REPORT OF THE MEMBERS OF THE ROYAL COMMISSION ON THE CARE AND CONTROL OF THE FEEBLE-MINDED UPON THEIR VISIT TO AMERICAN INSTITUTIONS.

To the Chairman of the Royal Commission on the Care and Control of the Feeble-Minded.

My Lord,—We have the honour to submit to your Lordship for the information of our colleagues the following Report of our visits to institutions and our conferences with officials and other experts in the United States of America.

Our observations will mainly relate to the methods of dealing with the classes of persons comprised within the reference to our Commission and to the institutions expressly assigned for their care and detention; we found, however, that, just as in England and Wales, these persons were to be discovered in great numbers elsewhere, as, for instance, in almshouses, prisons, reformatories, and other establishments as well as in their own homes; and that an account would be very imperfect which did not comprise the results of investigation of these sources.

We arrived at New York on Saturday, the 7th of October, 1905; our visit lasted exactly seven weeks from that date; and, as we were favoured with fine weather and found our inquiry facilitated in every way by the kindness of the State officials and others with whom our business lay, and by their well-informed interest in our investigation, we were able in that time to visit some sixty-seven institutions, including all those which were comprised in our programme and many others.

These institutions were in the States of New York, Massachusetts, Pennsylvania, Ohio, Indiana, Illinois, Maryland, New Jersey, and in Washington, D.C.

In addition to these visits we procured much valuable information from personal interviews with various officials and other persons of expert knowledge who were good enough to place their information, and in many cases a good deal of time and trouble, at our disposal.

At the more important visits and interviews all the Commissioners were present; on other occasions we divided into two or more parties with the object of spending our time to the best advantage.

There are no federal laws operating over the whole of the United States which are of any importance in connection with our inquiry; the whole subject—in so far as it is dealt with at all—is covered in each State by the laws of that State. Our tour did not extend beyond the eastern and middle portion of the Union; but even within these limits we found such considerable diversity of law and practice as rendered it in large measure impossible for us to carry over our conclusions from one State to another, and compelled us to estimate the scope and value of what we saw from week to week in the light of a constantly changing jurisprudence, just as if we were passing from France to Belgium and Belgium to Germany. In addition to this, we encountered further varieties arising from the fact that many of the institutions we saw, including those most interesting to English visitors, were

103—VII. 1,750—Wt. T.L. 290. 8/08. Wy. & S. 307?r.

established and conducted under the authority of what we should call Private (Local and Personal) Acts of the Legislature. These enactments imposed limitations and conferred powers and privileges of a bewildering variety.

In these circumstances we have divided our Report into sections relating to the different States we visited.

Each section is preceded by a brief statement of the law of that State so far as it affected our inquiry and of the method of dealing with defectives which have grown up under that law. Then follows a description of the special institutions for the training or detention of idiots, imbeciles and epileptics of that State, with notes of any Private Acts regulating them. The scope in operation of these institutions and their utility is then estimated: and the condition and prospects of the defectives not dealt with in them is described. At the end we have summarised the conclusions which our visit to the United States enabled us to arrive at.

See p. 139 *post*. We also append a Table showing institutions with which we made personal acquaintance, and such particulars regarding the size, the scope and the cost of the institutions as were of most interest for the purpose of our enquiry.

General Observations.

There are two or three features common to all the institutions for defectives which we saw that deserve explanation at the outset of our Report, not merely for their universality but also because of their departure from our custom in Great Britain.

These establishments are not, as a rule, established and maintained by the elected representatives of counties, cities or other districts forming the local authorities for these districts as one would naturally expect: they are almost invariably put by the legislature under the control of a small nominated body of managers who—subject to State inspection—build, manage and regulate them, appoint the officers, and apply for and receive the necessary funds from the State Treasury. It was nearly everywhere represented to us that this system not only enlisted the services of large numbers of highly competent workers, but conduced most markedly to economy in construction and purchase of buildings.

The second peculiarity is that they are not—as in Great Britain—erected out of the proceeds of loans authorised at their inception and gradually paid off by means of a Sinking Fund nor are they supported by rates; but they receive every year directly from the legislature such sums as that body can be induced to appropriate to them for completion or extension or for new works and improvements and for ordinary maintenance.

Some of the indirect effects of this system of finance will be referred to later; but it is obvious at first sight that it makes it extremely difficult if not impossible to calculate the *per capita* charge in respect of original outlay, which should in each institution be added to the cost of food, clothing, etc., in order to arrive at the true expenditure on the care and maintenance of the inmates.

Terminology.

It may be convenient if at the outset we explain that there is considerable difference in the meaning attached to certain words in America and in England respectively.

That which is termed a "Workhouse" in England is called an "Almshouse" in America. The word "Workhouse" in America denotes a "Prison," as also does the word "Reformatory." A "Lunatic Asylum" is, in America, generally called a "Hospital for the Insane" and an "Idiot Asylum" goes under the names of "Training School," "Custodial Institution" or "Colony for the Feeble-minded." The word "Feeble-minded" is used in America to denote all grades of mental defect except acquired insanity. It includes "Idiots" and "Imbeciles." It is used in this sense throughout this report. The word "pauper" is not generally used in America. A pauper is usually referred to as "An indigent or poor person."

Numbers.

We received the following information from the Bureau of the United States Census:—

Decennial enumerations of the feeble-minded in the United States have been made since 1850. In each census, from 1850 to 1890, inclusive, it was attempted to obtain returns for all the feeble-minded in the population. The enumerations were rather incomplete until 1880. In that year the work of the regular enumerators was supplemented by that of physicians, who reported more than 29 per cent. of the 76,895 persons found to be "idiots." In 1880 the number of this class per 100,000 of population was 153·3. In 1890 the total number of feeble-minded enumerated was 95,609 and the corresponding ratio 152·7 per 100,000 of population. Physicians did not make any special reports of the feeble-minded at the census of 1890, which probably accounts for the ratio being slightly less in that year than in 1880.

The primary object of all previous enumerations of the feeble-minded has been to ascertain their numbers in the United States. This object has had to be abandoned, for the Act of Congress of March 6th, 1902, governing the work of the Bureau of the Census, expressly provided that enumerations of the so-called "special classes," which include the feeble-minded, must be restricted to inmates of institutions. In the case of the insane, and to a considerable extent in the case of paupers, this restriction does not wholly prevent an approximate quantitative measurement of the extent to which insanity and pauperism prevail in the country, because a large proportion of each class is found in institutions. But of the feeble-minded relatively few are cared for in institutions of any kind. Of the 95,609 reported as feeble-minded at the census of 1890, only 5,254 were found in special institutions, and but 2,469 in asylums for the insane. The number of feeble-minded in almshouses was not ascertained.

Recent estimates made by competent authorities place the number of feeble-minded in the United States—that is, of persons so pronouncedly feeble-minded as to stand in need of institutional treatment—at not less than 150,000. Yet, on December 31st, 1903, the entire population of special public and private institutions for the feeble-minded numbered only 14,347. There were, in addition, 16,551 supposedly feeble-minded persons among the inmates of almshouses.

It is obvious that the results of an enumeration restricted to the few feeble-minded in institutions can not be brought into comparison with the results of previous censuses, at which the object was to include all persons of this class whether encountered in or outside of institutions. One might, indeed, fairly question the utility of an enumeration of the relatively small number of feeble-minded who are inmates of institutions, since it can throw no light on the real numerical strength of this class, and therefore does not accomplish the chief object of such a census. Even facts in regard to the colour, sex, age, nationality, race, geographic distribution, etc., of the relatively few feeble-minded who have been brought together in institutions

lose much of their significance so long as no inferences can be drawn from these facts in regard to the great mass of the feeble-minded who are not receiving institutional treatment.

Of the 14,300 detained in special institutions for the feeble-minded in 1904, no less than 30 per cent. suffered from physical defect also.

Epilepsy was by far the most common form of physical defect, being found in 18 per cent. of the cases, notwithstanding the fact that epileptics were professedly excluded from some of these institutions, and that many of the States have large separate epileptic hospitals and colonies.

Five per cent. were crippled or deformed, 5 per cent. paralytic and 1·5 per cent. deaf mutes. Not more than 7 per cent. were blind.

More than 80 per cent. of the deaths in the institutions are of persons under twenty-nine years of age, 50 per cent. of those under nineteen years.

Less than 8 per cent. of the inmates pay wholly for their maintenance, and less than an additional 11 per cent. pay any portion of the cost. These percentages are calculated on the whole number detained, whether in State or in private institutions.

NEW YORK STATE.

I. *The Law and practice as to Lunacy.*

Boards of Lunacy.

There is a State Commission in Lunacy established by law; it must consist of one doctor, one attorney, and one "reputable citizen."

It provides and inspects hospitals for the poor and indigent insane, now eleven or twelve in number.

Boards of visitation are appointed for each hospital; they consist of gentlemen resident in the district, nominated by the Governor of the State; they attend monthly at the hospital and have full power to visit all parts of it, see the patients and inspect books, etc., reporting their views to the Governor or to the State Commission. They receive travelling expenses, but no pay.

Private hospitals for the insane have to be licensed by the Commission.

Idiots and Imbeciles.

The State Commission in Lunacy has no jurisdiction over or duties with respect to idiots and imbeciles who do not come under the laws as to the insane and cannot be sent to a hospital for the insane. This is the marked distinction between New York and British Law. Of course an imbecile, epileptic or feeble-minded person who becomes insane can be treated as such.

All non-criminal insane persons have to be committed and certified on forms provided gratis by the Commission.

Certificate.

The certificate is to be given by two doctors who have made a joint examination of the patient within ten days of the order.

It must set out the facts and circumstances upon which the judgment of the doctors is based, and must show that care and treatment in an institution for the insane is required.

Petition.

The parent or other *near* relation or the overseer or superintendent of the poor may petition on a prescribed form for the commitment of the alleged lunatic, forwarding the certificate above described. The petition must be served on the lunatic.

Order

The order is made by the District Judge of the Supreme Court, or the Judge of the Court of Record of the city or county.

He may order commitment to an institution forthwith.

Or if the lunatic is harmless, he may commit him to relatives or a committee able and willing to look after him.

On the other hand he may order a hearing within five days and may summon such persons as he thinks fit; and make his order after the hearing, sending a written report of his decision with the order.

There may be an appeal within ten days, in which case a jury is summoned, and decides the matter. Pending appeal the commitment stands good unless a Judge of the Supreme Court orders otherwise. All costs of the hearing are paid by the town, city, or county.

Emergency.

Where the lunatic is dangerous or requires immediate care, the superintendent of an institution may receive him on the petition and certificates alone, but he must not keep him for more than five days without the judicial order.

The State pays cost of conveyance and maintenance of the poor in hospitals; and by its agents appointed by the Commission, collects what it can from the relatives.

The relatives or the Committees of the estates of the well-to-do lunatic have to pay entirely, and if they do not take proper steps for the detention of a lunatic who is dangerous to his own or others' person or property, the Poor Law authorities must do it for them, and may seize such an insane person as if he were a criminal and they were peace officers executing a warrant.

Any person apparently insane and conducting himself in a disorderly manner may be arrested by any peace officer and kept in a safe and comfortable place [*semble* a part of a jail, almshouse, or lock-up not occupied by criminals] until proceedings for his certification can be taken.

Discharge.

The superintendent of the hospital, etc., has power to discharge

i. a patient who has recovered, or

ii. a patient who has not recovered, but who, he thinks, can be discharged without injury to himself or others, to friends or relatives willing and able to receive and properly care for him.

If the superintendent will not consent to discharge a patient of the latter class, an appeal lies to the Judge of the Court of Record.

iii. a patient who is not insane but idiot or epileptic.

The Commission may discharge any patient. A writ of Habeas Corpus may be moved for in every case.

The Commission may send to the Matteawan or other State hospital for criminal lunatics any patient who has ever been in a penal institution or in Matteawan and who manifests criminal tendencies.

The superintendent of any State institution may—after notice to the relatives—apply to a district Judge of the Supreme Court for the appointment of a committee of the estate of any "incompetent" person in his custody.

There is little that we need say as to the State hospitals for the insane (*anglice*, lunatic asylums). They resembled the finest and best equipped of our county asylums, and were generally very handsome buildings, beautifully situated.

The cost of maintenance was generally high, 18s. a week being a common figure.

On the other hand, the cost of site and construction was surprisingly low, £200 a bed being regarded as ample for the finest institution. It was especially noticeable that recent extensions and additions were as a rule well designed and economical. At Poughkeepsie we saw a recent block for 500 quiet males of strikingly novel and simple and useful design; it had cost about £90 a bed and was self-contained with the exception of central heating, lighting, laundry, and attendants' home.

The general result of our enquiries was that the necessary cost of construction was much the same as in England for similar styles of building.

It will be sufficient to describe our visits to two Hospitals, during which we noted, among other things, the working of the law purporting to exclude congenital cases from institutions for the insane.

We did not discover that there actually was any essential difference between American practice and British in the important matter of discharging patients—a judgment on this point could be formed after long experience only—but we were told that persons who had recovered their tranquility, but were nevertheless a possible source of danger, were not, in fact, discharged.

As regards the law respecting criminal lunatics there are two essential differences between the laws of England and of New York State.

> i. When a person under criminal detention is alleged to be insane, the question of his commitment to a State insane hospital is to be decided not by the prison authorities and medical officers, but, as in non-criminal cases, by a judge of the Court of Record on the certificate of two independent doctors nominated by him; and
>
> ii. Whenever a convict shall continue to be insane at the expiration of the term for which he was sentenced, he may be retained in the State Criminal Hospital until he has recovered or is otherwise legally discharged.

We did not find that this latter power was used to any considerable extent to prolong the detention of persons who had recovered from their acute insanity but might, nevertheless, be dangerous in freedom, though it occasionally was useful in that way; but the institution at Matteawan—about to be described—had suffered from over-pressure on its accommodation, which partly explains this fact.

Criminal Lunatics.—In American phrase "criminal lunatic" means a person charged with a crime and certified to be insane; "convicted lunatic" or "lunatic convict" means a person found to be a lunatic when under sentence.

Lunatic Asylums in New York Visited by the Commissioners.

Hudson River State Hospital, Poughkeepsie, N.Y

Visited by all the Commissioners on October 16th, 1905.

This is a large asylum of over 2,300 inmates. The institution is managed by a board of managers, appointed by the Governor of the State, consisting of 14 persons of whom the greater number reside in Poughkeepsie.

The asylum lands are large, extending to fully 1,000 acres. The buildings consist of a large central block (including administration, some wards, recreation rooms, etc.) and a number of separate buildings without connecting corridors. These latter include two blocks, each containing about 600, and a series of cottages, each holding about fifty. These cottages were situated a long distance away from the main buildings, being so placed to facilitate work on the farm. This arrangement, however, was not approved of by the present medical staff, as the distance added to the difficulties of administration.

The staff was very large, consisting of 452 persons, which includes eleven medical officers. The disciplinary treatment appeared to be excellent, there being very little excitement or noise perceptible. All the cottage doors and many other doors were open, and the patients were given a large amount of liberty. The majority of them were allowed to roam about the grounds even after dark. There are no padded cells in the establishment; no restraint other than the sheet was used, and that only very seldom.

In this asylum we observed several persons who were congenital imbeciles. We were informed that all congenital imbeciles who were admitted were subjects of attacks of insanity, but that some were retained for a time after the acute attacks had subsided. At the time of our visit there were about thirty of this class of cases in the institution. The number we observed, however, in one room seemed to indicate that there was great difficulty in excluding congenital cases as strictly as the alleged system was said to secure. We inquired as to the number of epileptics in the institution and were informed that they constituted about 2 per cent. of the inmates. This is a much smaller proportion than obtains in English asylums.

The report for the year ending 1904 states that the value of the real estate amounted to $2,434,444·00, viz., £200 a bed; and the expenditure of maintenance for the year amounted to $414,147·00, the weekly cost *per capita* being $3·67 or 14s. 8d. The value of farm and garden products during the year amounted to $20,830·00, and the value of articles manufactured by the patients amounted to $36,899·00. There are a certain number of inmates called "reimbursing patients," who reimburse the State for the cost of their maintenance at the rate of $3·50 or 14s. per week, and there are also a few paying patients, the rates not exceeding $10·0 per room.

Buffalo State Hospital, Buffalo, N.Y.

Visited by Mr. Dickinson and Dr. Donkin on Oct. 23, 1905.

The number of inmates is 1,671. The medical staff consists of the superintendent and nine assistants, and the number of employees of the asylum amount to about 350. The weekly cost *per capita* is $3·72, 14s. 7d., and those patients who are able to pay contribute a minimum of $3·50 14s. per week.

The conduct of the asylum seemed to be all that could be desired, the patients appearing contented and happy, and grateful for the attentions of an accomplished and numerous staff. The only means of restraint used were the restraint sheet and a dress with long sleeves. There is no padded cell in the institution, and quieting drugs are rarely, if ever, used.

There is a separate building in which all those admitted are placed on reception and retained there for a time, before being located in the various wards of the institution. The greater number of the inmates are housed in the main block, there being only one cottage in which a few of the men working on the farm and in the shop are lodged. The most notable feature of the asylum is the large number of inmates who are capable of employment. Upon an average, 60 per cent. are employed regularly, chiefly in domestic work and in the laundry, but also in workshops, in which they make up the clothing of the establishment, the boots, etc. There are also carpenter shops, tinsmith shops, and painter shops, in each of which a few inmates are employed under the direction of a paid workman. There is a small amount of garden and farm work done, but the institution being surrounded by the town, the garden is hardly large enough to admit of this kind of employment to any great extent.

The law which prevents asylums for the insane admitting idiots or congenital cases is fairly observed, the superintendent being strongly of the opinion that this was a wise provision, as he thought that the introduction of the worst cases interfered with the cure of the insane, and that in cases of persons with minor defects the society of the insane would be deleterious to them. He has, nevertheless, a certain number of patients who are congenitally deficient, but these have been brought to him with attacks of temporary insanity.

The State Asylum for Criminal Lunatics at Matteawan, N.Y.

Visited by all the Commissioners on October 16th, 1905.

This is a large asylum accommodating about 650 patients, built on a fine site in a very beautiful situation. The institution affords reception for unconvicted male and female prisoners, and convicted female prisoners transferred from penitentiaries and reformatories, as well as for all persons of either class deemed to be unfit for liberty when their sentence has expired or the court returns them unsentenced to the asylum. At the time of our visit there were under detention 552 men and 89 women. The total staff numbered 118. Dr. Lamb is the superintendent and he had three assistant medical officers under him.

The ground attached to the asylum extends to about 250 acres, most of which is farmed by the inmates. The asylum itself is square shaped, the interior court being divided by a long corridor. The female patients are housed in the front of the building, the male patients in the two wings at the side. The male wings consist of day rooms on the ground flat and dormitories in the upper flat. There are very few single rooms, and what there are appear to be used as attendants' bedrooms.

The charges under which criminals are sent to this asylum are various. About 20 per cent. of them are for murder or manslaughter. The majority are for felony, but many are for petty charges, such as vagrancy, drunkenness, and petty larceny.

The custom of the asylum is to detain the inmates until they have completely recovered, after which they are sent back to the court to be dealt with. They may then be tried and sentenced, or the charges may be withdrawn. The discharges are not numerous; they take place solely on the superintendent's certificate.

The proportion of inmates at work did not appear to be very large. The majority of the men at the time of our visit were in the two airing yards in the middle of the building; and the majority of the women were in a day room. A few men and a few women were seen working in the laundry, the sexes being mixed in one of the rooms there. We were informed that about twenty-five were working on the farm that day. The work is not obligatory, but it is encouraged by all legitimate means, as being medically useful. The dietary is generous, and the discipline, however effective, was not stern. No violent punishment exists, and patients are encouraged to work rather than driven to it: they are told it is good for them. The restraints used in the asylum are little, if any. In this institution no difference is made between imbecility and acquired insanity. If an imbecile is received, he is kept and dealt with as an insane prisoner.

The total cost of maintenance is at the rate of $3·51, i.e. 14s. 7d. a week per head. This sum does not, of course, include any charge whatever in respect of interest or sinking fund to replace the original cost, nor does it includ money spent during the year in structural work.

II. *The State Board of Charities and the Fiscal Supervisor.*

There is a State Board of Charities consisting of three Commissioners nominated by the Governor, and a considerable staff who exercise general control over the State reformatories for men and women (i.e. prisons for incipient criminals) the State training schools and custodial homes for the feeble-minded, the State training and industrial schools for girls and boys, the schools for the blind and similar State institutions. It has also considerable jurisdiction over Poor Law authorities and the boarded-out poor, and over all indigent defective and criminal persons in homes, houses of refuge, protectories and other private and religious charities.

At an interview of Dr. Dunlop and Mr. Byrne with the State Commissioner of Charities, Albany, N.Y., October 17th, 1905, the Commissioner gave a complete statement of the law of the State of New York on this subject and of its working. He explained that not only the institutions for defectives of various sorts, but almshouses managed by the officers of the poor were under the control of his department, there being no other authority similar to our Local Government Board. It was clear that not long ago the condition of the country almshouses (as workhouses are called in the United States) was much the same as they are now in country places in England, that is to say, that there were in them many imbeciles of all grades who would be much better placed in institutions especially designed for their care and custody and who were gradually being moved into such institutions as the development permitted. Some of the almshouses were defective in accommodation and methods. He showed us photographs of every almshouse in the State; they exhibited a marked progressive improvement from extremely primitive beginnings.

However, even the best did not contain good accommodation for imbeciles. The Board of Charities did not insist on or desire this. Their wish was that all such persons should be removed from the Poor Law authorities and put into proper institutions. He expressed in very strong language his opinion that for imbeciles of all classes, including the feeble-minded who were merely lacking in self-control and power of successful application to business, custodial treatment was necessary. He put this not on the grounds of philanthropy, but on the grounds of economy. The propagation of such

degenerates by the freedom formerly allowed to persons mentally defective was in his opinion a danger to the community, which it was necessary to meet by the free application of permanent detention accompanied, as was now done in many other institutions, by a provision for putting the inmates to work of a remunerative character. He said that it was true that the effort made by the State towards dealing with delinquent children, destitute children, and the feeble-minded of all ages, was nothing in comparison with the efforts made by the Roman Catholic and other religious bodies and philanthropic associations who deal with the same classes. [On this point the Fiscal Supervisor, in a recent Report, remarks that the State had done much already and had recognised its duty and its burden, but the full extent of the liability could not be met in a few years.] The accommodation provided by the State, he said, was not a quarter of the existing total. He considered that in one way or another a most sufficient provision was made, but it was very difficult to give exact statistics.

[It should be noted here that while the religious bodies dealt extensively with delinquent and destitute children, we observed generally that they did not deal with the feeble-minded except incidentally, and that if they discovered an objectionable feeble-minded case among their ordinary inmates, their policy was to remove it to a State Institution.]

He thought that the number of imbeciles in New York State and in the cities within the State did not nearly reach the number of certified lunatics and was probably less than a quarter of that number.

He explained that not only in the State, but also in the private institutions, there was no real power by law to detain anyone after the expiration of the sentence passed by the Judge or Magistrate. But the detention of persons unfit for freedom was, in fact, enforced equally in all such institutions. The superintendent of a State custodial home or of a Roman Catholic orphanage would frequently refuse to give up to its parents a child or young person, or even an adult whom he believed it would be imprudent to set at liberty, and would defy the family who took proceedings in the Law Courts by *habeas corpus* or otherwise to procure his discharge. No such demands, he said, had ever been made, and the Commissioner thought that no Judge would think of allowing an order of *habeas corpus* to issue, if he were informed by the medical officer of an institution that the person was feeble-minded and a danger to himself or to the community. This practice was so universal that he did not think any amendment of the law was called for, and he could not understand our English difficulties. [As will be seen later this immunity from legal process is not universal.]

Finally he explained that the State as such gave no aid to religious or philanthropic institutions, except those for the blind or deaf and dumb during their period of training. For this he gave certain historical reasons. These institutions, however, receive regularly from the Poor Law authorities of the county from which the inmates come grants to the amount of $1·90 or $2·00, say 8s. a week, in respect of each inmate received in an institution registered and inspected by the Government. The inspection was of an entirely general character, the general management of the institutions being in the hands of the managers, and the medical treatment, receptions and discharges entirely in the hands of the superintendent.

At an interview with the Assistant Fiscal Superintendent, The Capitol, Albany, N.Y., on October 17th, 1905, the constitution and function of the office of "Fiscal Supervisor" was very fully discussed. This office is of recent formation, having formerly formed part of the office of the State Comptroller, and it was created for the purpose of scrutinising all estimates of expenditure proposed for the construction and maintenance of the following State institutions:

Western House of Refuge for Women, Albion.

New York State School for the Blind, Batavia.

New York State Soldiers' and Sailors' Home, Bath.

New York State Reformatory for Women, Bedford.

New York State Reformatory, Elmira.

New York State Training School for Girls, Hudson.

Thomas Asylum for Orphan and Destitute Indian Children, Iroquois.

New York State Custodial Asylum for Feeble-minded Women, Newark.

New York State Woman's Relief Corps Home, Oxford.

Society for the Reformation of Juvenile Delinquents, Randall's Island.

New York State Hospital for the Treatment of Incipient Pulmonary Tuberculosis, Ray Brook.

State Industrial School, Rochester.

Rome State Custodial Asylum, Rome.

Craig Colony for Epileptics, Sonyea.

Syracuse State Institution for Feeble-minded Children, Syracuse.

New York State Hospital for the Care of Crippled and Deformed Children, Tarrytown.

The general administration of these institutions appears to be in the first instance directed by the board of managers and carried out by the superintendent of each establishment. But these managers can only incur expenditure by obtaining the approval of the fiscal supervisor. Other questions of administration are subject to the inspection and to a certain extent the control of the State Board of Charities.

These institutions in the month of October submit their estimates to the office of the fiscal supervisor. The supervisor examines and collates these estimates, visits the institutions and makes local inquiries, and where he thinks it necessary, reduces or alters any entries. After the scrutiny of this office, estimates are submitted once a year to the Comptroller and voted by the legislature; but before taking effect they may be still further reduced by the Governor of the State.

During the interview we also received a description of a comparatively recent law (the date of this law we are not told) whereby no charitable institution is allowed to erect buildings which are estimated to cost more than $500·00 £100 per bed. We asked for particulars with regard to the working of this law, but were given no concrete example of a building having been constructed on these lines. We gathered that in America it is practically impossible to establish a complete institution at this figure, but an extension to an existing institution is possible. $500·00 per bed was sufficient to construct dormitories, day rooms and kitchens, but left no margin whatever for the construction of administrative blocks, or or such purposes as drainage, heating and lighting. Further particulars on this subject will appear in our description of Special Institutions.

III. *The Poor Law.*

There is a local Act of the legislature dealing with the poor law of almost every city and county in New York State: the following notes must, therefore, be confined to simple generalities.

A poor person is "one unable to maintain himself, and such persons shall be maintained by the town, city, county, or state."

The "state poor" are tramps, vagrants and other persons who have not resided sixty days in any town or county, and are relieved and supported by the state.

"Town poor" and "county poor" explain themselves. "Almshouse is a place where the poor are maintained at the public expense." Counties have elected "superintendents of the poor," towns and cities have "overseers of the poor." The powers of the superintendents include most of the powers of our guardians, but they draw on the county treasurer for their funds and render accounts to the county supervisors. One of them is keeper of the almshouse. The overseers are relieving officers with wider powers.

The Board of Supervisors (but failing them the Town Board) make general regulations as to outdoor relief, and the overseers and superintendents act accordingly.

All poor persons receive relief where they are found and are not moved to their place of settlement. Various considerations decide whether county or town pays for their maintenance, the presumption being against the town where the pauper is discovered to need relief.

County almshouses are places of commitment for vagrants and disorderly persons as well as places of relief for the honest poor.

No child under sixteen may be sent to, or kept in, any county almshouse, but must be provided for in a family, an orphan asylum, hospital, or other appropriate place at the expense of the county or town.

The superintendents are compelled by this law to provide for poor persons that may be idiots or lunatics at other places than in the almshouse.

This exclusion, by law, of idiots, lunatics and children from poor law institutions is noteworthy. It is doubtful whether it is successfully carried out in practice, but it certainly results in many of the excluded classes being found in the various special institutions hereafter to be described. And it accounts for the large number of religious and charitable institutions which exist everywhere for the maintenance and education of children.

By an Act of 1896, the State Board of Charities is to exercise supervision over aged, decrepit and feeble-minded persons, not proper subjects for care and treatment in insane hospitals, but whose friends wish to get them into homes, retreats, or asylums licensed by the Board. The only requirement in these cases beyond the licensing of the home is that there shall be an affidavit by two doctors that the aged, decrepit or feeble-minded person is not insane.

Information as to the practical working of the Poor Law was obtained on October 23rd, 1905, when Dr. Donkin and Mr. Dickinson called on the Superintendent of the Poor of the County of Erie, at Buffalo, N.Y. He was not at his office, but the principal assistant was available.

He stated that with regard to children sent to the institutions for the feeble-minded at Syracuse, Rome, or Newark, these were invariably the children of destitute persons and sent with the consent of the parents, except that in certain cases if the child was not properly maintained, the superintendent was able to dispense with this consent. In many cases the parents themselves applied to the Superintendent of the Poor for admission to these homes. Upon being asked whether in his opinion there were feeble-minded persons in the homes of the people, he stated that he thought that only a very small fraction of defectives was cared for in state institutions, and he was not aware of any private or religious institution which received them as such. The duty of the Superintendent of the Poor was to inquire into the circumstances of the parents, so as to ensure that only those who were poor were relieved of the custody of their children, and in some

cases arrangements were made whereby the parents paid part of the cost. As there was not sufficient room for all the applicants in the State institutions, the county had boarded out a certain number of feeble-minded children at various places at charges rising from 7s. 6d. a week, including a home on Long Island where there was a weekly charge of 25s. This was a private institution, which took other cases at varying rates of pay.

With regard to the women sent to Newark, he stated that dissolute women would only be sent there after they or their children had become a charge on the public, and therefore most of them would be women who had had children. Upon being asked whether cases were brought forward by charitable associations or individuals, or through the public schools, he stated that he did not know of any such cases.

He also stated that undoubtedly a great many persons of feeble intellect would be found in almshouses, for the reason that the State institutions were quite incapable of meeting the demand.

IV.—*Education Law.*

(1.)—*The City of New York.*

The law of compulsory school attendance has been in force since 1903 only, and appears to be very imperfectly enforced.

It requires all children under fourteen to attend school and they cannot be employed in factories, shops, etc.

All children between fourteen and sixteen must also attend school unless engaged in some useful and legitimate occupation during the day, in which case they must attend evening schools four evenings a week for sixteen weeks.

Attendance may be and is occasionally enforced by fines on parents who neglect their duty to keep their children at school or by committal to Truant Schools, to the Roman Catholic Protectory, or other similar institutions.

Children on register - - - - - - -	540,000
Average attendance - - - - - - -	466,000

There are no special schools for the mentally defective and epileptic, though some score or more of special classes have been started for some 400 defectives in the English sense. Sometimes markedly defective children are sent to the special institutions to be hereafter mentioned or to religious and charitable institutions, or are to be found with normal children in the ordinary classes or escape education altogether.

One of the schools visited by Mrs. Pinsent and Mr. Dickinson contained 3,000 boys, and in this school there was a special class of eleven boys. In another school, containing 1,500 boys, a special class, conducted by Miss Farrell, contained about fifteen boys, and the remainder of the special classes in other schools contained about the same number—about fifteen to thirty. The Board of Education has recently appointed Dr. Brown for the purpose of inquiring into the mental condition of the children of the school. There are 600,000 school children, amongst whom Dr. Brown estimates from 6,000 to 12,000 to be feeble-minded; or one to two per cent. Dr. Brown's method is in all essentials the same as ours in London. He has a teacher's report on each child and then makes his own examination. The Commissioners saw him conduct an examination, and came to the conclusion that he was admitting to the special classes the same grade of children as would be admitted in London. This

opinion was confirmed on a visit to the special classes in which they discerned every class of defect from the imbecile to those who were little below the average intelligence of children in a poor neighbourhood.

In addition to the twenty special classes above mentioned, there are in some schools in New York what are called the ungraded classes for those children who, for various causes, have been unable to keep pace with children of their own age. These are practically classes for the dull and backward.

At a visit by Mrs. Pinsent and Mr. Dickinson to a school in Henry Street, on October 12th, 1905, they saw Miss Richmond, who is the superintendent of that district, which district contains 26,000 children in schools. She has organised forty-four classes for backward children, containing on the average twenty-five in each class; and five classes for mental defectives, containing fifteen in each class. Her attention was drawn to the need for backward classes soon after the law had been passed forbidding any child to work who had not at the age of fourteen reached a standard of education equivalent to that of grade 5 B. In the event of a child failing to fulfil these requirements, he would be compelled to remain at the school until the age of sixteen. The grade 5 B. in the ordinary course should be reached in the second half of the fifth year of the child's schooling, or when he is about eleven years old.

Upon investigation, in the year 1903, she found that in her district there were 1,719 children whose prior education had been so neglected that they could not possibly hope to attain the required stage of instruction by fourteen. There were various causes for this. For instance, many of these were the children of foreigners who had recently arrived in the country; others had not been admitted to the schools owing to the lack of accommodation; others had been turned out by reason of their being troublesome and their seats being required for better behaved children. Some had been excluded by fear of contagion and some were children whose mental condition was unsatisfactory. Accordingly she obtained permission to organise classes for backward children. In these classes the number of children is small, and the teacher is therefore able to give individual attention, and to pass on as rapidly as possible each child into the grade more suitable to his age. The success of this naturally varies with each individual. To some children this individual teaching had done so great benefit that they succeeded in putting the work of two years into one term.

These classes also afford means of testing the mental calibre of each child and when any child appears to be mentally defective, he is removed into one of the regular classes for the feeble-minded.

(2.)—*New York State.*

At an interview of Mrs. Pinsent and Mr. Dickinson with Mr. Horner, Secretary of the Commission of Education of the State of New York, Albany, N.Y., 17th October, 1905, Mr. Horner explained the system of education in the State of New York. He stated that originally education in the State was in the hands of a Board of Regents, who dealt solely with secondary education in the higher schools, and who granted charters to various schools and universities for that purpose, until the schools of secondary grade under their control amounted to about 800. The elementary education was supervised by the Superintendent of Public Instruction. In the year 1904 an Act was passed which combined the administration of all education under a new department, called the Educational Department, consisting of eleven members, of whom the State Commissioner of Education. Mr. Draper, was one. He was elected for six years by the Legislature and after this time his place is to be filled by appointment from the Board of Education. This Board administers an educational fund of $6,000,000.00 per year, but this only forms a small part of the money expended for

education, the total amount exceeding $60,000,000.00. This sum includes taxes raised locally and also money arising from grants.

By means of this power of granting or refusing money, the Board of Education has practical control of the administration of the schools. They regulate the syllabus in all secondary schools and also to a certain extent guide the syllabus in the elementary schools. The money grants are distributed under one and the same system to all schools. They generally depend upon the number of teachers and the adequacy of the equipment. The Board of Education for the City of New York is practically exempt from the authority of the State Board of Education.

The Educational Department employs fifteen inspectors, who visit all the free public high schools. The elementary schools are inspected to a certain extent by School Commissioners, numbering 113, who reside in the various districts. The Board of Education also grants certificates enabling boys and girls to enter the professions. They likewise inspect and support the deaf and dumb schools. Mr. Horner was not able to say that much was done in the schools with regard to the feeble-minded. He thought that most cases of feeble-mindedness remained in the schools, and that this subject was dealt with locally, either by reception into the State custodial homes or private institutions of the worst cases.

The schools in rural districts are managed by trustees, who are elected by the people. These schools are inspected by the District Commissioners, who report to the Board of Education on such questions as the observance of the laws of compulsory attendance, accommodation, sanitary conditions, etc.

Some portion of the education fund is granted to private academies of a denominational character.

Many defectives, however, escape the educational net; and the law of compulsory attendance is not so effectually enforced as it might be.

Mr. Cole, City Superintendent of Education, Albany, N.Y., stated that the child population in Albany amounted to about 20,000. The deaf and dumb, blind, and idiot, as a rule were sent to the State institutions, provided they could be received. He could not say that there were any feeble-minded children in the schools, but an attempt had been made recently to meet the requirements of backward children by providing extra teachers to go occasionally into the schools to give individual attention to the pupils that required it. The teachers so employed had no special qualifications, but they were those teachers ordinarily held in reserve for the purpose of filling temporary vacancies in the staff. Mr. Cole stated that on an average a teacher could be spared to each school where it was necessary about twice a week.

A visit was paid to No. 1 school, in Bassett Street, a poor neighbourhood. No member of the substitute corps was there, but the Commissioners were told that one had been at the school last week. They saw the children who had been allotted to her to teach, and it was found that two of them were of the class who would certainly have been sent to a London special school, and two more were border-line cases, on which it was impossible to give an opinion without longer examination than was possible. It was learned in conversation that any pronounced defective or troublesome child could be refused admittance to the school, and the head mistress would inform a representative of the Catholic, Protestant, or Jewish community, who would probably take the child into one of their refuges, if the parents would consent.

The Commissioners then visited an ungraded class in a public school in Madison Avenue. This is for truant children, but they constantly get defectives whom they cannot possibly take into graded classes. The numbers varied from about fifteen to thirty-six. There were only fifteen present,

three of whom were said by the mistress to be mentally defective. The head master stated that he also had three defectives on his side of the school.

Institutions for the Feeble-minded.

We now proceed to describe the most important of the institutions in New York State and City specially established for the care of feeble-minded and other defective persons, and some typical institutions not designed with this object but containing such persons in considerable numbers.

Syracuse State Institution for Feeble-minded Children. Established 1851.

Visited by all the Commissioners on October 20th, 1905.

The State Superintendent of Public Instruction and eight persons nominated by the governor to hold office for eight years form the Board of Managers who entirely direct, visit and control this institution; the medical superintendent appointed by them is their chief executive officer.

"There shall be received and gratuitously supported in the Institution 120 feeble-minded children as State pupils who shall be selected from each judicial district in equal numbers, from those whose parents or guardians are unable to provide for their support. Such additional number of feeble-minded children as can conveniently be accommodated shall be received on such terms as shall be just."

In default of sufficient feeble-minded children, non-teachable idiots are admitted; but not those epileptic, insane or greatly deformed. Reception is by request for admission by relatives, etc., setting out the facts verified by affidavit of two disinterested neighbours and certified to be credible by the county judge. "Requests" may also be made by superintendents of the poor or commissioners of charities.

The managers may prescribe terms and conditions to be entered into with parents and guardians for the payment of the whole or part of the cost of maintaining a child. Every county shall pay £6 a year for the clothing of each of the State pupils belonging to it. Copies of the Forms used for admission are annexed.

No conditions appear to be prescribed by law for the discharge of children when their training is completed; they are simply returned to their relatives or to the keeper of the almshouse, or are sent to a custodial home.

About 284 males and 256 females were maintained and there was a large waiting list.

274 acres of land are attached to the institution.

The value of land and buildings was stated to be £80,000 *i.e.* £150 per bed.

The cost of equipment, £9,000.

The maintenance cost 16s. a week less 2s. 6d. a week if allowance be made for the home and farm products of inmates' labour.

We were received by Dr. Carson, the superintendent, and Mrs. Crowse, one of the managers. The inmates were 550, almost all of them being children, with the exception of a few whom the managers had not been able to dispose of after they reached maturity. We were shown the children at work in the schools, where they were receiving the elaborate education of the ordinary kind given to feeble-minded children. The education consisted of ordinary reading, writing, arithmetic and kindergarten studies. About half the children were capable of learning reading, writing and arithmetic. There were also rooms in which they were taught tailoring, sewing and knitting, both boys and girls doing the sewing; and there were several older boys who were capable of cutting out and making up clothes. A great number of the children appeared to be of a high grade, and many deemed proper for detention would not be considered as imbecile, or even feeble-minded, in England. Upon leaving the institution, the superintendent stated that most of the boys would go to their homes, but they would attempt to detain the girls. How far this had been done in past years we were not able to ascertain. The superintendent stated that he would not refuse to allow a girl to return to her parents, even though it might be possible that she had so little self-control that she would most likely get into trouble. This did not seem to be the opinion of the lady manager, who expressed strong opinions as to the desirability of detaining feeble-minded girls permanently when unable to control or take care of themselves. We were not able to ascertain how many discharges of this kind took place in the year, nor did there appear to be much record of the subsequent history of the children of the school.

The institution consisted of one large central building of some pretension, not modern, but quite suitable for its purpose, and also a few detached buildings, in which the lower grade imbeciles and idiots were detained. There was also a farm situated at a distance of five miles, on which we understood some forty of the elder boys were employed. The number of paid attendants was 115, a high standard of expert instruction being aimed at.

The cost per inmate that year was 12s. 6d. a week. The greater number of them are maintained by the State, but about fifteen pay the whole or part of their cost, and about forty are clothed by their parents.

There is no legal power of detention, and the superintendent was of the opinion that it would not be advisable that there should be any law on the subject, inasmuch as he thought it would deter the parents from voluntarily sending their children to the school. Under the present system a parent knew that he could withdraw the child at any moment, and the great object of the institution was to get the inmates into it, and out of danger; actual withdrawals were very few.

This institution, like all others, was inspected by the Board of Charities. This inspection was merely of a general character, concerning the order and administration of the home, and did not extend to the individual inspection of the inmates.

The funds of the home were provided by the State in the form of annual grants by the legislature, upon estimates submitted by the managers and approved by the Fiscal Supervisor.

In general the institution resembled the Royal Albert Institution in England, its defects being costliness, especially in methods of teaching. It was interesting chiefly as a pioneer institution only partially modernised, and content to do useful work for the benefit of the children sent to it without much concern as to their preparation for free life on their reaching the age when they had to be restored to freedom.

The farm seemed to be managed successfully and produced £3,600 in value.

The home work was sewing, knitting, tailoring and bootmaking and repairing.

Form of Request for Admission of Pupil.

To the Superintendent of the Syracuse State Institution for Feeble-minded Children.

I hereby request that————————————who is feeble-minded, and resides in the——Town of————————————in the County of————————————in the State of New York, may be admitted as a pupil into said Institution. ————————————

The said————————————was born in the Town of————————————in the County of————————————in the State of————————————and is of the age of————————————years, or thereabouts.————————————

Said————————————————————is now a legal resident of this county, and in indigent circumstances.

It is understood by the Superintendent of the Poor making this request, that if the person whose admission is thus sought should, after a fair trial, prove to be unteachable, or an improper subject for care and training at the Institution, by reason of insanity, epilepsy, or other disqualifying circumstances or condition,————shall be removed promptly, at the request of the Officers of the Institution, without cost to the Trustees thereof; and further, that in case of———death, the funeral expenses shall be paid by————————————County.

Dated the————————————day of————————————, 190

————————————————————————————————

Supt. of the Poor for————————————County.

Syracuse State Institution for Feeble-minded Children.

Descriptive Application.

Let every question be answered as minutely as possible by the Parents or Friends of Applicants for Admission to the Institution.

[Here follow seventy-nine questions as to the health-history, physical and mental, of the applicant, and as to his heredity.]

The family physician, or the one best acquainted with the family and the child, is requested to fill out and sign the following certificate:

————————————————————19

I,————————————a citizen of New York, physician and practitioner in the town of————————————hereby certify, that I have examined————————————and find that he is not insane, but is so deficient in mental ability, that he cannot be taught in common school as others of h age are. H bodily health is————————————, and he has no contagious disorder.

Signed————————————M.D.

N.B.—The Physician is earnestly requested to review the above questions, and to state in writing his opinion of the *cause* of the person's mental deficiency. To state whether the child is or has been epileptic. Also to mention any organic or functional peculiarity that he may have observed. It may be greatly for the advantage of the applicant that the physician should send in writing a full and minute account of the case, with his own thoughts and suggestions about it; especially any facts in answer to Questions Nos. 60 to 76 inclusive, which may be within his knowledge. Such letters will be considered confidential, and may be sent direct to the Superintendent.

This circular when properly filled out is to be mailed to

Dr. J. C. Carson,
Superintendent,
Syracuse, New York.

FORM OF REQUEST FOR ADMISSION OF PUPIL.

To the Superintendent of the Syracuse State Institution for Feeble-Minded Children:

I hereby request that———————who is feeble-minded, and resides in the ———————of———————in the———————of———————— in the State of New York, may be admitted as a pupil into the said Institution.

The said———————was born in the State of———————and is of the age of———————years, or thereabouts.

The parents or guardians of said———————are———of sufficient ability to provide———————for h support at the Institution.

Dated the———————day of———————, 189

To be signed by the applicant, name and residence in full. ———————

———————

STATE OF
COUNTY OF } ss.

———————and———————being severally duly sworn, say, and each for himself says, that he is a resident of the county of———————in the State of New York, that he is acquainted with the facts and circumstances stated and set forth in the foregoing request signed by———————and that the same are true.

To be signed by two parties, knowing to the facts and circumstances set forth. ———————

———————

CERTIFICATE OF COUNTY JUDGE.

The foregoing affidavit was, on the———————day of———————189 subscribed and sworn to before me by the said———————— and———————respectively, credible persons; and I certify that ———————, the feeble-minded person named in the foregoing request, is an eligible and proper candidate for admission as a pupil in the SYRACUSE STATE INSTITUTION FOR FEEBLE-MINDED CHILDREN.

STATE CUSTODIAL ASYLUM, ROME. ESTABLISHED IN 1893 FOR UNTEACHABLE IDIOTS AND CUSTODIAL FEEBLE-MINDED CASES.

Visited 19th October, 1905, by all the Commissioners.

Under the law regulating this establishment eleven managers are appointed by the Governor of the State with full control. The superintendent must be a doctor and chief executive officer and manager.

The inmates are to be poor persons committed by superintendents of the poor, in form prescribed by the managers from the feeble-minded and idiot persons in almshouses and in homes in the State. Epileptics are excluded.

If there is room for other cases paying patients may be received. Forms of "Request for Admission" and "Commitment" are annexed.

The value of land and buildings, £110,000, and cost of equipment, £8,000, amounting together to less than £160 per head of the 750 inmates, showed economy in construction.

Weekly maintenance cost 12s. per head, but including value of inmates' work and farm, 11s.

To Dr. Bernstein, the superintendent, were put the questions which have usually been addressed to the superintendents of all asylums and institutions who appeared before the Commission in England. Speaking usually, his evidence was in striking agreement with that laid before us by them. He was unwilling to express a decided opinion on the question of the comparative importance of heredity and evil environment in the production of feeble-mindedness, but he expressed the opinion that when a feeble-minded person was brought to his institution he would naturally expect to find a defective parentage. He stated that out of the classes of imbeciles who filled his institution, only about one-third were capable of any work which had a substantial result in paying for their maintenance, and that little, if any, more than one-tenth were capable of doing work which had an estimable money value. More than 50 per cent. of the inmates were actually occupied in cleaning the floors or in domestic work of some other trifling description. It was explained to us that the absence of teaching or professional industrial training was attributable to the fact that the institution was originally described as being for "untrainable idiots," and although this name had been modified the system of having no highly trained professional teachers of ndustry had continued.

There was only one trained and certificated teacher. Dr. Bernstein discouraged any education in the ordinary sense of the word, but has consented to a small three R's class for both boys and girls, yielding to the great desire of his teacher. He stated that it was useless in most cases, and where it succeeded did not make for happiness, but increased restlessness and a desire to leave the institution. He would like the whole of the time devoted to manual work, and this had been the case until lately. Rough sloyd work and various kindergarten occupations he had found most useful. There is only one school mistress, but the ward attendants are trained by her and by lectures from the medical staff to teach the children various forms of manual work. This is done by a system of half-hour classes, taking place both morning and afternoon. There is no schoolroom; the children are taught by the ward attendants in their own wards. Only 7 per cent. can read, and 5 per cent. read and write. There is also an expert instructor in drill and calisthenics, who takes classes himself and also instructs the ward attendants. These exercises are said to be performed regularly by all those who are capable of taking part in them, and to be useful in effect. It was also said that great care was taken that all those who were able to go out should have at least one hour's exercise in the open air, and from speaking to the inmates we gathered that this was the case. We observed much freedom in the general management of the establishment, there being very little locking up, the inmates (with the exception of those in one or two wards) moving freely about the house and grounds.

As regards the employment of the inmates, we were told that there was one shop for repairing, but not for making boots and shoes. An instructor and five inmates were engaged in the shop. We understood that the inmates made all their own clothing, except the boots, which came from other State institutions. All the clothing was washed by inmate labour, except the officers' uniforms, which were washed by paid labour, assisted by two or three of the more competent inmates. The cartage of coal and other goods from one part of the institution to another was carried out by the inmates, and also a good deal of painting and repairs.

There is a farm of nearly 400 acres, with fifty cows mostly used for milking purposes, but afterwards fattened to serve as food for the institution. The milking was done entirely by the inmates. There was a very large piggery, containing 180 animals, and the pork (which, we were told, was the commonest meat food in the institution) came wholly from this source. There was sufficient meadow land to provide in ordinary years all the fresh feed and hay required for the institution. The use of the farm for growing

crops appeared to be still in the experimental stage, but Dr. Bernstein had hopes that when the capabilities of the land were better understood, not only could the whole of the vegetables be produced on their own land, but considerable profit might be made by the sale of produce. In view of the anticipated profits from their farming enterprise, the managers were anxious to buy a neighbouring farm of 1,000 acres and to establish on it a colony of 120 of the more competent workers, locating them in separate cottages of an economical type of twenty each. The expectations were that the annual cost would amount to £360, and the returns in the shape of produce would exceed £520. The cost of constructing these cottages is estimated at £1,000 each.

The cost of maintenance *per capita* has rapidly diminished in recent years; in 1901 it was £33, in 1902, £31, and in 1903, £28. None of the buildings whatever, except a little shed which cost a few pounds, have been erected by inmate labour; but a considerable amount of repair work and painting is done by the inmates under instruction. The boilers, engines and apparatus for electric lighting, heating and ventilation were of an unusually simple, convenient and economical character. The whole of the bread was baked by one baker and six inmates. The number of attendants to inmates was not more than one to ten, notwithstanding the low grade of the latter.

To encourage work a system has been devised of giving small payments to those whose labour deserved it, which are applied as payment for their clothing, the balance they could spend as they liked, except a small amount which was always kept in reserve. But these gratuities were only given to a small number.

There were 148 applications for admissions during the past year, and a large "Waiting List." About fifty came from the Syracuse school and most of them through county authorities. The children, as a rule, were brought to the institution through the county superintendent, and their suitability for admission was decided by the managers of the home. Fifty per cent. of them had been in institutions previously. The inmates were detained in the home and generally the request that they should be discharged was refused by the managers. In such cases the parents could appeal to the State Commissioners of Charities, and from them to the law courts. This course had been taken on two occasions only, but in both these cases the judge had issued a mandate to release the inmate.

The population of the institution at the time of our visit was about 450 men and about 300 women. With regard to the character of the inmates, the great majority were idiots or very decidedly imbecile. We observed a certain number among the inmates who did not show the grosser symptoms of imbecility and were apparently of the class of so-called feeble-minded, with which our Commission is especially concerned. On inquiry of the superintendent he stated that there were about fifty of this particular class whom he described as in his opinion all able to earn their own living under supervision; but they were all of them, without exception, certain to fail if they attempted to stand alone. He was of the opinion that all these should be detained for life, as they probably would be, in this institution. Among the women the less defective class seemed smaller than it did among the men. The superintendent promised to give us as detailed an account as possible of all these cases, both men and women. Among this minority of cases we were shown two instances of so-called "moral imbecility," both of which were well marked, but they also evinced other defects. One was an incendiary and the other a kleptomaniac. We also saw one or two cases of chronic insanity, and one case who was a deaf mute and who appeared to be suffering from that defect rather than from imbecility.

In this institution the term "feeble-minded" is used in the same sense as the word "imbecile" is generally used with us, the word "backward" being

applied to cases which we call "feeble-minded." In fact the terms used by Dr. Barr are adopted.

Upon inspecting the case book, we found the histories imperfect. The medical officers stated that it was very difficult to get any reliable histories from the relatives of the patients, or from any other source; and consequently in many cases it was difficult to differentiate between congenital defect and acquired insanity. According to the amount of attention they required, the patients were divided into three groups: the idiots, the crippled, and others, the "others" being roughly classified according to age, there being a nursery, a department for boys, a department for the younger men, and one for the older men. The women were classified in a similar manner. But these classifications were not strictly adhered to. This classification did not make any very "hard and fast" distinction between the different grades of mental defects, and from what we saw we concluded that not only did it cause no hardship, but was beneficial, in that the brighter cases were able to assist in the charge of the others, and were happy in so doing.

Regarding admissions, we ascertained that the institution received all sorts of cases except those who had been committed either to a prison or a reformatory. The reason for the [recent] rejection of such cases was that in the past they had been found very troublesome, to be possessed of immoral tendencies, and to contaminate others in the institution. To ascertain the character of the class admitted, we took note of the last nine male admissions and the last ten female admissions. Dr. Bernstein laid great stress on the exclusion of the "criminal" idiot until his institution was provided with suitable *detached* buildings for their detention.

Recent Admissions.

Males.

1. A boy aged thirteen, admitted within the last few days; said to be a middle grade imbecile, about whom the previous history had not as yet been reported. He was in an excited condition.

2. A boy aged six, said to be an idio-imbecile, dirty in his habits, but whom the staff described as being teachable and improvable.

3. A boy aged seven, an Italian by birth, described as an idio-imbecile.

4. A boy aged sixteen, a middle grade imbecile with very imperfect speech.

5. An Italian boy aged eleven, a high grade imbecile, who might possibly be a useful inmate.

6. A high grade imbecile aged twenty-one, with imperfect speech; but judging from his ready answers to questions, has some intellect. A transfer from Syracuse.

7. A boy aged eighteen or over, imperfect speech, described as "retarded," but to us he appeared to be a genuine imbecile.

8. Aged twenty-three, an idiot.

9. Aged sixteen, a middle grade imbecile.

The majority of these nine were undoubted imbeciles, but two, or perhaps three, of them are such as in England would be designated as "feeble-minded" rather than imbecile.

Females.

1. An infant seven months old, wasted and premature; admitted with the mother to the institution.

2. A girl aged six, evidently an idiot; no previous history stated or recorded; no use of limbs.

3. and 4. Two sisters, the one aged eleven and the other aged nine. Neither of them was markedly deficient. Their education was imperfect, but from what was said this was evidently due to their not having been made to attend school. They were both admitted from the Albany Orphan Asylum. Their admission seemed to be due more to neglect and destitution than to imbecility.

5. A girl aged twenty-three, rescued by the Salvation Army. Her early history was not known. A more recent history is that of having borne an illegitimate child. She was weak and confused. The diagnosis of her condition was very doubtful; it might be a mild imbecility, but to us it appeared more suggestive of imperfect recovery from an attack of insanity.

6. A girl aged twenty-four, received from Newark; an imbecile; was excitable and a temporary. She was transferred from Newark because she was too bad for management there.

7. A woman over twenty years of age, described as an idio-imbecile.

8. A woman upwards of thirty years of age; a low grade imbecile transferred from Syracuse.

9. A girl of eighteen years, a low grade imbecile with no power of speech.

10. A woman aged twenty-five, an idiot.

The buildings both of the institution proper and of the farm, though devoid of ornament or any particular architectural beauty, appeared to us to be constructed with a commendable regard to economy as well as suitability for their objects, and we annex some views of them.

Form of Request for Admission to the Rome State Custodial Asylum.

According to the form prescribed by the board of managers of the Rome State Custodial Asylum, October 28, 1895.

To the Superintendent of the Rome State Custodial Asylum :

I hereby request that————————who is idiotic or mentally deficient and resides in town of————————in the county of————————in the State of New York, be admitted as an inmate to said asylum.

Dated the————day of————————190

(To be signed by the applicant.)

Superintendent of Poor————————County.

Statement.

(The family physician, parents or superintendent of poor are requested to state the facts called for below to the best of their knowledge and belief. If any particular is unknown the fact should be stated.)

1. Age————years; sex————; civil condition————; color————; occupation————; religion————; nativity of father————; of mother————education————none; ————reads.

2. When was mental peculiarity first noticed ?———————————————————

3. What is the bodily condition of patient ? (If there is any deformity of body or limbs, so state.)

4. Is there any defect of the special senses ? (If so, describe it.)

5. Is the patient subject to epilepsy ? (If so, state frequency of attacks.)

6. Is the patient violent, dangerous, destructive, irritable or passionate ? (If so, give nstances.)

7. Was the patient ever an inmate of an asylum or hospital for the insane ? (If so, was patient discharged as recovered, improved or unimproved, and when did such discharge take place ?)

8. Is the patient cleanly or otherwise in dress and personal habits ?

9. Has the patient any morbid habit ? (If so, describe it.)

10. Is the patient addicted to the use of tobacco or narcotic drugs of any kind ? (If so, state to what extent.)

11. What is supposed cause of present mental condition ?

12. Is there any history of insanity, epilepsy, chorea, or defects of vision, hearing or speech, or any nervous affection in the family of father or mother ? (If so, describe.)

13. How many brothers and sisters has the patient had ?

14. Was there any bodily deformity or mental deficiency in the other children ? (If so describe.)

15. Other facts indicating idiocy or mental deficiency ? (State if there has been any change in the patient's mental condition.)

16. Name of parents or nearest relative.

17. Residence and post office address.

ROME STATE CUSTODIAL ASYLUM.—FORM OF COMMITMENT OF PATIENT.

According to this form prescribed by the board of managers of the Rome State Custodial Asylum, October 28, 1895, and by resolution of said board on that date ordered to go into effect immediately, under authority of chapter 59 of the Laws of 1895, as amended by chapter 437 of the Laws of 1897.

I hereby commit———————————————who is a legal resident of this county and in indigent circumstances, to the Rome State Custodial Asylum for care and treatment.

It is understood by the superintendent of poor making this commitment that if the person named in this commitment should, after a fair trial, prove to be an improper subject for care and treatment at the asylum by reason of insanity, epilepsy or other disqualifying circumstances or conditions, the said———————shall be promptly removed at the request of the officers of the asylum without cost to the managers thereof.

Superintendent of Poor———————County.

NEWARK STATE CUSTODIAL ASYLUM FOR FEEBLE-MINDED WOMEN, ESTABLISHED AS AN OFFSHOOT OF SYRACUSE IN 1878: A SEPARATE INSTITUTION SINCE 1886.

Visited by all the Commissioners on 21st October, 1905.

The Board of Managers consists of nine persons, three to be women, nominated by the Governor of the State with full control; the superintendent is their chief executive officer.

There are about 600 inmates.

The institution covers 42 acres of land.

Value of land and buildings, £25,000; cost of equipment, £6,000; viz., about £53 per head.

Weekly cost of maintenance, 9s. 6d., but allowing for work, 9s. per head.

The Asylum is designed for feeble-minded women of child-bearing age, whose mental, moral, and physical condition can be improved in the institution, as appears from the following circular issued to Superintendents of the Poor, etc.

CIRCULAR.

The objects and purposes of the Custodial Asylum are EXCLUSIVELY for the enforced custody and protection during the *child-bearing age*, of feeble-minded women of such physical development as to be capable of becoming mothers, who are indigent residents of this State.

The Institution is supported by the State, except transportation and funeral expenses, in event of death, which must be borne by the county whence they come. It is not a school, in an educational sense, but conducted as a well regulated home, with special regard to training in all household duties and industries, the cultivation of habits of cleanliness, propriety, physical culture, music, vocalisation and self-reliance. A school department is maintained for such as are teachable and of school age.

Applications for admission must be made by or with the concurrence of the Superintendent of the Poor of the county of which the applicant is a legal resident, and must be accompanied by a description of applicant in conformity with blanks furnished for that purpose, and should be directed to the undersigned, who will refer the same to the Committee on Admissions. If a proper case, the applicant will be admitted at the pleasure of the Superintendent of Poor, provided a vacancy exists and she is accompanied by a written order of commitment by the said Superintendent of Poor, as per form furnished, who must also remove inmate on our notice, if for any reason she becomes disqualified. He may also remove on his own election without cause.

This institution is not an asylum for the aged infirm, for juvenile offenders, the reformatory class, the helpless invalid, the cripple, the insane, or the "mildly insane." Any case not clearly a proper subject for CUSTODIAL care, within the meaning of the first paragraph above, will be discharged as soon as her ineligibility is discovered.

Friends or relatives who desire to remove inmates must consult the Superintendent of Poor of the county of which said inmate is a legal resident, and secure his order in writing for such removal. This is all that is required.

All inquiries concerning the admission of inmates or the Institution will be promptly answered. For application blanks, circulars, or for any other information not herein contained, address,

C. W. WINSPEAR, *Superintendent*,
Newark, Wayne County, New York.

Forms of application are printed below:—

STATE CUSTODIAL ASYLUM FOR FEEBLE-MINDED WOMEN, NEWARK, WAYNE COUNTY, N.Y.

C. W. WINSPEAR, ESQ., *Superintendent:*

It is hereby requested that————————————whose preliminary application for admission to your institution has been accepted by your Board of Managers, and upon which I hereby commit her to your institution, be received into the same as a feeble-minded person, eligible to protective care of such asylum.

The said————————————is a feeble-minded person as stated in said preliminary application, is now a legal resident of————————in the County of———— and is in indigent circumstances, and, as near as can be ascertained, of the age of————years.

It is understood by the Superintendent of the Poor making this request, that if the person whose admission is thus sought should prove to be an improper subject for care and training at the Asylum, by reason of insanity, epilepsy, or other disqualifying circumstances or condition, she shall be removed promptly, at request of the officers of the Institution, without cost to the Managers thereof; and further, that in case of her death, her funeral expenses shall be paid by the County from which she comes.

Dated this———————day of———————————190

Committee on Admission———————————————————

Supt. of the Poor for———————— ——*County.*

DESCRIPTION OF PERSON FOR WHOM ADMISSION IS DESIRED AT THE STATE CUSTODIAL ASYLUM FOR FEEBLE-MINDED WOMEN, NEWARK, WAYNE COUNTY, N.Y.

Every question must be answered as minutely as possible by some one acquainted with the applicant for admission to the asylum. The application should then be transmitted to the asylum for consideration of the proper authorities.

[Here follow 37 questions as to the birth, condition, and mental and physical health history of the candidate.]

Dated———————————————190 (Signed) ———————————————

Supt. of Poor, County of—— ——————

Questions relating to family history to be answered by a physician acquainted with the case.

38.	Is the case congenital ?	38. ————————————————
39.	Has she insane or criminal tendencies ?	39. ————————————————
40.	Has there been cases of idiocy, insanity or criminality in the family to which she belongs ?	40. ————————————————
41.	Were the father and mother related ?	41. ————————————————
42.	Are both parents temperate ?	42. ————————————————
43.	Has she any physical ailment or disability ? If so, is the condition chronic ?	43. ————————————————

IMPORTANT.—The physician will please note any circumstances that throw light upon the history of the case, its supposed cause, etc., and will certify whether or not the case is feeble-minded.

Dated———————————————190 (Signed) ———————————————M B

Mr. Winspear, the superintendent, received us. He is not a doctor, but the general superintendent or steward, of the institution, taking evidently a special interest in all matters connected with the building and management of the establishment. He is assisted in medical respects by Miss Warnecke, a qualified doctor.

Mr. Winspear explained to us with emphasis that the whole object of the institution was to detain women of a child-bearing age, in order to prevent the propagation of persons of feeble mind, with its attendant evils to the community. He said that 50 per cent. were receptions on direct applications from relatives, which applications must be made through the Superintendent of the Poor. Another 25 per cent. were women who had been brought before a magistrate on some charge and, without being convicted by him, had been sent to the asylum as a proper place for their detention. Another 25 per cent. had been received from almshouses on the application of Superintendents of the Poor, who considered that the almshouses were not proper places for their care. A very small number (never reaching

5 per cent.) were received from the Hudson Reformatory for women, by suspension of the sentences arranged by the managers of that institution, or from Syracuse or other institutions, to which they had been sent without order of commitment, if the managers considered that Newark was a more suitable place. It will be seen, therefore, that a feeble-minded woman can be transferred from prison to Newark and detained there after the expiry of her sentence.

The average age at the time of application was something under twenty. The rule was that women must be of child-bearing age, which was usually sixteen to forty-five, the lower limit being occasionally reduced to thirteen and in a few cases the higher limit being raised. The medical officer said that 75 per cent. of the women received had had illegitimate children.

There is no legal power whatever of detaining the women sent to the asylum. In practice, however, no difficulty was found in keeping them as long as the superintendent wished. The requests of relatives for the release of inmates were often refused, but the dispute had never been carried into the law courts. About eight or ten per annum were returned to their friends. In the superintendent's opinion none of these did well, and it was desirable that these releases should be restricted as much as possible.

The grounds of the institution were entirely open, and there was nothing to prevent the escape of the inmates, if they wished. Two had escaped in the last twelve years, and in the same period there had been twelve attempted escapes and recaptures.

The inmates were divided theoretically into three classes, A., B., and C. which roughly represented an equal proportion of the total number, and were roughly based on the mental condition and tractability of the patients.

The object of the institution was very little directed towards the teaching or education of the inmates. There was only one trained teacher. However, those inmates who were able to work and who were working, were instructed in that direction. A number were taught sewing, and it was stated that 25 per cent. of them were capable of using the sewing and knitting machines. All the clothing of the institution is made in it, with the exception of the boots. Some of the patients were employed in the laundry. A sufficient number of inmates were employed in the bakery under the supervision of one woman to carry out all the baking for the establishment. There were seventy-five paid assistants of all description for the 600 inmates.

Although the cost of maintenance was remarkably low, the utmost economy was not aimed at. The inmates were allowed to work for themselves after the completion of what was considered their daily work, and they were allowed to sell, through their friends, any work performed in this time, but they did not receive any gratuity or other payment for their work in the institution. The superintendent thought that it was very undesirable either to press them to work hard or to devote any special attention to arranging lucrative work, as, for instance, laundry work for hotels or private families. He thought that it was important to cultivate three sentiments, and his managers had agreed with this policy for many years. First, that the women should be made happy by thinking that they were working for themselves by working for the institution which maintained them; secondly, that it was undesirable that people outside should think that the women were kept to penally hard work, as it would diminish the willingness to enter the establishment; and thirdly, even if he wished it, it would be difficult to carry out lucrative work, in view of the opposition from trade unionists and politicians.

The buildings of the institution, of which we annex some views, are appropriate and economical.

Newark State Custodial Asylum for Feeble-Minded Women.

Cottage at Newark Custodial Asylum.—£70 a Bed per Inmate.

Main Buildings of the New York State Custodial Asylum for Feeble-minded Women, Newark, N.Y.

A specially interesting feature is the cottages, which are separated from the main block and are of more recent construction. They appeared to be admirably suited to their purpose, having much more complete accommodation than is usually provided in such annexes, and having been constructed at an astonishingly low cost. One cottage which we visited was for forty-five inmates, in charge of one matron, two attendants, a cook, and a night watch. The inmates had commodious and separate day rooms and dining rooms, dormitories, complete sanitary arrangements, lockers, and drying

rooms for their clothes, with ample space in the basement and in the roof for storage or occasional use.

We were very much impressed with the cooking arrangements, which had been in use for many years but were remarkably simple, convenient and economical. In addition to the kitchener the cottage was provided with boilers for making tea, coffee, stews and cooking vegetables. They were heated by steam pipes from the central boilers. The *per capita* cost of the building of this cottage, based on the number of inmates and omitting the attendants, had been $375.00 (£75). We annex a view of this handsome and economical building. The superintendent stated that if it could have been built at the prices prevalent nine years ago, it would only have cost $240.00 (£50). We also saw a newer and larger cottage, which contained only sixty inmates, but had ample room for eighty. This cottage had cost £5,200, and although in appearance somewhat simpler than the smaller cottage, it was at least equally commodious, both for the inmates and for the attendants. In both cottages it was noticeable that, notwithstanding the economy of construction, the officers were particularly well provided for, there being a matron's room, and a large and prettily decorated drawing room for her use and the attendants'.

It should be mentioned that the cooking apparatus in the central block was equally convenient and economical in operation as that in the cottages, a similar plant being here also supplied from a central boiler.

The absence of constraint and control all over the institution was remarkable. The women seemed very happy and contented with their lot and as in the other institutions we saw, mutually helpful and affectionate. Although separated indoors into the classes A., B. and C., as above mentioned, they all mixed outside in what they called the park, which was a large garden planted with trees. No objectionable results had been found to arise from this association.

Of the 600 cases under detention, about half were decidedly imbecile or idiotic, the other half being high grade imbeciles or young women whose defect was so slight that on casual observation it would not be evident. The latter half contained nearly 200 cases whose mental disorder was so slight that in England they would not be legally recognised as mentally defective and would certainly not be detained in any existing institution. Among these we had pointed out to us several who on account of their defect were nymphomaniacs, and others in whom a hot temper and an excitable disposition were the conspicuous features. Practically all this class could converse reasonably, were educated or educable; but on close inspection and more especially after prolonged observation, they showed some distinct, though perhaps small, sign of defect. We were struck in recognising in some of these high grade cases characters similar to those which are frequently observed in English and Scottish prisons and inebriate reformatories; but many of them were not so degraded as some of the female inmates of the latter institutions.

The cases were primarily classified into lower grades and higher grades, and the latter into a younger and an older group. This classification, however, was not strictly adhered to, high grade cases being put into the departments for the low grade cases, most of them to assist the attendants, a task apparently grateful to the inmate and economical in result.

The previous history of the inmates, whether it indicated a moral or immoral life, was not taken into account in determining into which class the patient should be placed. The so-called "moral imbeciles" were not classed by themselves, the experience of the institution having shown that those cases with immoral tendencies are better treated and easier dealt with if mixed with the others rather than being classed by themselves. In discussing the high grade cases with us, the medical officer expressed her decided opinion that in none of them was there any chance whatever of their being able properly to care and protect themselves outside of the institution.

Even years of institutional care and treatment could not fit them for a free and independent life, and she, therefore, strongly advocated permanent detention. The superintendent stated emphatically that the detention illustrated by the Newark institution was not only approved by American medical and governmental opinion, but by the vast bulk of the people. This feature, of course, constituted in our eyes the most important lesson to be derived at Newark.

The large class of women of greater or less degree of mental defect, who in our country pass in and out of prisons, inebriate reformatories, asylums, and charitable institutions, and who in their intervals of freedom are a source of misery to their relatives and scandal to the community—not to mention more serious social dangers—seem to be dealt with at Newark in a manner which benefits themselves, satisfies the humane instincts of the community and is reconcilable with strict economy.

The Craig Colony for Epileptics.

Visited by all the Commissioners on the 26th October, 1905.

This institution was opened in 1896 "to secure the humane curative and economical care and treatment of sane epileptics."

Three Commissioners of the State Board of Charities, under powers conferred by a law of 1893, selected as a suitable site for an epileptic colony the extensive (1,900 acres) and beautiful estate of Sonyea, formerly belonging to the Shaker community, which, together with large buildings already on the land, was bought for £23,000.

Twelve managers nominated by the governor were empowered to get the estate and buildings into condition to receive patients gradually, and to educate and use the labour of colonists for labour on the land and new buildings. The superintendent was to be a doctor and chief executive officer.

"There shall be received and gratuitously supported in the colony epileptics residing in the State, who, if of age, are unable, or, if under age, whose parents or guardians are unable, to provide for their support." These are State patients.

Paying patients may also be received. Children are received in the colony upon the written request of persons desiring to send them, accompanied by a statement as to how much they can pay.

In case of State patients the application must be verified by the affidavits of the petitioner and of two disinterested persons and the opinion of a qualified doctor, all neighbours, and must be certified to be credible by the county judge or surrogate of the county, who must also certify that the patient is a proper and suitable candidate.

The forms in use are annexed.

Superintendents of the poor, etc., may make application as well as relatives.

All Poor Law authorities have every year to send to the State Board of Charities a list of all epileptics and of their condition on a prescribed form.

It is their duty to send to the colony all epileptics who become chargeable or whose health morals, or comfort are not properly provided for,

the poorer being always preferred to the richer. If they do not become State patients the Poor Law authorities must pay for them and recover from the relatives. For each State patient the State pays £50 per annum, and the poor law authority of the district £6 for clothing. State patients are assigned to each county in the ratio of its dependent epileptic population. Private patients pay as per agreement.

The superintendent has full power of discharge, but no patient may be discharged directly or indirectly to any workhouse or almshouse.

Patients becoming insane are certified and sent to asylums.

The managers employ an agent to collect contributions from parents who can pay: these are about 1 per cent.

They supply all Poor Law authorities with forms of application for admission.

INFORMATION RELATIVE TO THE MAKING OF COMMITMENT PAPERS AND THE ADMISSION OF PATIENTS TO THE CRAIG COLONY FOR EPILEPTICS, AT SONYEA, LIVINGSTON, CO., N.Y.

The paper to which this is attached is the regular application paper for admission of a patient to the Colony. The first and second pages must be filled and signed by a physician in the manner prescribed thereon, while the third must be signed by the Superintendent of the Poor of the county in which the patient resides.

Attention is respectfully called to the following resolutions:

No. 1.

"WHEREAS, Chap. 358, Laws 1898, provides that the Managers of the Colony shall fix the condition of admission, treatment, support, custody, discipline, and discharge of patients, be it therefore

RESOLVED:

That the Colony is not in condition at the present time for the reception of bed-ridden, helpless, or idiotic cases, and it cannot receive such cases until especial provision has been made for such classes on the Colony premises."

No. 2.

"WHEREAS, It appears that patients are frequently brought to the Colony in conditions of extreme uncleanliness, and

WHEREAS, In order to protect the Colony against the introduction of communicable diseases and other evils dependent upon uncleanliness of body and clothing, be it therefore

RESOLVED:

That no patient shall be received at the Colony who is not in a state of body cleanliness and who is not clothed, at the time of admission, with clean and suitable clothing; and that the Superintendent of the Colony, or his representative, be and is hereby empowered and directed to refuse to receive into the Colony any patient whose bodily condition or clothing is in violation of the requirements of this regulation."

(Section 1. Subdivision 5, Chapter 359, Laws, 1898.)

The foregoing resolutions were adopted by the Executive Committee of the Board of Managers of the Craig Colony for Epileptics at meeting held at the Colony on the respective dates of December 13, 1898, and September 13, 1898.

1. All clothing should be clean and appropriate to the season.

2. The body of the patient must be clean and free from vermin, and to insure such cleanliness the patient should have a bath immediately before being brought to the Colony.

3. Patients suffering from communicable diseases, such as smallpox, measles, scarlet fever, or diphtheria will not be received.

WILLIAM P. SPRATLING, M.D.,
Medical Superintendent.

CRAIG COLONY FOR EPILEPTICS.—CIRCULAR OF INFORMATION REQUIRED IN REGARD TO APPLICANTS FOR ADMISSION.

Sonyea, Livingston County, N.Y.

This blank may be obtained free on application to Superintendent of Craig Colony.

It is requested that the blank be accurately filled out and all information given that will be useful in the treatment and care of each case.

CRAIG COLONY FOR EPILEPTICS.—APPLICATION OF COUNTY SUPERINTENDENT OF THE POOR, OR OF THE POOR AUTHORITIES OF ANY CITY.

To the Board of Managers of Craig Colony:

The undersigned, a———————————————————————
———————————of———————————————County, State of New York,———
hereby makes application for the admission to the Craig Colony for Epileptics of———————
———————————————————————————————————
an epileptic, aged———————————years, born in———————————, residing
in———————————————and an indigent.

The name and address of the nearest friend or relative is———————————————
———————————————————————————————————
who is related as———————————————————————to the patient
Telegraphic address of friend or relative———————————————————

I hereby certify that I have personally examined and carefully inquired into the legal residence and financial condition of this person, and I further certify that such person is a citizen of this State and a resident of this county, in indigent circumstances, and, in my opinion, a proper patient for Craig Colony.

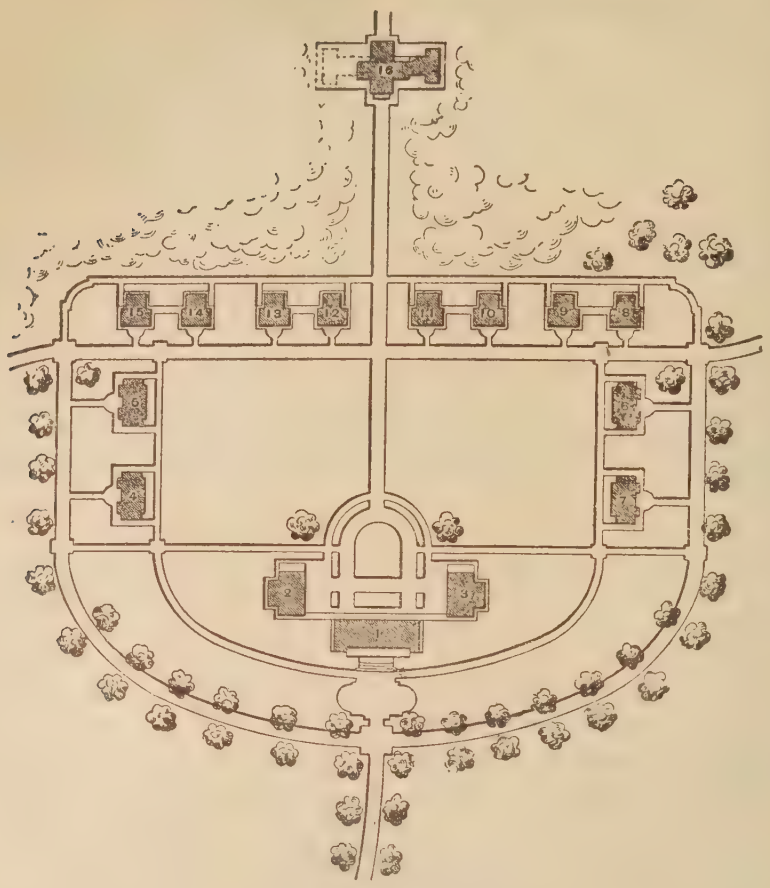
Date———————————

The following plans show the nature and arrangement of the women's cottages.



GROUND PLAN OF A GROUP OF COTTAGES FOR 400 WOMEN AT THE CRAIG COLONY FOR EPILEPTICS, SONYEA, N.Y.

Building No. 1 is for medical officers and assistants who have the immediate supervision of the group. Cottages 2 and 3 are for children, each cottage having a capacity of from thirty to forty. Each cottage is complete in itself, with school-rooms, playrooms, kindergarten rooms, rain-bath, etc. Cottages 4, 5, 6, and 7 accommodate thirty adult women each, of the middle class. Cottages 8, 9, 10, 11, 12, 13, 14, and 15 are for women of the first class, each cottage accommodating sixteen to eighteen patients. Building No. 16 is an infirmary for crippled, bed-ridden, and helpless cases. The patients of Class One live in the eight small cottages, those of Class Two in all other cottages, with the exception of the infirmary, which is occupied by Class Three. The entire group of sixteen buildings is heated by steam from a central plant in building No. 1. The buildings are all two storeys high. They are constructed of brick and painted white, with red roofs. The style of architecture is Spanish. The main building is called the Villa Flora, and all the other cottages bear the name of some plant, tree, or flower, the purpose being to plant about each one shrubs or flowers that have reference to the name of the cottage.

The cottages are quite independent except in regard to the central steam heating and lighting, and central laundry and bakery. One man and a woman cook control each male cottage.

Four large cottages, four medium size, and four small ones built eight years ago cost £20,000, about £80 per inmate. To-day they would cost at least £100. The steward thought that an institution built on the cottage system, but complete with administrative blocks, etc., would now cost nearly £120 a head. The estimate which the managers have submitted to the legislature this year for dormitories (cottages) for 250 new colonists, including heating, plumbing, lighting and furnishing is £100 a head. The managers regard day labour under their own supervision as vastly more economical than contract construction.

The net *per capita* cost of maintenance last year was 11s. 6d. a week; the gross cost about 14s. Interest on capital charges might bring the total net charge to 14s. a week.

Although the colony is not yet ten years old and has been rapidly developing all the time, it is a very interesting and instructive example of a fairly complete epileptic colony, which will, in the opinion of its officers, eventually have to grow to a size sufficient for the purposes of a State having some 14,000 epileptics.

Farm.—Very large; 100 cattle; 20 horses; 250 pigs; dairy; 300 sheep; 150,000 quarts of milk annually.

Gardens.—From thirty to sixty patients employed.

Value of products of farm, garden and dairy - -	£5,262
Cost of production - - - - - - -	£2,868
Net proceeds - - - -	£2,394

Laundry.—Does the whole work of the institution, 19,000 pieces a week. Two paid men and six paid women; thirty inmates.

Brickfield.—Employs two paid men and twenty-eight colonists at a profit to the State of £400 or £500 per annum. Bricks are sold as well as used.

Workshops and Trade School Building.—Paint shop, blacksmiths' shop, plumbers', carpenters' and lumber and repair room; a printing office and bakery. One paid man at the head of each directing five to ten inmates.

Sewing Room.—Forty women employed; they do the whole work of making and repairing clothes for the female and much for the male inmates.

School.—Sloyd school for boys and elementary schools for 68 of the younger female patients. The boys receive no elementary instruction.

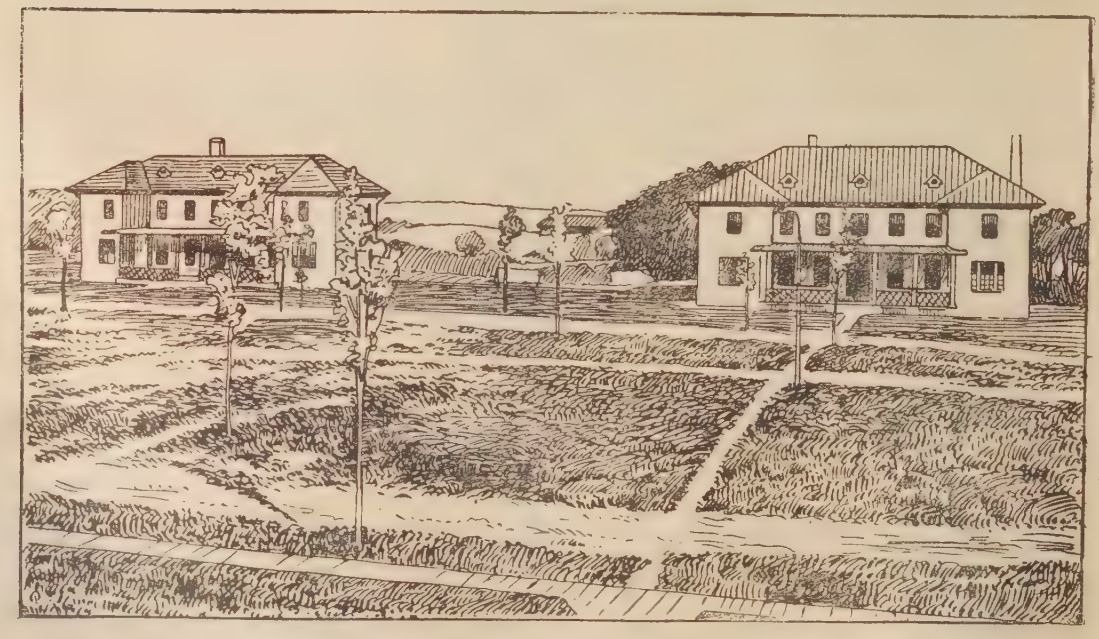
A stream flows through the centre of the estate roughly dividing the male from the female patients. There are 640 acres of forest, 100 acres of garden, 135 acres of good brick clay from which 500,000 bricks are made annually; 400 acres of rich alluvium in the valley land, the rest mostly clay.

The numbers when the colony was visited by all the Commissioners on 24th October were 850; the site would permit of almost indefinite increase; the estimated number for this year is 1,050.

There are seven medical assistants, including one lady, and a steward with practical control over the financial and business side of the colony. Total number of employees, 165. One night watchman is considered sufficient to attend to four cottages. If a patient has a fit at night, the other patients attend to him. We did not hear of any accidents at night.

The Shaker Colony buildings are still in use; they are fifty years old, and not particularly suited for their present purposes; but the bulk of the colonists live in separate cottages containing from sixteen to forty-eight persons.

One of Eight Cottages for the best class of Female Patients; Sixteen to Eighteen Persons living in each Cottage.



Types of Cottages on the Village Green, Twenty-Eight Men of the better class living in each Cottage. When completed, there will be Twenty-two buildings like these on the Village Green.

The original intention was, we were informed, that the treatment should aim at cure in the majority of cases, though the superintendent regrets that the disease is, as a rule, chronic before admission, which endangers and postpones good results.

Nearly the whole of the admissions have been at ages between ten and forty, equally divided between the groups ten to twenty, and twenty to forty; there is a known heredity of epilepsy, alcohol, insanity, or tuberculosis in 56 per cent. of the cases.

The patients cannot be detained against their will; 90 per cent. stay willingly, and those unfit for freedom are generally persuaded to remain.

There is an excellent hospital, operating room, therapeutic baths, examination room, medical library, and record room, and a research laboratory for which the State gives £500 per annum.

There is an Employees' and a Colonists' Club managed by inmates, a Roman Catholic Church, and Protestant Church—the latter used as assembly room.

A remarkably economical and picturesque pavilion for contagious diseases, containing 16 beds, is shown in this illustration.

A mile from Sonyea Hall and on the Bluff overlooking the picturesque Kishaqua, is this little Pavilion for Contagious Diseases. Cost complete, £500. Capacity, 16 Beds.

The patients are classified into two groups, the one sane or nearly sane, the other, the feeble-minded. The former are housed in the cottages, the latter in infirmaries. Among the former very few—the doctor informed us—could be regarded as really sane, although the Colony was supposed to be for such cases, and some, in addition to being epileptic, are distinctly feeble-minded or demented. Among the latter there are gross cases of imbecility, of dementia, and idiocy. The Report of the managers deprecates the treatment of idiots by the colony system, and advocates their detention in single large buildings separate from the cottages and removed from the ordinary free life of the colony.

The treatment of those in the cottages seemed to be quite good, but the same cannot be said for those in the infirmaries. The infirmaries were to all intents and purposes idiot asylums, where the attendance and nursing were insufficient. The wards were dirty and smelling. The inmates were ill-cared for. A considerable number, especially on the male side, were in straight jackets. The patients were seldom, if ever, taken outside for airing. There was turmoil and cross talking. Of 850 inmates in the institution, about 120 were in the infirmary blocks, and an increase of that number was expected.

In the infirmary blocks there were some so-called single rooms. These were practically prison cells, without furniture, and with a grating at the door for observation. These seemed to be used both for punishment and for the convenience of attendants, patients being shut in there often without the cognisance of the medical officers. We ascertained that the attendants habitually ordered the use of the straight jacket without medical authority. Upon commenting upon these facts to a member of the medical staff, we ascertained that the staff was painfully aware of this and desired better, but were, by reasons of economy, unable to procure it.

In addition to the two main classes, the cottages and the infirmaries, there were also a few inmates in an institution hospital, which was very well equipped. There were a considerable number of old men in a special house and a considerable number of small boys in another.

The buildings in many cases, especially the older ones, were in a state of dilapidation. The doorsteps were broken down, plaster was coming off the walls, floors were loose, and so forth. The reason for this was delay in supply of funds for purposes of repair.

The Houses of Refuge and Reformatories for Women at Albion and Bedford.

The latter visited on November 21st, 1905, by Mr. Byrne and Dr. Donkin.

These Houses were opened in 1893 and 1902 respectively.

They receive reformable women between fifteen and thirty, convicted of prostitution, inebriety or petty or first offences and committed by magistrates on indeterminate sentences not exceeding three years.

Women may be conditionally discharged at any time and re-arrested, if necessary. If feeble-minded, they may be transferred to Newark.

They may earn compensation for their labour and keep the balance over 8s. a week.

The average age of conviction is about twenty-one.

The Albion House of Refuge accommodates 140, and has 97 acres of land. The value of the land and buildings is £28,000 and the cost of equipment was £2,000. The weekly maintenance per head costs 20s. 6d., but including proceeds of work, this is reduced to 20s.

The Bedford House actually contains 227, but has proper accommodation for not more than 200; it has 107 acres of land. The cost of the land and buildings was £66,000, of the equipment £5,000. The *per capita* maintenance costs 18s. 6d. weekly; but including work, only 18s.

The reformatory methods used both in instruction and discipline seemed well adapted to the object and of unusual refinement, and are apparently to a considerable extent successful, though applied to unpromising material.

The superintendent, a highly intelligent and cultivated lady, informed us that about 5 per cent. of the women admitted were obviously imbecile, and another 5 per cent. so feeble-minded as to render most forms of instruction almost useless, and permanent detention necessary for their own sake

and that of others. Her experience led her to believe that there was always to be found a percentage of women of abnormal mind and character on whom reformatory efforts were wasted. For the control of these and the benefit of the others she felt the want of a disciplinary building.

About half the women were high grade; these lived in the cottages, the middle grade about [30 per cent.] and the low grade [20 per cent.] in separate reception blocks. The chief work was laundry, sewing, simple embroidery, cooking, hat and basket making, and paper box and stout envelope making, gardening, painting, decorating and ornamental floor laying, grading and trenching. Two or three learn typewriting and shorthand. A fair amount of school teaching is done, and a good deal of gymnastics, dancing and singing.

During the year eighty-six women were on parole: Six had to be returned to the reformatory for drinking and other offences. Seven broke parole and absconded.

After the expiry of the probation period, there were but little means of keeping in touch with the discharged women.

Girls Grading the Embankment in front of the Administration Building, New York State Reformatory for Women, Bedford.

The Hudson State Training School for Girls.

The school was visited on 17th October, 1905, by Mr. Byrne, Dr. Donkin, and Mrs. Pinsent.

It was first established in 1881 as a reformatory for women aged fifteen to thirty convicted of prostitution and petty offences, and not insane, but to some extent capable of reformatory discipline. It was altered in 1904 to a training school for girls, not over sixteen, committed as vagrants, disorderly, or criminals on indeterminate sentences.

It is under six managers appointed by the Governor and a lady doctor.

Magistrates may commit any girl not over sixteen who frequents houses of prostitution or assignation, or the company of thieves or prostitutes, or vicious and dissolute persons, or is in danger of depravation or is disobedient to parents or guardians, or is intemperate or a vagrant, and is not insane nor incapable of being substantially benefited.

The managers may discharge girls on parole at any time and cannot keep them beyond eighteen.

Moral reformation and the teaching of useful trades are aimed at; the girls may earn a peculium and receive clothes and a gratuity on leaving. They may keep the balance of their earnings over 8s. a week. Laundry, domestic work, and sewing are the chief occupations.

The institution is a collection of handsome buildings on a site giving magnificent views over the Hudson and the Catskills.

It is on the cottage system, there being seven three-storey brickbuilt, self-contained cottages. Originally the institution was built for older women who might be committed under thirty years of age for three years. There are sixty cases of this description still in the establishment, but only juveniles are now admitted, the cottage system enabling proper segregation to be carried out. There are at present only 238 inmates, although the amount of space, size of buildings, and the number of the staff seem to be sufficient to provide for double the number. The accommodation is unnecessarily luxurious, the bedrooms and recreation rooms being far better than those of many English private schools for the upper and middle classes. The *per capita* weekly cost is 23s. 3d., paid wholly by the State.

The superintendent and resident medical officer are both lady doctors.

It is perhaps unfair to form a definite opinion as to the value of this institution, as it is so new; but if continued on the present lines, the expense seems out of all relation to the class of children received, and in all probability to the results which can be achieved. Probably the idea is to increase the number of inmates, but we understood from the superintendent that the various religious bodies have their own reformatories, to which by far the greater number of juvenile delinquents are sent. The State deals with only a small proportion. The superintendent believed that the various religious institutions were not able to give the children so great educational opportunities as afforded by the State. She believed that the results obtained in the New York State Training School for Girls were really satisfactory, but stated that they had at present no means of following up cases after the period of probation was over. Even during probation they were visited by the parole agent only two or three times a year, and had to write a formal monthly letter. Most of the girls were trained for domestic service and that she always had applications for more girls than she was able to provide. The cookery, laundry, and sewing schools seemed very satisfactory. The household work of the cottages is done by the inmates, each cottage having its own matron (at a salary of £8 per month) and an under matron (at a salary of £5 per month).

With regard to the feeble-minded the superintendent said that a large number were sent to her from the courts who were probably not recognised as feeble-minded until they had been for some time in the institution. She said that they had generally from fifteen to thirty such cases out of the 200 odd inmates. When possible, these feeble-minded girls are sent to the institution at Newark; but it often happens that there is no vacancy there, in which case she considers it better to keep them in the training school than to return them to their homes.

We have not appended any illustration of this institution as we should not be prepared to advise the housing of reformatory girls, whether feeble-minded or not, in such luxurious premises.

The New York City School for the Feeble-Minded and Custodial Asylum, on Randall's Island.

Visited by Mrs. Pinsent, Mr. Dickinson, and Dr. Dunlop, on October 11th, 1905.

Mrs. M. C. Dunphy, the superintendent, very kindly showed the Commissioners around. They first visited the schools and saw four grades in classes, the general system being very similar to that used in London. The number is over 500.

The children have about four hours per day in class, which also included the physical training. Then they have four hours of manual and industrial training. They all sleep in dormitories placed immediately over the class-room. The sexes are entirely separate.

They next visited the Kindergarten Department, where the smaller children are taught. In this department the two sexes are taught together but are separated at play and in their dormitories.

In the gymnasium they saw the classes go through their physical exercises. Each child has at least one hour twice a week, and in addition to marching, dancing and calisthenics special exercises have been arranged for the nervous and paralytic which are stated to be of great utility. While here the Commissioners heard the institution's brass band, the musicians being composed of the feeble-minded boys, ranging in ages from fourteen to nineteen. This is considered a great means of improvement as well as recreation, and it made a lasting impression on the visitors.

In the "Industrial Department" they found the following industries:—

Tailoring.—All the inmates' clothes are made here by five paid women and inmates, who are estimated to do two-thirds of the work.

Basket Shop.—The basketmaking and chair caning for all the City institutions is done here.

Tinsmiths' Shop.—Many things are made here for the use of the institution.

Shoemaking.—New boot and shoes can be bought more economically from outside sources, but the whole of the repairs of the institution are done here.

Household and Laundry Work.—Done to a large extent by the lower grade girls.

They afterwards visited the custodial section for low grade imbeciles and idiots. Also the adult idiots, who were working outside as well as in the workshops. The total population is 305, of which 232 are feeble-minded, and 73 idiots.

This institution is supported by the State of New York, and itself forms

part of the charities organised and conducted by the Board of Public Charities.

There is no certification or power of compulsory detention.

The annexed statistical details have been furnished us through the courtesy of Mrs. Dunphy.

School for feeble-minded and custodial asylumn.

Males - - - - - - -	443
Females - - - - - -	290
	733

Of the number of male inmates 150 are employed in domestic and other work. To do the work performed by these inmates the services of hospital helpers would be required as follows:

> 12 Ward helpers; 1 helper in storehouse; 3 helpers in kitchen; 6 helpers to clean grounds; 11 helpers in industrial school. Total 33 helpers at $120·00 per annum each, $3960·00; annual *per capita* cost of maintenance, $117·96, $3,892·68, a total annual saving of £1.570.

Of the number of female inmates, ninety are employed in domestic and other work. To do the same work performed by these inmates the services of seamstresses and hospital helpers would be required as follows:

> 5 Seamstresses at $204·00 per annum each $1,020·00; 13 hospital helpers at $120· per annum each, $1,560·00; Total 18. Annual *per capita* cost of maintenance, $117·98, $2,123·28. Annual saving, £940. Grand total saving, £2,510.

It is difficult to determine the maintenance cost *per capita* of the feeble-minded children, as the figures of the adjoining children's hospitals and schools are given together, but it is evidently considerable, perhaps 18s. a week.

New York Almshouse, Blackwell's Island, New York, N.Y.

Visited by Mr. Byrne and Dr. Donkin, October 11th, 1905.

It is an enormous mass of buildings run very much on the lines of an ill-arranged English workhouse, and containing vagrants, paupers and committed drunkards and wastrels. In certain of the wards there were many senile dements and some imbeciles. We also saw a few cases of acute insanity. In the wards with the dements there were also some sane inmates.

The nursing staff is very small, there being but one day and one night nurse for each ward containing about sixty persons. Each nurse has the assistance of two inmates. The medical attention was of the slightest, and the casetaking was very imperfect. There was little of interest and nothing instructive to be seen: the inmates drifted in and out, mostly for very short periods, and were put to work, and fed, and discharged with the minimum of attention or expense.

The dements came some by direct order from the Commissioner of Charities' office and others from the Bellevue Hospital, mental and inebriate wards.

We had been informed that pretty generally the almshouses of the State gave shelter to many imbeciles, often in unsatisfactory conditions: this was a striking instance both of the fact and of the need for reform.

Albany Almshouse, Albany, N.Y.

Visited on 17th October, 1905, by Mr. Dickinson and Dr. Dunlop.

The almshouse consists mostly of old buildings and has accommodation for about 500. The inmates at the time of inspection numbered 246, three-fourths of whom were men and one-fourth women. The total staff, including the superintendent and the deputy superintendent numbered ten.

The superintendent informed us that about one-third of the inmates were distinctly feeble-minded, and our inspection quite corroborated that statement as we found a considerable number of senile dements, some imbeciles and some insane. Among the few patients we spoke to we found two low grade imbeciles, one of whom was a deaf mute, and two or three cases of secondary dementia. We saw one case of acute melancholia with delusions, and one case of paranoia. The deputy superintendent informed us that his insane were sent to asylums and any feeble-minded cases giving trouble to the State institutions; but he also stated that they had not had a transfer of an imbecile for more than five years. The almshouse is inspected by an inspector from the Board of Charities.

No children are admitted or detained in the almshouse, the city and county authorities sending them to two institutions, one Catholic and the other Protestant, assisted by the State.

So far as we could understand, there is no board of managers, the administration being in the hands of the superintendent, who has the practical direction of the institution. The salary of the superintendent is £500 per year, and that of the deputy superintendent £300.

There is farm land around the institution on which the inmates do a certain amount of work. The sane and insane inmates are not separated.

Good Shepherd Institution and Reformatory, Sisters of St. Vincent, Best Street, Buffalo, N.Y.

Visited by Mrs. Pinsent and Mr. Byrne on 23rd October, 1905.

It consists of three departments, one a home for rescuing fallen women, who are brought to it by friends, the clergy, or philanthropic persons. Secondly, a reformatory for girls between the ages of fifteen and thirty who are committed by magistrates for living in disorderly houses, etc. Thirdly, a protectory and establishment for young girls against whom as yet no charge is made, but who require custodial treatment and attention to save them from getting into trouble.

There are nearly fifty women of the first class. They are mostly of the poorest and most degraded sort, although one or two fashionable prostitutes sometimes find their way into the home.

In the reformatory department there are thirty-six, some of them quite young and none apparently as old as thirty. They are nearly all committed as prostitutes for six or twelve months. If they behave very well and show signs of reformation, they may be released on probation. The department has a probation officer, who visits their home and tries to help them upon discharge. The Sister Superior who took us around was unable to say how many were reformed by that department. They had no power of detention beyond the term of sentence, and she feared that reformations were very few. They were, however, occasionally brought about. Some of the better sort of women who were reformed were allowed to remain in the institution and its branches, as a sort of tertiary or lay sister. These took part in the work of the department, the laundry and the sewing shop where work of a lucrative character was done to help towards the support of the inmates. The thirty-six committed women were partially paid for by the usual contribution of 6s. per head per week from the Superintendent of the Poor of the county from which they came. They mostly came from the lowest parts of Rochester and Buffalo. The actual cost of maintenance and education of the inmates was very nearly 16s. per week. The remainder was made up by the private means of the Sisters and benefactions which they receive from religious and charitable sources and the proceeds of work.

There were altogether fifty-seven sisters in the establishment, which was large and well kept. Strong religious influences were brought to bear on the women, and their behaviour while in the institution was reported to us and seemed to be remarkably docile, quiet, and cheerful. There were comparatively few Sisters in charge of the different rooms and working departments, and it was no doubt the religious dress and surroundings which produced the quiet orderliness which was so noticeable.

Out of the thirty-six committed women and the fifty other adults, no less than forty-one were inebriates. The Sister Superior told us that at least three-quarters of them had one of the venereal diseases, some of them so badly that they had to be sent to the public hospital ; eight of them had been sent for this reason since last January. Of the thirty-six committed prostitutes nine were inebriates. Some of these had been back in the institution eight or ten times, and the Sister considered their committal for so short a time a farce. She considered that fully one-quarter of the total number were suffering from mental defect (if that phrase were taken as including moral defect) and quite unfit to be at large, and that they should be permanently kept, comfortably, but at work, in an institution. Few of the women escaped and all who did so had been recaptured. The numbers of women committed to them varied greatly, on account of the occasional activity but general inactivity of the police. On a recent occasion they had committed to them eighty women in one week.

They had had considerable difficulty in retaining some of the fallen women whom they had charitably received into their house, the keepers of saloons and disorderly houses being very anxious to get back these lucrative assets. These persons employed a low class of solicitor to take proceedings in respect to the detention of the women. The Sisters deemed it their duty on moral grounds to resist these attempts, but no less than eight had been released on *habeas corpus*. It was stated that the local Law Association had threatened to get the solicitor concerned struck off the rolls for putting the law in motion.

The protectory contained sixty-two young children, most of whom looked very happy and healthy; some of them were partly maintained by contributions from poor law authorities.

The statement of the Sister as to the number of incapables among the inmates was borne out by the fact that two or three, or possibly four, of the

thirty-six committed women (all of whom we saw) appeared even on a casual view to be mentally defective, and one of them seemed to be an absolute imbecile.

This was an interesting and characteristic instance of a difficult, thankless, and costly work of charity and reformation being carried out by philanthropic and religious persons, a feature which we encountered everywhere in the States. The work carried on at Buffalo was no doubt much more difficult than that exhibited by the same sisterhood at their fine institution at High Park, near Dublin, where the women were carefully selected as being quiet and reformable. But there was no perceptible difference in the order and discipline maintained apparently with equal ease. But here as in all other philanthropic and religious institutions there was no attempt at the systematic permanent detention and treatment of the Feeble-minded.

MASSACHUSETTS.

The laws of this State relating to defectives are most conveniently summarised by considering the jurisdiction of: I. The State Board of Insanity; II. The State Board of Charity; III. The State Board of Education.

I.—*The State Board of Insanity.*

The Governor appoints a Board of five persons, two at least of whom must be experts in insanity, unpaid, but receiving allowances for expenses. The board appoint a paid executive officer, an expert in insanity, who has a permanent staff.

The board controls and inspects seven State and two endowed lunatic asylums, one criminal lunatic asylum, and one State almshouse at the State Farm at Titicut, the Foxborough Hospital for Inebriates, the Palmer Hospital for Epileptics, the Waverley School for the Feeble-Minded, and the colony annexed thereto, the Baldwinville Hospital for Crippled and Epileptic Children, and the boarded-out insane poor.

The board reports annually as to the working of these institutions, their extension or modification, the appropriations which they require, it encourages, pays for, and reports on scientific and clinical work in these institutions, and sets out for the guidance of the legislature the best American and foreign methods of dealing with all classes of defectives. It prescribes the annual returns to be made, and the forms and certificates to be used; and approves all plans and specifications before buildings or extensions can be carried out.

It has practically unlimited powers of transfer from one institution to another provided that no person can be sent to an insane institution without compliance with the law as to commitment of insane persons.

It has full powers of visitation, investigation, and discharge, also of committal to asylums of any persons detained in any State institution.

The following information as to the law and practice in lunacy was given to us by Dr. Copp, the Secretary and executive officer of the Lunacy Board, whose friendly assistance was of great value to the Commission.

Lunatics are not distinguished and dealt with entirely separately from idiots and imbeciles as in New York. An idiot may be certified as a lunatic just as in England. The diversity in their treatment which largely exists in practice is due to historical causes. They have had hospitals for the insane for seventy-five years; they have had training schools for idiot and imbecile children for fifty years with custodial departments for some of those who proved to be permanently unfit for free life. Until quite recently harmless idiots and imbeciles were kept in the almshouses. In January, 1904, large numbers of them were taken out of the almshouses, those whose condition and habits made their continued existence there undesirable being certified as lunatics and sent to asylums. The residue—the clean and comfortable class—remain in the almshouses. Very few children, however, of this class remain, perhaps 200; the bulk are sent to the Waverley School or are in appropriate private establishments.

There are 10,000 insane in the State, 1,300 known feeble-minded, and a large residue of unknown. The Lunacy Board think this residue to be about another 1,300; other experts place it higher; Dr. Fernald, of the Waverley School, is inclined to think there are as many feeble-minded of all grades as there are of the insane. In the hospitals for the insane the proportion of cases of congenital mental deficiency is from $3\frac{1}{2}$ to 10 per cent.

The young children sent to the school for the feeble-minded are simply sent there by friends without any committal, or in low grade cases are committed by the Probate Court on the certificate of a physician; an adult imbecile would, like any other insane person, be committed by the judge of a city or district or police court on the certificate of two physicians.

Of the feeble-minded at large many find their way into prisons, reformatories, etc. Dr. Copp thought that 10 per cent. of the prisoners were feeble-minded, but that the greatest evil was the immorality of the women and the propagation of degenerate offspring, which was, unquestionably, an evil of considerable magnitude.

The special classes in Boston schools were bringing to light many defective cases, some of whom will receive a special education in the hope that they may be fit for freedom; others, for the sake of themselves and the community, must be dealt with custodially. This necessity is now generally recognised; and the State is ready to double the existing accommodation for them. Those who are merely backward can be cured—not so the lower grades; of the extreme cases 20 per cent. die young. Many are boarded out with relatives under supervision; but the class for whom this method is suitable is limited. The colony at Templeton is for those who leave the school when its training has left them still unable to live upon their own resources. This colony was a pioneer institution of which they have the highest hopes. It possessed practically unlimited land. A number of idiots and imbeciles were already quartered and working on it: buildings were springing up to meet their requirements as shown by daily practical experience, and better and more economical results were looked for than from any existing institution established in accordance with *à priori* theories.

II.—*The State Board of Charity.*

This Board, also appointed by the governor, has wide powers relating to hospitals, almshouses, charitable institutions, and the poor generally.

It has more particular supervision of—

The State Hospital, Tewkesbury.

The State Farm, Bridgwater [Titicut].

The Lyman School for Boys.

The Girls Industrial School, Lancaster.

The State Sanatorium at Rutland.

It has general supervision of, inspects and reports on nearly 500 charitable corporations.

It inspects the 205 city and town almshouses of the State, containing nearly 5 000 inmates, and also relieving 27,000 vagrants in the course of a year. It sees to the enforcement of "diligent employment" of all capable persons and of the law requiring the total separation of committed criminals from other inmates in almshouses. In agreement with the recent Departmental Committee in our own country, it recommends the entire separation of vagrants from the aged and destitute poor.

In its Report for 1904 it expresses its regrets as to the detention in almshouses of so many mentally and physically defective children and infants: other children are not allowed to be kept there at all, but, as in New York, are boarded out or placed in charitable institutions.

In order to understand the practical operation of the poor law we have perused the Returns and the Reports of the board on the individual almshouses of the State. They give the impression that many of these institutions are very imperfect in construction, that very little work is done and that the arrangements for the separation of the sexes are very imperfect, often non-existent. Unfortunately these Reports give no information as to the proportion of persons of defective mind found therein. It is stated that "Seventy-seven out-door paupers were reported as insane; seventy-one idiotic and seventy-five epileptic." This statement is obviously quite incomplete, and the return of indoor paupers, viz., 952 insane and 278 idiotic is also obviously under the mark.

On the other hand, it is satisfactory to see that there are no committed criminals now in the almshouses; vagrants of course there are in considerable numbers, viz., no less than 30,000 out of the 60,000 persons partially supported in almshouses during the year 1904.

For the condition of the almshouses we had to rely chiefly on Returns and statements furnished and made to us; but we were able to check these to some extent by personal investigation.

On 1st and 2nd November, 1905, Mr. Dickinson visited the office of the Pauper Institution Trustees of the City of Boston, and the Almshouse upon Long Island.

He ascertained from the office that the number of paupers in Long Island Almshouse varied between 800 and 1,000, and that up to nine years ago it contained both insane and feeble-minded persons; but that during the last nine years arrangements had been made to remove these persons, either to the asylums for the insane or to establishments for feeble-minded. The latest report gave the number of these persons in the almshouse as twenty-two demented, eight lunatic, and six epileptic. Upon visiting the almshouse itself it was clear both from what he saw and what all the officers told him that these numbers did not comprise all the persons of defective intellect. The assistant doctor stated that in his opinion from one-third to one-half of the people at the Almshouse had some mental defect, and it was generally admitted in respect to many inmates, that other accommodation was desirable, but that it was difficult, if not impossible, to obtain it. Especially, cases were mentioned of feeble-minded women entering the almshouse for the purpose of giving birth to a child, and it was stated that although the trustees had in several cases desired to place these women in some safe custodial home, it had been found impossible to do so. It was not feasible to certify them as

insane, nor did the doctor think that he could obtain the commitment of the Probate Court to send them to Dr. Fernald's school or colony; in any case, at the present time it was impossible to do so as Dr. Fernald would not readily admit adults. There were only eighteen children in the almshouse and these were all infants. The law does not allow children to be retained, unless they are defective in mind or body, or are of very tender age.

III.—*The State Board of Education.*

At an interview with the Commissioners of Education we were informed that the education laws were somewhat strictly enforced.

As regards defective children, we found that no boarding schools had yet been established for their elementary education, but the problem was well understood and was receiving consideration.

On October 30th, 1905, Mrs. Pinsent and Mr. Dickinson visited two schools, in Rutland Street and in Hyde Street, Boston, in company with Dr. Jelly, the medical expert, and Miss Carlyle, in order to see the special classes.

They were told that there are no special schools and only seven single classes for defectives in Boston, as the work is but beginning. In each of these classes the number of children is limited to fifteen. Some of the children come from long distances, being sent in the street cars at the expense of the school. There seemed to be a widespread objection in Boston on the part of the parents to send their children to special schools, which objection is only gradually being overcome.

These schools have a morning session only, lasting from nine to one o'clock. A few of the best children return to the graded schools in the afternoon. Dr. Jelly attached importance to this, as it removed the prejudice of the parents to a certain extent.

The children in these classes were clearly low grade defectives; and in both cases the teachers told us that only from three to five of the children in each class had any chance of becoming self-supporting. Dr. Jelly thought likewise on this point. The teachers were strongly of the opinion that all the rest would ultimately need permanent care, and would have been glad if it had been possible to transfer them to Dr. Fernald's institution. But this is impossible without the consent of the parents and also because his institution is already overcrowded.

One of the girls interviewed had reached the age of fourteen, and the authorities found themselves compelled to allow her to go out, because the parents would consent to no further custody of her, notwithstanding that she was clearly of a morally defective character, and certain to be ruined.

Two teachers whom we saw had devoted a great deal of their leisure time to learning different kinds of manual work, and it was understood that this was the same with all other special teachers. The manual work was distinctly of a high order.

We now proceed to describe the institutions of the State of Massachusetts, more specially interesting to our Commission and directly illustrating the prevalent methods of dealing with defectives.

The Massachusetts School for the Feeble-minded, Waverley, near Boston, Massachusetts, and its Annexe, the Colony at Templeton Massachusetts.

Visited by all the Commissioners on 30th October, 1905.

This is a most interesting institution, embodying in itself the whole history of American methods of dealing with the feeble-minded from its earliest beginnings in the training school for the idiot to its latest development, the colony for the permanent custodial care and employment of defectives unfit for free life. Its superintendent is Dr. W. Fernald, who is not only one of the greatest authorities in the United States of America on the medical aspects of the care of mental defectives, but is an institution manager of great energy, enthusiasm, resource, and capacity.

The school was started in consequence of the feeling aroused by a Commission appointed by the Governor of the State in 1846, from whose Report we may extract these words :—

"Common observation, the official report of the various town officers, and the research of Commissioners appointed for the special purpose, all concur in showing that there is a large number of idiotic persons in the Commonwealth who live in a state of brutish ignorance, idleness, and degradation, and go down to the grave like brutes that perish, without a ray of religious moral intellectual light; and experience has shown that, where such persons are taken at a proper age, they may be trained to habits of decency, industry, and sobriety, and lifted up from the slough of mere animal existence to the platform of humanity."

In 1851, when the school was incorporated, the joint committee of the Legislature on public charitable institutions reported :—

"Your committee have visited this school and been highly gratified by what they saw; the experiment seems to have succeeded entirely. The capacity of this unfortunate class for improvement seems to be proved beyond question."

During all this time the work was tentative. Four or five years later, in the report of 1855, it appears that the trustees, considering the limited means at their disposal, were of the opinion that only those should be admitted to the school whose age and condition gave chance for improvement. The school idea still prevailed. The nearer the child was to the child fitted for ordinary common school instruction, the more welcome he was as an inmate.

The school increased in numbers to somewhat over 100 pupils (there were ninety on the average in 1879, and 108 on the average in 1880), who remained for some five or six or seven years, and then were returned to their homes. There was no custodial department.

During this time the school was a private corporation, receiving from the Commonwealth an annual appropriation, always upon the condition that it would support and train a stated number of idiotic persons designated by the Governor. The managers were economical and thrifty and made some money, but always dealt fairly by the State in return for her appropriations, supporting at the school from 30 to 50 per cent. more indigent inmates on her account than they were required by the amount of appropriation.

About 1880 some of the more recently appointed or elected trustees began to agitate the subject of a custodial department. Whatever might be the merits of the school proper, they felt that there was urgent need in the community for an institution which should train the hopeless idiot, who had been rejected at their doors for thirty years as unimprovable. The early experiment had shown, as we have seen, that he could be vastly

improved. The arguments of these new members found favour with those who had been on the Board from the beginning of the school; and the result was that the custodial department was established, not by law, but by the trustees or corporation under their general power. Finally, in 1883, the custodial department was established by law; but by the same Act by which it was established the school department, so far as State cases were concerned, was pauperised, all State inmates being put upon the same footing; and the charges for the support of all cases, whether school or custodial, with the exception of private cases and cases from other States, were laid upon the inmates themselves, or, in case of poverty, upon the places of settlement, and when the settlement was not known, upon the Commonwealth.

In 1887 and 1888 the State gave grants of £45,000 to be expended in the erection of new buildings on the estate of Waverley, and the site in South Boston which the school had heretofore occupied was sold; the Legislature then expressly recognising a responsibility for providing suitable education for all idiotic persons, either at its own expense or the expense of the place of settlement. Both the State and cities and towns paid 13s. a week for custodial cases; cases from other States were received at £60 a year, and private patients on the school's own terms.

By the Act of 1886 the trustees were directed to make an annual report to the State Board of Education of pretty much all matters that had been contained in their reports to the corporation and Legislature; and were also directed to submit their accounts for the support of inmates in the custodial department by the Commonwealth to the Board of Lunacy and Charity for approval. To the State Board of Lunacy and Charity was also given the power to transfer to the school from the State almshouse and certain other institutions any inmate whose condition would be benefited by said transfer, upon the certificate of a physician that he is a proper subject for the institution.

Thus, by this Act of 1886, for the first time some other person or board of officers than the corporation and the trustees of this school and the Governor was authorised to take steps for the care and custody of the feeble-minded in the Commonwealth.

Since 1886 there has been no substantial change of the law.

In effect the State pays for the inmates who have no known settlement in the Commonwealth, the place of settlement or the persons legally liable to maintain pay in other cases.

The forms of admission and commitment are as follows:—

(For the Custodial Department—Judge's Commitment.)

Massachusetts School for the Feeble-minded.

Commitment Paper.

———————————, 19—.

I, the subscriber,* ———————————of the———————— of ———————— where————————resides, hereby certify that I have been notified in writing of the intention of———————————— to apply for the commitment of†————————————, the said ————————————to the Massachussetts School for the Feeble-Minded.

(*Signed*) ————————————

* Insert "overseers of the poor." (If in city of Boston insert "institution's registrar" or "chairman of insane hospital trustees.")

† Insert his or her son, daughter, or ward.

———————————, 19—,

I, the subscriber, resident of the ——————of——————, graduate of a legally organised medical college, and having practised three years within this Commonwealth, hereby certify that I have examined ——————, and find that —————— is so deficient in mental ability that —————— cannot be taught in the public schools as other children of —————— age are, and that in my opinion —————— is a suitable subject for the Massachusetts School for the Feeble-Minded.

(*Signed*)

——————M.D.

——————, 19—.

I, the subscriber resident of the —————— of ——————hereby represent that my* —————— is a fit subject for the Massachussetts School for the Feeble-Minded, and petition His Honour the Judge of the Probate Court for—————— County, that said—————— may be committed to the Massachusetts School for the Feeble-Minded according to law.

(*Signed*)

——————

* Insert son, daughter, or ward.

To the Trustees of the Massachusetts School for the Feeble-Minded, in Waltham.

Greeting :

Whereas it has been made to appear to me, ——————Esquire, Judge of the Probate Court for the County of——————, upon application in writing, this——————day of——————19—. that—————— ——————is a fit subject for the Massachusetts School for the Feeble-Minded.

Now, therefore, you, the Trustees of said School, are hereby commanded, in the name of the Commonwealth, to receive the said——————of the—————— of ——— ——————, and to care for——————according to law.

Witness my hand and seal at——————aforesaid, the——————day of——————, in the year of our Lord one thousand nine hundred and——————

——————

Judge of Probate for County of ——————

MASSACHUSETTS SCHOOL FOR THE FEEBLE MINDED.

Waltham,——————, 19 .

The applicant,——— ——————seems to be a fit subject for education at this school, and————will be admitted ON TRIAL, if on recommendation of the Secretary of the Board of Education, His Excellency the Governor approves this application.

——————

Supt.

Boston,——————, 19 .

It is recommended that the within-named—————— be admitted to the Massachusetts School for the Feeble-Minded.

——————

Secretary of the Board of Education.

COMMONWEALTH OF MASSACHUSETTS.

Boston,——————, 19 .

Approved.

——————

Warrant issued———— ——— ———, 19 .

(For the School Department.)

Application for the Instruction of Feeble-minded Children.

———————————, 19—.

To His Excellency the Governor:

I, the undersigned, resident of the————————of————————————
respectfully represent that my*————————, named————————————
and aged————years, is so deficient in mental ability that————cannot be taught in the common schools as other children are; and that I cannot afford to defray the expenses of———— education. I therefore request that your Excellency will designate————to be admitted as a pupil at the Massachusetts School for the Feeble-Minded, as a beneficiary of the Commonwealth.

———————————

———————————, 19—.

The undersigned, being acquainted with————————————a resident of this ————————, are of opinion that————statement is true, and that the child———— ————————————ought to be educated as a beneficiary of the Commonwealth at the Massachusetts School for the Feeble-Minded.

[Signatures.] ——————————————— ———————
——————————————— ———————
——————————————— ———————

———————————, 19—.

I hereby certify that I have examined the above-named————————————, and find that————is so deficient in mental ability that————cannot be taught in the common schools as other children are, and that, in my opinion,————is a fit subject for the Massachusetts School for the Feeble-Minded.

———————————M.D.

Note.—The first of the above declarations is to be signed by the parent or guardian of the applicant; the second, by a majority of the select men of the town or mayor of the city where the applicant resides; and the third, by the family physician or a competent medical practitioner. The paper is then to be sent to the Superintendent of the School. When a vacancy occurs, if the child can be admitted, the case will be considered.

* Insert, son, daughter, or ward.

(For all Cases.)

Application No.———————— Admission No.———

Massachusetts School for the Feeble-minded.

———————————19—.

Descriptive Application.

Let every Question be answered as minutely as possible by the Parents or Friends of Applicants for Admission to the School.

[*Here follow eighty searching questions as to condition, heredity, etc.*]

The family physician, or the one best acquainted with the family and the child, is requested to fill out and sign the following certificate:—

Please date.

19.

I, citizen of Massachusetts, physician, and practitioner in the town of hereby certify that I have examined and find that is not insane, but is so deficient in mental ability that cannot be taught in common schools as others of age are. bodily health is , and has no contagious disorder.

(*Signed*)

———————————————M.D.

N.B.—The physician is earnestly requested to review the above questions, and to state in writing his opinion of the *cause* of the person's mental deficiency; to state whether the child is or has been epileptic; also to mention any organic or functional peculiarity that he may have observed. It may be greatly for the advantage of the applicant that the physician should send, in writing, a full and minute account of the case, with his own thoughts and suggestions about its especially any facts in answer to Questions No. 60 to 76, inclusive, which may be within his knowledge. Such letters will be considered confidential, and may be sent directly to the Superintendent.

This application, when properly filled out, is to be mailed to

WALTER E. FERNALD, M.D., *Superintendent.*

WAVERLEY, MASS.

The institution having been in a state of perpetual growth and development naturally exhibits this in its buildings, which may be generally described as consisting of several central blocks of detached cottages, economical but quite adequate and healthy and cheerful.

The following notes give our impressions and conversation with Dr. Fernald. The school then contained over 1,000 patients; it covers 150 acres of land.

(*Dr. Fernald.*) This is a *cottage* for girls, 105 patients. They work in the laundry, sewing room, etc. The type of our building, you will note, is

MASSACHUSETTS SCHOOL FOR THE FEEBLE-MINDED, WALTHAM.—GIRLS' DORMITORY.

internally designed to have large space and few corners; we have rounded all the corners. Externally, as you see, it is economical but sufficient (*see* illustration). The girls have this day room, dining-room, and three dormitories. We have no separate room in this building. If a patient is sick, she is sent to the hospital. There is one matron and five attendants, who care for 105 patients. We have no kitchen in this building; the food is brought here. The attendants do no domestic work, except the cleaning and taking care of the clothing. The patients go to the sewing room to sew, but they do

their mending here; the newly admitted patients, who sew badly, also get some instruction in this building before they are assigned to some definite thing. Now, here is a point; we believe that in order to get the highest development of these people, it is not well to highly specialise their work during the educational period. It is best to give them great variety.

Do you include much book education? You cut that short, don't you? —(*Dr. Fernald.*) Rather. We waste no time.

Have you stopped teaching boys at the age of nine or ten?—(*Dr. Fernald.*) Yes; reading and writing is for only a few of our patients, and that he has been taught to read is no test what we have done for a boy. I think in America some of us have gone to a very great extreme the other way. Thus, the Elwin idea and the Waverley idea are very different. We believe in development and education, but education for the feeble-minded boy, in my opinion, should be looked at from a different standpoint from the normal boy. It should be practical and should aim at fitting him for work.

With regard to the very few of whom you can have hopes of a life outside, do you pursue their education?—(*Dr. Fernald.*) To no very high level. It is only possible with a few. The curse of our American institutions has been the presence of half-defective cases in each institution, who have misled the teachers to think that all the pupils could be carried to the point of development marked by them.

Have the Pennsylvania people continued their enthusiasm for education in their new place at Polk?—(*Dr. Fernald.*) Not to the extent that they did at Elwin; they have modified that very much.

The cost of this building, with furnishing, was $34,000.00; equal to £65 a bed.

We then saw a

Dormitory.—Thirty-five beds, eight windows, spring mattresses. Very good ventilating arrangement in an apparatus for exhausting the air from the room and admitting warm air.

Has each of these blocks a heating apparatus?—(*Dr. Fernald.*) No, the steam is generated in a building 800 feet away and is brought in conducts to this building. Each building has its ventilating arrangement.

Toilet Room.—Asphalt floor, rounded corners.

The walls in these blocks are all common brick, painted. The boys do all the varnishing and every bit of painting is done by them. Thirty-five patients use the toilet room.

Linen Room, joining each dormitory.—There is a place for each patient's clothing. It goes to a common laundry and comes back to its proper place. The woman who has charge of the dormitory has charge of this room.

What type of women are the attendants—are they of the servant or of the trained teacher type?—(*Dr. Fernald.*) They are above the servant type, but we have no trained service as yet. I should like to take them untrained but to do more than we are doing with them. I think we should greatly increase their value by instruction. Of course, we give them a great deal of instruction, but it is necessarily scrappy.

As regards small illnesses, a woman probably would be left in this building, but not for more than two days.

Stairs to upper floor covered with black rubber, which we were told was clean and everlasting.

Up-stairs.—Dormitory with thirty-five beds.

Where do the attendants sleep?—(*Dr. Fernald.*) The attendants sleep in a separate building, but the matron sleeps here.

How much supervision do you find necessary at night for these thirty-five?—(*Dr. Fernald.*) We have one woman here. If we have fatigued those children with work and exercise, she has nothing to do at night.

Are these all children? [Some were obviously middle-aged.]—(*Dr. Fernald.*) There are very few of them children, but we have got to use the word children here for all our people.

Does no one sit up at night?—(*Dr. Fernald.*) One attendant is on duty. She comes on at eight o'clock and goes about. She runs the whole show at night.

Attendants' Room.—You have no cells or separate rooms?—(*Dr. Fernald.*) No, only those three large ones. (Thirty-five beds in each.)

Toilet room upstairs same as below.

Do you use the shower in preference to the ordinary bath?—(*Dr. Fernald.*) Yes, it is safest and quickest and most efficient if it is properly done.

Matron's Office.—These women are mostly occupied in the laundry and in the sewing room. We keep our girls busy the whole day long, they do all the domestic work.

Plain Dining-room in basement.—There is no kitchen but a place for cleaning up.

The floor of the basement is concrete and the walls are all solid brick and the partition walls are brick, so that a fire could get very little headway.

The women in this building (medium grade) all go to the laundry, where they fold clothes, etc. They polish floors in all of the buildings.

Do they look after the lower grade imbeciles?—(*Dr. Fernald.*) No.

A second New Building for eighty Patients.—This was not as economical as the other, but of similar type.

School House.—Upstairs we were shown a large cupboard containing toys and a very remarkable collection of various instruments for primary sense training?—(*Dr. Fernald.*) We spent over £300 on the contents of these two cases, not counting the time of the people who planned the work. This training is applied to people of all ages. Your public elementary school classes need this sort of thing.

School Room.—Oldest class of girls reading and writing; seventeen present. The first class reads United States history intelligently and writes it in composition form. All can write home letters so that they are intelligible. Other children are in the second reader and some in the third. There are three classes in reading. Numbering is the greatest difficulty. This is our most advanced class. Their home letters are wholly without revision. They write compositions from their object lessons. The children are very fond of their school life and very much interested in nature study. Sixteen is the maximum number in a class. All these girls were employed this morning, some in the cooking school, sewing-room, manual training class, etc. They never have more than half a day in the school room. We believe in the industrial idea for all as much as in the educational. The lower grade children have a great deal of the open air exercises.

School room for oldest class of boys ; ten present. There were interesting detailed records kept of the children's work, to exhibit progress or failure and to indicate future training.

(*Dr. Fernald.*) All these children reach an age where, if school is continued two years longer, it would ruin them for practical purposes. We usually keep them in school to the age of eighteen for some part of the day.

How do boys compare with the girls as to self-control ?—(*Dr. Fernald.*) Barring the sexual problem, I think the boys are a trifle less capable. They need a great deal of looking after. But as regards the girls, who from mental weakness are morally irresponsible for their conduct it is the sentiment of the people at large, and we ourselves believe that protection should be given them, that they should be kept permanently away from men, for their own good and the good of the community. But there must be mental defect as well as moral obliquity before we receive them here. We object to receiving here girls whose real defect is simply want of chastity. This is not a home for fallen women, and many women who offend against chastity are anything but feeble-minded. But the moral imbecile, the woman who has no sexual control because she is defective in brain requires custodial treatment and is received here.

The Boston classes are not as bright as some of these classes of children. Are there not any here who could be sent back to the ordinary schools ?—(*Dr. Fernald.*) The trouble is that most of them have no parents or bad parents.

(*Dr. Fernald.*) *Cooking School.*—No practical work is done here, the idea is only to instruct. There is a trained teacher who gives instruction in regard to cooking, washing dishes, etc. There is a dining table where the girls learn to serve and wait upon each other, and a bedroom, where they go through the bedroom duties. They are also taught to wash and iron uniforms. This school has been open only a month. We pick out the most likely girls for this work.

Six girls with cap and apron were working in the school.

School room for older girls, but not far advanced ; fifteen present.

Another school room, second grade from the lowest grade of school classes, next to beginners' class. Dr. Fernald only put into this class the children whom he expects will learn to read and write. Twelve small boys and girls were present. They were playing with letters and arranging them according to sentences on blackboard. Thus they learn to read. The arbitrary name of the letter they learn much later. Box for matching colours, and the usual kindergarten.

The Hall, where twenty boys were doing physical exercises under one teacher and one male attendant. This instruction is regarded as of first-class importance and is kept up from morning until night for one class or another. The Ling or Swedish system is used ; a mental and physical drill, in which precise and carefully planned muscular movements have to be promptly executed at word of command.

Workshops : One Paint Room.—Five boys painting wagons ; five boys working on boot and shoe repairing ; five small boys painting red, yellow, and green blocks used in the schoolrooms.

Print Room.—Room with printing press, where the work of the institution is done by inmates.

Sloyd Working Room.—Windows on three sides. Nine boys working under one teacher. Girls come here in the morning. (Cost of work benches, £2.)

Sewing Room.—Window on three sides, about twenty-eight girls and women working; two instructors. The women were sewing towels, suits, aprons, and all sorts of institution work.

Class of beginners in sewing, small girls; fourteen working under one teacher. None of these girls could be taught to read or write.

All the cottages are on essentially the same plan.

(*Dr. Fernald.*) There are at the present time eleven patients in the infirmary, out of 1,000. Sometimes we have not a single patient.

Laundry.—Eleven patients working. There are five paid assistants in the laundry, all the rest of the work is done by inmates. Every girl gets instruction in this practical labour.

Ironing Room.—A large number of patients were working.

In no case is the actual industrial work mixed with the experimental work. The girls go through a special educational school for cooking, laundry work, etc.; after going through these they are sent to do the actual work. The same applies to the boys with regard to carpentry.

In the course of a day over 100 girls come to the ironing rooms. Many of these girls were mentally of a very low type, but quite industrious and well-behaved.

(*Dr. Fernald.*) I would have no hesitancy in certifying any patient in the institution (with the possible exception of one) as being of unsound mind. We have very few of the highest grade. There are about 125, not over that.

Out of doors we found in a field young boys carrying stones, older boys using pickaxes and breaking the earth. One supervisor.

Many children playing games and practising balance and exercises under an expert teacher on the lawn.

Cottage for Children: Idiot Cases.—About fifty. A day room, bath room, dormitory, dining room, matron's office.—(*Dr. Fernald.*) These do mostly physical work, but there is hardly a child here who does not receive some instruction. Each attendant has a class in teaching children to wash their faces, to dress themselves, etc. This sort of training will diminish the after-care very much. We expect 90 per cent. of the children to come out of this school; they would remain here for ever if we did not attempt to teach them.

Do you fully believe that by care and instruction you can raise even these up?—(*Dr. Fernald.*) We *know* that; already two generations have gone up. Of course, not every one of them; there is always a certain proportion who cannot be brought up. But a very large number can be, if the training is done in early childhood. If they are properly developed, they are capable of doing physical, manual work. We find that the physical development makes them tidier. There are five attendants, one head attendant and four others. She has two to five inmate helpers as well. We expect to make workmen out of most of these boys. We know we can do it, because we have already done it.

About a dozen children were seen playing outside with a teacher, holding on to a rope. The teacher was beating a small drum. The children run after balls, and the weak and paralytic are helped and encouraged to stand and walk and run.

A party of girls, low grade cases, carrying stones from one circular enclosure to another, for exercise and health and muscular instruction.

An enclosure with squares of large and small stones, and pile of wood, where children exercise daily, even in winter, unless there is snow on the ground.

(*Dr. Fernald.*) As regards our worst cases: the State gave us £400 to start with and the trustees promised to take care of the idiots; we agreed that we would care for them and nurse them. But we found we could not do it. When we put 100 children together, we couldn't live with them. They broke the furniture, broke the window glass, and the attendants wouldn't stay. In self-defence we were *driven* to train the idiots in order to be able to live with them, and now the trouble is over.

A circle among the trees, where girls were marching with an attendant Low grade idiots.

Five boys painting a dormitory. More are earning their living at this occupation than at any other. All the varnishing and painting is done by patients, as well as work on Dr. Fernald's new home.

Dining room for low grade cases, boys. About fifteen attendants to 140 patients. A considerable number of inmates were employed in feeding the helpless idiot children, and assisting in waiting during the supper hour.

Employees' Dining-room.—There is one head waitress, who usually has nine patients assisting her.

(*Dr. Fernald.*) We usually have about 100 children going home on holiday in the summer, but we scrutinise carefully whom we allow to go. This keeps up the home ties.

Most of my attendants are Canadians, daughters of respectable country people. They are the best—with no training when they come here but well-behaved, patient, and quick at learning. With a little experience they become ideal attendants and teachers.

The total maintenance expenses of the institution for 1904, including repairs and improvements were $150,000, practically 14s. a week.

There is a long waiting list of children desiring admission.

The Templeton Colony for Feeble-Minded Males, 90 Miles from Boston.

Visited by all the Commissioners on October 31st, 1905.

This colony, beautifully located on an eminence 1,200 feet above sea-level, a few miles from a railway, comprises an extent of 2,000 acres of land purchased for an incredibly small sum, but affording a useful variety of soil, sand and clay. There is an abundance of woodland, from which all the fuel used in the colony is drawn. Some of the land has, in the two years of its existence as a colony, been freed from stones and cultivated, and thereby very largely raised in value; but the greater part is still in its primeval state, with great boulders strewn over it and covered with brush, thus affording unlimited opportunity for labour in reclamation. Water power comes from a brook, which at one point has a fall of 80 feet, supplying power.

The colony consists of four groups of well designed but very economical wooden cottages, standing some distance apart, each group affording

room for fifty workers and the attendants. Three of these groups are inhabited, and the fourth, just completed, will shortly be the home of fifty arrivals from Waverley.

The colonists, though all custodial cases, *i.e.*, idiots or marked imbeciles, are all required to do manual work, and many of them do nearly the full work of a free labourer. We saw a group of four, with heavy sledges and hammers, breaking rock and drilling it for blasting with explosive; they were working steadily and without supervision. Further on was another group of five men working in a field. They were bringing in stooks of corn, which they were loading upon a cart. Others in the shed were unloading and storing the corn. A further group was hauling brick in wheelbarrows. At a little distance there was a row of about a dozen, who under the supervision of one man were working a field with sharp pick-axes. An imbecile was ploughing with a pair of horses, his daily task. All of these men had come from Dr. Fernald's schools for the feeble-minded, and a large proportion of those who were busily and happily engaged in useful work could never be taught to read and write, some had not human speech. The previous training was, of course, essential: idiots and low grade imbeciles could not be employed in this way without preliminary training.

All the cottages are built on essentially the same plan—solid brick foundations on cement with rough cast walls and slate roof. £20 was paid to the architect for the original design, after which all the buildings are modelled. The cost of building and furnishing a cottage is £2,000, although the cost of the group just erected, owing to a rise in material, was £2,400—£40 to £50 a head. The levelling, etc., is done by the inmates, as well as all carting, trenching, sewering, painting, and varnishing.

In each of the cottages there is a large sitting and dining room for the men. It is a pleasant apartment, with an immense open fire-place, and windows along three walls of the room; the impression given is that of a large substantial farmhouse.

Here the "boys" assemble in the evening and the attendants read to them from books such as would appeal to the normal boy of twelve. There is also music, and games are played until the early bed-time.

Each cottage has its own kitchen and storeroom. Once a month a requisition is made on Waverley for the supplies needed for the following month. There is also a cold-storage room, which is supplied with ice from Waverley. Baked bread comes from Waverley in barrels, which are returned filled with fruit, potatoes, etc.

There are two dormitories in each group, holding twenty-five beds each. These are large rooms with twelve windows and three doors. There is a single flue, 2 feet square, in each. All the cottages are heated by stoves and lighted by oil lamps. Next to the dormitories there is a small room, holding the best clothes of the men; these they wear once a week.

In the washroom there is a pump and a large sink, in which six movable basins can be placed, allowing that number of men to wash at the same time.

The attendance in one cottage consists of a man and his wife, four women and a laundress. In another group it consists of a man and his wife, two male assistants, and three women. In each group there are rooms for the attendants.

Belonging to each group there is a barn, the care of which falls entirely to the inmates.

An immense woodshed, where the entire supply for the colony is kept, furnishes employment for many of the men, especially in winter.

There is no doctor in the colony, but the local physician looks after the care of the inmates. There is telephonic communication with Waverley. It is seldom that medical aid is required, as long a period as six months having passed without an illness or mishap occurring.

One of Dr. Fernald's immediate projects for the colony is the establishment of a saw-mill, and the increase of his herd of cattle so as to supply the whole of the milk required at Waverley.

The training schools at Waverley, and their adjunct, the Templeton Colony, appear to embody the ideals of Dr. Fernald and of the State Commissions of Massachusetts as a permanent provision for the training and employment of custodial cases, whether feeble-minded, epileptic, or even of certain types of insanity. They called our attention with enthusiasm to its possibilities, now beginning to be realised, not only in respect of the health and well-being of the colonists and of the economical utilisation, under easy control, of such capacities as they had, but also of its adaptability to every class of defective, of the opportunities it gave for experiment and variety in employment, and of the prospect of its organic growth, step by step, into an institution which would not only benefit and lift up the unfortunate sufferers, but would reconcile their relatives and the whole community to the permanent detention of people whose freedom would mean a burden to their families, a nuisance to the community, and a danger to coming generations. The ideal, and of course to a more limited extent—the practical realisation made a most favourable impression on the Commissioners. It was a pleasure to see the happiness of the colonists, the humanity of their treatment, and the social utility of their employment in reproductive work with prospects of good economical results.

Dietary, Templeton Colony.

There is a daily written menu for each cottage—the diet was simple, cheap, but generous in quantity.

October 28th, 1905.

Breakfast.

Rolled wheat.
Milk and sugar.
Fried potatoes.
Coffee.

Dinner.

Beef stew with turnips, carrots, onions.
Mashed potatoes.
Farina pudding.
Bread.

Supper.

Griddle cakes and syrup.
Bread and butter.
Milk and tea.

October 29th, 1905.

Breakfast.

Hominy.
Catsup.
Baked beans.
Muffins.
Bread and butter.
Tea and coffee.

Dinner.

Fried ham.
Squash.
Coldslaw.
Mashed potatoes.
Apple pie and cheese.
Tea.

Supper.

Stewed pears.
F. toast.
Bread and butter.
Raisin cake.
Tea.

October 30th, 1905.

Breakfast.

Rolled wheat.
Fried fish.
Baked potatoes.
Corn biscuits.
Bread and butter.
Tea and coffee.

Dinner.

Beefsteak.
Parsnips.
Potatoes.
Pickles.
Sea moss farina.
Bread and butter.
Tea.

Supper.

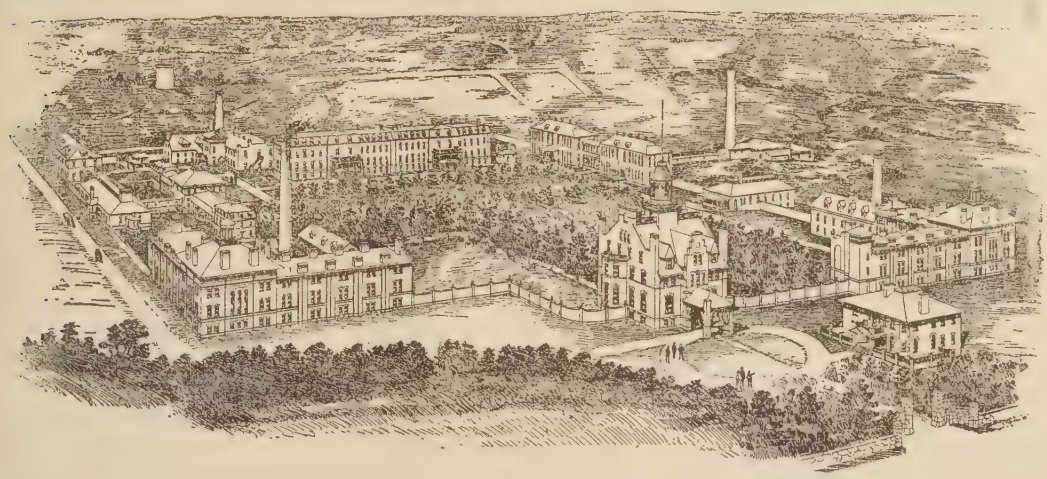
Baked beans.
Sliced pickles.
Bread and butter.
Gingerbread.
Tea.

The State Hospital at Tewkesbury, Massachusetts.

Visited by Mr. Byrne on November 1st, 1905.

Mr. Byrne was received by the superintendent and first assistant medical officer, Dr. Nichols and Dr. Emerson, who had both had considerable experience of work in the institution, which was more than fifty years old.

The State hospital provides for sick, insane and indigent paupers who are at the charge of the State, that is to say, who are either aliens or have no settlement in any county of the State of Massachusetts. The institution is consequently an interesting receptacle for every class of those who have gone under in the battle of life and have fallen upon the resources of the State. The inmates are not committed. They are received in the institution on what is called a "permit," which is really an order from the overseers of the poor of the district where they are found in trouble. The State bears the entire charge of their maintenance. The inmates vary in number from about 1,300 in summer to 1,800 in winter. The handsome buildings are, or at any rate looked, modern, and are adequate, well equipped and officered, the proportion being 1 : 11. There are 600 acres of land, a herd of eighty cows, and a large piggery; and much land is successfully cultivated for maize and roots as well as for fruit and vegetable garden produce, mostly by inmate labour (and this point was especially made), by the labour of lunatics who were fit to be outside the walls. The land and buildings were worth £170,000 *i.e.*, £100 a bed: the gross weekly cost of maintenance was 13s. 9d.: net cost apparently about 12s. 6d; the number requiring nursing or hospital treatment was very large.



State Hospital, Tewkesbury (General View from North East).

Mr. Byrne did not see the hospital (of which the general view is inserted) which he was told differed in no degree from the ordinary well equipped hospital in a large city; nor the training school for nurses, which was thought much of.

The lunatic asylum was very well arranged, and included all the usual classes of lunatics and idiots, the proportion of the latter being apparently about the same as in an English county asylum. Most of the lunatics were certified and ordered to be detained by the Judge of Probate, or the district judge, in the manner usual all over the State; but many were put into the lunatic wards by the doctors for observation, or detention without any ceremony, there being no legal objection to this being done—in fact, the doctors had an absolutely free hand as regards classification in the whole of the institution. Everyone who came in was received on a permit which gave the roughest particulars as to name, condition, etc. The doctors in the reception house sorted them out, sending some to the hospital, some to the almshouse wards, some to the observation wards in the asylum and some to the certified wards in the asylum, as their condition required. In practice this freedom, though strange to English eyes, seemed admirably effective; but the result had been that the doctors had taken no particular care to estimate the proportions of the various classes whom they received, considered from the mental point of view, being aware that they could put a man or a woman at a moment's notice in whatever department his or her condition seemed to require. There was also a maternity ward of the class usual in a big London workhouse in which there were 117 births a year.

The doctors expressed the opinions which have been usually laid before the Commission by thoughtful persons in such positions. They considered that, apart from the classes who were certified as lunatics, which in Massachusetts includes idiots, and from the classes which they call feeble-minded, who were appropriate inmates of the Waverley School or the Templeton Colony, there were a number of persons who were in and out of their institution after having had interludes in prison, at the State Farm, or in alms-houses, whose destitute and semi-criminal position was attributable to a defective mind, which they considered was quite as often a moral defect as an intellectual one. The percentage of these persons among the pauper class in their institution might reach twenty. It was certainly not less than ten, but of this number they thought only a small proportion, say half or quarter, required permanent detention in a colony in their own interests and in the interests of the community. Such detention they considered necessary if the State were to aim at being in a position to assert that all classes of its defectives were being properly dealt with as the interests of the community required; and they considered that the evils whch arose from the present position of affairs were great, though they were not in a position to say that they were recognised as being so great as to require the first and most immediate attention of the State. They considered that the presence of these people in the community must undoubtedly increase, and that it might even be said to give rise to the burden which the State had to bear from its criminals, its epileptics, its lunatics and other degenerates; but they both appeared to think that the effect of a vicious heredity was to be traced as much from the circumstances unfavourable to proper mental and moral growth in which the children of defective parents were necessarily found, as from any direct physical taint. As practical men they did not consider it mattered which view was taken.

They expressed a very strong opinion that institutions of this sort should be at remote places in the country, on a railway line, but where land was cheap; secondly, that all classes of defectives should, both in their own interests and in the interests of good management of the institution, be kept constantly at such work as they were capable of, and that satisfactory methods of dealing with this class were almost impossible until their identification on each reconviction or falling into poverty became practicable. They would welcome the "finger-printing" of such people.

Institutions for Epileptics at Palmer, Mass.

The Commissioners were unable to visit this institution as they intended, but particulars are appended which have been compiled mostly from the Annual Report of the institution for 1904. It dates from 1898.

At that time there were believed to be at least 10,000 epileptics in the State, nearly all in their own homes; institution treatment was desired in the case of at least 10 per cent. There were 460 in the Palmer Hospital, 100 in the Children's Cottages, to be described hereafter, 100 in the Waverley School, and at least 100 in almshouses.

The 460 in the Palmer Institution comprised many insane and feeble-minded, though most of the insane were intended in future to be dealt with in the hospitals.

The land and buildings, including water and sewerage systems, were valued at $360,000, about £156 per head. There are several hundred acres of land, and the buildings, though scattered, were described as adequate and well equipped.

Bird's-Eye View of the Massachusetts Hospital for Epileptics, Palmer, Mass.

The Cottage Hospital for Epileptics, Palmer, Mass.

The number of employees was very large, nearly one to four patients. The low bodily and mental condition of the bulk of the patients is shown by the large number of workmen found necessary: *e.g.*, eleven assistant farmers. As might be expected, the cost of maintenance is high, 18s. a week. The institution is complete, with infirmary, industrial building, central heating and lighting, etc.

There is a superintendent and three assistant physicians, and at present the institution is run rather on hospital lines than as a "colony."

The farm products reached a value of over £400 a year.

The work done by the inmates was mostly of a light character.

The management were strongly in favour of constant light employment and manual training as opposed to book education for young epileptics. They estimated that cottages containing twenty-five, which they regarded as the ideal mode of dealing with this class on a large estate, should be constructed for £2,400, *i.e.*, £96 a head.

The methods by which patients are admitted to this hospital are as follows:—

1. The regular insane commitment, such as is used at the insane hospitals.

2. The sane indigent; in this case the approval of a judge is required, in addition to the physicians' certificates and the notification of the town authorities.

3. The sane private, in which two sureties are required to sign the patient's application.

The lands, buildings, and improvements were paid for by moneys voted by the State Legislature; the cost of maintenance was defrayed by receipts from the State, from Poor Law authorities, and from private individuals in the proportions of £21,000, £7,500, and £1,100 respectively.

THE HOSPITAL COTTAGES FOR CHILDREN, AT BALDWINVILLE, MASSACHUSETTS.

Visited by all the Commisioners on October 31st, 1905.

This is a private philanthropic institution for epileptic, nervous, and deformed children to the age of fourteen. It consists of a central building with two wings at the side. The patients at the time of our visit numbered 140. The full paying rate is 20s. a week; the "charity" rate is 13s., and a few beds are maintained free.

The children were assembled in day rooms, to either side of which dormitories were attached. These held ten beds each. Leading out from one of the dormitories was a small room with four beds, for tubercular cases.

There were two well-equipped school-rooms, one for the older children with desks and benches, and another for the younger children, with chairs.

Dr. Bates, who is the superintendent of the institution, told us with regard to the dietary that the children never received meat, but they were given soup in which meat had been boiled, and broth. They receive very little fried food, no raw fruit, with the exception of oranges, no nuts, and especially no apples, and very little pastry. They may have cereals and cooked green vegetables. He laid great stress on the necessity of his scientific dietary for epileptics and believed that errors in food-supply were responsible for many relapses and failures.

The children who are mentally defective at the age of fourteen go to Dr. Fernald's school, but owing to want of room at his institution, they have often been kept longer at the cottages than the managers desired.

The Massachusetts Hospital for Dipsomaniacs and Inebriates, Foxborough, Massachusetts.

Visited by Dr. Dunlop on November 2nd, 1905.

This is an institution for the treatment of inebriates who are neither of bad repute nor of bad character. It thus corresponds to retreats established under the 1879 Act. The procedure for admission is that an application is made by the inebriate himself, a relation or a friend, a neighbour or public authority—in fact, anybody. That application is supported by a double medical certificate and presented to a judge. It may be to a judge of the Supreme Court or of any court, or even a justice of the peace. On receipt of this application, the judge has to give the inebriate twenty-four hours' notice of a trial, and if the inebriate lodges defences, he remits the case for trial by jury. If the inebriate gives consent to waive his right for trial or fails to appear when cited, the judge grants an order of commitment, ordering his detention for any period up to two years. This action is taken in terms of Section 59 of the laws relating to the Massachusetts Hospital for Dipsomaniacs and Inebriates, which reads as follows :—

"Any of the judges named in Section 33 may commit to the Massachusetts Hospital for Dipsomaniacs and Inebriates any male, or to a State insane hospital any male or female, who is addicted or subject to dipsomania or inebriety either in public or private; but no such commitment shall be made until satisfactory evidence is presented to the judge by whom the proceedings for commitment are heard that like notice to that required by Section 34 has been given and that such person is not of bad repute or of bad character apart from his habits of inebriety. The magistrate who receives the application for such commitment shall examine on oath the applicant and all other witnesses, shall reduce the application to writing and cause it to be subscribed and sworn to by the applicant. He shall cause a summons and a copy of said application to be served upon the person to be committed in the manner provided by Section 25 of Chapter 217. Said person shall be entitled to a hearing, unless after receiving said summons, he shall in writing waive such hearing; and in such case, said magistrate may issue an order for his commitment to said hospital without such hearing if he is of opinion that such person is a proper subject for its treatment and custody."

The institution consists of three pavilion buildings, with outhouses and a farm.

FOXBOROUGH HOSPITAL FOR INEBRIATES.

ADMINISTRATION HOUSE. GYMNASIUM. COTTAGE. DINING HALL. COTTAGE. COTTAGE.

DAY ROOM.

The pavilions are constructed thus: On the ground floor at one end of the pavilion there is a dayroom; at the side a small dormitory with six or eight beds, extending along the pavilion from the dayroom there is a passage, and off the passage there are a series of small rooms. On the first floor there is a similar dayroom and similar dormitory, but the rooms entering from the passage are double the size of those below, and instead of containing only one bed, have four each. These rooms appeared crowded, the floor space being 12 by 16 feet. On the second floor there are large unused attics over the single rooms in the lower floors, and a dormitory placed over the dayrooms of the lower floors. There are also beds in the passage and at the head of the stairs. The three pavilions are built on similar lines, two of them being used for inebriates and the third for chronic insane, the reason why the third was given up to this purpose being that there was a popular outcry against the expense of treating inebriates in this manner, and the one pavilion was devoted to the care of the insane as a cloak to cover the expenses of management. Perhaps also inebriates "not of bad repute or of bad character" were fewer than was anticipated.

The other buildings consisted of a barn and stable, a brush manufactory, a hall used for physical culture, chapel and entertainments, with a very complete hydro-therapeutic department attached; and another small hall devoted to a dining-room, kitchen, bakery and storehouse.

The staff of the institution consists of a medical superintendent, two assistant medical superintendents, a physical director, twelve day and three night nurses, a head nurse, and twenty-four other paid employees, including a farm superintendent—no less than one to five in all.

The inmates at the time of our visit numbered 224, of whom 62 were lunatics placed in the one pavilion, and 162 inebriates placed in the other two pavilions.

The inebriate inmates were classed into three groups. The first were recent admissions. These were kept apart and suitable treatment was given them until the immediate effect of drinking had passed over. Some of those seen had been two or three weeks in this group. Secondly, the well-behaved inmates. This group included the greater majority. Thirdly, the uncontrollable inmates; these numbered sixteen. They were kept within locked doors, being employed in the brush factory and in a locked up corridor in one of the pavilions.

The essentials of the treatment were compulsory abstention from drink, good food, physical culture, and work, it being a rule of the institution that the inmates must work for at least eight hours per day. The following is a note of the actual employment of the 162 inmates at the time of the visit:—

Bakery	2	Gymnasium	2
Barbers	2	Kitchen	5
Barn	3	Matron	5
Stable	2	Office	2
Carpenters	2	Laundry	10
Cobbler	1	Paint-shop	6
Dining-room	9	Piggery	1
Engine-room	7	Special	5
Broom-shop	16	Ward work	14
Farm	31	Sick and unemployed	20
Street department	17		

A scrutiny of the inmates gave the impression that they were essentially of the same class as those treated in inebriates' retreats. Few of them were markedly degenerate, and even the worst cases in conversation did not show the grosser signs of mental defect. They evidently were drawn from a class very different from the ordinary alcoholic degenerate seen at home in prisons and certified Inebriate Reformatories.

The discipline of the institution was apparently not strict, but punishment is used to a considerable extent. This consists of seclusion in a bedroom, to which punishment there is occasionally added a bread and water diet. Another punishment is transfer to the incorrigible class. Malingering to avoid work is a fairly frequent offence. When an inmate does this, he is carefully examined by the doctor to ascertain if there is anything really wrong and if nothing is found he is treated nominally as if sick, being put to bed and kept there, fed on a milk diet, being given a small drink of milk every two hours and nothing more, until such a time as he apparently recovers. The great disciplinary difficulty is escape. Many inmates do so every year. Most are recaptured but many are not. To meet this the staff is at present agitating authority to transfer escapers to other State institutions, such as Concord Reformatory and the State Farm, and to have a rule to the effect that time absence on escape or under transfer to these institutions does not count towards the completion of the period of commitment.

By looking over the commitments it appeared that the medical certification set out in most cases comparatively uninteresting details; the only facts recorded were such as any commonsense person could put in, no special

medical knowledge or power of observation being directed to causation, heredity, mental condition or stress and other interesting factors. The after histories of the cases were evidently carefully watched, an official being sent around to the various districts to glean particulars of the ex-patients. The current report gave the subsequent histories for a short time after discharge only, but in further reports (a draft of one of which was seen) the histories will be continued much longer. From that draft it would appear that about 30 per cent. of the cases may for practical purposes be considered cured, in so far as they are able to live at home peaceably and to keep out of mischief. A scrutiny of the commitment orders also showed that in the majority of cases the application was made by some public official; but it was stated that although this was so, it was on the report of a relative or friend that the public official took action. But in the commitments looked at there was also a considerable number where a relative or friend applied directly.

The cost of the establishment is very heavy, averaging something like 24s. per week per head. That this should be so is due to the very large staff. The land, 105 acres, is valued at £3,300; the buildings, £35,000; total £170 a head.

Those who can pay for their own maintenance have to do so; the others are supported by their place of settlement.

Inmates may be released on probationary licence.

State Farm, Bridgewater, Massachusetts.

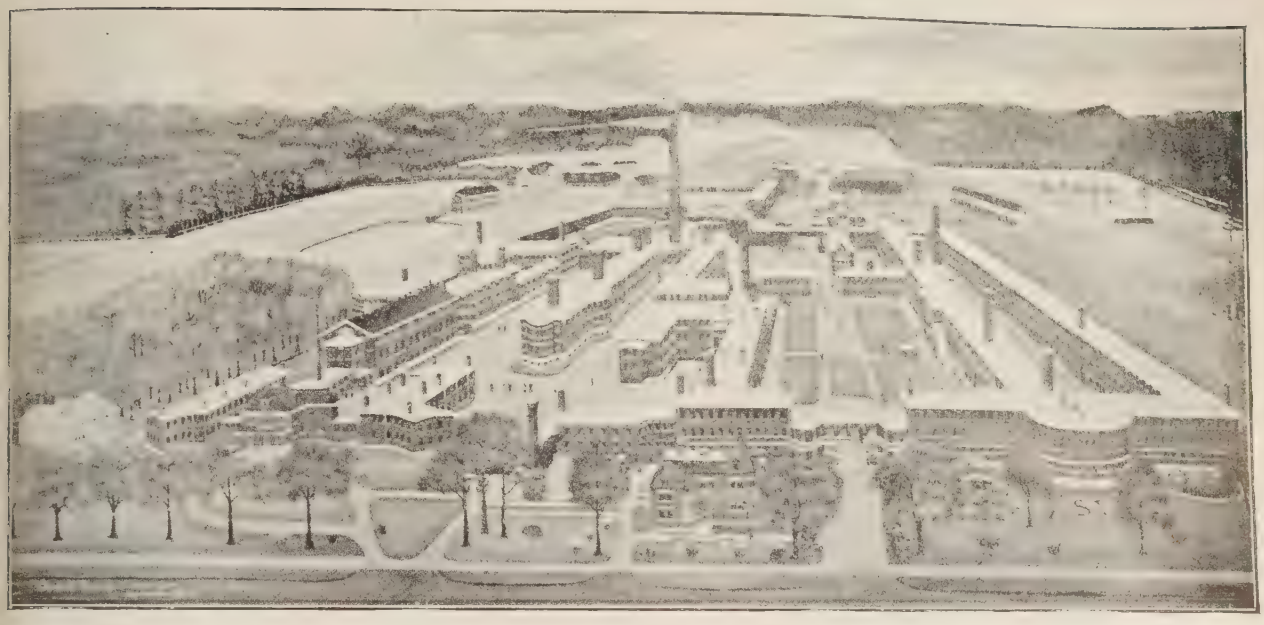
Visited by Dr. Donkin and Mr. Byrne on 2nd November, 1905.

It is a well managed and highly interesting institution, comprising a criminal lunatic asylum, an indeterminate sentence prison, and a workhouse on one site and under the same management; it has existed some fifty years.

The farm consists of nearly 1,000 acres, and it and the very handsome buildings are valued at £155,000, or £90 per head of the 1,660 inmates. The farm stock and products and the machinery, carriages, etc., were very valuable; the whole personal estate being valued at £200,000.

The prisoners are drunkards, vagrants, nightwalkers, and so forth; two-thirds under indeterminate sentence not exceeding one year; some 400 under indeterminate sentence not exceeding two years, the remainder under sentences of from five to fifteen months. The numbers had recently been suddenly increased by a police raid on the tramps' lodging-houses in Boston in search of thieves and bad characters, a manœuvre practised from time to time in America, and known as a "hobo scoop."

MASSACHUSETTS STATE FARM, BRIDGEWATER, MASS.



CRIMINAL INSANE DEPARTMENT [500]. HOSPITAL AND ADMINISTRATION [200]. WORKHOUSE DEPARTMENT [1000].

Under the system of indeterminate sentences the authorities had and exercised full power of transfer from one part of the establishment to another, as circumstances might indicate; and it was impossible not to be impressed by the *primâ facie* advantages arising from the existence of this power, though we were told that there were many cases for which the limited indeterminate sentence was insufficient.

The bulk of the criminal insane were convicted persons from the State prisons, houses of correction, and reformatories, about 1 in 9 only being sent direct from the courts without conviction.

The workhouse hospital exhibits instances of nearly all ailments; and there is a considerable proportion of seniles, of the tuberculous, and of drunkards.

In all three departments Dr. Drew attributed the presence of a large proportion of the cases to the results of personal or ancestral excess in drink.

Unfortunately, our visit had to be a hasty one, but in addition to the information which we derived from our conversation with the superintendent and the doctor we carried away a favourable general impression. The buildings presented quite an imposing frontage, and were in admirable condition and cleanliness, though simple and economically built. Good order reigned, and we were informed that the prisoners were kept strictly to work, especially on the extensive farm, at reclamation, building, and other outdoor employment of a lucrative description. The criminal insane appeared, we thought, to be kept more indoors than at Broadmoor; and to have fewer attendants and less personal care. On the other hand, the sane prisoners were largely kept to useful work, and were well-housed.

The staff consisted of one superintendent, one assistant superintendent, one medical director, four medical assistants, and over eighty employees; that is, 1 to 18 inmates—a very low figure considering the number of sick and insane. The maintenance cost was very creditably low, 9s. a week.

The Reformatory, Concord, Massachusetts.

Visited on November 1st, 1905, by Dr. Donkin, Mrs. Pinsent, and Dr. Dunlop. It is a Reformatory or Prison for Males, the Elmira of Massachusetts.

This is a prison for males. Its object is to give knowledge of a trade and training in habits of industry to criminals whose reformation is not despaired of, but as at Elmira there was a considerable admixture of first and more confirmed offenders by those of unknown antecedents.

At the time of our visit the number in custody was 835, that being described as small, the usual number being considerably over 900.

The establishment consists of a large prison block with three wings radiating from a central hall, all with inside cells. Outside of these blocks there are large workshops, etc. These workshops were in full swing when seen by us. Many inmates were engaged in the manufacture of furniture, some of which was high-class work. Among the products we saw a large number of light folding tables, which we were informed were turned out in quantities as a ready market was found for them. We also saw some spinning and weaving being done, and we were told that in the reformatory the inmates made cloth for a large number of the State institutions. Other shops we saw were a tinsmith's and an iron-founding shop.

As at other reformatories, the inmates are divided into three grades according to conduct. The third or lowest grade contained about thirty boys.

In going around the prison we were struck by the absence of imbeciles. Our attention was directed to one or two, but from the deputy warden's statement and from our own observation we were satisfied that they were not numerous.

Punishment consisted of losing marks, the use of a dark cell, and of a bread and water diet. The offences for which the boys were committed were in most instances trivial, such as vagrancy, petty larceny, and the like. The sentences of the great majority were indeterminate.

Sherbourne Reformatory for Women, South Framingham, Massachusetts.

Visited on November 1st, 1905, by Dr. Donkin, Mrs. Pinsent and Dr. Dunlop.

This establishment is equipped for the reception of about 600 female prisoners, but the actual number present at the time of our visit was only 190. These were graded as at the male reformatories, and out of the 190, about 100 were in the second and intermediate grade, ninety were in the first grade, and none in the third.

The objects of the Reformatory were similar to those of the Male Reformatory at Concord.

The first grade prisoners are housed in comfortable rooms, measuring 12 by 10 feet, each with a large window. They have access to a comfortably

furnished day room and also to a dining room, where they eat their meals from white tablecloths. The second grade are kept in similar rooms, which are, however, not quite so well furnished. They have access to a dining room, but not to a day room.

There are a few strong rooms into which inmates are put for mild punishment. None of these was occupied at the time of our visit. There are also some rooms reserved for the inmates on reception.

All the prisoners are worked. We saw about fifty in a room where they were manufacturing shirts. This was fitted up with steam machinery and apparently was equipped for turning out a large amount of work. About thirty inmates were working in a sewing room, doing the domestic sewing of the establishment. A large number were engaged in the laundry, where they did not only the washing for the institution, but also outside washing or profit.

Attached to the prison is a large farm with a herd of cows. But few inmates are habitually at work on this. In the summer, however, a considerable number work at weeding, etc.

The punishments used are detention in one of the strong rooms described above, and for the most serious offences in a darkened cell, where the prisoners are subjected to a bread and water diet.

On going around the prison and talking to a few of the inmates, our impression was that a few were obviously feeble-minded, but that the great majority was not so.

The inside staff of the prison is entirely composed of females, there being a female superintendent, a female chaplain, a female medical officer, a female assistant medical officer, etc.

The offences committed by most of the inmates were trivial: drunkenness, stubbornness, and offences against decency were apparently the most numerous.

MARYLAND.

With the exception of the small but interesting institution at Owings Mills, described below, we found that practically no special provision for the feeble-minded as distinguished from the insane was made in this State. It is necessary to bear in mind that here—at least as much as in other States we visited—religious and private charity deal on a scale which excites admiration and astonishment with poor and orphan children, the blind and crippled, fallen women, and other classes of the destitute, and include in their beneficent operations the feeble-minded class, though the epileptic, the dirty, and the more objectionable members of that class are naturally the last to be benefited. There are no reliable statistics as to the number of imbeciles in the State; the census of 1890 gives 1,550. This is admittedly too few; and in the country districts there must be many unknown and neglected cases. Baltimore has "Supervisors of City Charities," who appear to have done good work during the few years of their existence. They are an important branch of the Board of Charities and Correction, which deals with prisons, insane asylums, hospitals, and charitable institutions.

The Charity Organisation Society, Baltimore, Maryland.

Visited by Mr. Dickinson and Dr. Dunlop, on November 7th, 1905.

It was ascertained that in Maryland the law makes no provision whatever for the asylum care and treatment of adult imbeciles. A few imbecile children are received and dealt with at Owings Mills Asylum, and a few are received into almshouses. Imbeciles are refused by the insane asylum authorities. The Charity Organisation Society has found the greatest difficulty in getting cases into any of these institutions. Indeed, it is felt in the State that the proper care of these classes is a crying question, and the opinions of the Charity Organisation Society and other persons concerned in work among the poor and the criminal have been loudly expressed in writings. The Legislature has not, however, as yet dealt comprehensively with the question.

Lunatics.

Even as regards lunatics the State has not, and will not until 1909, assume full responsibility.

> The existing Lunacy law is contained in an Act of the Legislature of 1900, Chapter 603, Section 1. When any person is alleged to be a lunatic or insane, and without sufficient means to pay for his or her maintenance at an asylum, and who has no relative or relatives, or others legally chargeable with his or her support, the County Commissioners of the county in which such person may reside, or the Supervisors of City Charities (if such person resides in the city of Baltimore) shall, upon the written certificates of two qualified physicians, cause such person to be sent to the almshouse of the county or city to which he belongs, or to an hospital or some other place better suited to his condition, there to be confined at the expense of the county or city until he shall have recovered and be discharged in due course of law; but if demanded by the alleged lunatic or insane person, or any of his relatives or friends, or if requested by the Board of County Commissioners of the county in which the alleged lunatic or insane person resides, or by the Supervisors of the City Charities, if said person resides therein, the Circuit Court for the county in which such person may reside, or the Criminal Court of Baltimore (if such person resides in the city of Baltimore), shall cause a jury of twelve good and lawful men to be empaneled forthwith, and shall charge the said jury to inquire whether such person is insane or lunatic, and, if found so, it shall be the duty of the County Commissioners or of the Supervisors of City Charities to cause such person to be sent to the almshouse of the county or city to which he belongs, or to an hospital, or to some other place better suited to his condition, there to be confined at the expense of the county or city until he shall have recovered and be discharged in due course of law. It shall be the duty of any Board of County Commissioners and the Supervisors of the City Charities, before whom any such alleged lunatic or insane person is brought for commitment, under this section, if not satisfied that such person is lunatic or insane, as defined in Section 3, of this Article, to notify the State's attorney of said county or city, and he shall immediately thereupon bring the said question before the Circuit Court of the said county, or the Criminal Court of Baltimore City, for the determination in accordance with the provisions of this section.

Nothing contained in this section shall prevent the friends or relatives of such lunatic or insane person from confining him or providing for his comfort.

3. No person shall be deemed entitled to the benefit of the preceding sections who shall possess or be entitled to receive sufficient income for his maintenance and support as a patient in any home, retreat, or hospital for the insane in this State, or who has relatives or others legally chargeable with the support of the said person who are able to pay for the maintenance and support of the said person as a patient at any home, retreat, or hospital for the insane in this State. The County Commissioners of any county or the Supervisors of City Charities may consent in writing to the commitment in accordance with the provisions of Section 1 of this Article, of any indigent insane person from the respective counties or the city aforesaid not able to pay the whole cost of his maintenance, but who may be able to pay for part thereof, as a reimbursing patient, and designate the rate per week which shall be reimbursed to the county or City of Baltimore, from which said patient is committed; but no person shall be committed as a reimbursing patient who is himself able, or who has relatives or others legally chargeable with the support of said person, who are able to pay the rates for private patients at the State hospital or at any institution, home, or retreat for the insane within the State.

31. No person shall be committed to or confined as a patient in any institution, public, corporate or private, or almshouse or other place for the care and custody of the insane or idiotic, except upon the written certificates of two qualified physicians of the State of Maryland, made within one week after separate examination by them of said alleged lunatic, and setting forth the insanity or idiocy of such person and the reason for such opinion. No certificate shall be of force which shall be presented for the commitment of any patient more than thirty days after date of examination. The form of physician's certificate shall be substantially as follows:—

State of Maryland, County or City of ———. Dated ———, I, a resident of the County or City of———, being a graduate of——— Medical College, and having practised as a physician five years, do hereby certify that on this ——— day of ——— I have personally examined ———, age ——— (sex) ——— ? (social state), and do verily believe that the said ——— is insane, and that the disease is of a character which, in my opinion, requires that the person shall be placed in a hospital or other establishment where the insane are detained for care and treatment. I further certify that I am not related by blood or marriage to the said ———, nor in any way connected as medical attendant or otherwise with the hospital or other establishment in which it is proposed to place the aforesaid ———, and that this certificate is signed and made within one week of the examination of the patient.

——— ———, M.D.

Residence ———————.

By the further act of 1904, Chapter 421, Section 2, it is provided:—

From and after the first day of January, 1909, the State of Maryland shall be charged with the maintenance, care, control, and treatment of all dependent insane persons who are at that time residents of the State of Maryland. And as soon as practicable after the said first day of January, 1909, the State Board of Lunacy shall transfer from the several county almshouses and county and city asylums to one of the State hospitals for the insane such dependent insane persons who are residents of the State of Maryland as in the judgment of the said Board of Lunacy should be so removed;

and all such dependent insane persons, after their removal to one of the State hospitals for the insane, shall be maintained therein at the expense of the State.

There is an excellent State Lunatic Asylum at Springfield, and a city hospital with a large lunatic department at Bayview. We give no details as to these institutions as we did not obtain full particulars as to their cost, and some of the buildings are more largely constructed of wood than would be permissible in England.

Boarding-Out.

The system of boarding-out the destitute (including some defectives) in private families under inspection is largely used on grounds of economy and appears to work without grave difficulties.

The following paragraphs are from the last Report of the Supervisors of City Charities:—

Feeble in Mind.

Attention is again directed to the deplorable condition of the scores of feeble-minded and imbecile girls and boys all around us who are poorly cared for and are causing pain and suffering in their homes because the State has not made sufficient provision for the treatment of such cases.

It is not unusual to come across cases that disturb the domestic peace and happiness of the family to such an extent that the sympathies of the whole neighbourhood are aroused, and yet we are powerless to afford relief. What can be done with an active boy eleven years of age who, if not closely watched, will jump out of a window or strike one of the smaller children with a stick or chair or anything that is at hand? The boy, nevertheless, must be attended to and constantly cleaned like an infant. Some of these defective children chew the shoes off their feet and gnaw the plaster from the wall. Cases are frequently found where widowed mothers of such children are prevented from earning a living, and forced to become objects of charity, compelled as they are to watch the children constantly.

The economic side of this question will eventually force itself upon the community. These children, so inhumanly neglected, will almost certainly bring increased expense to the community by becoming parents of another generation of unfortunates, who in turn are to be a blight upon society. Why in this enlightened age such distressing conditions are permitted to exist from year to year it is difficult to understand.

Epileptics.

The urgent need of proper care for epileptics in this State cannot be too strongly emphasised. Other States are establishing colonies and in many ways giving special attention to this large class of unfortunates. The apparent indifference exhibited by the State of Maryland can only be accounted for by a total ignorance of the facts. Numerous cases come to the notice of this department of persons suffering with epilepsy who live aimlessly, unhappily and wretchedly, a burden to themselves and their families, simply drifting through life as misfits because they cannot receive proper care either at home or elsewhere. No firm will employ a man or a woman, however competent, who is liable at any moment to fall over with a fit. The foundry, factory, and office all alike are closed to him; recently a man after having attacks several times in church was requested in a kind way not to attend the future services. As a consequence, the epileptic gradually drifts to the almshouse or an insane asylum.

Immediate steps should be taken to establish a colony, where each of these unfortunates could become a busy, useful member. Experience has shown that in other States these colonies in a few years become almost self supporting, and lift their many subjects from a worn-out, aimless existence into a comparatively happy, contented life. The Craig Colony at Sonyea, New York, provides for over 1,000 patients, and is aiming to care for double that number. Maryland has done next to nothing in this line.

Inebriates.

As regards inebriates there appears to be no satisfactory provision. The local "Jane Cakebread" has been the subject of a recent legal decision to the effect that such persons cannot be committed to a hospital or asylum, but must go to the penitentiary.

The supervisors remark—

"Amanda Orr is representative of a class of persons who cannot resist the temptation of liquor. She has been committed to Bayview and the House of Correction many times for drunkenness and disorderly conduct. The only remedy for this class is to be confined indefinitely until cured of their disease in some place where they can be held in restraint and given healthy work and proper treatment. Incurable cases should be confined for life. This method of treatment is the most humane for the victim of the drink or opium habit and discourages the intemperate use of liquor and drugs. It is also much the cheapest method for the public in the long run. We need legislation to provide for indeterminate commitments for such cases."

The Maryland Asylum and Training School for Feeble-Minded, at Owings Mills, near Baltimore, Maryland.

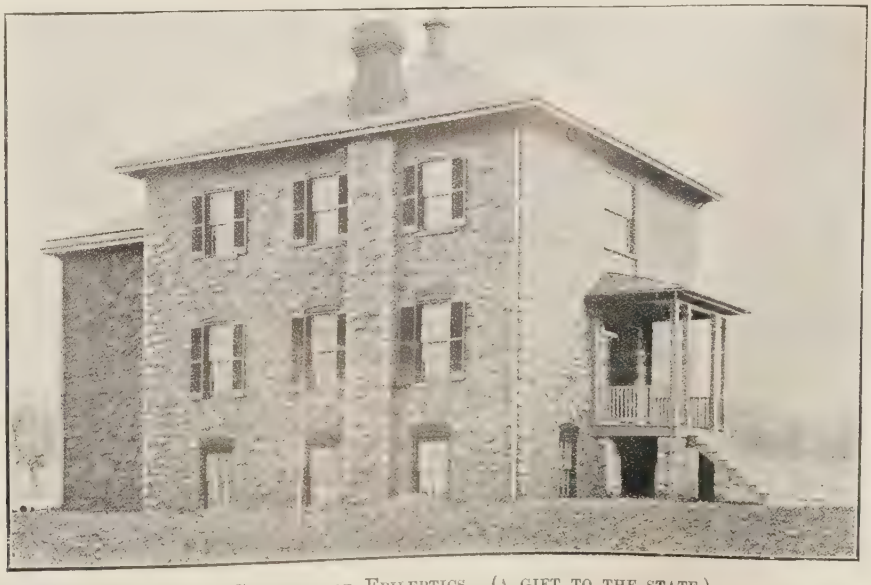
Visited on November 7th, 1905, by Mr. Dickinson and Dr. Dunlop.

This institution which has existed about seventeen years is situated twelve miles from Baltimore and is reached by a city tramway. The asylum is built on the villa principle, a large administrative block in front with some dormitories for the highest grade girls. Behind this there was one building containing kitchen, laundry, and sewing room; also one school building arranged for classes numbering sixty-eight, and four residential blocks, two being for boys and two for girls, one being for nineteen epileptics.

Special Institution.

The Maryland Asylum and Training School for Feeble-Minded, Owings Mills, Baltimore County.

LAUNDRY GUNDRY COTTAGE. PEMBROKE COTTAGE COTTAGE FOR EPILEPTICS.



Thom Cottage for Epileptics. (A gift to the State.)

The cottages hold about forty-five patients with three attendants. The population is about 200, the number of boys and girls being nearly equal. About half are "feeble-minded," the remainder lower grade imbeciles and idiots or epileptics.

Admission to the institution is by application; the greater number are received from various institutions, such as infant asylums and almshouses in the State. The waiting list is a long one (at present over 200) and the admissions are few. Idiots are attempted to be excluded, the higher grade imbeciles being the class desired for treatment. The age for reception is seven, and most of the inmates are very young.

There is no commitment of children to the institution, but power exists for committing older cases or for the detention of pupils who have attained to majority, although this power has never yet been exercised. The following is an extract from the Act of April 7th, 1900 :—

"Section 1. Be it enacted by the General Assembly of Maryland, that it shall be the duty of the visitors of the Maryland Asylum and Training School for Feeble-minded to report or cause to be reported to the Lunacy Commission the names of all inmates in said asylum and training school as wards of the State whom they know or have reason to believe to be twenty-one years of age, with such information as said visitors possess as to the age, condition and parentage of such inmates, and the place of residence of the parents or other near relatives or friends of such inmates if known.

"Section 2. And be it enacted, that when the Lunacy Commission receives the report required by the preceding section, it shall be the duty of such Commission without delay to examine, or cause to be examined, by at least two competent physicians, such inmate or inmates with special reference to his, her or their mental condition, and if the members of said Lunacy Commission, after such examination shall have been made, shall be of opinion such inmate or inmates so examined is or are by reason of mental imbecility, idiocy or unsoundness of mind, incapable of taking proper care of themselves, they shall report such fact to the Circuit Court for Baltimore County, with the reason for their opinion therefor.

"Section 3. And be it enacted, that when the report mentioned in the preceding section shall have been filed in said Court, it shall be the duty of the judge or judges thereof to examine the same, and if of opinion from such report and the reason given therein that the welfare of such inmate would be promoted by his or her remaining longer in the custody and subject to the control of the management of said Asylum and Training School, said judge or judges shall certify the same, and which shall be authority for the retention of the control of such inmate until otherwise ordered."

Discharges are very few and so far have only been made to suitable parents. In one case a parent raised proceedings by *habeas corpus* to get his child out of the institution, but the institution defended the action and won the case. The intention of the management is to keep the cases permanently and to increase the size of the institution according to the needs of the State.

The maintenance cost of the institution amounts to about £30 per head per year. The recent buildings have cost about £70 per bed.

The staff consists of a medical superintendent, a matron, four teachers, a housekeeper, a farmer, and attendants, the total number being seven superior officers and thirty attendants. Each residential block is supervised by a principal attendant (always a woman) and four attendants, who in case of the girls are all females, but with the boys one is a male. The amount of industrial work done in the establishment appeared to be small, though the farm was utilised as a means of employment for some of the epileptics and others capable of doing and of being benefited by work. Open air life was encouraged, and better scope for labour was contemplated as the numbers increased.

The ratio of staff to patients would also be diminished.

WASHINGTON, DISTRICT OF COLUMBIA.

At the seat of the United States Federal Government we found little of special interest or importance in connection with our inquiry, though our conversations with the courteous State officials whom we interviewed supplied us with much general information. In fact the scientific dealing with mental defectives was sadly to seek in the centre of Government except, of course, in regard to the insane who were dealt with in a fine asylum of modern type. The blind and the deaf and dumb were also dealt with in admirable institutions run on the most modern lines. The Legislature was slow to give consideration—much less practical effect—to proposals for dealing with the feeble-minded, whether children or adults, and we failed to find that any effectual inquiry had been made into their numbers or condition. The higher officials were aware of the importance of the question, but had failed to influence the Legislature to any practical action, the question being "crowded out" by matters of greater political interest. If the local affairs and finances of, say, Birmingham were managed directly by the Crown and Parliament, the same results would probably be noticed as are exhibited at Washington, which is governed directly by Congress and commissioners responsible to and relying for ways and means on Congress. Here as elsewhere we found that many mental defectives were to be found in the almshouses and the homes of the poor, a burden and a trouble to the community and to private families.

The state of affairs can best be illustrated by what we found at the local short sentence prison, "the Workhouse." This was visited by Mr. Byrne, Mrs. Pinsent, and Dr. Donkin on November 6th, 1905. They had an interview with the assistant superintendent, who had been in office over five years, and who spoke with interest and intelligence, though the inquiry was obviously a novel one to him. His account of the place coincided largely with the account already received at the Workhouse on Blackwell's Island, New York. The inmates were nearly all sentenced for varying times up to six months for drunkenness, and a few for longer terms for vagrancy and disorderly conduct.

The assistant-superintendent stated that he considered there was no good result from the short sentences given, nearly all the inmates being "repeaters." He did not know one case in all his experience where there was reason to believe reform had taken place, and he anticipated none until the law was altered.

Upon being questioned as to the mental condition of these inmates he stated that many were "not right in their heads," and that a very large proportion of them were in his opinion of weak will and entirely unable to control themselves, but he preferred not to give an opinion as to whether the drunkenness was a cause or the result of the feeble-mindedness. He told us that in the neighbouring jail, which was not under the same control, a very large number of prisoners were found who had previously been inmates of the workhouse, it being practically a matter of accident to which of these institutions many men were committed, though the jail was nominally for the more serious cases.

In almost all cases drunkenness was a part of the offence, and they were sent to the jail with sentences of six months or even a year when disorderly conduct was excessive. He spoke very strongly in favour of the indeterminate sentence for all criminals of this class, considering that the present system was entirely a farce.

On being asked as to whether the men under his charge were able to work hard, he said on the whole, "Yes." All that could work were made to work, and he believed that in the proper conditions he could get the

average inmate of the institution to do two-thirds of an ordinary industrious labourer's daily work, though this desirable result was not at present attained owing to want of sufficient land and appliances costing money which was not forthcoming. The remarks of this observant official and the appearance of the institution alike gave the impression that the responsible authorities while keeping the objectionable classes committed to it, at any rate temporarily, out of sight, had not as yet successfully coped with the more difficult problems of classification, training, and reformation

PENNSYLVANIA.

Our time did not allow us to have the advantage in this State of conferring with official and other experts as to the details of the laws relating to defectives and their practical working. However, we learned much from the Report of the Board of Public Charities and Lunacy for 1903 which gives very complete details on subjects of interest to us.

The number of inmates in almshouses is given as 13,000, of whom 5,000 were returned as insane, idiotic or feeble-minded, 9,000 were in State and other hospitals for the insane, and 1,900 in the two special institutions for the feeble-minded at Elwyn and Polk, which important institutions we saw and propose to describe later. 29,000 persons received out-door relief: there seem to be no reliable statistics as to the number of defectives among these.

The State seems to be remarkably well provided with hospitals, homes for children, refuges for fallen women (white and coloured), training schools and so forth—all of which appear to have been provided by the charity of religious and philanthropic persons, and occasionally of municipalities and other public bodies. These are inspected by, and make returns to, the Board.

From a careful examination of the Reports of the Board on the almshouses, it appears that some of the larger ones have suitable and well-managed insane and imbecile wards; but that in others there is an objectionable mixture of all classes, and very defective arrangements for employment, and even, in some cases, for the separation of the sexes. The State institutions for the insane are much lauded, some of them are indeed famous, but the total accommodation falls much behind present requirements as regards numbers. Inexpensive cottage buildings and other annexes to the existing institutions are contemplated to remedy this.

No special provision is made for epileptics and practically none for inebriates. By a statute passed in 1903 provision is made for the reception into the hospitals for the insane for one year of persons addicted to excessive use of alcohol and drugs. The Committee on Lunacy (which is a Committee of the Board of Charities) regards this novel measure with some misgiving.

Elwyn School for Feeble-minded Children (Pennsylvania)

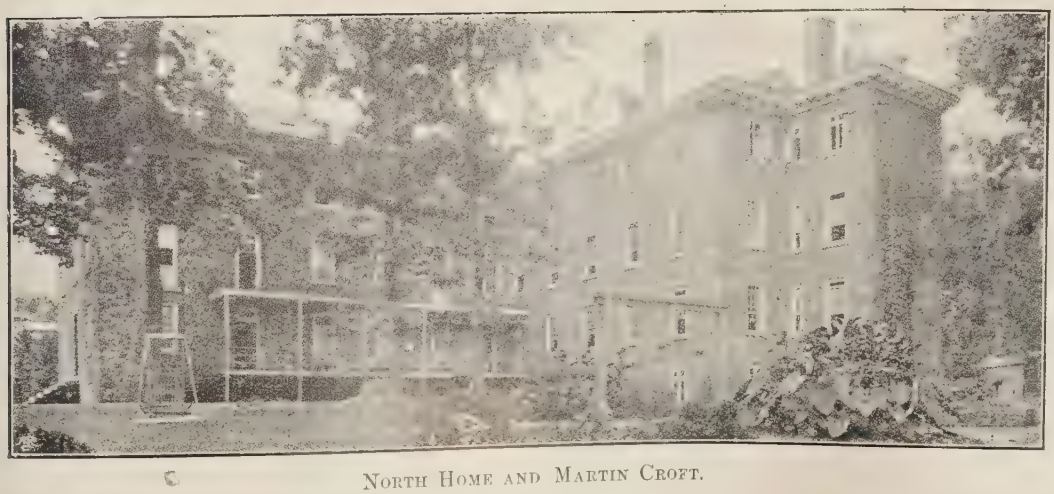
Visited by all the Commissioners on November 7th, 1905.

This famous institution illustrates almost the whole history of American methods of dealing with the feeble-minded. It was started some fifty years ago by contributions from private individuals with a State subvention to carry out the training of idiot children in accordance with the methods

and hopes of the Seguin School. Its accommodation and numbers gradually increased as its utility became manifest, the State contributing largely both by grants for building purposes and by generous allowances for the maintenance of inmates. About thirty years ago its scope was extended by State aid so as to include a custodial or asylum department for the care of the feeble-minded irrespective of age.

It now consists of a picturesque and well-wooded estate of 350 acres, and of a large collection of separate blocks and cottages providing for very complete classification and including schools, residential cottages, entertainment halls, band rooms, industrial buildings, and every conceivable adjunct to a complete establishment. The buildings are plain and economical but rendered picturesque by trees, shrubs, and creepers.

Department of the Training School: Main Building.



North Home and Martin Croft.

THE SCHOOL HOUSE.

Some of these have been provided by private benefaction, some by the State. The training given is elaborate, scientific, and careful in a high degree; as compared with that at Waverley it was, perhaps, less practical in its objects and more showy and directed to accomplishments. This is no doubt in part due to the fact that owing to their being no power of detention and to children being constantly taken away by their relatives, every effort was made by intensive education to fit them as rapidly as possible for a life of freedom, efforts doomed, in the opinion of Dr. Barr, the distinguished superintendent, to failure in the vast majority of cases.

The number of inmates was 1,060; of paid employees, 165.

The value of the land and buildings is said to be £150,000; the weekly cost of maintenance has been gradually reduced to 14s.

Dr. Barr gives the following scientific educational classification of the feeble-minded:—

Requiring—	IDIOT.	
	Profound (Apathetic / Excitable)	Unimprovable.
Asylum Care.	Superficial (Apathetic / Excitable)	Improvable in self-help only.
	IDIO-IMBECILE.	
	Improvable in self-help and helpfulness. Trainable in very limited degree to assist others.	
	MORAL IMBECILE.	
	Mentally and morally deficient.	
Custodial Life and Perpetual Guardianship.	Low Grade.—Trainable in industrial occupations.	Temperament bestial.
	Middle Grade.—Trainable in industrial and manual occupations.	A plotter of mischief.
	High Grade.—Trainable in manual and intellectual arts, with genius for evil.	
	IMBECILE.	
	Mentally deficient.	
Long Apprenticeship and Colony Life under Protection.	Low Grade.—Trainable in industrial and simplest manual occupations.	
	Middle Grade.—Trainable in manual arts and simplest mental acquirements.	
	High Grade.—Trainable in manual and intellectual arts.	

BACKWARD OR MENTALLY FEEBLE.

Training for a Place in the World.

Mental processes normal, but slow and requiring special training and environment to prevent deterioration. Defect imminent under slightest provocation, such as excitement, over-stimulation or illness.

ACTUAL CLASSIFICATION IN THE SCHOOL.

		Males.	Females.	Total.
School Department.	In School	138	91	229
	In Improvement Classes	46	28	74
Manual Department.	In Carpentering	3	–	3

Institution	7	3	10
Free Fund	23	19	42
On roll September 30th, 1904	589	419	1,008

Dr. Barr gave the following evidence.

This is primarily a training school, but we have some buildings for asylum purposes. We attempt to keep out those who are as easily cared for in an almshouse as here.

There is no legal commitment of children or adults, unfortunately.

No really feeble-minded child ought ever to be released from an institution. They constantly do get out; that is something we have every day. Among the poorer classes the parents are dazzled by a little accomplishment and want them to go out. I find the best place for my boys is in the United States Marine; and I sent a boy into the Army to-day.

They all come to us in the same way. They simply make the application to me and I see that the blanks are properly filled, and when possible I examine the cases. Very many of the children come from the homes of the parents. Those who come from the public schools are a very low grade, I have yet to see a high grade case from the public schools.

The high grade cases are very troublesome; the nearer they approach the normal, the worse they are.

Most of the parents of these children are feeble-minded. We keep an account of the families. The proportion of idiot or imbecile parents is larger than I have in my books. I studied and set forth 3,500 cases, and I have recently studied 3,000 more, and should say that at least 60 per cent. are cases of parental idiocy and imbecility.

The mixed lunatics I put under a separate head. I found that 64 per cent. of those were children whose parents, one or both, were mentally defective.

We have quite a few cases of a third generation of defectives, nearly 100.

We get cases which should really be in the reformatory, a number of them, both girls and boys.

Philadelphia is a big city; among the lowest section of the city there are many Russian Jews and many among them are feeble-minded. The proportion is very large among the Italians, Jews, and mixed races.

Speaking of the Americans, in the rural districts when you get below Mason and Dixon's line, where the people have intermarried among their own kind, in Maryland, Virginia, and Delaware, you will find imbecility running rampant.

Our statistics are very defective.

Relative to the school work, Dr. Barr submitted the following data:—

There are some children who are able to go through the whole of the school. They go to fractions. They will learn to read in the third reader and to enjoy an ordinary book. Nine per cent. of them get as far as this. About two-thirds of the children we have in the institution come to the school.

It is impossible to teach the worst child anything like reading or writing, He can only have the very beginning of kindergarten work, the very simplest exercises. They sew cards in leather, with shoe strings.

We keep them in the school for a limited time, as long as there is any gain. Then we send them to the custodial buildings, and there they can perhaps help others.

They are not limited as to age. When the limit of educability is reached we send them to the custodial home. There is very little to be done after the fifteenth year.

The high grade children go out. The boys, 95 per cent. of them go to the bad, and the girls the same; I should be in favour of retaining them.

Many of the children are absolute criminals. Some are the victims of circumstances, but the absolutely bad children we cannot do anything with. We have fifty to seventy-five of them.

I think our Government should take up the question of these children. I should have these form a national colony on the bad lands of the West, to be taken care of under military discipline.

If they are kept here there must be a separate department, absolutely separate.

Of the 270 custodial cases about 100 are of the lowest grade, who are unable to feed themselves.

There are in the school twenty teachers; fifteen regular teachers, two visiting teachers, and three attendant teachers, the latter being employed in the custodial departments, but we were told that they really do a teacher's work.

We were informed by the matron that a few of the children go home for holidays in summer. The teachers have a vacation of two months, and during the absences the places are filled by substitutes. In summer the children are taught in outdoor classes, of which there are six or seven.

We visited many of the school rooms; first, a room containing sixteen of the high grade children, engaged in kindergarten work; a room for boys, twenty five present; one for girls, seventeen present. These rooms, we were told, are not classified as to ages.

In the schoolroom for the larger girls, containing twenty-five, were many high grade moral imbeciles. They were engaged in sewing. Dr. Barr stated that altogether £300 worth of work is produced yearly in the sewing room.

The oldest boys in the school we saw engaged in drawing and colouring designs. The teacher stated that these worked in fractions and read in the third reader.

There was a good exhibit of the children's work, including basket weaving, in Indian design. The lower grades are engaged in industrial work. We saw eighteen of them and were informed that they polish floors, and perform other simple duties about the institution. They had been given up as unteachable in the school, but are receiving the training of the hands, the folding of napkins, and the knitting and winding of cotton rags.

Some of the larger middle grade boys were cutting pasteboard picture frames, and other small articles. Dr. Barr stated that the paper is used instead of wood because of its cheapness.

Two of the low grade boys were weaving and neither of them could be taught to read or write; others were winding cotton rags in this room. An excellent quality of Norway mat, of which several hundred dollars' worth is sold, is made by the inmates.

There is a shoe shop, but not all the boots and shoes for the institution are produced there; Dr. Barr stated, however, that eventually this would be accomplished and that before a year was out they would do all their own tailoring.

The printing room contains two presses, and all the work of the institution, including the printing and binding of the Report, is done there. At the time of our visit we saw five boys engaged in the room.

In a sloyd room, where twelve boys were seen working, the children make small things for the institution.

The institution also has a large assembly room, where a dance for the children is arranged every Saturday night, stereopticon views on Wednesday and services on Sunday.

The school has a band and a large singing class, in which many of the lower grades, who are very talented in this respect, participate.

On the review grounds which are large, we witnessed a military drill of about 150 boys, some of them low grade cases. The military training is a great factor in the education at Elwyn. There are also football and baseball teams, and all those who are capable of receiving any training take part, the number being about 700.

One of the cottages seen, we were told, contained eighty girls. The teachers are housed in a separate cottage. There is also a hospital for non-contagious diseases, and an epileptic department, where we saw 120 boys in one of the cottages and were told that there was another building for the girls. Most of these were middle grade epileptic cases, superficial idiots, and idio-imbeciles. Mechanical restraint is used, but Dr. Barr stated that it is recorded in each case. We saw boys working among the low grade imbeciles, and these receive a remuneration of one cent per day for their work.

Forty-six of the low grade boys were seen in one room, with three attendants; in another room, where the cases were not quite so low, were only two attendants.

On the whole, it appeared to us that Elwyn, both in its excellences and in its defects resembled the Royal Albert Institution. There was the same elaborate and careful training and good order, the buildings, though not nearly so palatial, were adequate and healthy, and the children looked healthy, happy, and well cared for. On the other hand, there were the same difficulties and varieties of fortune in obtaining admission and the same want of power to detain even the cases most unfit to be at large unless they were paying patients. There was a large waiting list seeking admission. There was no systematic drafting of the uneducable cases to a colony or other custodial institution where they might be detained permanently under the sanction of the law. The good work done in both institutions appears to be often nullified by a like defect in the legal powers of the managers.

It will be seen later that this defect has been partly removed by the Legislature of Pennsylvania in respect of their more recent institution at Polk.

The State Institution for the Feeble-minded of Western Pennsylvania at Polk.

Visited by all the Commissioners on November 11th 1905.

This is a particularly interesting institution, being of quite recent design and scope. It was established under a special law of 1893 with the object that it should supplement the Elwyn Institution, and should provide for the requirements of Western Pennsylvania by methods which should reproduce all the good points of the older institution and substitute improved arrangements in matters in which Elwyn had been proved defective.

The Act empowered five Commissioners, nominated by the Governor, to buy an estate of over 800 acres of good land and to erect buildings thereon to be approved by the State Board of Charities; the initial

appropriation was £50,000. The buildings were to contain two groups; an educational and industrial department and a custodial or asylum department.

It was enacted :—

Sec. 10.—That this institution shall be entirely and specifically devoted to the reception, detention, care and training of idiotic and feeble-minded children and shall be so planned in the beginning and construction as shall provide separate classification of the numerous groups embraced under the terms idiotic and imbecile or feeble-minded. Cases afflicted with either epilepsy or paralysis shall have a due proportion of space and care in the custodial department. It is specifically determined that the processes of an agricultural training shall be primarily considered in the educational department, and that the employment of the inmates in the care and raising of stock and the cultivation of small fruits, vegetable, roots, et cetera, shall be made largely tributary to the maintenance of the institution.

Sec. 11.—There shall be received into the institution feeble-minded children under the age of twenty years, whose admission may be applied for as follows :—

First.—By the father, if father and mother are living together.

Second.—If father and mother are not living together, then by the one having custody of the child.

Third.—By the guardian, duly appointed.

Fourth.—By the superintendent of any county orphanage.

Fifth.—By the person having the management of any other institution or asylum where children are cared for.

Under items three, four and five, consent of parents, if living, is not required.

All inmates are subject to such rules and regulations as the board of trustees may adopt.

Sec. 13.—Any parent or guardian who may wish to enter a child into said institution for treatment, culture or improvement, and pay all expenses of such care, may do so under terms, rules and regulations prescribed by the superintendent and approved by the trustees.

Sec. 14. Said board shall receive as inmates of said institution feeble-minded children, residents of this State, under the age of twenty years, who shall be incapable of receiving instruction in the common schools of this State. Said board shall prescribe and cause to be printed instructions and forms of application for the admission of such and shall include therein interrogatories to which they shall require answers under oath, showing such facts as may be needed for the information of said trustees. Such printed instructions and forms shall be furnished to all applicants for the admission of any person or patient in whole or in part as a State beneficiary and shall be endorsed by the board of commissioners or the directors of the poor of the county in which he or she resides at the time of making the application.

Sec. 15.—Adults who may be determined to be feeble-minded, and who are of such inoffensive habits as to make them proper subjects for classification and discipline in an institution for the feeble-minded, can be admitted upon pursuing the same course of legal commitment as governs admission to the State Hospital for the Insane.

Sec. 16.—The board of commissioners or directors of the poor of a county, in approving the application for the admission of a person to said institution, shall state whether or not such child has an estate of sufficient value, or a parent or parents of sufficient financial ability to defray the expenses in whole or in part of supporting such child in said institution, and if there be such means of support, in part only, then the amount per month which the parents or parent or legal guardian of such child may be able to pay, and the person or persons who make the application for such admission shall therein make statement under oath as to such means of support. Said board of trustees, in accepting the application for the admission of any person shall fix the amount, if any, and shall require payment for such support, so far as there may be ability to pay, as a condition to the admission or retention of said person. Said amount may at any time be changed by said trustees, according to their information concerning the means of support. Where the indigence of the child or its family be such as to require its admission upon the full beneficiary fund of the State, the ascertainment of the facts shall be as hereinbefore stated, and the support at the institution shall be provided for by annual appropriations at such per capita rates as shall be appropriated by the Legislature on the application of the trustees, after submission and approval of the same by the State Board of Public Charities.

The forms now in use for the admission of patients are appended.

APPLICATION FOR THE ADMISSION OF A FEEBLE-MINDED PERSON OVER TWENTY YEARS OF AGE.

I, the undersigned, hereby request you to receive , a feeble-minded person, as an inmate into your Institution, believing that such detention is necessary for h benefit. Subjoined is a statement respecting the said

(*Signed*)
Occupation
Degree of relationship (if any), or other circumstance of connection with the feeble-minded person.
Dated this day of , one thousand nine hundred
To
Superintendent of State Institution for Feeble-minded of Western Pennsylvania, Polk, Pa.

PHYSICIANS' CERTIFICATE.

We, the undersigned, residents of Pennsylvania, hereby certify that we have within one week prior to the respective dates hereinafter mentioned, at in the county of separately examined of and do verily believe that the said is feeble-minded and of such inoffensive habits as to be a proper subject for classification and discipline in an institution for the feeble-minded.

We further certify that we have been actually in the practice of medicine for at least five years, and that we are not related by blood or marriage to the said nor in any way connected as a medical attendant or otherwise with the institution in which it is proposed to place the aforesaid.

(*Signed*) M.D.
Residence,
(*Signed*) M.D.
Residence,
Dated this day of , one thousand nine hundred

CERTIFICATE OF MAGISTRATE OR JUDICIAL OFFICER.

I, a
of County, of the State of Pennsylvania, do certify that the foregoing certificate was duly sworn or affirmed to before me by the above named and
on this day of 190 ; that the signatures thereto are genuine, and that the signers are physicians of good standing and repute.

[*Seal.*]

STATEMENT.

IF ANY PARTICULARS IN THIS STATEMENT BE NOT KNOWN, THE FACT TO BE SO STATED.

1. Name of feeble-minded person, with Christian name at length - - - -
2. Sex and Age - - - - - - -
3. Residence for the past year or so much thereof as is known - - - - -
4. Occupation, trade or employment - -
5. Parents, if living - - - - - -
6. Husband or wife - - - - - -
7. Children - - - - - - - -
8. Brothers and sisters, and the residence of each of these persons - - - -
9. If not more than one of these classes is known, the names and residences of such of the next degree of relations as are known - - - - - - - -
10. A statement of the time at which the mental enfeeblement was first noticed, and the circumstances that induced the belief of its existence - - - -
11. Name and address of all medical attendants during the last two years - - - -

(*Signed*) NAME

(When the person signing the statement is not the person who signs the order, the following particulars concerning the person signing the statement are to be added, viz. :)

Occupation (if any) - - - - - -
Residence - - - - - - - -
Degree of relationship (if any) or other circumstances of connection with the feeble-minded person - - - - - -

LUNACY LAW OF 1883.

Note.—The certificate must be signed by at least two physicians and made within one week of the examination of the patient, and within two weeks of the time of the admission of the patient, and shall be duly sworn to or affirmed before a judge or magistrate of the Commonwealth of Pennsylvania, and of the county where such person has been examined, who shall certify to the genuineness of the signatures and to the standing and good repute of the signers.

And any person falsely certifying as aforesaid shall be guilty of a misdemeanour and also be liable civilly to the party aggrieved.

Act of Assembly No. 256, passed at the Session of 1893. Extract relating to the Admission of Adults to the State Institution for Feeble-Minded of Western Pennsylvania.

SECTION 15.—Adults who may be determined to be feeble-minded, and who are of such inoffensive habits as to make them proper subjects for classification and discipline in an institution for the feeble-minded, can be admitted on pursuing the same course of legal commitment as govern admission to the State Hospital for the Insane.

CERTIFICATE OF DIRECTORS OR OVERSEERS OF THE POOR.

We, the undersigned, of the Poor, for the Poor District of hereby certify that we have examined the circumstances of the above-named feeble-minded person and of h parents, and find that the said feeble-minded person has the following property and estate, to wit :

and that h parents have the following property and estate, to wit :

and we further certify that the said feeble-minded person has an estate of sufficient value to defray the expense in* of h maintenance in the State Institution for Feeble-Minded of Western Pennsylvania, and that the parents of the said feeble-minded person are of sufficient financial ability to defray such expense in*
and that the of the said feeble-minded person is able to pay dollars per month towards such expense. And we further certify that the legal settlement of the said feeble-minded person is in the said district.

Witness our hands the day of 190 .

This application when properly filled out, is to be mailed to
J. MOORHEAD MURDOCH, M.D., *Superintendent*,
Polk, Penn'a.

APPLICATION FOR THE ADMISSION OF A CHILD UNDER TWENTY YEARS OF AGE.

190

To the Board of Trustees of the State Institution for Feeble-Minded of Western Pennsylvania :

I the undersigned resident of County of State of Pennsylvania, respectfully request that my* aged years be named admitted to the State Institution for Feeble-Minded of Western Pennsylvania.
(*Signed*)

* Insert son, daughter or ward unless application is made by the Superintendent of a County Orphanage or a person having the management of any other Institution or Asylum where children are cared for, when this space shall be left blank.

NOTE.—The above declaration is to be signed by either the parent or guardian or the superintendent of the County Orphanage, or the person having the management of the Institution or Asylum where the child is at present cared for. Said person shall also, with the assistance of the physician, answer under oath the following questions.

[Here follow ninety-seven searching enquiries].

CERTIFICATE OF MAGISTRATE OR JUDICIAL OFFICER.

I , a
of County, of the State of Pennsylvania, do certify that the foregoing answers were duly sworn or affirmed and subscribed to before me by the above named on this day of 190 .

(*Signed*)

CERTIFICATE OF PHYSICIAN.

I, the undersigned, certify that I have examined the above named and find that he is by reason of being feeble-minded, incapable of receiving instruction in the common schools of this state. has bodily health and no *contagious disorder.*

(*Signed*) M.D.

Date, 190 . Residence

NOTE.—The above certificate is to be signed by the family physician or a medical practitioner who is earnestly requested to aid in the answering of the foregoing questions. Any thoughts or suggestions about the case or facts not set forth above, if sent direct to the superintendent will be considered confidential.

CERTIFICATE OF DIRECTORS OR OVERSEERS OF THE POOR.

We, the undersigned of the Poor, for the Poor District of hereby certify that we have examined the circumstances of the above named child and of h parents, and find that the said child has the following property and estate, to wit :

and that h parents have the following property and estate, to wit :

And we further certify that the said child has an estate of sufficient value to defray the expenses in* of h maintenance in the State Institution for Feeble-Minded of Western Pennsylvania, and the parents of the said child are of sufficient financial ability to defray such expense* and that the of the said child is able to pay dollars per month towards such expense. And we further certify that the legal settlement of said child is in the said district.

Witness our hands the day of 190 .

J. MOORHEAD MURDOCH, M.D.
Superintendent.
Polk, Penn'a.

The inmates in the State Institution for the Feeble-minded of Western Pennsylvania at the time of our visit numbered 1 166, of whom 669 were males and 497 females. 350 are taught in the school, and of the total number 20 to 30 per cent. are of very low grade.

With regard to the school work, Dr. Murdoch, the superintendent, stated it was the idea to give every child who is capable of learning, the opportunity attaining some knowledge of reading and figures; but the work is not carried very far beyond the primary stage, the aim rather being to develop the industrial work as more useful. Some of the children work in fractions, but those are the exceptions, the greater number of them only getting up to addition and subtraction. In reading, they reach the third reader at the best. Each child who seems capable of learning is given a fair trial of some months, but if after that time no results are apparent, the principal teacher takes it away for solely industrial training. Dr. Murdoch stated it was surprising how well such a child sometimes progressed in the industrial work. Of course, jointly with the school work, every child receives industrial training.

The total cost of the institution buildings was $750,000, viz. £125 per head: the cost of maintenance is 14s. 6d. a week. A separate building for the lower grade, custodial cases, cost £30,000. This latter building is complete in itself having a separate kitchen and separate administration, but it is heated from the central plant. There are in the building 250 inmates, making the cost per bed £120. The grounds about the institution cover nearly 1,000 acres and most of the buildings were erected eight years ago. There is a separate and well-equipped hospital building, with two large wards, in which at the time of our visit we saw only three patients, an operating room, and upstairs a ward for contagious diseases. The total staff of the institution consists of three medical men and 116 employees, which number includes the teachers.

The buildings, though erected at such moderate cost, were of substantial construction and pleasing appearance, and so arranged as to secure free ventilation and ample means of classification.

The large hall, or assembly room, which was used for many purposes, appeared to us a most valuable adjunct to the institution and served very efficiently in lieu of a number of buildings which, if separately provided, would have cost large sums.

In a remote and picturesque part of the estate, we were informed that there was a summer camp with simple inexpensive shelters and dormitories, where the inmates spent a week or more in the fine weather in batches, to their great advantage and pleasure.

The Children present September 30th, 1904, were thus Classified:

Classification.	Boys.	Girls.	Total.
School Department—			
In class room	146	93	239
In training classes	36	29	65
Manual Department—			
In grading, road making, etc.	40	—	40
In shops	48	—	48
In garden and farm	48	—	48
In laundry	3	25	28
In domestic duties	59	154	213
Custodial Department—			
In asylum	132	93	225
In nursery	53	49	102
	565	413	1,008

Number Employed in Industrial Branches:

Branches.	Boys.	Girls.	Total.
Bake shop	3	—	3
Blacksmith shop	1	—	1
Carpenter shop	6	—	6
Domestic duties	59	154	213
Farm	48	—	48
Grading	40	—	40
Laundry	3	25	28
Manual room	14	—	14
Painting	2	—	2
Power house	—	—	—
Sewing rooms	—	24	24
Shoe shop	6	—	6
Tailor shop	15	—	15
Henneries	6	—	6
Mattress shop	12	—	12
	215	203	418

The proportions at the date of our visit were much the same.

Outline of School Work.

Kindergartens.

Kindergarten D.—Consists of quite small children.

Kindergarten C,—Consists of boys.

Kindergarten B.—Consists of small boys and girls, who have primer and blackboard reading with kindergarten occupations.

Kindergarten A.—Consists of larger boys and girls, having primer and blackboard reading, number work, slate writing, with kindergarten occupations.

Class E.

Boys and Girls.

Primer, First Reader, blackboard reading, simple number work, letter writing with pencil, time telling, nature study, basketry, bead work.

Class D.

Boys.

First and Second Readers, simple addition and subtraction, letter writing, copy books, weights and measures, toy money, time telling, basketry, nature study.

Class C.

Boys and Girls.

Second, Third and Fourth Readers, simple operations in the first rules of Arithmetic, weights and measures, toy money, time telling, nature study, basketry, bead work, fancy work.

Class B.

Boys.

Third and Fourth Readers, compound numbers, letter writting in ink, Geography with maps and globe.

Class A.

Boys and Girls.

Third and Fourth Readers, decimals, letter writing in ink, Geography with maps and globe, basketry, bead work, fancy work.

Going through the institution, Dr. Murdoch conducted us first into his office, to which is attached a small dispensary and examining room, where slight ailments are treated. We were told that a dentist comes from Franklin, Pa., a near-by town, once a week.

We saw two dormitories of twelve beds each, occupied by girls who attend the school. Dr. Murdoch stated that the system of grading was a practical one, those who were congenial being put together. The girls assist in the care of the dormitories, in bed-making, sweeping, etc.

In a day-room were fifty-six girls, with two attendants. Each of these day rooms had a smaller one opening from it, in which children were also assembled.

On the same floor is a large dining room for girls, with a kitchen, where the cooking is done by natural gas, and a bakery.

Upstairs was a tailor shop containing five machines. Here all the clothing for the institution is made, including girls' cloaks, jackets, trousers, etc. About twenty-five boys work in the shop half a day, which Dr. Murdoch thought was better than a whole day's work, although he stated that occasionally when the need was pressing, the boys did work for a full day.

In the shoe shop all the repairing is done, and 75 per cent. of the new boots are manufactured.

A large amount of raffia work is done in the institution. We were told that last summer nearly every girl had a raffia hat which had been made by the inmates, and some of them were sold. Some of the low grade children were employed in braiding rope, making hammocks, mats, etc.

About fifty of the boys are employed in the sloyd room, where some practical work is accomplished. There were nine large benches.

We passed through the rooms of the higher grade boys, who were playing cards and checkers, others were listening to a phonograph. In this room we saw a crippled boy, who having been taken away from the institution by his mother, came to grief on the rail-road, losing both legs; after the accident he returned to the institution. All these boys were attending school

a part of the day and were engaged in industrial work for the remainder In another room we saw lower grades, who were doing farm work. We saw some of the lower grades attending the school; these go into the manual training classes, but are not taught reading or writing. Most of them were defective in speech. Dr. Murdoch stated that many of the children received a leave of absence occasionally to visit their parents.

One of the cottages for the low grade cases contained 214 inmates, some of these being middle grade imbeciles. These, however, have separate quarters from the low grades. We were informed that many of the patients in this cottage had been there since the institution opened, having then come from the almshouses. Many of the middle grade children assist in caring for the lower grade there being one aid for five or six children. A ward of fifty-four low grade cases was in sole charge of a man and his wife, aided by a supplementary, who goes from department to department. The attendants live in this building. In the court there was a stone pile for the lowest grades. The cottage for low grades contained both boys and girls, the boys being on the one side and the girls on the other. Upon being asked if any work was done by the low grade boys, Dr. Murdoch stated that they assisted in making their beds, and in shovelling dirt and in grading; but he stated that they had to be guarded because they attempt to escape. They also help in the sewing room.

In this cottage there was a division for the girls acting as aids in taking care of the lower grade cases. They live there without the supervision of an attendant, have their own rooms and a sitting room.

We also saw the low grade females assembled in a room with bars at the windows.

The power house of the institution was very interesting, being heated entirely by natural gas derived from the wells of Western Pennsylvania; but there is also a provision for coal heating, should the gas supply fail. Therefore, a supply of coal is constantly kept on hand. The cost of the natural gas is $12\frac{1}{2}$ cents.

Most of the washing in the laundry is done by machinery. There are seven employees and sixty patients employed there, the work being carried on daily, some of the patients working in the morning and others in the afternoon.

For convalescents who are unable to walk the institution provides a pony cart. This we saw driving about, with four children in it; they seemed to be enjoying the exercise greatly.

In the well-kept barn we saw a herd of 100 Holstein cows, whose milk is all used by the institution; no butter is made. A record is made of the quantity of milk from each cow. We were told that the institution also has a poultry farm.

Dr. Murdoch stated that many of the boys working on the farm did so without supervision, some of them driving all the way to Franklin, the nearest town, and back to the institution.

Much attention is paid to Nature study and recreation in the woods, in the school gardens, and the farm. On the latter, a very large amount of useful and remunerative work is done by the boys.

Dr. Murdoch informed us that more than 60 per cent. of the inmates were received at ages between eight and twenty-one and 20 per cent. were adults. The adults were certified and detained compulsorily; they had never had any difficulty in keeping the children. They had at least 100 girls (more than 20 per cent.) who had been on the streets or had got into trouble. He was opposed to the boarding out of feeble-minded children, especially

females above the age of childhood. Kentucky is the only State in which this is done and the results are unhappy. Epileptics and the few dements whom he has, get on quite well with the others.

He uses mechanical restraint (the camisole) once or twice a day to prevent self-injury.

NEW JERSEY.

The comparatively small State of New Jersey contains, in addition to the usual asylums for the insane, prisons, and juvenile reformatories and industrial schools, three State institutions of special interest to the Commission, viz., an institution for defective women, a training school for imbecile boys and girls, and an epileptic colony.

Speaking generally, its laws relating to the insane and the poor are much the same as in New York State, but it has two laws relating to the feeble-minded which are of special interest.

Chapter 137 of the laws of the session of 1904 reads as follows:

"It shall be unlawful hereafter for any person who has been confined in any public asylum or institution as an epileptic or insane or feeble-minded patient, to inter-marry in this State, without a certificate from two regularly licensed physicians of this State that such person has been completely cured of such insanity, epilepsy or feeble-mind, and that there is no probability that such person will transmit any of said defects or disabilities to the issue of such marriage; any person of sound mind who shall inter-marry with any such epileptic, insane or feeble-minded person, with knowledge of his or her disability, or who shall advise, aid or abet, cause or assist in procuring any marriage contrary to the provisions of this Act, shall be guilty of a misdemeanor."

Chapter 134 is a supplement to the Act for the instruction and maintenance of indigent, deaf and dumb, blind and feeble-minded persons, inhabitants of this State.

It reads:

"That any parent, parents, guardian, or custodian who shall make application to have any person admitted to any of the institutions coming under the provisions of this Act, shall in such application, waive all right to remove such inmate, either permanently or for a limited time; provided that any inmate may be discharged upon request of the governor or person administering the government of this State, on the recommendation of the principal superintendent or person at the head of such institution; and provided further that the person at the head of such institution may grant a leave of absence to any inmate for a limited time."

The exact number of feeble-minded persons in the United States is not known. Accurate returns are so hard to get that in the census of 1900 no attempt was made to record them. The latest official returns are therefore found in the census of 1890, which gives 95,571 as the number. Because many parents either do not recognise this condition in their children or resent being questioned about it, there are without a doubt many cases not reported.

However, assuming that the above figures are correct, there are 1,526 feeble-minded for every one million of the population (or one for every 655). Making an estimate upon this basis, there are now in New Jersey over 2,500 feeble-minded persons.

The Training School for Girls and Boys, the State Home for Feeble-minded Women, and the two or three private institutions are caring for about 500 of these.

Many others are in the Hospitals for the Insane, Epileptic Village, the Almshouses, and other institutions. A few are in good homes where (providing the children are easily managed), they may, perhaps, safely remain throughout their lives. By far the greater number, however, are in places entirely unsuited to their needs.

The institutions specially designed for the feeble-minded date from the passing of a law in 1888, which provided an appropriation for the maintenance under the direction of the governor, of indigent, deaf, etc., and "feeble-minded persons," in suitable aslyums, the large sum of £60 per annum for maintenance, and £6 for clothing being granted for this purpose. Special mention was made of feeble-minded females over twelve years of age, who were to receive industrial training and moral and physical care.

It was not until 1904 that provision was made by the Act already mentioned, for the compulsory detention of such persons. Originally the period of training was to be from three to eight years, after which it was hoped that the inmates could be returned safely to their homes.

New Jersey State Home for the Care and Control of Feeble-minded Women, Vineland, N.J.

Visited by all the Commissioners on November 9th, 1905.

View of Institution from the South-West.

The Home at the time of our visit had 160 inmates. The grounds about the institution cover 35 acres.

We were conducted through the buildings by Dr. Dunlap. In the central block we were shown first a large reception room, comfortably and prettily furnished, where patients may receive their friends and relatives. On the same floor is a schoolroom for the younger children, where the usual kindergarten work, modelling in clay, etc., is carried on, a dining-room for the attendants and teachers, and a large dining-room for the patients, seating 124. The latter is furnished with small round tables accommodating four people, and the tables are covered with white cloths.

Upstairs were two large dormitories. Each bed had a white pillow sham embroidered in red, this being the work of the inmates. Leading off from these dormitories there were two open-air sleeping apartments on the verandahs, one holding ten beds and the other seven. These are used for tubercular cases. Attached to each dormitory is a nurse's room, and also a washroom for the patients. There was furthermore a small dormitory, with barred windows, for excitable cases. One patient was seen in this room.

In the attic is the dressmaking establishment, where the garments for the patients are made. These consist of combination suits, *i.e.*, skirt and waist attached, reaching to the ankles. They are usually made of white Canton flannel. The dressmaker is assisted in her work by four or five girls, and fully a dozen patients are able to cut out and make dresses. In another room were girls working upon bed coverings, tufting the quilts, etc. These, we were told, last about a year, when they are renewed. They also do some carpet weaving, enough to supply the institution. There was quite a display of work done in knitting, crocheting, Mexican drawn work, etc. In another room, the clothes of the inmates are kept, each patient having a separate box for her belongings, trinkets, etc., while the dresses are hung in closets; in this room a class is held for mending and darning.

In the assembly hall, which was well equipped with all gymnastic appliances, we witnessed a drill in which about 35 girls dressed in very pretty gymnasium costumes took part; none of these girls was under fourteen years of age, and some were quite middle-aged. They also went through various interesting exercises, one of which consisted in balancing themselves on narrow wooden rails, resembling a railroad track. Dr. Dunlap stated that the girls receive a daily training of one hour in this physical work, on the utility of which she laid great stress, and an hour for reading and writing, the periods being of twenty minutes duration; no classes are for a longer time. Much attention is also given to the musical training; many of the girls sing, and there is a stringed band of nine, which played wonderfully well.

The per capita cost of maintenance is 18s. per week. Up to the present the cost of land, buildings, etc., amounts to $70,000.00, which for the 160 inmates is at the rate of £90 per head. The superintendent stated that this capital expenditure would have been at least four times as much if the work had been carried out by the city council or other local authorities, who invariably paid more than is necessary. The small figure was due to unwearying personal attention and to the trustees dealing with the finances as if they were using their own money.

The teaching staff consists of two trained teachers, for physical culture music and English, two sewing teachers, and two for washing and ironing.

Exercises in Gymnasium.

The institution is heated by a power house, which also does all the laundry work. The attendants sleep in the power house.

In the ironing room we saw thirty-six girls at work, some of them the lowest grades. Each was supplied with an individual stationary ironing-board, and the iron was heated by gas. In the wash room individual white porcelain tubs were used, twelve girls being at work there. Both the washing and ironing rooms were large and cheerful, with benches for recreation. The girls work here daily, ceasing at about four in the afternoon.

The worst cases were placed in a separate cottage. Many of these were epileptics, but no mechanical restraint of any sort is used in the institution, and there were no dark cells. In this department about twenty were of the lowest grade. In this, as in all other parts of the institution, the inmates were treated with affectionate gentleness, as if they were children.

In the basement of the central block we saw a recreation room where the patients were enjoying themselves; one was playing the piano and many were dancing.

There were in the institution two patients advanced in years, one seventy and the other eighty-nine.

The following is a concise record of our conversations with Dr. Mary Dunlap, the superintendent and sole director, a lady obviously of great capacity and influence both over her charges personally, and over the aims and management of a very interesting institution.

Dr. D.: The cases are committed here for one year. There is a provision also, that if they are not suitable cases, we can return them. The commitments are renewed every year. This is done on my own responsibility. Being a physician as well as superintendent, I can do that without protest. A great many of the women here have had children. We have one case of a mother and daughter here; one woman had four before she came.

I should say that fully one-third have had illegitimate children, in some cases more than one.

Our law provides only for childbearing women, but I think they ought to stay here for life; but some, of course, could be cared for in our almshouses quite well.

The women discharged often relapse, and we don't let them out unless it is impossible to keep them.

We get cases from twelve to thirty-eight, but we keep them for life if we can manage to do so.

They are not committed by the courts, but come through the Governor of the State. He receives the application, he sends for the clinical history and sees that it is a proper case, and if it is, he issues a warrant for one year. The papers are renewed after one year. If, however, this is not a proper place for them, we can dismiss them. We have some few patients who cannot do anything. We have about eighteen or twenty idiots. In the laundry work we can employ the lower grades, but the idiots are a trouble.

The following is the form of commitment to the institution:—

EXECUTIVE DEPARTMENT.

To the Principal of the New Jersey Training School:

SIR,—You will please admit ———— for the county of ———— of the age of ———— into your institution for instruction and support at the expense of the State of New Jersey, and for the term of one year from ———— at the yearly sum of $230.00 and $30.00 for clothing; and you are hereby authorised to draw from the Treasury of the State semi-annually ———— and the Treasurer is hereby authorised to pay the same. Make semi-annual report, giving admission, progress of learning, state of health and remarks.

Given under my hand at Trenton, N. J.,

(*Signed*)

Governor.

An elaborate paper of questions as to the history of the patient has also to be filled up.

THE NEW JERSEY TRAINING SCHOOL FOR FEEBLE-MINDED BOYS AND GIRLS.

Visited by all the Commissioners Nov. 9th, 1905.

This was built and partially endowed by a private chartered association, but is almost entirely supported by State contributions towards the maintenance of the inmates, which has varied from £66 and £55 per annum as a maximum down to considerably smaller sums or even nothing, together with—in all cases—£6 per annum for clothing. On the whole the State contribution has been about £41 per head, sufficient to allow of savings devoted to additional buildings, farm, etc.

The admissions take place on the order of the Governor, practically in the same way as in Dr. Dunlap's institution.

The numbers at the time of our visit were about 350, about one-sixth paying a substantial proportion of their keep and one-third paying something.

The age limits were practically five to twelve for girls and five to twenty-one for boys. The Governor was generally set in motion by the parents or by Charity organisations.

Speaking generally, the institution was an idiot asylum and training school for imbeciles of the type familiar in England. There was perhaps more useful employment in the farm and in the workshops than in our country, and less attention was devoted to education in the sense of literary or other accomplishment.

Professor Johnstone, the superintendent, was not only an enthusiast but an accomplished exponent of his system of sympathetic and personal attention to the individual needs of his pupils, and loving care for them in their defects and weaknesses; and the good results of his personal devotion were manifest even on our short visit.

He accompanied us through the institution and over the grounds.

The North Group.

The Administrative Cottage—Maxha

In the assembly room we saw the 350 inmates, who sang several songs with spirit and enjoyment; there was also a recitation. This assembly is held every morning for twenty minutes. Fifteen minutes of this time are spent in singing and five are devoted to the telling of a story by the superintendent. All the training in music, exercises and so forth is in mass.

We were told that about half of the patients are engaged in some industrial work, coming to the limit of the school education at about fourteen or fifteen, after which they are given manual work. From 100 to 150 are employed in the garden and do nothing else; practically 200 are undergoing some training, mentally or physically. Gymnastics are part of the regular daily training and there is a gymnasium in the basement. Out of the whole number, they are attempting to teach English, that is, reading and writing, to not more than ninety; fifty only out of this number reach the third reader and can do simple division. The average number of children in a class two years ago was nine, but this has now been increased to thirteen, owing to the larger population. The superintendent contemplates engaging a domestic science teacher to train the children on scientific principles. We saw an "unpractical" sewing class, from which, when they become proficient, the girls are graduated into the dressmaking department and the mending room. In the kindergarten two of the older girls are trained to help the teacher, and we were told that last summer, when the teacher was absent on her vacation, one of these high grade girls took entire charge of the kindergarten. In the sloyd room we saw some of the older girls at work and were informed that they came there at four or five in the afternoon when they have finished their work in the kitchen and other departments of industrial work, for training and recreation in the sloyd work. Altogether forty-four children are taught in the sloyd department, there being classes of seven each. Fifty children were in the basket class and fifty in the sewing room.

In regard to the industrial classes, Professor Johnstone stated that in the spring the greater number of them are put to work on the farm. There are 280 acres of ground, and part of this land is devoted to an orchard. The girls pick the fruit and assist in canning. The institution also has a garden, in which the children work, each bed being allotted to a child or to a class of children for caretaking.

In the shoe shop eighty pairs of shoes had been manufactured last year, and all the repairing for the institution is done there. In the tailoring department we saw five machines worked by patients, and we were told that two-thirds of the clothing for the institution is made there. There is, furthermore, a shop for making hammocks, mats, and brooms, but many of these workers had not as yet returned from the farm.

In the storeroom we saw a good supply of canned fruits and vegetables, these being derived from the farm. The peas and corn were put into small cans, but everything else into gallon receptacles; fifteen various kinds of fruits and vegetables were canned. We were informed that the canning process is not expensive, the original apparatus costing only $55.00 and the soldering being very simply done. Both boys and girls work at the canning. In the winter the canning room is used for pickling.

The institution buildings number a total of twenty-one, including a good steam laundry, horse stable, and barn for the cows. The cost of the stable was $2175.00 and the barn $4293.00. The daily milk supply is 60 gallons On the farm most of the work is done by the patients, there being only one paid farmer, one florist, and four paid assistants. Professor Johnstone stated that some of the boys were practically self-supporting. Five were capable of delivering coal from the railroad, without supervision.

An interesting feature of the institution was the privilege allowed to the children to purchase articles at the general shop. Each child has a certain weekly allowance, varying from one cent to seven cents, and upon producing good reports from his teachers, he is granted this credit. For this amount he

can purchase candy, fruit, and small trinkets. Almost everyone in the institution is interested in this department, which, as Professor Johnstone stated, is a stimulus to good conduct.

For the instruction and interest of the children, a board of lady visitors contributed to the institution a number of animals, consisting of three deer, some coyotes, prairie wolves, a coon, rabbits, doves, canaries, monkeys, etc.; and a carousel [*Anglicè*, a roundabout] operated by steam, with a hand organ, is another great source of enjoyment to the children.

A lady presented the institution with a car line and car. On holidays and special occasions the car is produced harnessed with donkeys and the inmates drive about, which gives them great pleasure.

The institution also has a conservatory and some greenhouses, which are in charge of a florist.

For the recreation of the employees a club has been organised. Once a month the employees are called to a meeting at which the work of the institution is discussed. A bulletin on the wall of the main building furnishes suggestions to the employees.

The hospital consists of about four small wards, two of them with verandahs and four single rooms for purposes of isolation. There were about twelve patients altogether in the hospital. There were three cottages for low grade cases, one for females, another for the younger males, and one for the older males. Those for the males only were visited; the one for older men contained seven. These were left in charge of one man attendant, and the inmates did not appear to be well cared for. The rooms were smelly, the patients not very clean, and one at the time of the visit was in restraint. In the department for the younger degraded cases, on the ground floor, there were about seventeen idiots and on the upper floor about a dozen low-grade epileptics. The care and treatment of this block was not such as might be desired for the class of cases. They were not over clean, they were untidy, and the wards were smelly. The mattresses in this department were very hard and lumpy, being stuffed with corn husks.

As a means of punishment in the institution there existed two cells known as "quiet," one being in one of the female cottages and the other in the male. These were semi-dark cells, lined throughout with wood, and contained nothing but a bedstead. The officer showing these rooms explained that they were not used for more than an hour or two at a time, but afterwards stated that the cries coming out of them were sometimes hideous and kept the attendants who sleep on the same flat awake all night. Mechanical restraint, consisting of muffs and camisoles, seemed to be very freely used among the degraded cases and were put on by the attendants or matron without the permission of either the superintendent or the medical officer. One case seen had been in cuffs for a year, and another case was pointed out that had a camisole on every night for over a year.

It is, unfortunately, impossible for us to give any reliable information as to the capital cost of the training school, on account of the gradual way in which it has been expanded and improved, as legacies, donations, and savings on the maintenance fund enabled the managers to carry out their successive improvements.

The New Jersey State Village for Epileptics at Skillman, New Jersey.

Visited by Dr. Dunlop and Mr. Byrne on November 23rd, 1905.

It is a very interesting example of an epileptic colony in an early stage of development. There is a very large farm, old farm buildings re-adapted for the new purposes at a slight cost and supplemented by new buildings, comprising hospital, cottages, children's department, etc., economically built, but perfectly adequate and suitable for their purposes. It is regulated by private Acts of the Legislature, and bye-laws made in pursuance of the powers given by those Acts.

Dr. Weekes, the superintendent, who received the Commissioners, gave them full information as to the history and position of the Colony. It was established for epileptics who were not insane, nor idiotic. We found, however, some low grade imbeciles and idiots. The bye-laws also exclude paralytics, bed-ridden, violent, dangerous and destructive persons requiring mechanical restraint or personal attendance ; also all under five years of age.

Both paupers and non-paupers are admitted. Of the latter there are scarcely any. The process by which they are admitted consists of :—

(*a*) A written request by relatives and an undertaking to pay the charges.

(*b*) A certificate of epilepsy by two doctors and a bond with sureties to pay for the maintenance of the patient.

In the case of paupers, admission requires :—

(*a*) A written request.

(*b*) Evidence before a Judge of Common Pleas of the epilepsy and indigency of the patient, and of the consent of the Poor Law authority of his township, viz., the " chosen freeholder."

(*c*) An order of the judge " to detain him until he shall be restored to health, or removed or discharged from the village according to law."

Discharges take place by the Board of Management on the advice of the superintendent, and also theoretically, by the Court of Common Pleas. Most of the patients remain willingly in the institution, there being very few escapes.

It is the duty of the overseers of the poor to send to the village by the procedure set out above all chargeable epileptics, and also to take action when relatives apply to them and produce suitable cases. Moreover, all officers of asylums or State or county institutions must send their epileptics who are not insane or idiotic to the village. We were informed the State of New Jersey proposes to develop the institution so as to meet the full requirements of the State.

The present cost of maintenance is naturally high—about 25s. a week—the number of patients being small. The charge of maintenance is borne partly by the State and partly by the Poor Law authorities. The county collectors have to pay two dollars a week, and thirty dollars per annum for clothing for each patient, and it is their duty to recover from the relatives such sums as they are able to pay.

The total *per capita* cost of the land, buildings, etc., amounts to £263 for each of the 300 inmates, whose immediate reception is contemplated; but the site, the farm of 890 acres, the water supply, and other provisions, are adequate for at least four times that number.

At the present time, farm and garden work together with levelling, road-making, cementing, etc., form the bulk of the men's work throughout the year, and of many of the women's for seven months of the finer weather. The fine

range of workshops including carpenters, smiths, boot-makers, and three others, large enough to employ 75 or 100 men, have just been built for £2,400 ; but at the date of our visit they had scarcely been brought into use.

There is a fine laundry in which we observed that for the safety of the epileptics working there, the power for each machine was provided by a separate motor in order to avoid belting and other gearing.

A cottage for eighteen of the women of the highest mental grade and two paid servants attracted our attention. It was entirely complete in itself except that it had no laundry and provided separate bedroom accommodation for each inmate. The cost of this had been £3,000.

A particularly fine building had been erected and was ready for 100 children, with rooms for an assistant doctor, the chief matron, and two teachers. This building was entirely complete in itself and cost £900.

Another well designed house, complete in itself, save laundry, provided, in separate bedrooms measuring 12 feet by 10 feet, for forty women of low mental grade and six paid servants at a cost of £100 per head.

Two smaller cottages for twenty-eight middle and low grade men cost £95 per head. The inmates here slept in dormitories and were looked after by an attendant and wife in each cottage. We observed several lunatics and idiots among these.

Dr. Weekes spoke with enthusiasm of the good work which he believed would be done in the institution at Skillman. He strongly recommended large colonies, and regarded extensive farms with good land for gardens as essential.

An interesting remark made by Dr. Weekes as showing the value of the labour of epileptics was noted. Among work under way at the time of the visit was a ditch about 3 or 4 feet deep to connect the drain of one of the new houses with the main sewer. Dr. Weekes was asked whether this ditching was being done by inmate labour, and his answer was to the effect that he could not afford to let the inmates do the work for it was cheaper to contract for the digging of the drain than to pay for the supervision of the inmates when doing it.

The buildings, he thought, should consist of separate blocks of a cheap character for the different grades, with a central laundry, power-house, and workshops. He was also in favour of the use of inmates of the higher mental grades as servants and attendants on the lower grades.

Such an institution, he thought, should, when in full swing, maintain its inmates at a cost not exceeding 8s. a week. He was in favour of classification by mental capacity and not at all by the degree of epilepsy. And he saw no reason why feeble-minded persons not suffering from epilepsy but requiring institution care, should not live and work on separate portions of the same estate under the same superintendent.

OHIO.

In this State the insane and the feeble-minded, *i.e.*, idiots and imbeciles, are dealt with, as in New York and most of the other States we visited, under separate laws and in entirely separate institutions.

The State has recognised the desirability, and undertaken the burden of dealing both with all the feeble-minded and with all epileptics requiring institution treatment, and the large institutions which we are about to

describe have gone some way towards and are intended eventually to attain, these objects.

We were informed—but were unable from lack of time to verify by personal investigation—that there were fewer lunatics and mental defectives left in the almshouses of this State than elsewhere, but that there were no doubt considerable numbers of both maintained in the homes of parents and relatives. This would seem to be *à priori* probable in an enormous agricultural State with a scattered population, however willing the State authorities might be to provide more suitable educational and custodial treatment.

Columbus State Institution for the Feeble-minded.

Visited by all the Commissioners November 13th, 1905.

The Ohio Institution for Feeble Minded Youth was established in the year 1857, and its benefits restricted to children of the class described by law; in 1898 its benefits were extended by law to adults of the same class, thus practically dividing it into two departments, the training and educational department for children, and the custodial, training and industrial department for adults.

Objects.

The object of the institution is best stated by quoting the language of the two statutes, establishing it in its present form, and prescribing its general object and purpose.

Section 674. (Training and Education of Inmates.) The object aimed at in the institution is to train and educate those received, so as to render them more comfortable, happy, and better fitted to care for and support themselves; to this end the trustees shall furnish to them such agricultural and mechanical education as they are capable of receiving, and as the facilities furnished by the State will allow, including shops and employment of teachers of trades.

Section 674A. (Custodial Department at Institution.) There shall be a custodial department established in connection with the Ohio Institution for Feeble-Minded Youth. That said department shall be entirely and especially devoted to the reception, detention, care and training of idiotic and feeble-minded children and adults, regardless of sex or color, and shall be so planned in the beginning, and constructed, as shall provide separate classifications of the numerous groups embraced under the terms idiotic and imbecile or feeble-minded. Cases afflicted with paralysis shall have a due proportion of space and care in the custodial department. It is specifically determined that the processes of an agricultural training shall be primarily considered in this department, and that the employment of the inmates in the care and raising of stock and the cultivation of small fruit, vegetables, roots, etc., shall be made largely tributary to the maintenance of the institution. Such other industries as the board of trustees and the superintendent may deem necessary and useful for the welfare of the inmates, and as tending to their proper employment, or as contributing to their development, discipline, and support, may, from time to time be added.

General Provisions Governing Admission.

Section 671. (Admission of pupils, and their expenses.) The Trustees of the Institution for Feeble-Minded Youth are authorised to admit into the institution all youth of this class who have been residents of the State for one year, and are not over fifteen years of age, and who are incapable of receiving instruction in the common schools.

Admission of Children to Educational Department.

Children between the ages of six and fifteen who are "idiotic" or so peculiar or deficient in intellect as to be incapable of being educated at an ordinary school, and who are not epileptic, helplessly crippled or deformed, may be admitted by the superintendent. Application on behalf of others not embraced in this general description, shall be especially referred to the action of the board of trustees. The parents or next friends to those on whose behalf applications are made for admission as pupils, are expected to make answers in writing to such interrogatories as are provided in Sec. 672. All pupils will be expected to come provided with a supply of neat and substantial clothing. There will be a vacation during the months of July and August, unless otherwise directed by the board, at which period all pupils must be removed by the parents or guardians, unless otherwise directed by the superintendent.

Admission of Adults to the Custodial Department.

Section 674F. (Admission of Adults.) Adults who may be determined to be feeble-minded, and who are of such inoffensive habits as to make them proper subjects for classification and discipline in an institution for the feeble-minded, can be admitted, on pursuing the same course of legal commitment as governs admission to the State hospitals for the insane.

Children may also be admitted to the department under Section 674E.

Epileptics, insane, the vicious, helplessly paralysed, hopelessly crippled or deformed, the blind, the senile, and dements from causes occurring after puberty, cannot be received under the law governing this Institution. Since the enactment of the law creating the custodial department all commitments must be made through due process in the Probate Courts, after the fitness of the applicant, under Section 674E and compliance with the instructions prescribed by the trustees and superintendent of the institution, has been fully made and shown to the Court. Commitment is then made as provided in Section 705, Bates' Statutes.

Farm or Custodial and Industrial Department for Males.

This is located at Morgans, about twelve miles south west of the original or central institution in Columbus, and is intended for the custodial care and industrial training and employment of adult males of the feeble-minded class; the Columbus buildings being devoted to the educational department for children and the custodial care and industrial training of adult females who are supposed to be improvable. With both departments it is hoped will be gradually realised—as rapidly as the buildings and other appliances for their care may be provided by the Legislature—all the aims for which the institution was originally founded; the principal among which was to make this class less a burden to themselves and society, and by so doing prevent the increase of their kind, which experience has shown results from neglect or lack of far-seeing guardianship; and with

this care and guardianship they will be trained to compensate, at least in part, for their custody, by such self-supporting labour as they are capable of rendering in the simpler occupations of agricultural labor and farm life.

The administration and policy of this institution therefore, is to make the parent institution the teaching and training department of imbecile children of teachable age, and the farm the working or industrial department, where all who are capable of any sort of useful physical exertion or industrial training will be finally and fully cared for, guarded and protected, and under humane direction made as self-sustaining as possible, whether they remain in charge of the State or are recommitted to their families and friends.

The institution benefited for many years by the enthusiastic energy and great capacity of a superintendent—Dr. Doren—whose name is well known to all interested in the treatment of the feeble-minded.

His recently appointed successor, Dr. Rorich, received the Commissioners with marked friendliness and spared no pains in assisting them in their work. The information which he gave both as to his own institutions and as to the general condition of the State in regard to the matters in which we were interested was of great interest and value.

The present friendly attitude of the legislature was due, he told us, in large measure to the indefatigable efforts of Dr. Doren extending over many years. There was no accurate knowledge as to the number of feeble-minded in the State, but a general apprehension that they were numerous and a source of great public evils. Private provision was practically non-existent. Epileptics were numerous in the insane asylums and the feeble-minded institution, notwithstanding the existence of the large state Institution for Epileptics at Gallipolis.

The excellent State Reformatory for boys at Lancaster no doubt contained many youths suitable for a feeble-minded institution, but they were well cared for there, well educated, and their disposal carefully thought out.

As regards girls, the State institution did in fact receive many who were immoral—even prostitutes—because of their mental defect. Magistrates used it for that purpose, but this class was very numerous, and at present the State institution failed to meet the whole difficulty, though it hoped eventually to do so. The State was liberal, and in ten years there would be 1,000 of this class under care, where now there were a few score.

The drunkard, as such, is not dealt with by the State in the absence of visible insanity, feeble-mindedness, moral insanity, prostitution or criminality

Admission to the State Institution.

The forms in use are as follows, non-essentials being omitted.

Affidavit Applications for Commitment to the Ohio Institution for Feeble-minded Youth.

Ohio, ———— County, SS.

————————, the undersigned, a citizen of said County, makes application for the commitment of ———————— to the Ohio Institution for Feeble-Minded Youth, and being sworn, says that —he believes said ———————— is a feeble-minded person incapable of receiving instruction in the common schools of the State; —h— has a legal settlement in ———————— Township, in this County, and is a proper subject for classification and discipline at an Institution for the Feeble-Minded.

The said feeble-minded person has * ———— an estate of sufficient value to defray the expense in † ———— of supporting h—— in said institution ‡ ————

Dated this ———— day of ———— 190 .

Sworn and signed in my presence,

Probate Judge.

Relatives of said ————

Revised Statutes, Secs. 710, 674f.

Names of Nearest Relatives.	Kinship.	P. O. Address.

Inquest—Feeble-Minded
Orders on Hearing, etc.,

This day this cause came on to be heard,* and the said———————————————
———————————was brought before the Court———————————————
———————————————————————————————————
———————————————————————————————————
———————————————————————————————————
———————————————————————————————————
———————————————————————————————————

Thereupon the Judge proceeded with the examination; and having heard the testimony of ———————————————the medical witness, and of ———————————————and being satisfied that said ——————————————————————————————— is a feeble-minded person, incapable of receiving instruction in the common schools of the State, that —he has a legal settlement in ———————————Township, in this County; that —he has been an inhabitant of the State of Ohio for one year next preceding this date; that h—— feeble-mindedness has occurred during the time —he has resided in this State, and that —he is a proper subject for classification and discipline at the Ohio Institution for Feeble-Minded Youth.

It is therefore ordered that ——————————————————————————— the medical witness in attendance make out a certificate, setting forth the facts as is provided by law.

The Court further finds that said feeble-minded person has † ———— an estate of sufficient value ——————————————————————————————— ——————————————————————————————— to defray the expense in ‡ ———————————of supporting h—— in said institution. ———————————————————————————————

And it is further ordered that an application be made to the Superintendent of said Institution for the admission of said ——————————————————— and that a certified copy under seal, of the certificate of said medical witness and of the findings in this case be transmitted to said superintendent; and it is further ordered that said ——————————— be committed to the custody of ——————————————————— until otherwise ordered, and this cause is continued.

———————————

Probate Judge.

* Instead of the remainder of this sentence, insert the following, in cases where such proceedings are had: "And as it was deemed unsuitable or improper to bring said person into Court, by reason of the character of h—— affliction, the Judge personally visited h—— and hereby certifies that he has ascertained the condition of said person by actual inspection."

† If the person has no such estate, then insert the word "not," and in the blank space following, add, if such is the fact, "but has a parent or parents or legal guardian ———— ———————— (giving the name) of sufficient financial ability. "

‡ Here say "whole" or "part" as the case may be.

§ If in part only, here say, "and may be able to pay $———— per month" (giving the amount)

MEDICAL CERTIFICATE

FEEBLE-MINDED.

The State of Ohio, ———————— County, SS.

I, ——————————————— being duly sworn and examined as the medical witness in the matter of ———————————————————————

alleged to be feeble-minded, do hereby certify that I have this day carefully examined the said ——————————and find in reference to——————— case as follows:

1. Name of patient in full———————————————

2. Sex ——————— Age ——————— Married, single, widowed

3. Condition of life and previous occupation, if any ———————————

4. Religious persuasion so far as known ———————————

5. Previous place of abode ———————————

6. Whether first attack ———————————

7. Age (if known) on first attack ———————————

8. When and where previously under treatment ———————————

9. Duration of existing attack ———————————

10. Supposed cause ———————————

11. Whether subject to Epilepsy ———————————

12. Whether suicidal ———————————

13. Whether dangerous to others ———————————

14. Facts or symptoms indicating feeble-mindedness observed by examining physician

15. Physical causes ———————————

16. Moral causes ———————————

17. Predisposing causes ———————————

18. Habits of patient ———————————

19. Habits of parents ———————————

20. Hereditary or not ———————————

21. Whether patient is free from any infectious disease ———————————

22. After having given the answers to the questions prescribed above by the statute governing these proceedings, please read the answers given by the parents, guardian or next friend, of the person named in the proceedings, to the interrogatories prescribed by the Board of Trustees of the Institution for Feeble-minded Youth, and authorized by the law establishing that institution, and state whether, from these answers and your own examination, the origin or cause of h—— present condition is congenital or otherwise; and especially whether you have observed or would suspect any symptoms of existing or oncoming insanity of epilepsy. Also, whether you consider h—— a proper case, from a medical standpoint, for commitment to the custody of the Institution for Feeble-Minded.

[The "Interrogatories" consist of some sixty searching questions as to mental condition, habits, parentage, etc.]

Dated ——————— 190 .

Physician.

APPLICATION FOR ADMISSION.

FEEBLE-MINDED.

Probate Court —— ——————County, Ohio.

In the Matter of

No. ————.

Inquest—Feeble-Minde
Application.

To the Superintendent of the Ohio Institution for Feeble-Minded Youth, Greeting :

Whereas, all the proceedings necessary to entitle ——————— to be admitted into the Ohio Institution for Feeble-Minded Youth, having been had according to law, as will appear by the certified copies of said proceedings hereto attached, application is hereby made for the admission of said ——— ——————— into said instiuttion.

This ——— day of ——————— A.D. 190 .

Probate Judge.

The total number of inmates is 1,350, of whom 150 boys are employed in outdoor work. The grounds about the institution cover 187½ acres. The staff consists of the superintendent, matron, 200 employees, one physician, the total number of employees including twenty-five to thirty teachers: this excludes the Farm Colony, which will be dealt with later.

The schools contained 500 to 600 children, with twenty-five teachers.

The children on reception were put into "beginners' classes" divided into brighter and more backward; and the processes of training were as usual. In Mrs. Pinsent's opinion the mental condition of the children in the lowest classes was much the same as would be found in a London special school.

The brighter beginners advanced to the work of a First Standard in a normal school.

From the beginners several graduations led up to the most advanced grade who were capable of instruction in music, geography, reading above the Third Standard, and (in a few cases) fractions. Many of these bright-looking girls were described as of bad habits, requiring strict discipline. About half of the small number who reach the highest class would be thought fit to go out to their families, or to recommended situations; the general training aims at this, though it is rarely possible. After the school curriculum, work at sewing, the laundry, etc., is provided for the bulk of the girls.

The boys' classes corresponded very closely with the girls' in the matter of mental condition and attainments. Drill and gymnasium is given daily to all; and there was a fair orchestra and a singing class of nearly 100.

The custodial building for children lay beyond a large playground. It was an attractive building floored everywhere with small white tiles inserted by the inmates under an expert's direction.

A noticeable feature here was the employment of a large number of the higher grade inmates to look after the more helpless, not only in the infirmary, but in the whole department. For example fifty-one of the very lowest girls were looked after by three attendants and ten inmate "helpers."

Another matter we noticed was the large number of "cage" beds for the troublesome and noctambulant patients—camisoles and other physical restraints were rarely used.

About thirty-five inmates work in the laundry under two attendants; fifteen of these were boys.

The sewing, tailoring, and mending rooms were good; some fifteen motors (electric) being employed, and the whole clothing of the establishment being made by the inmates.

The institution also has a large carpenter's shop, a machine shop, a plant to pump the sewage to the river, and a storehouse where the supplies are kept. A storekeeper presides over this department. There are sixteen horses in the stable.

The nurseries, which are very extensive, are cared for by one florist and the inmates. Many varieties of roses, chrysanthemums, carnations, violets, etc., are raised, as well as radishes and lettuce.

The bakery contains a large oven heated by natural gas, which is used throughout for the boilers. Two inmates, who have been trained for the work, do the baking for the establishment, which requires a large supply. Eleven hundred loaves were the result of one baking.

A few of the workers in this department were now and then discharged; few could get on in the world. In Dr. Rorich's opinion, this was less from want of intellect than from lack of control, resolution, and other good moral habits.

The Farm Colony, an Extension of the Institution for the Feeble-minded, Columbus, O.

Visited by Mr. Byrne, Mr. Dickinson, and Dr. Dunlop on November 13th, 1905.

This Colony is situated about fourteen miles out of Columbus, and consists of a tract of farm land of 1800 acres. At present there are only about fifty adult imbeciles living and working on this farm, but it is in early contemplation to increase the accommodation until adults will be housed there to the number of 1,500 or 2,000, the scheme being to keep the permanently feeble-minded in the Columbus Institution until they are fit for regular and profitable work, and then to remove them to the Colony.

The present accommodation consists of a roomy old farmhouse occupied by the officer in charge and his wife, a temporary dormitory building for the boys, a large barn and stable accommodation, and a large handsome block of asylum buildings which at present* is unused. The future buildings are to be erected so as to form a semi-circle, a considerable distance away from the present Colony. These were not sufficiently advanced to give much idea of their ultimate appearance.

The Colony is in an inchoate condition. At present it is under the charge of an efficient subordinate officer, who was the principal attendant at the Columbus Institution. His wife acts as matron. He has eleven employees under him. On the day of our visit, twenty-seven boys were doing agricultural labour on a field about a mile distant from the farmhouse. A few boys were working in the barn and in carting manure,

* In August, 1906, Dr. Rorich informed me that this building was now occupied with working inmates.—W. P. B.

and a few were occupied in doing the house-work of the residential block. Paid labourers were laying the foundations of the future main blocks.

The majority of the boys seen were middle grade imbeciles. They all looked to be in good health, happy and contented. The steward who showed us around informed us that until recently they were extremely troubled with attempts to escape, and that that was so he ascribed to the fact that a fairly generous reward was paid for returning the boys to the institution. The abolition of that reward has been followed by a very marked diminution in the number of escapes. The officer in charge informed us that, roughly speaking, it took four boys such as they had to do the work of one agricultural labourer. The impression given to us was that the development of the Colony side of this institution had either not been thought out in detail, or that funds for its completion had not been provided by the Legislature. We felt that we should be glad to have been able to have seen its eventual growth and working under Dr. Rorich's management.

The State Hospital for Epileptics: Gallipolis, Ohio.

To our great regret time did not allow as to see this important institution, but we append a few notes of the information respecting it which we received from Dr. Rorich and other sources.

It has been established for fifteen years and has gradually developed to its present dimensions—five doctors and 1,200 inmates—in pursuance of the policy of the State to deal with all epileptics requiring institution treatment. The weekly cost of maintenance has been gradually reduced from a high figure to a little over 13s. a head, including ordinary repairs and small improvements. It is furnished with elaborate hospitals, laboratories, etc., and carries on much valuable scientific work extending in many directions far beyond the care and treatment of epileptics.

The number of salaried officers, attendants, workmen, etc., is 215; but of these some twenty or more are merely temporary.

Nine-tenths of the cost of maintenance is received from the Treasury—there being but few paying patients; and the only expense regularly falling on the county or other poor law authorities being the clothing of the patients, not exceeding 30s. a year.

Ages of those admitted since opening of the Hospital, November 30, 1893.

Number of known insane heredity	239

The trustees complain that they have not sufficient acreage to provide the outdoor labour and employment which they consider eminently desirable for both sexes, and are pressing for appropriations sufficient to provide enough land for the inauguration of the colony system to supplement the existing "hospital" system. They point out the great advantages which have already arisen from the partial development of the original block hospital for epileptics into a collection of cottages, etc., with hospital and administrative centre.

They receive—as might be expected—a considerable number of ordinary feeble-minded cases in which the epilepsy, which is the nominal cause of admission, is either non-existent or temporary (alcoholic or hysterical and feigned pseudo-epilepsy).

The admissions are by order of the Governor, as at the State feeble-minded institution.

There is no power of detention beyond persuasion. The annual discharges amount to nearly 10 per cent., of whom 1 per cent. are recovered, and perhaps 7 per cent. "improved."

ILLINOIS.

The State of Illinois, including Cook County, of which the great city of Chicago is the most populous and important part, has laws of a very modern type respecting most classes of delinquents and defectives.

It has reformatory schools or juvenile prisons for young criminals of both sexes up to the age of twenty-one, that at Pontiac for males is famous; it has a separate prison discipline for nearly all offenders between sixteen and eighteen years of age; sentences on juveniles are indeterminate within the maximum allowed by law; the system of release on parole is well established. A register of juvenile offenders exists admirable in all respects, save that for lack of some such infallible test, as that of finger-prints, it does not in practice bring about the identification of persons

previously convicted; the "mark" system by which earlier release may be obtained by good behaviour and industry obtains in all juvenile penal establishments; probation and supervising officers may be appointed; the adoption, apprenticeship, guardianship or boarding-out of young male and female offenders is provided for. All penal and reformatory institutions are supervised and inspected by a State Board of charities; there must be in every county with 500,000 inhabitants, and there are in fact in smaller places, "Juvenile Courts," with special magistrates and special courthouses, before whom children may be brought to the exclusion of other jurisdictions; no child under twelve can be sent to any gaol or penitentiary.

The laws as to the certification and detention of the insane are much the same as in New York.

Special classes for defective children have been established in small numbers in Chicago, and a system to provide for the periodical examination of all children in elementary schools in respect of their mental condition has been inaugurated.

On the other hand there are several striking lacunæ in the laws dealing with the criminal and defective classes.

There are no special laws dealing with inebriates as such; the care and control of idiots, imbeciles and other persons of defective mind, but not certifiably insane, rests practically on a voluntary basis; and hitherto no special provision has been made for epileptics.

The existing state of affairs can best be showed by a relation of our interviews with officials, of our visits to certain institutions of a miscellaneous character, and of our interesting and instructive inspection of the great asylum for feeble-minded children at Lincoln.

On November 15, 1905, Dr. Donkin and Mrs. Pinsent had an interview with Dr. McMillan, Superintendent of the Child's Study Department, Board of Education, Chicago, Ill.

Chicago has four special schools for defectives, containing 200 children. These classes are not in special buildings, but are held in separate classrooms in the ordinary public schools. The defectives are allowed to use the same playgrounds with the normal children, and no trouble has been incurred with regard to this. Dr. McMillan expressed his opinion that this was better for the children than to be kept entirely isolated.

Dr. McMillan stated that he is just concluding an investigation as to the numbers of defective children in Chicago. He could give no exact figures, but estimated that there were 900 who should be sent to special classes. With careful individual attention and schooling he thought that 25 to 30 per cent. would probably be completely self-supporting, making good citizens. Ten to 15 per cent. were only fit for institution life and permanent detention; and the remainder might get along fairly well, being able to support themselves with careful supervision.

The Secretary of the Board of Education told the Commissioners that it was their policy to deal with the whole number of defectives, increasing the accommodation so far as necessary in day classes and in separate institutions, but Dr. McMillan stated he was afraid that this would never be completed. He said that there was in Illinois no law for the permanent detention of feeble-minded such as exists in other States, and no great public interest in the matter.

A circular has been issued to the teachers requesting that every child who is two years behind the grade proper for its age should be reported to Dr. McMillan, who then arranges for its examination. He refuses to send idiots, or imbeciles, or low-grade cases to special classes. Of these

there is a waiting list of 750 in the State, and great difficulty is experienced in getting them into the institution at Lincoln. He submitted all children where there was a question of permanent detention to an examination of at least three-quarters of an hour's duration.

The cost of educating a child in the special schools is three times as much as that of a child in the ordinary school. In the future special class teachers are to be required to devote a year to the study of medicine and psychology, after which they will receive a larger salary. Women only are employed as special teachers.

Subsequently Mrs. Pinsent visited the Marquette School, which has a special class for defective children. There were fifteen children present who appeared to be of the same type as children admitted to London special schools. Three of the girls were so mentally defective as to make institution care extremely desirable. The usual difficulties were felt, both in obtaining the parents' consent on behalf of the child and also in obtaining a vacancy for the child in Lincoln if the parents' consent to prolonged detention were granted.

The class-room contained some excellent sloyd benches, but these had been contributed by private charity, and the principal stated that great difficulty had been experienced in getting the necessary materials for adequate manual training. He had hopes, however, that the question would receive more attention from the Board of Education in the future.

On November 15th, 1905, Mr. Byrne and Dr. Dunlop had an interview with Mr. Edward J. Brundage, President of the Board of Commissioners, Cook County, Illinois.

Mr. Brundage explained that the ideal of the State was ultimately to take charge of all lunatics, imbeciles and other degenerates; but that at the present time the State Institutions are not large enough to do so, and that consequently a large number of such persons are still cared for by the counties, or are imperfectly cared for in their homes.

Cook County is a large and important county, containing the city of Chicago, and to take care of these individuals the county supports large institutions at Dunning. These institutions are first, a hospital for consumptives with a population of about 120; second, a hospital for the insane with a population of about 1,800; third, a county infirmary or poorhouse with a population of about 3,000. Beyond these there are the local almshouses and an elaborate system of outdoor relief, boarding-out and guardianship.

In the insane hospital and in the county infirmary imbeciles are received and detained. Those admitted to the insane hospital are certified and dealt with similarly to lunatics. Mr. Brundage presented the Commission with a series of Annual Reports and other data, copies of rules, etc. The Annual Reports show among other information that the Cook County Commissioners support a detention hospital for the diagnosis of insanity; this is situated in a special block of the county hospital. This detention hospital is, however, for diagnosis only, and makes no pretence whatever of treating or curing "incipient insanity" patients. The Report for 1904 shows that the yearly admissions to this detention hospital numbered 1,630, and that these were disposed of as follows:—

To the insane asylum at Dunning	805
To other insane asylums	391
Deaths	23
Discharged, "recovered," or to friends	400

The Dunning Institution.

Visited by Mr. Dickinson and Dr. Donkin on November 16th, 1905.

This is one of the large institutions supported by the Cook County Board of Charities. It consists of three parts: a lunatic asylum, a poorhouse, and a hospital for consumptives. The asylum, which contains about 1,800 patients, consists of the following:—

First, an old central block, constructed about fifty years ago on the cellular plan. In it there was nothing instructive.

Second, a series of modern cottages built within the last few years. These were exceedingly well adapted for the purpose, and cheap, being erected at a cost of about £80 per bed. Each cottage held from thirty to forty patients. In close proximity to these cottages there was a common dining room and recreation room for the use of the cottage inmates.

Third, a farm of about 160 acres with a cottage to hold 50 male inmates. This cottage was also very well adapted for its purpose, and as a complete establishment, supplying its own heating and cooking and everything else, it cost less than £100 per bed for construction. The inmates of this cottage not only farm the 160 acres with very little paid assistance, but also do much valuable work about the institution. They were seen in small gangs, busily engaged in various occupations.

Fourth, an asylum hospital in which the decrepit, bedridden patients and acute cases were kept. This was well adapted for its purpose. A noticeable feature was that it was entirely nursed by females, both in the male and in the female side. The per capita cost of this insane asylum was only £22 10s. per annum. The medical superintendent informed us that this sum was inadequate, and that owing to want of funds the nursing staff was too small. The want of a sufficient nursing staff entailed locked doors and the use of some physical restraint.

Among the asylum patients there were very few imbeciles. The medical superintendent reported that a considerable number of imbeciles were annually received with attacks of acute insanity, but on recovery, provided arrangements can be made for their proper care at home or elsewhere, they are discharged. What few remain are only those for whom no care outside can be found. The law of the State prohibits idiots or imbeciles being certified or dealt with as lunatics.

Fifth, the poorhouse. This consists of a radiating block, antiquated and with no points of structural interest. Visiting the male side we were shown one ward containing about sixty defectives, some being imbecile and idiot, and others dements. These were cared for by one female employee, who was an elderly woman, and who was assisted by several of the sane poorhouse inmates. The medical superintendent informed us that imbeciles, and especially the higher grade ones, were transferred from this institution to the State School for Feeble-minded at Lincoln, but that sometimes they are detained for a long period, the waiting list for Lincoln being a long one, over 700, and the vacancies comparatively few. We did not visit the corresponding ward for female imbeciles, but were informed that their numbers were much smaller but the conditions similar.

The Cook County Hospital, Chicago, Illinois.

Visited by Mrs. Pinsent and Dr. Dunlop on November 17th, 1905.

This is a large general hospital, holding about 1,100 beds. The only department of special interest to us was a wing used as a detention hospital. This contained four wards, two male and two female, where alleged lunatics were taken and detained for observation. It also contained a small court room for the trial of the alleged lunatic. This court room was about twenty feet square, with a bench for the presiding judge, seats for the six jurymen, a witness box, a special seat for the clerk of court, and accommodation for the witnesses, the Press and the public. The ordinary procedure is to report lunatics to the police. The police sergeant issues a warrant for the reception of the lunatics into these wards, where they are detained until the following Thursday, that being the day on which trials take place. The trial is presided over by a judge and a jury of six, one of whom must be a medical man. They are open and public, and are always attended by representatives of the Press, the principal witness at the trial being, of course, the medical officer in charge of the wards. The judge has discretion in ordering the committed cases either to a State hospital or to Dunning, but in most cases he orders the commitment to Dunning.

The wards were in all ways suitable for the temporary detention of lunatics. There was no attempt at curative treatment, the wards are intended simply for the purpose of reception and observation. About 1,500 cases per year, or thirty per week, pass through the detention wards. There were only five cases in at the time of our visit, which was made on a Friday. Among them was one man remitted for wife killing, who was remitted from the county jail for observation.

The Bridewell Prison, a few miles distant from Chicago, Ill.,

Visited by Mr. Byrne and Dr. Donkin on November 18th, 1905.

This is an institution which receives from 1,400 to 1,500 male prisoners, with sentences of six months and under, a few State prisoners and some federal prisoners. There are also about 120 women.

The prison appeared to be a good example of the American plan of central cells and to be well ordered. Its size was inadequate. We were told that it was always necessary to put two men into many of the cells. They occasionally had a population of over 2,000.

We were struck by the large number of good workshops and by the number of men who, as we were told, were employed in quarrying within the prison grounds. The prison lines extended over about 70 acres. The chief officer who took us around stated that in one or two recent years the prison had come near to being self-supporting. There was no contract work. The prisoners were not given any money for their labour.

On inquiring of this officer as to whether they recognised any feeble-minded men among their number, he informed us that there were many, the present number being sixty-four, who were considered unfit for the ordinary

prison discipline and were given easy work which was not tasked, were located from the rest of the prisoners as far as possible, and were called by the name of "cranks." He considered that all of these men were not responsible. He stated that this classification had been in existence for some time and had not been initiated by higher authorities, but was suggested by one of the warders who had taken a considerable interest in this matter, having been himself previously an attendant in a lunatic asylum. The medical officer of the prison, he stated, was aware of the mental defects of these inmates, but always declined to certify any of these men as insane. This segregation appeared to us to be a remarkable fact, as this was the first prison which we had seen or heard of in the States where any kind of recognition of weak-minded prisoners took place. The whole appearance of this large gaol, as far as we could judge, rendered it much more comparable to a long sentence convict prison than to any other gaol of its class in the United States visited by us. The officer who gave us this information expressed his opinion very strongly that it was entirely useless to deal with the majority of the prisoners who came to this prison under short sentences repeated over and over again in the manner at present in vogue. He thought that they should be made to work for a term of years in a reformatory, with a view to their being trained to greater efficiency and self-control.

Within the grounds of the prison and under the same superintendent there is a large and well-equipped reformatory for boys, under the name of "The John Worthy School," to which juveniles are committed and to which young prisoners committed to the gaol are frequently transferred in pursuance of a recent and very useful law. The average daily population of this school was 380.

Illinois Asylum for Feeble-minded Children, Lincoln, Illinois,

Visited by Dr. Donkin, Mrs. Pinsent, and Mr. Byrne, on November 16, 1905.

This is a large institution, with four doctors, and a large staff, containing 1,400 inmates, including idiots and all grades of feeble-minded in the main buildings and seventy-five custodial cases of various degrees of imbecility on a large farm of 880 acres, two and a half miles away. The main institution, which is some forty years old, and of modern gothic, seemed economically built, well ventilated, well equipped and very fairly suitable for its purpose. It was well provided with workshops situated in a separate industrial building of a very suitable character. There was a brush-maker's shop, where one paid man supervised the work of from twelve to twenty inmates; a carpenter's shop, where we were told there were generally twelve; a hair mattress shop; boot and shoe-making and repairing shop, and two large establishments for sewing and tailoring respectively. In most of these shops very few were working when we were there, and we were told that this was usually the case, the bulk of the inmates who were able to work being employed on the more necessary work of the establishment. Nearly all the clothing and boots and shoes for the inmates were provided from these workshops. The brushes and other products from that shop were unusually well constructed, and they were sold to the public at a profit, the usual objection to the sale of institution goods not applying in this case, as these were claimed to be made for the instruction of the inmates, and the Labour Unions had as yet not objected.

There was the usual complete apparatus for the instruction of the younger inmates, kindergarten, sloyd exercises, etc., precisely similar to that seen in other institutions. A very large number of the inmates were

still in school. Attempts were made to teach many of them reading and writing who would, as we were assured by the doctors, never acquire these accomplishments, but in spite of the hopelessness of the task they were being educated because their parents liked it. Physical exercises and training were much relied on.

The laundry was large and well equipped, a number of men doing the washing without any supervision beyond that of the matron, and some twenty to thirty women were doing the ironing without direction.

None of the inmates were committed to the institution by legal process, but were received there on the request of their parents or of the poor law authorities. No power existed to detain them, but practical difficulties were rarely found to arise, the usual course of putting every obstacle in the way of discharge of undesirable people being successfully adopted. There were, however, a considerable number of discharges from the establishment, some thirty a year, and some of those discharged were in the opinion of the doctors people of a sort who would be likely to get into trouble. Only about two per year were discharged with the full approval of the superintendent, as being fit to take their places in the world.

We were informed that there was no particular pressure on the accommodation of the establishment, so far as this was indicated by applications, the Superintendent's waiting list not exceeding twenty-eight. This was contrary to what we had been informed by the Secretary of the Charity Board, who told us that there were seven hundred cases waiting to come into the institution. Many imbeciles, we were informed, were still at home and in poorhouses all over the State, but no particular evil was considered to arise from this, and there was no general outcry, either from experts or from the public, to put an end to this state of affairs. It was, however, the intention of the legislature, so far as could be judged, gradually to provide accommodation, until all those who required it were provided for.

The lower grade, the idiots, who were in separate departments for men and women, numbering in each case seventy-five, were well cared for, the rooms being of adequate size and in good sanitary condition. There was but one attendant on duty for each department containing seventy-five, who was assisted by a second attendant for a certain part of the day when the latter had completed making up the beds, etc., in the dormitories; and he was replaced by a watchman at night, who was not in any sense an attendant on the patients, but was more of a guard or fireman. The good order and cleanliness which we observed and the economy in service were highly creditable to the management.

There were two cottages of precisely similar construction, one containing 175 boys and the other 175 girls. These buildings appeared well suited for their purposes. They had separate kitchens, dining rooms, dormitories, day rooms, and residences for the officers in charge; but everything else was provided from a central power-house, laundry, etc. There was a large infirmary which, we were assured, provided all that was necessary. In addition an old infirmary of inadequate size was now used as a place for the detention of those idiots who were cripples and delicate. There were thirty-two of this class who were looked after by three paid attendants with some of the middle grade imbeciles to help. The cost of the cottages, we were informed, was high, but need not have been so if needlessly extravagant estimates had not been accepted by the authorities.

The seventy-five boys on the farm resided in a two storey building, containing simply a kitchen, dormitory, dining-room, and sanitary accommodation. There were no day-rooms as the inmates were working all day. This building for seventy-five boys was provided for £600 and was precisely the same as one of the wings of the cottages.

The general opinions of the doctors were the same as those expressed to us by other institution authorities They had a large number of epileptics.

exceeding 300. These were not separated from the others on account of their epilepsy, the classification being by mental condition. They considered that it would be very desirable to have an epileptic colony with buildings of a simple character, entirely in the country, so that epileptics capable of work could lead a simple country life and help to maintain themselves

The per capita cost of this well-managed institution is only 11s. per week. A running money account is not kept with regard to the farm, but we were informed that it contributed substantially to the economical maintenance of the inmates; and this was corroborated by the fact that the legislature had recently completed the leasing of another 480 acres of land, to still further reduce the expenditure by supplying as much as possible for the institution. The probable reduction in the maintenance cost was estimated to be from 11s. to less than 8s. a week.

The death rate was from 5 to 6 per cent., consumption and pneumonia being, as usual, the chief ailments.

The cost of maintenance is entirely by the State, but parents and relations who can afford to pay the whole or part of their children's support have to do so. Even those who are poor have to contribute towards the transportation and clothing of their children who are received in the asylum.

The following forms are in use:—

Dr. C. B. Taylor, Superintendent.

ILLINOIS ASYLUM FOR FEEBLE-MINDED CHILDREN.

SIR,

In the matter of ———— a feeble-minded child residing in the County of ————

I, ———— Clerk of the Court of ————County, do certify that ———— Judge of the County Court of ————County, has issued his order to the effect that ———— a feeble-minded child residing in said ———— County, is a proper subject for the care of the Illinois Asylum for Feeble-Minded Children, too poor to furnish ——self with sufficient clothing and pay the expenses of transportation to and from the Asylum, and authorising the Superintendent of said Asylum to receive and provide clothing and transportation for ———— in accordance with the provisions of Section 27 of "An Act to Regulate the State Charitable Institutions and the Reform School, and to improve their organization and increase their efficiency," approved April 15th, 1875.

Given under my hand, this ———— day of ———— 190

Clerk ———— County

Know all men by these presents, That we————

as principal, and ————

————as security, are held and firmly bound unto the Board of Trustees of the Illinois Asylum for Feeble-Minded Children in the penal sum of Three Hundred Dollars, for the true payment whereof we bind ourselves, our heirs, executors, administrators or assigns, jointly and severally, firmly by these presents.

Sealed with our seals, and dated this ———— day of ———— 190 , at ———— Illinois.

The conditions of the above obligations are such, that whereas, the said ———— has placed in charge of the said obligees ———— an imbecile child for the purpose of being trained and instructed, as provided for by an Act of the General Assembly of the State of Illinois, entitled "An Act to Regulate the State Charitable Institutions, etc.," approved the 15th of April, 1875, and has agreed to furnish the said child with comfortable and suitable clothing and all travelling expenses for and on account of said child, or pay for such as may be furnished during ———— continuance in the school, and also to remove the said child from the asylum whenever required, without charge to the Asylum or any of its officers or agents.

Now if the said _____ shall well and truly perform the conditions aforesaid, then this obligation to be void; otherwise to remain in full force and effect.

_____

_____

_____

State of Illinois,

County of _____ SS. I, _____

County Judge of the County of _____, hereby certify that I am acquainted with _____ and _____ the persons who have signed the foregoing bond, and from my own knowledge state that they own property in their own right to the amount of _____ Dollars above exemption, and that their credit to that extent is good.

_____

County Judge.

INDIANA.

In the State of Indiana the feeble-minded have been specially dealt with for the last quarter of a century independently of the insane.

The population of the State is 2,500,000; there are over 6,000 insane in asylums and infirmaries and a considerable additional number in their own homes. The number of the mentally defective—not insane—is estimated at 7.000 or 8,000; 1,040 of these are in the great "Indiana School for the Feeble-minded" at Fort Wayne. There are no "Special Schools" for defective children.

There is the usual nominated "Board of State Charities" sitting in the State House and having full powers of inspection over all State Institutions.

The Law as to the Feeble-Minded.

Sec. 3105. That there shall be established and maintained in this State at or near the city of Fort Wayne, Allen county, Indiana, an institution to be known as the "Indiana School for Feeble-Minded Youth." The general charge and management of said institution shall be intrusted to a board of trustees consisting of three members, who shall be appointed by the governor of this State. * * *

Sec. 3107. The purposes of this institution shall be to care for, support, train and instruct feeble-minded children, the term feeble-minded to include idiotic, epileptic and paralytic children.

Sec. 3108. The institution is to be divided into two distinct departments, one industrial, the other custodial. The industrial department is to be a department for culture, in which shall be placed such feeble-minded children who are actually in a practical sense capable of improvement, in which the rudiments of a common school education are to be taught in connection with, and subordinate to, culture in manual and industrial occupations. The objective point to be attained in this department is future usefulness, self-care and self-support. The custodial department shall be an asylum for low-grade, feeble-minded, idiotic epileptic children. In this department special attention shall be paid to mental, physical and hygienic treatment.

Sec. 3136. The superintendent acting under the control and supervision of the trustees of said institution, is hereby authorised and required to provide for appropriate industrial education of the pupils.

Sec. 3137. The industrial education of the said pupils shall, as far as possible, be conducted in such manner as to make said pupils fit and able to earn their own support when they shall have been graduated or otherwise discharged, and not chiefly or mainly so as to make any profit or revenue.

Care and Control of Children.

Sec. 3172. The boards of directors, trustees or managers of any orphans' home, or of any home for orphan and destitute children, shall have the care, custody, control and guardianship of any and all children living in such homes and for the time agreed upon in such written agreement, and may, when it may seem proper and best, place them in suitable homes, having regard for the moral and religious character of the persons with whom such children are placed, in order to secure to them the benefits of good example and wholesome instruction and the opportunity of becoming intelligent and useful men and women.

The method of admission is different in the case of a child and an adult: the former being on voluntary application, the latter in the nature of a commitment.

Form of application for a child :—

The following application must be duly signed by the father, if father and mother are living together ; if father and mother are not living together, then by one having custody of the child or by the guardian duly appointed ; or by the Superintendent of any county infirmary, or matron of any county orphanage, or by the person having the management of any other institution or asylum where children are cared for.

APPLICATION.

I hereby request, That ———————————— of ————————————
————————————County, may be admitted as a pupil to the Indiana School for Feeble-Minded Youth, and herewith forward to you answers to all the interrogatories propounded to applicants, and those answered by the Physician, and I agree to remove ———————— promptly when required by the Superintendent, without any expense whatever to said Institution.

————————————

* *To be signed by some one of the parties above stated.*

The application is accompanied by the following documents:—

I. AUDITOR'S CERTIFICATE.

State of Indiana, ———————— County.

I, ————————————, Auditor within and for the County and State aforesaid, hereby certify that the Board of Commissioners of the aforesaid County, on application to them made, have determined that ———————————— has for one year prior to the making of the aforesaid application, been a bona fide resident of the state of Indiana, and that ———————— is a feeble-minded child, now residing in said county, and is a proper subject for admission into said school and that applicant has made a a sworn affidavit as to his or her financial ability before said Commissioners.

Witness my hand and seal of said County, this ———————— day of ————————

190 .

II. Etiological History.

[Here follow fifty searching questions as to heredity and condition of child.]

III. Physician's Confidential Report.

Please state fully any facts concerning this case, which, in your judgment, may have a bearing on the subject of causation, etc.

..... (*Signed*)———— ———M.D.
.....

Date, ———— 190

Note.—Physician's fee for services in this case will be paid by person making the application.

IV. Physician's Affidavit.

———— 190 .

I, ———— M.D., resident of ———— do hereby certify that I have examined ———— and believe h—— to be a proper person for admission to the Indiana School for Feeble-Minded Youth; that —he is not insane, and that —he is not afflicted with any chronic or contagious disease, nor has —he been exposed to any of the acute contagious diseases within a period of three weeks prior to this date. I further certify that —he has been successfully vaccinated within one year previous to this date.

(*Signed*) ————M.D

Subscribed and sworn to before me ————

this ———— day of ———— 190 .

Notary Public.

Form of Admission of Adult Females to the Custodial Department.

Rules adopted by the Board of Trustees.

Section 1.—The Superintendent will admit all adult females for whom there is room in the Custodial Department and who are committed by the Courts, and whose condition and commitments are in accordance with the regulations hereafter written.

Section 2.—The Superintendent on request shall forward to each person wishing to secure the commitment of an adult female idiot or imbecile, a personal descriptive blank,* and ask that it be completely filled and returned to him. On receiving such personal descriptive blank properly filled, the Superintendent shall add thereto such remarks concerning the case as he may think appropriate, and shall also add a statement as to whether or not there is room in the appropriate part of the Custodial Department of the Institution, for the adult person in question. The Superintendent shall then return to the person sending the blank, a copy of the same with his remarks and statements as to room, and shall also send a Commitment blank in duplicate.

When the petition is thereafter presented to the Circuit Court there shall be submitted at the same time the personal descriptive blank with the Superintendent's comments thereon as above described, in order that the Court may be advised as to the condition of the Institution in regard to room for more inmates and so forth.

Section 4.—No person shall be admitted to the Custodial Department for adult females who is entirely helpless, or who is unable to walk, or who cannot feed, clothe or wash herself.

* This blank contains forty-five searching questions.

Petition to the Circuit Court.

In the

——————————Circuit Court.

The undersigned, ——————————— a resident of ——————————— County, State of Indiana, upon oath says that he, the affiant, is acquainted with ——————————————, now residing at ——————————— County of ——————, State of Indiana, that said ——————————— is not and cannot be properly maintained or cared for by those who have her in charge; that she is (feeble-minded) (idiotic), and is over sixteen years of age and under forty-five years of age, and is not insane or pregnant; that she is in good bodily health and is not afflicted with any chronic or contagious disease; that she is a legal resident of said State and County aforesaid, and is a proper person to be admitted to the Custodial Department for Adult Females of the Indiana School for Feeble-Minded Youth, and that her admission thereto would be in conformity to the rules and regulations established by the Board of Trustees of said Institution for the admission and care of such a person.

Affiant further says that he has known said ——————————— for year ——————; that affiant is ——————— related to her as ——————— that her legal residence is ——————————— Township, ——————— County, State of Indiana; that her age is ——————— years and her birthplace is ——————————; that she is (married) (single); that she has had ——————— children, with names and ages as follows:———————

———————————————————————

———————————————————————

———————————————————————

that she was married to ——————————— in the year ————, her husband now being (dead) (alive); that she is to the following extent:

Noisy? Ans.——————————— Destructive? etc., etc. (fifteen answers).

That the following of her relatives within three generations have been:

Intemperate? Ans.:——————————————Idiotic? etc., etc. (ten answers).

That the following names and addresses of persons have knowledge of the foregoing statements: ———————————————————————

———————————————————————

———————————————————————

———————————————————————

That ——————————————— is a reputable physician and acquainted with said ———————————————

The undersigned, ——————————————, a citizen of said County and State upon oath, declares that the foregoing allegations and statements of facts are true as he verily believes.

———————————————

Subscribed and sworn to before me, this ——————— day of ——————190

———————————————

Notary Public.

Order of Commitment.

In the

——————————— Circuit Court.

Comes now, ——————————————, a resident of said County and State, and presents for hearing and order his petition heretofore filed herein, in which petition ——————————— a resident of said County and State is charged with being (idiotic) (feeble-minded); and the said petition now comes on to be heard before the said Court (or the undersigned Judge of said Circuit Court in Chambers); and, it appearing that notice of the filing of said petition has been duly served upon said ———————————, by summons read to her, which summons and proof of service thereof are in the words and figures following, to wit:

———————————————————————

———————————————————————

———————————————————————

———————————————————————

———————————————————————

———————————————————————

And the Court, having examined said petition, and being fully advised in the premises, finds that said ——————————————— has been duly served

with notice of the filing thereof, and that she is present in Court (or is unable to attend the hearing of said matter), and having examined witnesses adduced, one of whom (————————————) is a reputable physician, and finds that the facts contained in the petition are true, and that said ———————————— is a proper person to be cared for in the Custodial Department for Adult Females of the Indiana School for Feeble-Minded Youth at Fort Wayne, and that she can be cared for therein, and that she is ———— years of age.

Now, therefore is is ordered that said ————————————— be committed to the Custodial Department for Adult Females of the Indiana School for Feeble-Minded Youth at Fort Wayne, and that she shall be received therein immediately, or as soon as there shall be room to receive any more inmates in said Custodial Department, and shall be retained there at the discretion of the Board of Trustees of said Institution.

————————————— *Judge.*

The inmates of the School may be roughly classified as —

Girls in training	300
Girls in custodial cottage	150
Adult females	120
Boys in training	275
Boys on farm	200
Boys in nursery	20

About 300 are epileptics.

There is at present no State Epileptic Institution, but a site of 1,000 acres for one is about to be acquired by the State. It is understood that this is to be an epileptic hospital on the same lines as the Ohio Institution at Gallipolis, but the superior advantages of the colony system are being urged on the Legislature.

It is evident from the above figures that the State of Indiana is still far from dealing adequately and comprehensively with all its mental defectives. There were few adult males in the school, and we were informed that large numbers of male idiots and imbeciles were to be found in the hospitals for the insane, in the poorhouses, and in their own homes, which in most cases were very unsuitable places for them. We were told that serious public dangers and inconveniences arose from this. Mrs. Harper, one of the trustees, feared that it would be a long time before the whole needs of the State were met; the burden would be very heavy.

The Indiana School for Feeble-Minded Youth.

Visited by all the Commissioners on November 14th, 1905.

We were conducted over this Institution by Mr. Albert Carroll, the superintendent, who spared no pains to inform us as to its working, and as to the general condition of the feeble-minded in the State.

It is a fine and well equipped institution, which cost £120,000, less than £120 per head. The yearly cost of maintenance has been gradually reduced to the very satisfactory figure of £24 per annum, excluding repairs, 9s. 4d. a week. This economy appeared to have been attained without any sacrifice of comfort, efficiency, or skilled teaching and nursing. The dietary contains much less meat than is usual, not oftener than three times a week; the health and appearance of the inmates was normal.

Tuberculosis was the most serious ailment, and much attention was devoted to keeping it down. All inmates were tested with tuberculin on admission (except mongolians), and in tuberculous cases much care was taken in respect of nutrition and the testing of it by frequent weighing. The death rate was 3 per cent.

The staff appeared to be of the usual strength and efficiency. We were unable to procure the exact numbers.

The few parents who can afford to contribute to the cost of the maintenance of their children have to do so; the State provides the rest.

The main building of the institution was constructed of brick throughout, and the walls inside were painted white, the paint being applied immediately on the surface. This, Mr. Carroll stated, was entirely sanitary, and answered the purpose admirably.

In this building we visited the custodial departments for boys and girls, the boys being on one side and the girls on the other. The word "custodial" we were told is applied to those who are receiving care, and who are not doing any school or industrial work. There were 130 patients in the custodial department, which did not, however, include the low grade idiots; these are kept in a separate custodial house. The ages of those in the custodial department ranged up to forty, and they were of all classes of imbecility except the very low grade.

We visited three of the dormitories on the girls' side, where we saw sixteen beds in each room. All the windows throughout this department were fitted with iron bars. A number of the inmates were engaged in polishing the floors. We saw a large day room where a number were assembled. Mr. Carroll stated that great stress was laid upon open-air exercises for these inmates; they were sent out daily, and on a fine Sunday afternoon they would be out for hours, and the usual chapel services were then omitted.

Through the school department we were conducted by the principal, Mr. Cyrus D. Mead, who stated that the children are divided into two classes, the lower grade children being taught in the morning, while the higher grade received instruction in the afternoon. We were shown a class of seventeen girls, and it being in the morning, they were of the lower grade. Regarding them Mr. Mead gave information as follows:

Last year these girls did kindergarten work entirely; now they are promoted to primary work. They only trace letters after the teacher's writing. Some of them have been in the school four or five years, and some cannot accomplish primary work, others are in the first reader. In the afternoon we have a primary class of brighter children here who read in the first and second readers. These girls here are doing work which the ordinary child would do at five or six years old. Their ages average thirteen and fourteen.

The principal stated that throughout the institution, in all classes for beginners, sound work was taught, *i.e.*, teaching the children to spell according to the sounds of the letters.

We saw another class of twenty-eight smaller, but higher grade girls, who were engaged upon needlework and sewing. They are there taught to hemstitch, to make many beautiful designs in torchon lace, and the Norwegian embroidery. The lacemaking was especially interesting, some of the work being of a fine quality, and there was also much done in raffia, such as the making of hats; we saw fancy pillows made of this material. All such work is sold, and the proceeds are sent to the State Treasury. The useful work done in this Department and its good results on the girls contrasted with the slow and laboured work in the primary class.

All these girls read and write, and every girl but one attends the school.

In a class of sixteen, the girls were beginning kindergarten and primary work. These were a very low grade of children, mentally as low as any in the school. We were told that the previous year they had done kindergarten work almost entirely, and had been at that for several years, but now they were actually accomplishing some primary work in recognising sight words and in reading simple sentences. There was in this class a fourteen year old deaf and dumb child, who had been sent to the institution from the deaf and dumb asylum. She also could recognise objects by the written word and readily distinguish colours.

The school also has an art class for the brightest pupils, and we saw some good work in charcoal drawing, water-colouring and modelling in clay. The drawings were made from plaster casts and from the natural objects about the room. We saw a cast of a child's head, made by one of the girls who could not do much in the school work, and this was so well done that it could hardly be distinguished from the original model. Mr. Mead stated that the girls receive instruction for one term in this art class; then they are sent out. The sloyd work done in this department was equally interesting. The art class is usually composed of about ten students, who are picked individuals. They are mostly children who advance to the literature class, where they read and appreciate such poems as "Evangeline," "Snow Bound," Gray's "Elegy." They do not memorise, but are required to comment upon selections read.

We next visited a class of eighteen boys, who ranged from those beginning the primary work to those reading in the second reader. They were the highest class of boys in the morning session.

They would average fourteen years of age: and some had been at this elementary work for years.

It was the opinion of the teacher that some out of her class would be sent to the custodial department; but teaching was given wherever even the slightest improvement seemed probable.

In the afternoon we visited the classrooms of the brighter children, who were considerably in advance of those in the morning session. We saw the most advanced class of girls, consisting of about twenty. They were doing seventh and eighth class work, and they read and appreciated literature, such poems as "Evangeline." They were a very high grade. However, practically none of them were going out into the world, that would be exceptional. The school was mostly a home for them for life, because of their unstable character and to avoid propagation of the unfit; their detention is because of their defective self-control and their moral character. The family history is bad in most cases.

Clearly the work they did calls for a fair grade of intellect, but we were told the failing was in their moral character; it was not intellect that was so much at fault, as other parts of the mind; and none were fit for freedom.

They use the fourth reader. In arithmetic they work in fractions, mensuration, weights and measures, and discount.

In an upper kindergarten class there were fifteen boys. We were told there had been twenty in the class, but the other five had been taken out for primary work.

Other departments of the institution were equally interesting as the school rooms. We visited the laundry, which was equipped with the usual machinery, but very few of the inmates were employed there. The wash-room was

presided over by two employees, a woman and a man. The work is carried on five days in the week, and from 19,000 to 20,000 pieces of clothing pass through the laundry. Upon inquiring as to the cause for so small a number of inmate workers, we were told that the girls had been distributed in the other departments, in the sewing and mending rooms; and we were also told that sometimes they did not have enough girls for the work in the laundry.

About twenty-five girls were working in the ironing room, and we were told that the regular number varied in proportion to the work to be done and the number of girls available. No outside work is done in the institution, the labour of the inmates being required for their own benefit. In the ironing room there were four hired employees.

In the building for practical work, we visited the tailors' shop, where on an average ten boys daily are employed, five in the morning and five others in the afternoon. Here is made all that the boys wear, all the outer garments, and they also make night-clothes. The only things purchased were knitted underclothing and stockings.

In the shoe shop we were told three boys work all day long. Not a pair of shoes is bought, everything being made in the shop; the sole leather is bought by the roll and the uppers by the hide. At the time of our visit there were about a dozen boys engaged in the shop, but these do not work the entire day.

Abouts 900 pairs were made last year; and about 1,200 pairs this year, with about 6,000 minor repairs.

On an average seven or eight boys will turn out 1,200 pairs of boots.

We were told that with the machines one of the boys can accomplish as much as six pairs of boots per day.

The same building also contained a carpenter shop for the boys.

The storeroom contained a quantity of clothing ready to wear, such as overcoats, etc., and blankets. The price of the latter, we were told, varied from $2.00 to $2.50.

We next inspected the custodial building for girls, where the low-grade cases are housed. The building was unsatisfactory, as the superintendent stated, being plastered throughout and wainscotted with wood, which he thought very undesirable for such classes of patients. The construction of the building was attributable to a desire for cheapness.

In one of the rooms we saw twenty-eight patients and in another thirty-one, who were cared for by an attendant in each room and about four inmate helpers. The dormitories varied in size, one containing thirty-four, one forty, and another twenty-four beds. There are 100 inmates in the custodial department.

The cottage for adults contained those inmates who had been committed by the courts, and the superintendent spoke of it as being one of the most satisfactory buildings, being completely equipped and a small institution in itself, very well arranged. The building contains a separate kitchen, dining room, day rooms and dormitories. It is heated from the central plant, this being more economical than an individual heating plant. The matron and attendants are housed in the same building. The cost of the building was £8,000 and it affords room for 130 patients, £62 a head; the inmates at the time of our visit numbered 110.

This building was especially cheap because the bricks were made on the farm, and plans had been laid very carefully with a view to economy.

Returning to the main building, we saw the girls assembled in the dining room, there being 260 to 270 present. They were served at tables seating eight and twelve, and spread with white cloths. One girl at each table served the dinner, consisting of beans, cabbage, potatoes and bread. We were informed that about twenty-five of the girls have an earlier dinner, in order that they may assist in serving later. The arrangement of the girls in the room was according to the grading in the school.

For supper and breakfast coffee and milk are served, but milk only for the epileptics.

The boys' dining room, also in the main building, was similar to that of the girls. It contained about 275, who were eating dinner at the time of our visit. The superintendent stated that three of the important items in the dietary were potatoes, beans, and bread. The inmates receive meat twice and three times per week, but they get the extract of meat in the form of soups and broths on other days. The rule is: a veal dinner on Sunday, pork on Saturday, and beef once or twice per week.

We also visited some of the boys' dormitories. One of these contained thirty-one beds for the middle grades, most of whom were in the school.

The orchestra of the institution is well trained; eight girls were playing stringed instruments and one was at the piano.

We also witnessed a drill in the assembly room and were informed that each room in the institution receives thirty minutes' training there each week, besides a daily drill of ten minutes in the various rooms.

Mr. Carroll stated that the discharges from the institution were now few, amounting to not more than two or three, while the withdrawals were fifteen to eighteen.

Withdrawals of children from the school by parents and friends used to be more common and led to bad results; the superintendent had no legal power of detaining cases not committed, but where in his judgment release was inexpedient he opposed good advice, persuasion, and every form of passive resistance to the parents' selfish wishes, and had never yet been taken to task by the Law Courts.

With regard to the farm work, Mr. Carroll made the following statements:—

"The farm is not a paying investment. It gives us an outlet for the labour of the children and it gives us supplies of which we know the quality. But with the same staff that we have we could farm about 500 more acres, and consequently make just that much more. We are not losing money, but it is not a big thing as an investment. If we can make £250 per year from our farm, we are doing good, but that is nothing when you consider what we have invested there. Our farm buildings cost about £7,000."

In the farm building we were shown in to a large assembly hall, where plays are sometimes acted.

A day room contained thirty boys of the low-grade type. The superintendent stated it was the intention to place these in a new building, to replace them with boys who can work on the farm, the lower grades being able to perform small duties indoors, but no outside work.

The dining room of the farm contained twelve tables seating fourteen each. The tables were spread with oilcloth. There is a kitchen and also a scullery in the building.

The staff of this part of the institution consists of a farmer, an experienced man who has charge of the house and twenty-five employees. There are 180 inmates.

The farm has a herd of 45 cows, a flock of sheep, and about 150 pigs, which stock is in charge of the inmates.

Of the 180 inmates on the farm, half are custodial cases of no industrial value and half working men.

There is need of 500 acres more, on which none but workers might live.

About the farm grounds we saw some of the men in-raking and gathering leaves, and divisions of them were seen marching to distant fields, but we did not witness much actual work.

CONCLUSIONS.

We may now summarise the conclusions which our visit to the United States has enabled us to arrive at.

1. In America, as in England, feeble-minded* persons are to be found in the almshouses (*Anglicè* workhouses), in the reformatories, in the prisons, and under temporary charitable care, and at large throughout the country in such numbers as to constitute a danger to the well-being of the nation.

2. The result of this is that in America, as in England, the problem of how to deal comprehensively with the feeble-minded is agitating the thoughts of those who are concerned with the social conditions of the people, especially of those who are engaged in the administration of Poor Law, criminal jurisdiction, lunacy, and vagrancy.

3. The necessity for action in the matter is accentuated by the fact that in most of the States the feeble-minded, even those of the lowest grade of idiocy, are not dealt with as lunatics. They are not certifiable as insane, nor are they eligible for admission into lunatic asylums or insane hospitals.

4. In most of the States which we visited the practical measures which have been adopted for solving this problem (except in connection with elementary schools) have been longer in action and are of a more advanced and more successful character than anything that has been attempted in our own country.

5. These measures, though now forming part of the State administration, owe their inception to the able and persistent efforts of a few individuals who, having established on a voluntary basis institutions for imbeciles, were enabled, when the State came to their assistance, to so enlarge and develop those institutions as to render them suitable for providing for all grades of the feeble-minded upon a rational system.

6. The American institutions are thus the result of the practical experience of men who have made it their life's work to study this particular problem, and these institutions appear to us, in their methods of treatment, administration, and finance, to be examples that, in many respects, may be imitated in our own country with great advantage.

* The word "Feeble-minded" is used in America to denote all grades of mental defect except acquired insanity. It includes idiots and imbeciles. It is used in this sense throughout this report.

7. We do not, however, wish to say that we think American institutions sufficient for all the requirements of the case. Their own administrators would be the first to admit, not only that their present organisation is incapable of providing for more than a fraction of those who require care, but that they themselves are still working out improved methods by the light of past experience.

8. The principle which underlies American practice in this matter is that no person who is mentally deficient should be left without care and supervision. If such care cannot be provided by the family the State undertakes the duty. This is justified on the grounds, firstly, that the community owes protection to its weakest members, and, secondly, that the community itself suffers by the irresponsible actions of the feeble-minded, who fall into dependence, destitution and crime, particularly in the case of women who are unable to defend themselves from the sexual dangers which beset them.

9. This particular phase of the problem, namely, the control of feeble-minded women of child-bearing age, has received much attention in the United States. We found this dealt with in two ways, by the provision of special institutions and by enactments prohibiting marriage. Of such institutions we visited two, the one at Newark in New York State, the other at Vineland in New Jersey. We found detained in them many women whose mental defect was slight, and were struck by the fact that these women were detained with ease and readily settled down to the institution life. At Newark, 25 per cent. of the inmates were women who had been brought before a magistrate on some charge and without being convicted by him had been committed to this institution as a proper place for their detention.

10. Most of the American institutions were started as schools for feeble-minded children under the idea which prevailed that a large number of these could be educated so as to be able to take their place in the world alongside of their normal brothers and sisters.

11. This idea has been modified by experience, and now it is the opinion of those whom we consulted that it is only a very small fraction of the feeble-minded who can stand alone, however excellent their education may have been.

12. Two results flow from this. Firstly, although in some places the system of education still follows on the lines of that given in schools for normal children, in those institutions which appeared to us to be the most scientifically organised there is now a tendency to limit the instruction to such manual work as the feeble-minded are found able to perform, and as will afford them occupation and happiness as inmates of permanent working homes.

13. Secondly, the opinion has now become general that the provision of schools for feeble-minded children must be accompanied by permanent homes for adults. The present schools have become congested with adults who have grown up in the school and whom the managers have felt constrained to retain there for fear of the disasters which would have fallen upon the adolescent if turned adrift into the world.

14. Hence, those interested in the American institutions have induced the State Legislatures to allow of the establishment of departments or branches for adults into which they can draft the children who have passed school age, and also admit from outside feeble-minded adult men and women whom the Poor Law or other public authority may think require the protection of a home. Expert opinion condemns as ineffective and wasteful an institution which lacks a custodial department or colony or other annexe for adults.

15. Contemporaneously with this movement the Americans have had to consider the question as to what powers of compulsory detention should be given to the managers of these institutions. On this subject we naturally discovered considerable difference of opinion. Some of the managers whom we interviewed were adverse to any such power being bestowed upon them. They argued—especially in regard to schools for the feeble-minded—that it is desirable there should be nothing to hinder parents from allowing their children to profit by the special education offered to them, and if they knew there was a possibility of their child being compulsorily detained parents would hesitate to run this risk and would hold aloof from the institution.

16. On the other hand, most managers had had experience of cases in which it would have been of benefit to a child if there had been legal power to resist the demand for freedom made by it or on its behalf. We had instances mentioned to us in which the managers had been so convinced of this as to feel justified in defending actions of *habeas corpus*, and in one or two cases the Courts of Law had on grounds of public policy actually upheld the managers' decision to detain a feeble-minded person against his own or his family's wishes.

17. It is to be noted that as the inmates of feeble-minded institutions are paid for almost entirely by the State there is no inducement operating upon the Poor Law authorities to withdraw those whom they send there in order to relieve the local rates.

18. The preponderance of opinion was in favour of such power of detention being conferred on the managers, and in some States this view has already been embodied in a Statute by the Legislature giving authority to a Judge to order the detention of a feeble minded person under certain circumstances.

19. It should be noticed that so far as we have ascertained, the State Legislatures have only conferred these specific powers of detention in respect to institutions which are supported by the State and controlled by managers appointed by the State, and in which therefore there is no risk of such powers being used for improper purposes.

20. We must, however, add that the general opinion of the American manager is that in homes for the feeble-minded power of detention is only needed on very rare occasions. The great majority of defectives have no desire to leave the protection and kindly care which are afforded to them in these institutions. Even in the case of Newark, the inmates of which are mostly women who have been led astray but whose mental deficiency in many cases was very slight, the attempts to escape are exceedingly rare, and this notwithstanding the fact that the grounds are unenclosed and there is therefore no physical difficulty in the way of an inmate leaving the premises.

21. In the State of Massachusetts the Legislature does not appear to have made any special enactments with reference to the detention of the feeble-minded. In this State, however, it is possible to take advantage of the ordinary law for seclusion of lunatics, inasmuch as there is no distinction in law made between lunatics, idiots, and imbeciles. In Massachusetts a person of defective intellect can be certified as insane and committed to an institution for the feeble-minded under the same procedure as that adopted in lunacy.

22. Massachusetts differs from most of the States we visited in having adopted one system of State organisation for all kinds of mental disorder. It has a State Board of Insanity which is charged with the control of all institutions for lunatics, feeble-minded, epileptics, and inebriates, and which exercises extensive power of removing patients from one institution to another.

23. We mention this fact because in most of the States the control of lunatics is kept distinct from that of other defectives, and great importance appears to be attached to this distinction. For example, in New York State there are two distinct Government departments, the State Commission in Lunacy and the State Board of Charities. The former has the care of the Lunatic Asylums whilst the latter control the Institutions for the Feeble-minded and the Epileptic. It may be advisable in practice to maintain a wide separation between persons suffering from curable lunacy and congenital idiocy; but the union of organisation as followed in Massachusetts and also in Pennsylvania appears to us to possess merit, as it facilitates governmental action and encourages scientific administration and classification. Indeed, we doubt whether in the States where there are duplicate departments there is in effect any greater separation of these classes than there is under the direction of the single Board of Insanity in Massachusetts. In New York State we visited three ordinary Lunatic Asylums and one Criminal Lunatic Asylum. In the former, cases of congenital mental defect were comparatively few: but in the latter we noted their presence in considerable numbers. This fact indicates the difficulty of separating congenital from acquired mental defect when dealing with prison cases.

24. The method of treatment followed by all the most successful of the American institutions, whether for lunatics or for feeble-minded, consists chiefly in developing to the utmost extent whatever faculty for working an inmate possesses, and it is remarkable how much labour the mentally afflicted are able to perform when wisely directed and constantly supervised. It is work alone which make an institution for feeble-minded hopeful or indeed bearable either for the attendants or the patients. There are not, however, many branches of labour which the feeble-minded can perform. In the American institutions we found the inmates generally engaged in the trades of making or mending boots, tailoring and dress-making, rough painting and carpentering, baking, washing, and farming. Of these the two last-named industries are those to which most importance is attached. The laundry gives occupation to large numbers of the women, whilst the advantages of agricultural occupations for the men is so generally recognised that public money has been readily granted to the institutions we visited for the purchase of land and the extension of farming operations on a considerable scale. The cleaning, scrubbing, cooking, and indeed all the domestic duties in the homes were entrusted almost entirely to the inmates. In some cases the higher grade inmates attended to and looked after those of low grade with much care and assiduity. In short, occupation of some sort was provided for all, even if it were only training in balancing and walking, in tactual discrimination and other elements of self-help and usefulness.

25. Since the institutions have been placed under State management great efforts have been made to administer them on economical lines. Under the American system the managers and the superintendents are appointed by the State and are entrusted with the expenditure of a grant of money made annually by the State Legislature upon a Budget presented by the managers and strictly checked by the financial department of the State. It is not usual to allow any expenditure by the managers to be met by borrowed money, and thus the cost of new buildings and enlargements has to be provided for out of the annual grant.

26. The result of this is that the managers do their utmost to make the money granted to them go as far as possible, and we found that in many instances they have succeeded in providing accommodation for the feeble-minded of a satisfactory character at a cost below anything we have known in our own country.

27. The total cost of land and buildings in the institutions for feeble-minded which we inspected varied from £90 per bed to £160. The cost of additional blocks or cottages was from £50 to £75 per bed. The weekly maintenance per inmate varied considerably. The lowest figure was 9s. 4d. In some instances the State allow as much as 18s. or 22s. for maintenance, but in these cases the managers have been able, out of savings in

current expenditure, to add to the building or equipment of the institution. Taking into consideration the fact that prices in America exceed those in England the foregoing figures may be regarded as satisfactory.

28. The low cost of erection of buildings in recent years is due to the opinion now held by the American managers that the feeble-minded do not require and are not benefited by anything like the elaborate accommodation provided for lunatics, and even in the lunatic asylums which we visited opinion was evidently ripening in favour of simpler and less costly arrangements. In the Farm Colony at Templeton, Massachusetts, the inmates were housed almost as modestly as the ordinary labourer would be on an ordinary farm, and the men and boys there seemed to be as contented and as healthy as any we had seen elsewhere, and to be doing remunerative work to an extent which having regard to their low mental condition was unique in the experience of any of us.

29. The cost of maintenance depends largely upon the number of attendants, and this must necessarily be considerable in all establishments for persons who cannot look after themselves. In the institutions which we saw the proportion between attendants and inmates varied between 1 to 7 and 1 to 10.

30. In most of the institutions the attempt is made to add to the financial resources by the product of the inmates' labour. There is no doubt that material assistance is afforded by this means, but, of course, as a large proportion of the feeble-minded can do but little effective work, in no case have we found that the aggregate returns have been suffcient to make the institution self-supporting.

31. Most of the institutions which we visited are what may be termed large institutions containing from 500 to 2,000 inmates. Notwithstanding this fact, we were favourably impressed with their suitability for the purposes for which they are established. In the best of the institutions, however, the present tendency is to house the inmates in separate cottages or blocks having accommodation or varying numbers. In some cases it is found best to erect a building for 25 inmates and two or three attendants. In others the distinct blocks contained 100 or 200 persons. By this means suitable accommodation could be given to suitable cases, and great scope for classification was afforded whilst preserving the advantages and economies secured by having one central administration for a large community.

32. The foregoing observations have reference solely to the homes for feeble-minded, as it is these that was our prime duty to report upon. We visited, however, a large number of other institutions, such as lunatic asylums, prisons, reformatories, labour colonies, homes for epileptics, workhouses or almshouses, and residential and day schools, and with respect to some of these we may add the following observations.

33. As regards the lunatic asylums our general impression is that in America these are as a rule better designed, more cheaply built, and more successfully managed than are the majority of asylums in England.

34. It is noticeable that in America the word "asylum" is avoided. These institutions are termed "State Hospitals for the Insane," and the spirit which has prompted this nomenclature governs both the design and the administration. The best asylums which we visited partake more of the nature of a curative home than of a prison. They are not enclosed by walls or railings. A large proportion of the patients are allowed absolute freedom, and every attempt is made by providing recreation and useful employment to relieve or cure the patient. In some States the providing of work has been hampered by a prejudice that exists amongst the working-classes against permitting inmates of institutions to compete with outside labour, but, fortunately for these afflicted creatures, a wider and more generous view now appears to be obtaining, and under certain conditions the State Legislatures encourage this necessary development of the work.

35. In American asylums the proportion of medical men to the rest of the staff is generally higher than it is in the United Kingdom, and the scientific treatment of the insane is thus facilitated. The superintendent is usually a member of the medical profession, and he has very extensive powers entrusted to him. The asylums are administered by a committee of managers nominated by the Governor of the State and resident within reasonable distance of the asylum. The superintendent is responsible to this committee, but in practice he has a very large degree of personal authority in the establishment. The superintendents whom we saw gave us the impression of being men of high standing in their profession and possessing great knowledge of, and showing great devotion to, their work.

36. One fact which calls for remark in the organisation of the State institutions in America is the share taken by women in the management of those institutions which receive women inmates. At Newark, the regulations laid down by the State of New York stipulated that the board of management should consist of nine persons, three of whom must be women The resident medical officer in this institution was a woman. In several of the institutions for women we found a lady doctor on the medical staff, whilst the institution for Feeble-minded Women at Vineland, New Jersey, had a medical woman as superintendent, and three women on the board of management. Women superintendents and medical officers were also found in the State reformatories for women at Sherborne, Bedford, Albion and Hudson, and the superintendent of the City Schools for Feeble-minded and Idiot Children, New York, is a woman. We were told that public opinion in New York State was so pronounced on this subject that a law had been passed making it obligatory to have a woman medical officer on the staff of any State institution in which women lunatics were received.

37. We have already explained the financial system which regulates the State institutions, and have shown how the result has been to make managers and superintendents take every means to ensure economy in building and administration. We may mention, as an example of this, that the Legislature of the State of New York has in recent years laid it down that no building in an asylum is to cost more than £100 per bed. We did not find that this had been proved to be actually feasible, but it has undoubtedly effected a very considerable curtailment in the estimates.

38. In connection with the subject of Lunacy administration we must not omit to mention that in New York, Brooklyn, Albany and Chicago, we visited the pavilions or wards which have been erected for the reception of persons suffering from mental disturbance for the purpose of observation prior to committing them to an asylum. We were much impressed with the usefulness of these wards, which offer great facilities for the diagnosis of doubtful cases of insanity and feeble-mindedness and thus simplify certification The wards in New York, Albany, and Chicago were for observation only, the patients not being detained sufficiently long for curative purposes, but those in Albany were for curative as well as diagnostic purposes, and the patients in them were detained longer.

39. We visited three institutions specialised for the detention and treatment of epileptics. The most noteworthy fact we observed in them was the marked degree of mental enfeeblement of the majority of the inmates, in fact it may be said that the inmates of these epileptic institutions are as feeble-minded as those in the feeble-minded institutions proper. In New York State the separation of epileptics from the feeble-minded and the insane is carried to an extreme. There, if a feeble-minded or even an insane person is epileptic he technically ceases to be considered feeble-minded or insane but only epileptic. The Craig Epileptic Colony is an instance of what a so-called colony for sane epileptics may develop into. It was started as a working colony for the sane, but has now become an asylum housing helpless low-grade imbeciles and idiots.

40. In almost all the almshouses which we visited we found mentally defective persons present. In some they were comparatively few, but in others

they were to be seen in large numbers. When this was so the conclusion was forced upon us that the detention of such persons in such institutions is a cause of great discomfort to the sane inmates.

41. In the prisons we visited, and especially in the short sentence prisons, we came across mentally defective persons in considerable numbers. In one prison only did we see any special provision made for the prisoners of this class; it consisted in segregation in one part of the prison and untasked labour. Our general observation in the prisons was that little official cognisance is taken of the existence of such a class of person. We did not find that much provision is made for the care or supervision of feeble-minded persons after the expiry of their sentence; but prisoners with marked insanity in the State Prisons of New York are certified and transferred to the Criminal Lunatic Asylum, where they are kept permanently or until cured irrespectively of the expiry of their sentences.

42. In the criminal reformatories also we saw numbers of the feeble-minded, and ascertained that in the reformatories, as in the prisons, little or no provision is made for them, the one exception being that in the case of women there exists a power of transferring them from the reformatories to custodial homes for the feeble-minded. For example, in the Newark State Custodial Asylum for Feeble-minded Women we met with some who had been transferred from the Hudson Reformatory for Women. The detention of these women at Newark was not limited to the length of their sentences. In the reformatories we were impressed by the prevalence of mental defect among the inmates of the lowest disciplinary grade. In one reformatory we found the third disciplinary class to consist almost entirely of feeble-minded, and were informed that the percentage of feeble-minded in the total population of that reformatory amounted to about 20 per cent. We were told that in a particular reformatory to which the more refractory cases are sent, the percentage of feeble-mindedness is still larger.

43. As regards the elementary schools, we visited several of these in New York City, Boston, Philadelphia, Albany, Chicago, and other towns, with the view of ascertaining whether there was anything we could learn from the American methods of dealing with the feeble-minded children attending for daily instruction. Some attempt has been made to provide special classes, particularly in New York and Boston. In the former city the educational authorities seem to be fully alive to the problem, and to be providing gradually classes of the kind with which we are acquainted in England. Considerable interest is shown in this subject, but those concerned in it stated that they had been inspired and guided by their knowledge of what has taken place in England, and we cannot say that we obtained any new ideas or more useful experiences than those which have presented themselves to us in our own country.

44. We trust that our experiences in the United States will be of value to the Royal Commission as undoubtedly they have been to us, and we take this opportunity again of expressing our grateful acknowledgments to those kind and hospitable friends in America who gave us ungrudgingly that assistance and advice without which our journey would have been fruitless.

April 30th, 1907.

ROYAL COMMISSION ON THE CARE AND CONTROL OF THE FEEBLE-MINDED.

PARTICULARS REGARDING INSTITUTIONS VISITED BY THE COMMISSIONERS WHICH WERE OF MOST INTEREST FOR THE PURPOSES OF THE INQUIRY.

Name of Institution.	No of Inmates.	Acreage.	Staff.	Cost per Bed.	Cost of Maintenance.	Nature of Institution.
I.—NEW YORK STATE :						
(1) Hudson River State Hospital, Poughkeepsie (*see* p. 7 *ante*).	2,300	1,000	152 (11 medical men).	£200.	14s. 8d. per week.	Asylum for insane.
(2) Buffalo State Hospital, Buffalo (*see* p. 7 *ante*).	1,671	In town, small farm and garden.	350 (10 medical men).	—	14s. 7d. per week.	Asylum for insane, 60 per cent employed.
(3) State Hospital for Criminal Insane, Matteawan (*see* p. 8 *ante*).	650	250	118 (4 medical men).	—	14s. 7d. per week.	20 per cent of inmates convicted of murder or manslaughter. Majority convicted of felony, but many for petty charges.
(4) Special Classes in New York City (*see* p. 13 *ante*.)	400 defective children.	—	—	—	—	No Special Schools, but a score or more classes for defective children. There are also classes for dull and backward children which afford means for testing mental calibre of children.
(5) Syracuse State Institution for Feeble-minded Children (*see* p. 16 *ante*).	550	274	115 (Medical superintendent).	Value of land and buildings £80,000. Equipment £9,000.	16s. per week (less 2s. 6d. earnings).	Somewhat similar to Royal Albert Asylum.
(6) Rome State Custodial Asylum (*see* p. 19 *ante*).	750	400	— (Medical superintendent).	£160.	12s. per week (less 1s. earnings).	Untrainable idiots and custodial feeble-minded cases from almshouses, and homes in the State.
(7) Newark State Custodial Asylum for Feeble-minded Women, Wayne (*see* p. 26 *ante*).	600	42	75 (Lay superintendent assisted by medical man).	£53.	9s. 6d. per week (less 6d. earnings).	Feeble-minded women of child-bearing age. Board of managers nine in number, including three women.
(8) Craig Colony for Epileptics, Sonyea (*see* p. 32 *ante*).	850 (open to almost indefinite increase).	1,900	165 (Medical superintendent, 7 assistant doctors, including a lady doctor).	—	14s. per week (less 2s. 6d. earnings).	State, and paying patients.
(9) Houses of Refuge and Reformatories for Women at Albion and Bedford (*see* p. 40 *ante*).	Albion House, 140	97	— (Lady superintendent.)	—	20s. 6d. per week (less 6d. earnings).	Reformable women between 15 and 30 convicted of prostitution, inebriety and petty offences on indeterminate sentences not beyond 3 years.
	Bedford House, 227	107	— (Lady superintendent.)	—	18s. 6d. per week (less 6d. earnings).	
(10) The Hudson State Training School for Girls (*see* p. 41 *ante*).	238	—	— (Superintendent and resident medical officer both lady doctors.)	—	23s. 6d. per week	Training school for girls not over 16 committed as vagrants, disorderly or criminal, on indeterminate sentences. Inmates cannot be kept after 18.

Name of Institution.	Number of Inmates.	Acreage.	Staff.	Cost per Bed.	Cost of Maintenance.	Nature of Institution.
I. New York State—*cont.*						
(11) New York City School for Feeble-minded and Custodial Asylum, Randalls Island (*see* p 43 *ante*).	733	—	— (Lady Superintendent. Work done by inmates, if done by paid helpers would cost, it is said, over £4,000 a year.)	—	Probably 18s. per week.	General system somewhat similar to the English special schools, but children are boarded.
(12) Almshouse, Blackwells Island (*see* p. 44 *ante*).	—	—	Very small, 1 day and 1 night nurse for 60 patients, assisted by 2 inmates.	—	—	Similar to English workhouses, but conditions unsatisfactory.
(13) Almshouse, Albany (*see* p. 45 *ante*).	500 could be accommodated; actually in residence. 246	—	10 (including superintendent at £500 a year, and deputy at £300)	—	—	Workhouse, sane and insane inmates not separated; one-third of inmates said to be feeble-minded.
(14) Good Shepherd Institution, and Reformatory, Buffalo (*see* p. 45 *ante*).	(1) 50 (2) 36 148 (3) 62	—	57 sisters	—	—	(1) Home for rescue work. (2) Reformatory for girls between 15 and 30, committed for living in disorderly houses. (3) Home for young girls not charged requiring custodial treatment.
II. Massachusetts:						
(15) Almshouse, Long Island (*see* p. 49 *ante*).	800 to 1,000	—	—	—	—	Workhouse. According to the Report insane and feeble-minded persons had been almost entirely removed, only 36 being left. But in the opinion of the assistant medical officer one-third to one-half of the inmates had some mental defect.
(16) Special Classes Boston (*see* p. 50 *ante*).	105 (seven classes of fifteen).	—	—	—	—	No special schools, and these classes are only in the experimental stage.
(17) School for the Feeble-minded, Boston, and Templeton Colony (*see* p. 51 *ante*).	School at Boston, 1,000	150	—	—	About 14s. per week, including cost of repairs and improvements.	School for the Feeble-minded.
(*see* p. 60 *ante*).	Colony at Templeton. 150 to 200 at present.	2,000	(No resident medical superintendent; local doctor comes when required.)	£40 to £50.	—	Custodial cases, idiots or marked imbeciles; all doing manual work.
(18) State Hospital at Tewkesbury (*see* p. 62 *ante*).	1,300 to 1,800.	600	—	£100	13s. 9d. per week (less 1s. 3d.) earnings.	Sick, insane or indigent paupers; entire maintenance provided by the State.

Name of Institution.	Number of Inmates.	Acreage.	Staff.	Cost per Bed.	Cost of Maintenance.	Nature of Institution.
II.—Massachusetts—*cont.*						
(19) Hospital for Epileptics at Palmer (*see* p. 64 *ante*).	460	Several hundred.	1 attendant to 4 patients (4 medical men).	£156	18s. per week.	Many insane and feeble-minded; costs defrayed by State, Poor Law authorities and private individuals.
(20) Hospital Cottages for Children, Baldwinville (*see* p. 66 *ante*).	140	—	—	—	Patients pay from 13s. to 20s. per week.	Private philanthropic institution for epileptic, nervous, and deformed children up to 14.
(21) Hospital for Dipsomaniacs and Inebriates, Foxborough (*see* p. 67 *ante*).	224 (62 of whom are lunatics)	—	1 attendant to 5 patients (3 medical men).	£170	24s. per week.	Corresponds to a retreat in England.
(22) State Farm, Bridgwater (*see* p. 70 *ante*).	1,660	1,000	1 employee to 18 inmates (5 medical men).	£90	9s. per week	Criminal lunatic asylum, indeterminate sentence prison, and a workhouse on one site.
(23) Concord Reformatory, Concord (*see* p. 72 *ante*).	835	—	—	—	—	Industrial training for reformable criminals.
(24) Sherbourne Reformatory for Women, South Framingham (*see* p. 72 *ante*).	190 (accommodation for 600)	—	Female staff, including 2 medical women.	—	—	Industrial training for reformable criminals.
III.—Maryland:						
(25) Asylum and Training School for Feeble-minded, Owing Mills (*see* p. 77 *ante*).	200	—	37 (including a medical superintendent).	£70	£30 per annum.	Boys and girls admitted at 7, discharges very few. About half inmates are feeble-minded, but remainder lower grade imbeciles and idiots or epileptics.
IV.—Washington:						
(26) The "Workhouse" or Local Short-sentence Prison, District of Columbia (*see* p. 79 *ante*).	—	—	—	—	—	Inmates sentenced up to six months for drunkenness and a few for longer terms for vagrancy, etc. Many said not to be right in their heads.
V.—Pennsylvania:						
(27) Elwyn School for Feeble-minded Children (*see* p. 80 *ante*).	1,060	350	165	—	14s. per week	Primarily a training school, but with some buildings for asylum purposes.
(28) State Institution for Feeble-minded of Western Pennsylvania at Polk (*see* p. 86 *ante*).	1,166	1,000	119 (including 3 medical men).	£125	14s. 6d. per week	Intended to supplement Elwyn and provide for requirements of Western Pennsylvania.
VI.—New Jersey:						
(29) State Home for Care and Control of Feeble-minded Women, Vineland (*see* p. 96 *ante*).	160	35	Lady medical superintendent, 6 trained teachers.	£90	18s. per week	Women committed for one year of child-bearing age; committal renewable every year. Committal by Governor of State, not by Courts.
(30) Training School for Feeble-minded Boys and Girls (*see* p. 99 *ante*).	350	280	—	—	—	Committal by Governor. Age of boys, 5 to 21; age of girls, 5 to 12. Practically an idiot asylum and training school for imbeciles built and partially endowed privately but almost entirely supported by State.

Name of Institution.	Number of Inmates.	Acreage.	Staff.	Cost per Bed.	Cost of Maintenance.	Nature of Institution.
VI.—New Jersey—*cont.*						
(31) State Village for Epileptics, Skillman (*see* p. 103 *ante*).	300	890	—	£263	25s. per week	Epileptic colony supposed to be for epileptics neither sane nor idiotic, but containing some low grade imbeciles and idiots. Both paupers and non-paupers admitted.
VII.—Ohio:						
(32) Columbus State Institution for Feeble-minded Youths (*see* p. 105 *ante*).	1,350 (50 being on the farm colony).	Grounds, 187½ acres	200 (including 1 medical man and about 30 teachers).	—	—	Training and educational department for children and custodial training and industrial department for adults.
The Farm Colony, an extension of the Institution for the Feeble-minded, Columbus (*see* p. 113 *ante*).	50	Colony, 1,800 acres	Master and Matron and eleven employees.			The Colony only has 50 adult imbeciles at present, but it is intended to have 1,500 to 2,000 eventually.
(33) State Hospital for Epileptics, Gallipolis (*see* p. 114 *ante*).	1,200		215 (including 5 medical men).	—	13s. per week	Epileptics requiring institution treatment. Nine-tenths of cost paid by State, there being but few paying patients and the county and Poor Law authorities only contribute for clothing not exceeding 30s. per head per year.
VIII.—Illinois:						
(34) Marquette School, Chicago (*see* p. 117 *ante*).	15 in special class for defectives.	—	—	—	—	School contained special class for defective children of same type as admitted to London Special Schools. 200 such children are educated in special classes in Chicago.
(35) Dunning Institution (*see* p. 118 *ante*).	Asylum, 1,800	160	—	From £80 to £100 for the modern buildings.	£22 10s. per year	(1) Lunatic asylum. (2) Poor house. (3) Hospital for consumptives.
(36) Cook County Hospital, Chicago (*see* p. 119 *ante*).	1,100	—	—	—	—	General Hospital. New wing used as detention hospital for observation of alleged lunatics. About 30 cases per week pass through detention wards.
(37) Bridewell Prison (*see* p. 119 *ante*).	1,400 to 1,500	70	—	—	—	Chiefly for prisoners with sentences of six months and under. Sixty-four of the prisoners were considered as unfit for prison discipline and were known as "cranks."
John Worthy School	380	—	—	—	—	Reformatory for boys to which juveniles are committed and young prisoners committed to gaol are frequently transferred.

Name of Institution.	Number of Inmates.	Acreage.	Staff.	Cost per Bed.	Cost of Maintenance.	Nature of Institution.
VIII.—Illinois—*cont.*						
(38) Asylum for Feeble-minded Children, Lincoln (*see* p. 120 *ante*.)	1,400 (300 of whom were epileptic)	880	Numerous, including 4 medical men	—	11*s.* per week	Idiots and all grades of feeble-minded, and 75 custodial cases of imbecility on farm. Inmates received on request of relatives or Poor Law authorities. No power of detention. Cost of maintenance provided by State, with contributions from parents.
IX.—Indiana:						
(39) School for Feeble-minded, Fort Wayne (*see* p. 127 *ante*).	1,065 (300 of whom are epileptic)	—	—	£120	9*s.* 4*d.* per week	For training and instructing feeble-minded children. Containing two distinct departments, one industrial and the other custodial. The inmates included 120 adult females.

ROYAL COMMISSION ON THE CARE AND CONTROL OF THE FEEBLE-MINDED.

INDEX.

Age in relation to mental defect:
Average age at death, 4, 48.

Albany Almshouse, New York, 45, 140.

Albion House of Refuge for Women, New York, 40:
Buildings and land, 40.
Class, and average age of inmates, 40.
Cost, amount of, and how defrayed, 40.
Discharge and re-arrest, regulations as to, 40.
Employment of inmates, 40.
Table of particulars, 139.
Woman as superintendent, 40, 137.

Almshouses:
Definition—Corresponding to workhouses in England, 3.
Feeble-minded in, 3, 132, 138.
(For Almshouses in particular States, *see titles of those States.*)

Asylums:
Idiot asylums, definition as training schools for the feeble-minded, 3.
Lunatic Asylums, *see title* Hospitals for the Insane.

Authorities for establishment and management of institutions for defectives:
Nomination of, general practice as to, 2.
Summary of conclusion of Commissioners as to, 134, 135.

Baldwinville Hospital Cottages for epileptic, nervous, and deformed children, 66:
Accommodation, number of inmates, 66.
Buildings and classification, 67.
Cost, how defrayed, 66.
Dietary, 67.
Table of particulars, 141.
Transfer of children to Waverley School, age at which desirable, 67.

Bayview Hospital, 76, 141.

Bedford Reformatory for Women, New York, 40:
After-care of cases, small opportunity for, 41
Age of inmates, 40.
Buildings and land, 40.
Class of case, feeble-mindedness of many inmates, 40, 41.
Classification, 41.
Cost, 40.
Detention of inmates, necessity for, 40.
Discharge and re-arrest, regulations as to, 41, 42.
Discipline and general treatment, 40.
Employment, 41.
Girls grading embankment; illustration, 41.
Retention of proportion of earnings, 40.
Table of particulars, 139.
Woman as superintendent, 40, 137.

Blind:
Number of, in institutions for the feeble-minded, 4.

Blackwell's Island, New York, almshouse on, 44, 45, 140.

Boarding-out, authority for and practice as to in various States, 13, 47, 49, 76, 94, 117.

Boston:
Special classes in, 50, 140.
Waverley School, *see that title.*

Bridewell Prison, Illinois, 119:
Accommodation, number of inmates, 119.
Buildings, 119.
Classification in, 120.
Employment of inmates, no contract system, no money given to inmates, 119.
Feeble-minded inmates, 119.
John Worthy School for boys, 120.
Period of detention in, futility of short sentences, 120.
Table of particulars, 142.

Bridgewater State Farm, Massachusetts (criminal lunatic asylum, indeterminate prison and workhouse), 70:
Accommodation, number of inmates, 70.
Buildings, value of, 70.
Class of case received, 70, 71.
Cost of, 70, 71.
Employment of inmates, 71.
Sentences, indeterminate, 71.
Staff, number of, 71.
Table of particulars, 141.
Transfer of prisoners from one part of institution to another, powers of, 71.
Value of whole estates, 70.
Working of, general observations as to, and comparison with Broadmoor, 71.

Buffalo State Hospital for the Insane, 7:
Accommodation, number of inmates, 7.
Buildings, 8.
Class of case—extent to which idiots and imbeciles are admitted, 8.
Cost, 7.
How defrayed, 7.
Discipline and punishments, and general treatment, 8.
Employment of inmates, 8.
Staff, 7.
Table of particulars, 139.
Working of, comments on, 8.

Causes of mental defect, views as to, 20, 64, 71, 84.

Census Returns as to Defectives, 3.
Classes included, 3.
Inadequacy of, 3.

Charitable Enterprise:
Importance of, and especially in inaugurating provision for the feeble-minded, 132.
In various States, 9, 10, 11, 12, 48, 73, 80.

Chicago:
Bridewell Prison, 119, 142.
Cook County Hospital, 119, 142.
Number of defective children in, 116.
Schools, special, 116, 117, 142.

Classification of defectives by Dr. Barr, 82.

Columbus State Institution for Feeble minded Youth, Ohio, 105:
Visit of Commissioners to, 105, 113.
Accommodation—number of inmates, 112.
Acts constituting, 105.

Columbus State Institution for the Feeble-minded, &c.—*cont.*
Admission, regulations as to, 106.
Certificate for, 110.
Forms for, 107–112.
After-life of inmates, results of training, etc., 112, 113.
Age of inmates, 106.
Buildings, 112, 113.
Class of case, 105, 106, 107.
Classification in, 105.
Custodial department, 105, 106, 107.
Discipline and punishments, 113.
Employment of inmates, school curriculum, etc., 112, 113.
Higher-grade employed in care of lower grade, 112.
Farm Colony Extension, 106, 113, 114.
Holidays, removal of pupils during, 106.
Physical exercises, etc., 112.
Staff, 112, 113.
Table of particulars, 142.
Women, immoral, sent to by magistrates, 107.

Conclusions arrived at by Commissioners, summary of, 132–138:
Almshouses, feeble-minded in, 132, 138.
Authorities for lunatics and other defectives, 134, 135.
Charitable enterprise in care of the feeble-minded, 132.
Criminal lunatics and feeble-minded, 138.
Detention, 133, 134, 138.
Epileptics, 137.
Hospitals for the insane, 132, 136, 137.
Observation wards, 137.
Institutions:
Accommodation—number of inmates, 136.
Cost of:
Amount of, 135, 136, 137.
Limitation of cost of buildings, 137.
How defrayed, 133, 136.
Absence of any inducement to Poor Law authorities to withdraw cases in order to relieve rates, 134.
Employment of inmates, 135, 136.
Staff, 137:
Women as superintendents and medical officers, 137.
Summary of, 132, 133.
Marriage of defectives, prohibition in certain States, 133.
Recovery and improvement, 133.
Reformatories, 138.
Schools, and special classes, 133, 138.
Homes for adults in connection with, 133.
Women, share taken by in management of institutions in which women are received: women as medical superintendents, etc., 137.
Women, Feeble-minded:
Detention, necessity for, 133.
Transfer from reformatories to Custodial Homes 138.

Concord Reformatory for Males, Massachussetts, 72:
Accommodation, number of inmates, 72.
Buildings and classification, 72.
Class of case, 72.
Discipline and punishment, 72.
Employment of inmates, 72.
Table of particulars, 141.

Cook County Hospital, Chicago, 119:
Accommodation, number of inmates, 119.
Buildings, 119.
Lunatics, alleged, detained in, for observation, 119.
Table of particulars, 142.

Cost of Institutions, *see title* Institutions, *subheading* Cost.

Craig Colony for Epileptics, 32–40:
Accommodation, number of inmates, 37.
Admission, regulations as to, 32.
Forms used, 33, 34, 35.
Age of inmates, 39.
Authority, 32.
Poor Law authorities, duties of in relation to, 32.

Craig Colony for Epileptics—*cont.*
Brickfields, 37.
Buildings, 36, 37, 39, 40.
Dilapidated condition of portion of buildings, 40.
Plans of women's cottages, 36.
Views of, 38, 39.
Children, admission, 32.
Class of case admitted, 32, 137.
Classification as sane or feeble-minded, 39, 137.
Clubs for employees and for colonists, 39.
Cost, 32, 39:
How defrayed, 33:
Work of patients, 37.
Detention, absence of any power of, 39.
Discharge, regulations as to, 33.
Discipline and punishments, 40.
Employment of inmates, 37.
Feeble-minded epileptics, detention in infirmaries, 39
Discipline and punishment, 39.
Number, 39, 137.
Unsatisfactory condition, 39.
Land and farm, 32, 37.
Heredity of epilepsy, insanity, and tuberculosis, among patients, 39.
Hospital, library, laboratories, etc., 39:
Contagious diseases pavilion, 39.
Infirmaries, defective conditions in, 39.
Old men and boys, special houses for, 40.
Recovery, rarity of, 38.
Schools, 37.
Staff, 37.
Table of particulars, 139.
Transfer to asylums of patients becoming insane, 33,
Treatment, 38, 39.
Women:
Cottages for, 36, 38.
Employment of, 37.

Criminal Lunatics:
Definition, 6.
Provision for in different States, *see title of those States, subheading* Criminal Lunatics.

Deaf-Mutes, number of in institutions for the feeble-minded, 4.

Criminal Lunatic, definition, 6.
Feeble-minded, classes included in, 132 *note*.
Institutions, 2.

Detention of defectives:
Necessity for, and especially for prevention of propagation, 9, 10, 17, 21, 32, 46, 48, 50, 58, 62, 64, 76, 78, 84, 85, 99, 127, 129, 133, 134.
Illinois, absence of any law as to detention in, 116.
New Jersey, Law of 1888, detention of women specially advocated in, 96.
Practice as to in particular institutions, 9, 10, 17, 21, 29, 39, 40, 42, 44, 71, 76, 78, 82, 84, 86, 94, 99, 115, 116, 117, 118, 121, 131, 134.
Report of Supervisor of City Charities, Baltimore, as to, 76.
Summary of conclusions of Commissioners as to 133, 134, 138.

Dunning Institution, Illinois 118.
Accommodation:
Number of inmates, 118.
Number of cases sent to from Detention Hospital in 1904, 118.
Asylum for senile and acute cases, 118.
Inadequacy of staff in, 118.
Buildings, 118.
Cost, 118.
Employments of inmates, 118.
Farm, 118.
Feeble-minded among asylum patients, 118.
State Law prohibiting certification or detention as lunatics, 118.
Staff, 118.
Table of particulars, 142.

Elwyn School for feeble-minded children, Pennsylvania, 80.
Accommodation—number of inmates, 82.
Waiting list, 86.

Elwyn School, etc.—*cont'.*
Admission, procedure as to, 78.
After-career of inmates:
Boys, suitability for Army or Navy, 84.
Age of inmates, 81, 84.
Buildings, 81.
Views of, 81, 82.
Class of case, 80, 81, 83, 84, 85.
Higher grade more troublesome than lower grade, 84.
Moral imbeciles, 84, 85.
Classification, 82, 83.
Cost, 82.
How defrayed, 83.
Custodial department, 81.
Class of case in, 85.
Transfer of cases to, from schools, 84.
Detention, absence of powers of, desirability of such power, 82, 84, 86.
Discipline and punishments, 80.
Employment, school curriculum, etc., 76, 79, 80.
Higher grade working among lower grade, 86.
Payment, 86.
Sloyd, 85.
Epileptics in, 80.
Family history records showing heredity, 84.
Holidays, 85.
Improvement, extent of, 84.
Land, acreage and value of, 81, 82.
Moral imbeciles, 85.
Recreations, etc., 86.
Staff, 82, 85, 86.
Table of particulars, 141.
Working of, general comments on, 86.

Employment of Inmates of Institutions, *see title* Institutions, *subheading* Employment.

England, Law and practice in as regards defectives comparison with American law and practice:
Asylums:
Cost of, 6.
Definition, corresponds to Hospital for the Insane in America, 3.
Discharge from, 6.
Epileptics in, number compared with number in American Asylums, 7.
Idiot asylums, comparison with American Institutions for the feeble-minded, 17, 86, 100.
Authorities:
Idiots and imbeciles, authority for, 4.
Local Government Board, American Authority similar to, 9.
Certification of idiots, 48.
Cost of institutions, method of defraying, 2.
Criminal insane, method of dealing with, 6.
Definitions, term used for various institutions, 2.
Detention in an institution, class of child considered suitable for, 17, 31.
Schools, special:
Class of child in, 13, 15, 112.
System of, similarity to system in New York City School, 43.

Epileptics:
Craig Colony, *see that title.*

CONCLUDING PARAGRAPHS AND SIGNATURES TO THE REPORT - - 471

MEMORANDA BY THE COMMISSIONERS - - - - - - - - 472

Royal Warrant.

EDWARD R. and I.

Edward the Seventh, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, Defender of the Faith, to—

Our right trusty and entirely beloved Cousin Thomas Henry, Marquess of Bath, Chairman; and

Our trusty and well-beloved:—

William Patrick Byrne, Esquire, Companion of Our Most Honourable Order of the Bath, Principal Clerk in the Office of Our Secretary of State for the Home Department;

Charles Edward Henry Hobhouse, Esquire;

Frederick Needham, Esquire, Doctor of Medicine, one of the Commissioners in Lunacy;

Henry David Greene, Esquire, one of Our Counsel learned in the Law;

Charles Edward Heley Chadwyck-Healey, Esquire, one of Our Counsel learned in the Law;

Harold Nelson Burden, Clerk, Manager of Brentry and other Certified Inebriate Reformatories;

Willoughby Hyett Dickinson, Esquire, Chairman of the National Association for promoting the welfare of the Feeble-Minded;

Charles Stewart Loch, Esquire, Secretary to the Council of the London Charity Organization Society; and

Ellen Frances Pinsent. Greeting!

Whereas We have deemed it expedient that a Commission should forthwith issue to consider the existing methods of dealing with idiots and epileptics, and with imbecile, feeble-minded, or defective persons not certified under the Lunacy Laws; and in view of the hardship or danger resulting to such persons and the community from insufficient provision for their care, training, and control, to report as to the amendments in the law or other measures which should be adopted in the matter, due regard being had to the expense involved in any such proposals and to the best means of securing economy therein;

Now know ye, that We, reposing great trust and confidence in your knowledge and ability, have authorized and appointed, and do by these presents authorize and appoint, you, the said Thomas Henry, Marquess of Bath; William Patrick Byrne; Charles Edward Henry Hobhouse;

Frederick Needham; Henry David Greene; Charles Edward Heley Chadwyck-Healey; Harold Nelson Burden; Willoughby Hyett Dickinson; Charles Stewart Loch; and Ellen Frances Pinsent to be Our Commissioners for the purposes of the said inquiry.

And for the better effecting the purposes of this Our Commission, We do by these presents give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission; and also to call for, have access to, and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do by these presents authorize and empower you, or any of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid.

And We do by these presents will and ordain that this Our Commission shall continue in full force and virtue, and that you Our said Commissioners, or any three or more of you, may from time to time proceed in the execution thereof, and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And We do further ordain that you, or any three or more of you, have liberty to report your proceedings under this Our Commission from time to time if you shall judge it expedient so to do.

And Our further will and pleasure is that you do, with as little delay as possible, report to Us under your hands and seals, or under the hands and seals of any three or more of you, your opinion upon the matters herein submitted for your consideration.

Given at Our Court at *St. James's*, the ninth day of *September*, one thousand nine hundred and four, in the fourth year of Our Reign.

By His Majesty's Command,

A. AKERS-DOUGLAS.

Royal Warrant.

EDWARD R. and I.

Horatio Bryan Donkin, Esquire, M.D., F.R.C.P.,
To be a member of the Royal Commission to consider the existing methods of dealing with idiots and epileptics, and with imbecile, feeble-minded, or defective persons.

Edward the Seventh, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, Defender of the Faith, To our Trusty and Well-beloved Horatio Bryan Donkin, Esquire, Doctor of Medicine, one of the Commissioners under the provisions of the Prisons Act, 1877. Greeting!

Whereas by Warrant under our Royal Sign Manual bearing date the Ninth day of September One Thousand Nine Hundred and Four, We were pleased to appoint Commissioners to consider the existing methods of dealing with idiots and epileptics, and with imbecile, feeble-minded or defective persons.

Now Know ye, that We, reposing great trust and confidence in your knowledge and ability, have authorized and appointed, and do by these presents authorize and appoint you the said Horatio Bryan Donkin, to be One of Our Commissioners for the purpose aforesaid, in addition to and together with the Commissioners whom We have already appointed.

Given at Our Court at *Balmoral* the Seventh day of *October*, one thousand nine hundred and four, in the Fourth Year of Our Reign.

By His Majesty's Command,

A. Akers-Douglas.

Royal Warrant.

Edward the Seventh, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, Defender of the Faith, to Our right trusty and right well-beloved Cousin Jacob, Earl of Radnor. Greeting!

Whereas the Office of Chairman of the Royal Commission on the Care and Control of the Feeble-Minded is now vacant by the resignation of our right trusty and entirely beloved cousin, Thomas Henry, Marquess of Bath.

Now know ye, that We, reposing great trust and confidence in your real discretion and ability, have authorized and appointed, and do by these presents authorize and appoint you, the said Jacob, Earl of Radnor, to be Chairman of the said Commission in the room of the said Thomas Henry, Marquess of Bath, resigned.

Given at Our Court at *St. James's*, the twenty-fifth day of *February*, nineteen hundred and five, in the fifth year of Our Reign.

By His Majesty's Command,

A. Akers-Douglas.

Royal Warrant.

EDWARD R. and I.

James Craufurd Dunlop, Esq., M.D., F.R.C.P. (Edin.), to be a Member of the Royal Commission on the Care and Control of the Feeble-Minded.

Edward the Seventh, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, Defender of the Faith, to Our trusty and well-beloved James Craufurd Dunlop, Esquire, Doctor of Medicine, Fellow of the Royal College of Physicians (Edinburgh), Superintendent of Statistics in the Office of the Registrar General for Scotland, Inspector under the Inebriates Acts, Assistant to the Medical Adviser to the Prison Commissioners for Scotland. Greeting!

Whereas by Warrants under Our Royal Sign Manual bearing date respectively the Ninth Day of September and the Seventh Day of October, 1904, and the Twenty-fifth Day of February, 1905, We were pleased to appoint Commissioners to consider the existing methods of dealing with idiots and epileptics and with imbecile feeble-minded or defective persons.

Now know ye, that We, reposing great trust and confidence in your knowledge and ability, have authorized and appointed, and do by these presents authorize and appoint you, the said James Craufurd Dunlop, to be one of our Commissioners for the purpose aforesaid in addition to and together with the Commissioners whom we have already appointed.

Given at Our Court at *St. James's*, the sixth day of *March*, nineteen hundred and five, in the fifth year of Our Reign.

By His Majesty's Command,

A. Akers-Douglas.

Royal Warrant.

EDWARD R. and I.

Edward the Seventh, by the Grace of God, of the United Kingdom of Great Britain and Ireland and of the British Dominions beyond the Seas, King, Defender of the Faith, to—

Our right trusty and right well-beloved Cousin Jacob, Earl of Radnor; and

Our trusty and well-beloved:—

William Patrick Byrne, Esquire, Companion of Our Most Honourable Order of the Bath, Principal Clerk in the Office of Our Secretary of State for the Home Department;

Charles Edward Heley Chadwyck-Healey, Esquire, Companion of Our Most Honourable Order of the Bath, one of Our Counsel learned in the Law;

Charles Edward Henry Hobhouse, Esquire;

Frederick Needham, Esquire, Doctor of Medicine, one of the Commissioners in Lunacy;

Horatio Bryan Donkin, Esquire, Doctor of Medicine, one of the Commissioners under the provisions of the Prison Act, 1877;

James Craufurd Dunlop, Esquire, Doctor of Medicine, Fellow of the Royal College of Physicians (Edinburgh), Superintendent of Statistics in the Office of the Registrar-General for Scotland, Inspector under the Inebriates Acts, Assistant to the Medical Adviser to the Prison Commissioners for Scotland;

Henry David Greene, Esquire, one of Our Counsel learned in the Law;

Harold Nelson Burden, Clerk, Manager of Brentry and other Certified Inebriate Reformatories;

Willoughby Hyett Dickinson, Esquire, Chairman of the National Association for promoting the welfare of the Feeble-Minded;

Charles Stewart Loch, Esquire, Secretary to the Council of the London Charity Organization Society; and

Ellen Frances Pinsent. Greeting!

Whereas We did by Warrants under Our Royal Sign Manual, bearing date the ninth day of September and the seventh day of October, one thousand nine hundred and four, and the twenty-seventh day of February and the sixth day of March, one thousand nine hundred and five, authorise and appoint certain persons therein respectively named, or any three or more of them, to be Our Commissioners to consider the existing methods of dealing with idiots and epileptics, and with imbecile, feeble-minded, or defective persons not certified under the Lunacy Laws; and in view of the hardship or danger resulting to such persons and the community from insufficient provision for

their care, training, and control, to report as to the amendments in the law or other measures which should be adopted in the matter, due regard being had to the expense involved in any such proposals and to the best means of securing economy therein ;

And Whereas We have deemed it expedient that the scope of the said Commission should be enlarged, and that the Commissioners appointed for the purposes aforesaid should also be authorised to enquire into the constitution, jurisdiction, and working of the Commission in Lunacy and other Lunacy Authorities in England and Wales, and into the expediency of amending the same or adopting some other system of supervising the care of lunatics and mental defectives ; and to report as to any amendments in the law which should, in their opinion, be adopted :

Now know ye, that We, being advised that a new Commission should issue for this purpose, have revoked and determined, and do by these presents revoke and determine, the said several Warrants, and every matter and thing therein contained.

And We do by these presents nominate, constitute and appoint you the said Jacob, Earl of Radnor (Chairman) ; William Patrick Byrne ; Charles Edward Heley Chadwyck-Healey ; Charles Edward Henry Hobhouse ; Frederick Needham ; Horatio Bryan Donkin ; James Craufurd Dunlop ; Henry David Greene ; Harold Nelson Burden ; Willoughby Hyett Dickinson ; Charles Stewart Loch ; and Ellen Frances Pinsent to be Our Commissioners to consider the existing methods of dealing with idiots and epileptics, and with imbecile, feeble-minded or defective persons not certified under the Lunacy Laws ; and in view of the hardship or danger resulting to such persons and the community from insufficient provision for their care, training and control, to report as to the amendments in the law or other measures which should be adopted in the matter, due regard being had to the expense involved in any such proposals and to the best means of securing economy therein ; and also to enquire into the constitution, jurisdiction, and working of the Commission in Lunacy and of other Lunacy Authorities in England and Wales, and into the expediency of amending the same or adopting some other system of supervising the care of lunatics and mental defectives ; and to report as to any amendments in the law which should, in their opinion, be adopted.

And for the better effecting of this Our Commission, We do by these presents give and grant unto you, or any three or more of you, full power to call before you such persons as you shall judge likely to afford you any information upon the subject of this Our Commission ; and also to call for, have access to, and examine all such books, documents, registers and records as may afford you the fullest information on the subject, and to inquire of and concerning the premises by all other lawful ways and means whatsoever.

And We do by these presents authorize and empower you, or any of you, to visit and personally inspect such places as you may deem it expedient so to inspect for the more effectual carrying out of the purposes aforesaid.

And We do by these presents will and ordain that this Our Commission shall continue in full force and virtue, and that you Our said Commissioners, or any three or more of you, may from time to time proceed in the execution thereof, and of every matter and thing therein contained, although the same be not continued from time to time by adjournment.

And We do further ordain that you, or any three or more of you, have liberty to report your proceedings under this Our Commission from time to time if you shall judge it expedient so to do.

And Our further will and pleasure is that you do, with as little delay as possible, report to Us under your hands and seals, or under the hands and seals of any three or more of you, your opinion upon the matters herein submitted for your consideration.

And for the purpose of aiding you in your enquiries We hereby appoint Our trusty and well-beloved Hartley Brinkley Newton Mothersole, Esquire, Barrister-at-Law, to be Secretary to this our Commission.

Given at Our Court at *St. James's*, the second day of *November*, one thousand nine hundred and six, in the sixth year of Our Reign.

By His Majesty's Command,

H. J. Gladstone.

REPORT.

To the King's most Excellent Majesty.

MAY IT PLEASE YOUR MAJESTY,

We, the undersigned Commissioners, appointed

> "to consider the existing methods of dealing with idiots and epileptics, "and with imbecile, feeble-minded or defective persons not certified "under the Lunacy Laws; and in view of the hardship or danger "resulting to such persons and the community from insufficient "provision for their care, training and control, to report as to the "amendments in the law or other measures which should be adopted "in the matter, due regard being had to the expense involved in "any such proposals and to the best means of securing economy therein";

and also

> "to enquire into the constitution, jurisdiction and working of the "Commission in Lunacy and of other Lunacy Authorities in England "and Wales, and into the expediency of amending the same or adopting "some other system of supervising the care of lunatics and mental "defectives; and to report as to any amendments in the law which "should, in our opinion, be adopted,"

have the honour to submit to your Majesty our Report.

Terms of the original reference.

1. The original Royal Warrant under which we were appointed, and which was dated September 9th, 1904, instructed us

> "to consider the existing methods of dealing with idiots and epileptics, "and with imbecile, feeble-minded or defective persons not certified "under the Lunacy Laws; and in view of the hardship or danger "resulting to such persons and the community from insufficient provision "for their care, training and control, to report as to the amendments "in the law or other measures which should be adopted in the matter, "due regard being had to the expense involved in any such proposals "and to the best means of securing economy therein."

According to our interpretation of this reference it became our duty to consider the existing methods of dealing with the following classes of persons, viz.:—

(i.) Idiots, whether certified or uncertified under the Lunacy Acts or the Idiots Act.

(ii.) Epileptics, whether certified or uncertified under the Lunacy Acts or the Idiots Act.

(iii.) Imbecile, feeble-minded or defective persons not certified under the Lunacy Acts.

Terms of the extended reference.

2. Our original reference was extended by Royal Warrant, dated November 2nd, 1906. It authorised us

> "to enquire into the constitution, jurisdiction and working of the "Commission in Lunacy and of other Lunacy Authorities in England "and Wales, and into the expediency of amending the same or "adopting some other system of supervising the care of lunatics and "mental defectives; and to report as to any amendments in the law which "should, in our opinion, be adopted."

According to our interpretation of the new reference, it became our duty to enquire into the constitution, jurisdiction and working of the Central Lunacy Authorities in England and Wales, viz. :—

(i.) The Lunacy Commission.

(ii.) The Judge and Masters in Lunacy, and

(iii.) The Lord Chancellor's Visitors in Lunacy.

Evidence heard by the Commission.

3. We commenced hearing evidence on November 14th, 1904, and our sittings have been open both to the Press and the public.

We have had evidence from representatives of all classes of persons who could give information on the subject of our enquiry, and have examined 248 witnesses. The taking of evidence and its consideration occupied 68 days, in addition to the time expended in visiting Institutions and in preparing the Report.

Our original reference covered the United Kingdom of Great Britain and Ireland. Under it, we heard 162 witnesses from England and Wales, twenty-seven witnesses from Scotland, and twelve witnesses from Ireland.

Some Scottish and Irish witnesses were heard by the Commission in London, and others at special sittings in Edinburgh and Dublin respectively.

Our extended reference only related to England and Wales, and on this we heard forty-seven witnesses.

Evidence given before previous Royal Commissions and Committees, etc., considered.

4. We have considered the evidence given before previous Royal Commissions and Committees touching the subject of our reference as a whole, and the recommendations made by them, and we have also obtained, through the Foreign Office and Colonial Office, full particulars of the manner in which foreign countries and the colonies are dealing with the questions submitted to us in our original reference.

Personal investigations by the Commissioners. Vol. VII.

5. Five of the members of the Commission visited the United States of America in October, 1905, and their Report is issued in a separate volume.

In addition, various members of the Commission have, from time to time, visited numerous institutions in which provision is made for the classes of persons named in our reference, in England and Wales, Scotland and Ireland and on the Continent.

Appointment of Honorary Assistant Commissioners for Ireland.

6. In connection with our investigations in Ireland, the Secretary of State for the Home Department, at the request of our Chairman, and with the assent of the Lords' Commissioners of His Majesty's Treasury, on July 17th, 1906, appointed Sir George Plunkett O'Farrell, M.D., Inspector of Lunatics in Ireland, and Mr. Joseph Mooney, J.P., to be Honorary Assistant Commissioners.

Appointment of Medical Investigators.

7. Almost at the outset of our enquiry, we found that there were no available statistics from which any trustworthy estimate could be made as to the number of persons who might be said to fall within one or other of the categories named in our reference. We decided, therefore, that an expert investigation of the question was indispensable, and having obtained the authority of the Treasury for the expenditure, which was necessarily considerable, we appointed medical investigators to make a thorough inquiry in regard to the number of mentally defective persons (including "epileptics") in sixteen separate typical districts, both urban and rural, in England and Wales, Scotland and Ireland, in the hope that from the particulars thus ascertained we might be able to form at least a rough estimate of the whole number, and of the provision that it would be necessary to make for their proper treatment.

INTRODUCTION.

Scope of the introduction.

8. We have "to consider the existing methods of dealing with idiots and epileptics and with imbecile, feeble-minded or defective persons not certified under the Lunacy laws," and we have to enquire into the expediency of amending "the constitution, jurisdiction and working of the Commission in Lunacy and of other Lunacy authorities in England and Wales, or adopting some other system of supervising the care of lunatics and mental defectives." In the course of investigating the problem which these words define, we have received evidence and suggestions from many quarters, and it is now our duty to endeavour to formulate what we hope may prove to be a consistent and practical scheme for solving it.

In this introduction, we propose to discuss shortly one or two preliminary questions, and to state, in outline, the plan of our Report and the general conclusions at which we have arrived.

The gravity of the present state of the mentally defective.

9. Of the gravity of the present state of things, there is no doubt. The mass of facts that we have collected, the statements of our witnesses, and our own personal visits and investigations compel the conclusion that there are numbers of mentally defective persons whose training is neglected, over whom no sufficient control is exercised, and whose wayward and irresponsible lives are productive of crime and misery, of much injury and mischief to themselves and to others, and of much continuous expenditure wasteful to the community and to individual families.

We find a local and "permissive" system of public education which is available, here and there, for a limited section of mentally defective children, and which, even if it be useful during the years of training, is supplemented by no subsequent supervision and control, and is in consequence often misdirected and unserviceable. We find large numbers of persons who are committed to prisons for repeated offences, which, being the manifestations of a permanent defect of mind, there is no hope of repressing, much less of stopping, by short punitive sentences. We find lunatic asylums crowded with patients who do not require the careful hospital treatment that well-equipped asylums now afford, and who might be treated in many other ways more economically, and as efficiently. We find, also, at large in the population many mentally defective persons, adults, young persons, and children, who are, some in one way, some in another, incapable of self-control, and who are therefore exposed to constant moral danger themselves, and become the source of lasting injury to the community.

The reports of the Medical Investigators.

10. This point may be illustrated by a reference to the reports of the Medical Investigators, whom we appointed to investigate some typical districts and to ascertain the extent and nature of the mental defect prevailing in them. They were instructed to examine certain groups of persons :—

Group A (Children in Public Elementary Schools).
Group B (Children and Adults in Poor Law Institutions).
Group C (Children and Adults in Receipt of Outdoor Relief).
Group D (Persons known to Sanitary Authorities).
Group E (Persons relieved by Medical Charities).
Group F (Persons known to General Practitioners).
Group G (Children and Adults in various Charitable Institutions and Common Lodging Houses, Training Homes, and Reformatories and Industrial Schools).
Group H (Persons to be heard of from other sources).
Group I (Known to the Police).
Group J (Idiots of the District in Idiot Asylums).
Group K (Inmates of Prisons).
Group L (Inmates of Inebriate Homes).

The reports of the Medical Investigators—*contd.*

Thus, in these districts, they made a census of various classes of mental defect, uncertified insane persons, idiots, imbeciles and "other feeble-minded," "defective" children and epileptics, in connection with the different institutions and authorities which ordinarily deal with them, institutions of the Poor Law schools, prisons, asylums and homes; and they noted also a large number who were living with their families or independently, under a great variety of conditions, altogether apart from the institutional establishments of the country.

We will take four of the reports of the Investigators, namely, those which relate to the crowded urban districts of Manchester, Chorlton and Prestwich, and to the less populous and chiefly rural unions selected for investigation in Somersetshire, Wiltshire and Nottingham, and we will refer especially to Group H., "other sources." In large towns there are usually many public and private institutions, and to these the mentally defective gravitate. In the country, apart from the workhouses and the county asylums, there are few institutions, and, relatively, a large number of mentally defective persons are to be found in the general population. On the other hand, in a town, there is such a constant movement of the population that those who at one time are known and cared for as mentally defective may quickly pass unrecognised to some other city or quarter.

Manchester, Chorlton and Prestwich, Vol. VI., p. 163.

11. Of a series of 500 cases of mentally defective children noted at Manchester some seven or eight years ago, Dr. Melland reports that the great majority have now been completely lost sight of. Of the rest, most have been found to be of the slighter degrees of defect, able to earn their living at home and fairly well looked after and controlled. "I feel quite sure that there are a large number of such slight cases absolutely undiscoverable so long as they are fairly effectively looked after by responsible parents and guardians." Hence, he concludes, that the number of which he makes a return in this class, under the heading "other sources," viz., 232, "falls far short of the total number which are actually present in the population."

Vol. VI., p. 6. (7).

In the Manchester district this class—"other sources"—contains mentally defective persons of every kind except senile dements. One section of it, the feeble-minded, may be taken as illustrative. The feeble-minded, according to the definition submitted to us by the Royal College of Physicians, are "persons who are capable of earning a living under favourable circumstances, but are incapable from mental defect existing from birth or from an early age (*a*) of competing on equal terms with their normal fellows; or (*b*) of managing themselves and their affairs with ordinary prudence." Of these, there were found, in this group, in the Manchester district 145; and of them, "twenty-four are in urgent need of provision. A further twenty-six should be cared for, though there is no great urgency. Of the remainder, thirty-six are working more or less regularly, and able to earn something towards their own support, and have more or less satisfactory home surroundings. The rest, fifty-nine in number, are not working, but are sufficiently well looked after at the moment, though one feels that at any time changes in their environment may make further provision for them urgently necessary. Some of them are able to give a little assistance in housework, and others of them are mothers of families, which they have reared with more or less success, mainly less. Many of them are made the pet of the family, being humoured and spoilt in every way by the other members."

Vol. VI., p. 164 & 165.

Somersetshire Unions, Vol. VI., p. 227.

12. In the Somersetshire Unions Dr. Tredgold found, from "other sources," 273 persons of all classes of defect, except certified lunatics and senile dements, among the general population.

One or two of these classes may be noted. "Out of the twelve idiots," he writes, "four are the children of fairly well-to-do parents, able to provide them with the necessary attention, and who would be very reluctant to part with them. In the remaining eight cases, I do not consider the present conditions to be at all satisfactory: several of these parents told me they would be only too thankful to get their charge into a suitable institution, could they do so; but others absolutely refused to part with them." As characteristic of some cases of this class, three instances are cited, of which the following is one :—

Vol. VI., p. 228.

"An idiot boy, sixteen years old, who is a repulsive object, subject to frequent fits, dressed in a girl's coarse petticoat. He is very destructive, and will smash anything he can lay hands on, and is generally tied up to the leg of the table to keep him out of mischief. The father is a labourer; the small cottage in which they live is filthy, in an inconceivable muddle, and contains eight other smaller children. In this case, the guardians were willing to take the child into the workhouse, but the parents flatly refused."

An analysis of this "feeble-minded" section—144 cases—of which information was obtained "from other sources," showed that out of 144, thirty-three males and five females were at present satisfactorily provided for. Of the rest this is the account:— Somersetshire Unions—*contd.*

"Persons in need of Provision:

"(a) *On Account of Personal Habits or Propensities.*—The total number of these is fifty-four (twenty-four males, thirty females). In fourteen, the feeble-mindedness is complicated by epilepsy. Three have been in asylums with attacks of insanity, whilst several others are so unstable, as well as defective, that insanity may almost certainly be looked for. Three have been imprisoned, and several others show definite criminal tendencies, which will inevitably bring them within the arm of the law before long. In this class there are also several loafers, capable of useful work under firm supervision; six married women with families (one of eight children); and seventeen feeble-minded women who have given birth to illegitimate children.

"(b) *On Account of Unsatisfactory Nature of Present Environment.*—The total number of these is fifty-two (twenty-seven males, twenty-five females). Nine of these have been inmates of the workhouse on several previous occasions; they belong to that class who manage in fair weather to obtain a living by begging, hawking, or odd jobs, but are driven to the house by stress of weather. Under proper care, they would be able to earn the greater portion of their keep. Two of the cases in this group are boarded-out under conditions which are not at all satisfactory; the majority of the others are at present leading an idle, listless existence, partly supported by friends, and partly by would-be philanthropists. They are quite capable of useful work under proper conditions."

13. Again, under Group H., "other sources," in Nottinghamshire, Dr. Gill found 267 cases, or practically one-third of his total. In it were persons suffering from defect of all kinds, excepting, as before, "certified lunatics." Of the 105 who were feeble-minded, he returns twenty-eight as requiring more suitable supervision, thirty-nine as efficiently looked after, but who would be better able to earn a living, or part of a living, if they worked under better regulated conditions; while the remainder have independent means, or are working with relatives who look after them carefully. Of thirty-five imbeciles, whom he found in this group, eleven are not under proper control. Nottinghamshire Unions. Vol. VI., p. 281.

"One of these, a girl of eight, an uneducable imbecile, calls for mention. On account of her filthy habits she is quite unfit for school and she is unmanageable at home. Her conduct has constituted a public scandal for the last two years, into the details of which it is impossible to enter; but, until lately, no attempt has been made to have her put under proper control."

14. In dealing with the different classes of the mentally defective in the general population in the selected Wiltshire unions, Dr. Pearse, writing of the imbeciles amongst them, says, though of a higher grade than the idiots, they are more capable of an independent existence, and, being often violent and excitable, more capable of mischief. The majority do no work, but wander aimlessly about the country-side. A few work in farms at a small wage, but they are quite incapable of anything beyond the simplest work, and that only under supervision. Of the male cases (thirty-five), only seven do any work which assists towards their livelihood. "Five of them are in receipt of relief; the remainder, the majority of whom are in poor circumstances, are dependent on their relatives, and when they can no longer maintain them, will become a burden on the public." "None of the female imbeciles (fifty-two) do any remunerative work: fourteen are in receipt of relief, some of the others are capable of doing a little housework, but cannot be relied upon for the simplest task. Three have given birth to children." Wiltshire Unions. Vol. VI., p. 262.

"Though there is no possibility of developing these imbeciles into satisfactory members of the community, their condition could be ameliorated and the danger to the public lessened were there some possibility of training them in discipline and in simple occupations. Their friends have often told me that they have endeavoured to train those under their care in manual work of various kinds, but have found it impossible. Such training cannot be done at home, but were there provision for treatment in an institution, though the low grade types would probably require permanent care, those of a higher type might have their faculties sufficiently developed to enable them to do simple work, to be less of a burden to the community and less a source of anxiety."

Wiltshire Unions—*contd.* Vol. VI., p. 262.

"Further, as there are so many of these cases under no kind of supervision, as a present measure all imbeciles should in my opinion be under inspection, and further methods should be devised of dealing with them in special wards of the workhouse or elsewhere, if occasion should demand, until some more satisfactory provision can be made."

Nottinghamshire. Vol. VI., p. 284.

15. Of this feeble-minded class in Nottinghamshire, Dr. Gill gives a similar account: "When one comes to the feeble-minded, what I have said gathers still greater force. One hundred and twenty of them are at present practically non-wage-earners, or what they earn comes so irregularly that they are practically earning nothing, but are dependent on the charity of their friends or the Lady Bountiful of the parish. They are the last to be taken on when work gets plentiful, and the first to be dismissed when it becomes slack. They are in a constant state of hand-to-mouth existence. I have talked it over with very many during the progress of my enquiry, and all agree that something in the way of organised work of a simple nature with intelligent and sympathetic oversight ought to be provided for them. Such a colony could probably be made largely, if not entirely, self-supporting."

The necessities of the case.

16. These extracts from the reports of the Medical Investigators are confirmed by much other evidence from both towns and rural districts. They indicate, we may repeat, evils of extreme gravity which require the speediest attention. They refer, as has been said, chiefly to feeble-minded persons connected with no institutions and living in the local conditions and surroundings in which they have been brought up. Many of them no doubt remain with their families and are kindly treated. But very many are untrained and uncared for. Leading irregular and purposeless lives, they become entirely undisciplined and fall into vice and crime. And, except so far as the special classes of the local education authorities may have, in a few places, met the need in some degree, there is no public organisation to train them according to their ability, and to control and supervise them, especially in the early years of life, when most can be done to aid them effectually.

This evidence suggests for our consideration as a main issue, how far it is possible to create a system by which these mentally defective persons could at an early age be brought into touch with some friendly authority, trained, and, as far as need be, supervised during their lives, in co-operation with their relations, when that is to their advantage, or, when it is desirable, detained and treated in some measure as the wards of the State. The evidence also suggests, that, as so many authorities are brought into contact with these persons,—the Poor Law, prisons, schools and the like,—in some way a settled plan of action should be established between the various agencies, so that some one supervising authority should see that they did not pass from one authority or institution to another, helped or detained a little at each, but permanently cared for by none. The reports of the medical investigators, indeed, raise in a few words some of the principal questions which we have to determine.

The number of mentally defective persons in England and Wales. Vol. VI., p. 52

17. With regard to the number of mentally defective persons, we may say that, if the figures of the census which we have made in the districts which have been investigated are applicable to England and Wales generally, there may be estimated to be in the whole population (32,527,843) 149,628 mentally defective persons or ·46 per cent., apart from certified lunatics. It may be estimated that of this total 66,509 or 44·45 per cent. require provision, that is, are estimated to be "at the present time urgently in need of provision, either: (1) in their own interest; or (2) for the public safety. It is recognised that there may be many others for whom the present accommodation is not ideal; these are not here included, but only such cases as are, in the opinion of the Investigator, improperly, unsuitably, or unkindly cared for, or who by reason of particular habits and characteristics are a source of danger to the community in which they live."

The total number of mentally defective persons, including certified lunatics, may be estimated to be 271,607 or ·83 per cent. of the population.

18. The words "mentally defective" are used in this Report to represent the whole group of cases that come within the scope of our investigation, whether at the present time they can or cannot be certified under the Lunacy and Idiots Acts. This group, "the mentally defective," divides itself into two classes. It consists, firstly, of those who from disorder of the mind, or through mental infirmity arising from age or from the decay of their faculties, have lost the power of managing themselves or their affairs. Secondly, it consists of those in whom the brain is in some degree undeveloped, and will remain undeveloped throughout life. Definition of "mentally defective." Recommendations III. and IV.

The former class consists of two sections. In the first of these are included, those who from disorder of the mind have lost the power of managing themselves or their affairs. To these, the name "lunatic" has hitherto been given by law and popular usage. Adopting a recognised alternative, we would substitute for that word the term "person of unsound mind." In the second of these sections come, those who through mental infirmity arising from age or from the decay of their faculties have lost the power of managing themselves or their affairs. To them, we would apply the term "mentally infirm." This is a term which is recognised in law, and, as both mental infirmity arising from age and that arising from the decay of faculties are included in it, it is more appropriate than the term "senile dement," which is very generally applied to this section. This whole class may be said to consist of persons who have at some time been normal in mind, but have become abnormal.

To the latter class, those in whom the brain is in some degree undeveloped and will remain undeveloped throughout life, such terms as idiot, imbecile, feeble-minded, moral imbecile have been generally and somewhat indiscriminately applied. These terms we have adopted, but we have endeavoured to give to them specific meanings, in order to facilitate the introduction of better and more discriminating methods of help and control in regard to those whom the terms represent.

Principles Adopted in Dealing with the Problem of the Mentally Defective.

19. Next, we would refer to the principles on which is based our suggested solution of the problem which has been submitted to us; and we would summarise the conclusions which we have adopted in the course of our Report. Principles adopted in dealing with the problem of the mentally defective.

(1) Our first principle is that persons who cannot take a part in the struggle of life owing to mental defect, whether they are described as lunatics or persons of unsound mind, idiots, imbeciles, feeble-minded or otherwise, should be afforded by the State such special protection as may be suited to their needs. Heretofore, lunatics, idiots and imbeciles have received the protection of the law. So also have persons who have property which is in the hands of the Court of Chancery, but who are not "found lunatic by inquisition," and persons who "through mental infirmity arising from disease or age are incapable of managing their affairs" or are "proved to be of unsound mind and incapable of managing their affairs." We propose that this principle of special protection should be extended to all mentally defective persons. This extension is new to English law. Chap. XXXVII.

(2) Our next principle is that the mental condition of these persons, and neither their poverty nor their crime, is the real ground of their claim for help from the State. It follows that their aid and supervision should be undertaken by some powerful local authority who can ensure that they will receive it from other quarters or, failing this, will provide it themselves. Hitherto a large number of adults, young persons, and children who cannot be certified under the Lunacy and Idiots Acts have been supported by public authorities as paupers, on the ground of destitution, or, as prisoners, on account of their crime, but they have not been dealt with primarily on the ground of their mental defect.

(3) Our third principle is that, if the mentally defective are to be properly considered and protected as such, it is necessary to ascertain who they are

Principles Adopted in Dealing with the Problem of the Mentally Defective—*continued.*

Principles adopted in dealing with the problem of the Mentally Defective—*contd.*

and where they are, and to bring them into relation with the local authority. This should, we think, be done chiefly through the agency of the education authority and other public or quasi-public authorities without any undue invasion of the privacy of the family. This suggestion for ascertaining who are mentally defective is also new.

(4) Next we adopt the principle that the protection of the mentally defective person, whatever form it takes, should be continued so long as it is necessary for his good. This we consider desirable, not only in his interest, but also in the interest of the community. It follows that the State should have authority to segregate and to detain mentally defective persons under proper conditions and limitations, and on their behalf to compel the payment of contributions from relations who are able to pay for their support; or should itself provide such care and accommodation as may be necessary, either directly or through the local authority. This, subject to many variations and adjustments, is an extension to the whole class of the mentally defective of advantages now given to lunatics and idiots only.

(5) Further, in order to supervise local administration of this nature a central authority is indispensable. This will not only tend to produce efficiency, economy, and uniformity, but it will also provide safeguards for the proper care of the mentally defective person. Thus, the central authority, which we would propose to call the Board of Control, becomes ultimately the general guardian of his person and is responsible for ensuring that his liberty is not unnecessarily curtailed by the local authority. The adoption of this principle also, in the case of the mentally defective generally, represents an extension to a new class of advantages now granted only to lunatics and idiots.

(6) Our next principle is that in regard to the protection of property all mentally defective persons should have like privileges. The protection of property now afforded to lunatics, idiots and mentally infirm persons should therefore, we think, be extended to all mentally defective persons, and further, as this duty of protection in the case of these persons is akin to the duty of protection in the affairs of infants and wards, the same judicial authority should in our judgment be in charge of both the one and the other. We are of opinion, therefore, that all this administration should be in the hands of the Chancery Division of the High Court instead of partly in their hands and partly, in the case of lunatics and mentally infirm persons, in the hands of the Judge and Masters in Lunacy. This is a reversion to a practice in vogue before the creation of the Judge and Masters in Lunacy. The extension of these privileges to all mentally defective persons is new.

(7) Lastly, it is in our opinion essential that there should be the closest co-operation between judicial and administrative authorities, in this case the Chancery Division of the High Court and the central authority. There would practically be a division of labour between the Court and the central authority, the Board of Control. In the case of a person who has property and is alleged to be suffering from mental defect, the inquiry in Jury cases, or where an issue was directed in the High Court, would be by the King's Bench Division, but in other cases by a legal Commissioner of the Board of Control.

The manner in which we have applied these principles in the course of our Report is indicated in the following summary of its arguments and conclusions.

Summary of the Report Showing briefly the Proposed Application of the above Principles.

Summary of the Report showing briefly the proposed application of the above principles.

20. In making this Report we have considered the position and needs of the mentally defective successively in relation to the several branches of administration with which they are chiefly brought into contact; and we have proceeded step by step in formulating the recommendations which we have made, as we have sifted and summarised the evidence which we have received in regard to each branch.

Summary of the Report Showing briefly the Proposed Application of the above Principles—*continued.*

21. We have taken first the administration of Poor Law relief in town and country, apart from the Metropolis, and have come to the conclusion that intervention in the case of mentally defective persons should be based as we have said, on the principle that such persons are suffering from mental incapacity rather than on the principle that they require aid as poor and destitute, and we have concluded that the provision made on their behalf should be organised on that understanding. And as we have recognised the fact that mentally defective persons are found who are being dealt with by several central authorities and at many administrative centres, we have argued that for their sufficient treatment and supervision there should be one central authority, a "Board of Control," for the general protection and supervision of all mentally defective persons and for the regulation of the provision made for their accommodation, and maintenance, care, treatment, education, training and control. We have further proposed that the local authority which should co-operate with this central authority should be a Statutory Committee of the Council of the County or County Borough for the Care of the Mentally Defective that should take over the duties of the Visiting Committee of Asylums of the Council. Part of the duties of the Education Committee of the Council would also be transferred. Subject to the approval of the Board of Control this authority would have power to contract for the accommodation of mentally defective persons with any Poor Law or other public authority, public or voluntary agency or private person.

The Poor Law and the central and local authority. Part I. below.. Recommendations I. and V. Recommendations XXVIII., XLII., LXXIV.

22. We have next dealt with the special conditions of the provision which has been made for the care and maintenance of the mentally defective in London, and have pointed out the necessity of establishing a united and self-consistent administration; and we have recommended that a Statutory Committee of the London County Council for the care of the mentally defective should be the Committee of administration for the Metropolis, and that the functions of the Metropolitan Asylums Board, so far as they refer to the mentally defective, should be transferred to this Committee.

The Metropolis. Part II. below, and Recommendation XCVI.

23. We have then discussed the education of the mentally defective in its chief bearings; and we have advocated a system of record and limited notification. We have also recommended that for the education and training of all mentally defective children the Board of Control, and the local authorities, represented by the Committees for the care of the mentally defective, should be responsible, subject to ample powers being given to these Committees to contract with the education authority for the supply of special schools and classes, or to take other suitable measures for their education. We have urged that the childhood and schooling of mentally defective children cannot rightly be treated apart from their after life, and that no age can be fixed in their case as separating school time from supervision and after-care. So far as it may be necessary, therefore, the supervision exercised over them by or on behalf of the local authority would be continuous; and both in the education and control of children it is proposed that many methods besides special classes or special homes should be adopted, such, for instance, as "colonies," family supervision and friendly guardianship and wardship till the age of twenty-one.

Education. Part III. below, and Recommendations I., LXXIV., LXXIX., LXXXI.

24. Passing to other administrative centres we have examined the state of the mentally defective who are in prisons, casual wards and common lodging houses, and we have considered much detailed evidence in regard to juvenile offenders and children in remand homes. We have shown how widespread and unanimous is the opinion that in many cases separation or detention is indispensable, if offences of certain kinds are not to be perpetually perpetrated by weak minded offenders, and perpetually punished without effect. We have recommended that feeble-minded juvenile offenders should be most carefully examined by medical officers and dealt with in various ways; and that the procedure for the commitment of feeble-minded prisoners, their treatment, and the arrangements for their discharge should be entirely reformed.

Prisons, casual wards, juvenile offenders, etc. Part IV. below, and Recommendations LXXXVII.–LXXXIX.

25. We have shown to how large an extent habitual inebriates are mentally defective, and we have recommended that the care and control of mentally defective inebriates should be placed in the hands of the Board of Control and of the local authorities which would hereafter be responsible for the care of mentally defective persons generally.

Habitual inebriates Part IV. below, and Recommendation XCI.

Summary of the Report Showing briefly the Proposed Application of the Principles Adopted—*continued.*

Mental defect and criminal responsibility. Part IV. below.

26. We have discussed the question of criminal responsibility in relation to mental defect and the methods of judicial procedure which are now in force in regard to lunatics, habitual drunkards and inebriates; and we have argued that in the case of persons who are charged with offences and are alleged to be mentally defective the principle should be adopted of keeping the question of the committal of the alleged offence separate from questions of the alleged mental defect, the relative irresponsibility of the offender and his appropriate treatment when charged with crime or convicted.,

Idiot asylums and voluntary homes for the feeble-minded. Part V. below. Recommendation LII.

27. The asylums for idiots and the voluntary homes for the mentally defective are next described by us, and we recommend that the procedure under the Idiots Act should be extended so that not only idiots who are under twenty-one years of age and whose parents or guardians desire to obtain for them admission to an idiot asylum, may be admitted on a single medical certificate, but also that feeble-minded persons, imbeciles, moral imbeciles, and such inebriates, epileptics, and blind or deaf and dumb persons as are mentally defective and less than twenty-one years of age may be admitted to suitable institutions in the same way. We have recommended also that the local authority should have power, subject to the approval of the Board of Control, "to contract with any Poor Law or other public authority, public or voluntary agency, or private person, under such conditions as they may deem advisable, for the care, education, training or maintenance of mentally defective persons, or of epileptics not mentally defective."

Recommendation XLII.

Causation of mental defect, definition and number of mentally defective persons. Part VI. below.

28. Before considering in detail the formation of the proposed central authority, we have discussed shortly the causation of mental defect and the number and the definition of the class of persons for whom provision should be made or over whom supervision in some form is required. Under the general title of mentally defective persons, besides those who are already recognised as such legally, we have placed the other groups of persons who have not hitherto been recognised as such in law or have only been recognised partially. These groups include imbeciles, feeble-minded persons, moral imbeciles, and such inebriates, epileptics, deaf and dumb, and blind persons as are also mentally defective. For practical and administrative purposes we have defined each of these groups.

The Lunacy Commission. Part VII. below. Recommendation XLIV.

29. We have next considered the constitution and the work of the Lunacy Commission in England and Wales, and have compared it with the General Board of Lunacy in Scotland; and we have discussed the system now in force in England for the examination of plans, contracts and estimates for the construction of asylums, and we have made recommendations for complete financial control. We have shown that at the present time the work of the Lunacy Commission is altogether beyond its numerical strength; and we have made suggestions for modifications in the present system of visitation and discharge.

Various ways of providing for the mentally defective: intermediate hospitals, observation and reception wards, boarding-out, etc. Part VII. below. Recommendations XI.-XIII., XXII., LX.-LXIII.

30. To increase the resources at the disposal of local authorities for dealing with cases of mental defect and for reducing the pressure upon asylums we have recommended the erection of intermediate hospitals, the institution of large farm colonies as in America, the general establishment of observation and reception wards, and the use and notification of private homes for the treatment of "unconfirmed" cases. We have proposed also the adoption of family care and guardianship, either on the plan of the family colony in force on the continent or on the plan of "boarding-out" in force in Scotland, organised in connection with the local authorities for the care of the mentally defective and under the inspection of the central authority. In cases in which persons ordered to be detained have to be removed to some temporary place of reception, we have recommended that reception houses or reception wards be used instead of the workhouses.

Recommendations LXIV. LXVI.

Recommendations LXXI. LXXV.

Summary of the Report Showing briefly the Proposed Application of the Principles Adopted.—*continued.*

31. With a view to a simplification of the system of certification and the promotion of uniformity, we have recommended various changes. At the request of the relatives or where no relatives are forthcoming, for the purposes of making an urgency order or of obtaining a reception order on petition, we would allow the Committee to authorise their medical officer or one of their medical officers to act on their behalf. We provide also for the appointment of certifying medical practitioners who, being specially acquainted with this branch of work, would be likely to act on uniform lines. Certification, etc. Recommendations LXVIII. to LXXI. XXXVI.

32. In order to ensure that there be continuous control in many cases in which, owing to the lack of any proper care or supervision, such a control could not otherwise be provided in a satisfactory manner, we recommend the introduction of a system of wardship, on the lines of the Poor Law Act of 1899, so that the Committees for the Care of the Mentally Defective may by resolution vest in themselves the rights and powers of the parent until the mentally defective young person reaches the age of twenty-one; and, after the age of twenty-one, we recommend further proposals for continuous care where it is necessary. Wardship. Part VII. below, and Recommendations XLIX.–LIV.

33. The privileges in regard to the protection and management of property which were allowed to lunatics and to mentally infirm persons under the Lunacy Act of 1890 should, we recommend, be extended to all classes of mentally defective persons. Guardianship of property. Recommendation X.

34. For the central administrative control of the work which we have now passed in review we have recommended that there be a Board of Control. This Board would be formed partly by a re-organisation, partly by an enlargement of the present Lunacy Commission. It would deal with the whole class of mental defectives and could not, therefore, be properly designated a Lunacy Commission. It would consist of a certain proportion of qualified medical men who had an expert knowledge of the various classes of mental defect, and a certain proportion of legal members; for under the proposed scheme, in cases in which inquisition without a jury has to be made, a legal member of the Commission, assisted, if necessary, by a medical member of the Commission as assessor would undertake it. Also, appointed for a term of years, there would be honorary Commissioners specially qualified to assist the Board; and there would be a paid Chairman. England and Wales would be divided into districts, and there would be at least eight Assistant District Commissioners. The Board of Control. Part VII. below, and Recommendations V.–IX. Recommendation XIX. Recommendations XV.–XVI.

35. The offices of the Judge and Masters in Lunacy should, in our opinion, be merged in the Chancery Division of the High Court, and the duties of the Lord Chancellor's visitors would be included in the duties of the Commissioners of the Board of Control. By these several changes there would, we believe, be a very advantageous concentration of responsibility combined with a control that would extend over the whole administration for the care of the mentally defective. The Judge and Masters in Lunacy and chancery visitors. Part VII. below, and Recommendations VII., XXIV., XXV

36. All these changes and proposals we have also considered from the point of view of economical management. We have submitted a rough estimate of the expenditure that may be incurred and we have suggested the apportionment of State aid by block grants on the lines proposed to the Royal Commission on Local Taxation by Lord Balfour of Burleigh, Sir Edward Hamilton and Sir George Murray; or, as an alternative, by grants-in-aid to the extent of half the cost of maintenance and management to be made to local authorities on revised conditions. We have proposed also that building grants should be made to local authorities, as suggested by the Royal Commission on Local Taxation in the case of lunatics. Finance and the apportionment of Grants. Part VIII. below and Recommendation XLI.

37. Finally, after referring not only to the limited and experimental efforts which have been made in our country, but also to the information collected by our Commissioners who visited the United States of America, we have dealt in Epileptics. Parts IX. and X. below.

SUMMARY OF THE REPORT SHOWING BRIEFLY THE PROPOSED APPLICATION OF THE PRINCIPLES ADOPTED.—*continued.*

Epileptics—*contd.*

Recommendation XC.

some detail with the needs of epileptics not mentally defective, and have recommended that the Board of Control be empowered to register, inspect and report on institutions or houses established for their care, and to regulate any institutions or houses in which accommodation may be provided partly for mentally defective persons and partly for epileptics not mentally defective, and that the committees for the care of the mentally defective be authorised to consider and deal with these cases, and to provide for them.

Utilisation and extension of existing agencies.

37a With regard to epileptics who are not mentally defective, we have given in Recommendation XC. a list of general recommendations relating to the mentally defective which we think should be applicable to these cases. We have also specifically referred to these cases in Preamble (1) and Recommendations XLI., XLII., LXXIII., XCII., XCIII. and XCVI.

Part XI. below.

38. Throughout, we should add, we have endeavoured to follow and to develop existing lines of administration, and to utilise and extend existing agencies, and though, no doubt, we have proposed some very large modifications and some far-reaching changes in certain directions, we have sought to revise and to extend methods of procedure already in operation rather than to initiate what is entirely new and to supplant what is relatively old. The series of recommendations in which our proposals are set out in detail conclude our Report as to England and Wales.

Scotland and Ireland. Parts XII. and XIII. below.

39. On Scotland and Ireland we have reported separately, in their case also concluding our statements with detailed recommendations.

Transitory Measures, Recommendations XXIV.—XXVII.

39a. As the suggestions for our new scheme may have to be considered in relation to the Poor Law and other matters which will involve delay, we have emphasised the importance of taking immediate steps to strengthen the present Lunacy Commission. We consider that in so far as it can be effected by the Lord Chancellor, acting under the various powers he now possesses, a reorganisation and enlargement of the present Lunacy Commission should be now made for the better administration of the Lunacy Laws. We think that the proposal in Paragraph 35 should, if possible, be carried out at once. If the Lunacy Department could be thus placed on a satisfactory footing, it would be easy, hereafter, to transform it into a Board of Control with the powers requisite for the Central Authority which we have recommended for the control of all mentally defective persons. The extended order of reference having imposed upon us the duty of investigating the functions and working of the Lunacy Commission and the Judge and Visitors in Lunacy, we are strongly of opinion that immediate reconstruction of the present system is urgently required, and that, as a preliminary step, even if it is only a temporary one, two additional Medical Commissioners should be appointed and the number of Honorary Commissioners should be filled up—the offices of the Chancery Visitors and the Lunacy Commissioners should be consolidated, and the work of the Judge in Lunacy should be performed, so far as possible, by the Judges of the Chancery Division.

PART I.

THE POOR LAW AND THE MENTALLY DEFECTIVE IN TOWN AND COUNTRY, APART FROM THE METROPOLIS.

CHAPTER I.

Forms of Poor Law Relief.

40. The Poor Law authorities deal with the greater number of "uncertified persons" who are mentally defective. Such persons are very often by reason of their infirmity in a state of destitution, and are unable to take proper care of themselves; and all uncertified persons, when through destitution they are in receipt or need of relief, in some way or other come under the jurisdiction of the Local Government Board. Also, to a limited degree, the branches of law with which the Local Government Board are concerned may have relation to some classes of uncertified persons, though they may not be in receipt of relief or in need of it.

Uncertified mentally defective persons.
Adrian, Vol. I, 5.

41. Thus, unless they are otherwise specified and dealt with, for instance, as prisoners or inebriates, all those mentally defective persons who are "not certified under the Lunacy Acts," are eligible for Poor Law relief if they are poor and destitute; and this relief may be given either in the form of indoor relief or in that of outdoor relief.

(i.) Indoor Relief and the Workhouse.

42. For indoor relief there is the "workhouse," a term which in Poor Law administration has a very wide signification. It is "construed to include any house in which the poor of any parish or union shall be lodged and maintained, or any house or building purchased, erected, hired, or used at the expense of the poor rate by any parish . . . for the reception, employment, classification or relief of any poor person therein, at the expense of such parish. The place may therefore be a building in which inmates of all sorts, whether sick, healthy, of both sexes, of all ages, may be housed, or a building for the accommodation of inmates of a special class." And, in effect, "every board of guardians in England and Wales may provide for the housing in a separate building or in separate wards attached to an existing building of any uncertified persons (of the pauper class)" "who may require indoor relief."

Definition of "workhouse."
Adrian, Vol. I., 7, 10.
Adrian, Vol. I., 15.

43. Boards of guardians have also powers under which they may form combinations for the provision of indoor relief and their powers are in this matter different in the Metropolis and in the country. Thus in the Metropolis suitable inmates from the workhouse of one union may be admitted to the workhouse of another union "where, in the opinion of the Local Government Board, the workhouse is adapted only for the reception of poor persons of a particular class or particular classes." Also in the Metropolis the guardians, with the approval of the Local Government Board, "may set apart any ward or portion of their workhouse for the reception of particular classes or descriptions of poor persons and provide separate maintenance and treatment for them therein." In London, too, the County Council are required to grant to Metropolitan Unions an amount equal to fourpence a day per head for every indoor pauper reckoned according to the average number of indoor paupers maintained during the five financial years ending 25th March, 1888; and the classes of indoor paupers are defined as "all paupers maintained in a workhouse and all paupers maintained in any district school, separate school, separate infirmary, sick asylum, hospital for infectious diseases, or institution for the deaf, dumb, blind or idiots, or in any certified school under 25 and 26 Vict., c. 43, and includes any children boarded out. . ." And, further, there is, in London, the Metropolitan Common Poor Fund to which boards of guardians pay their *quota* for certain purposes according to the rateable value of their unions, so that on the distribution of the fund to the unions, the unions which have a lower rateable value receive relatively the larger grants, and the unions which have a higher rateable value receive relatively lesser grants, or in some cases no grant from the fund at all. From this fund, subject to certain conditions, grants are made at the rate of fivepence a day, for each pauper above the age of sixteen.

Combinations for Indoor Relief in London.
Adrian, Vol. V. 16.
Adrian, Vol. I., 18.
Vol. I., p. 3.
Section 17, Metropolitan Poor Amendment Act, 1869.
Section 43, Local Government Act, 1888.
Metropolitan Common Poor Fund.
Adrian, 19, 55.

Metropolitan Asylums Board. Metropolitan Poor Act, 1867. Adrian, Vol. I., 59, 60.

44. Consistently with these exceptional financial arrangements, the Metropolis under the Metropolitan Poor Act, 1867, has a special organisation, the Metropolitan Asylums Board, which enables it to provide asylums for the reception and relief of the sick, insane, or infirm, or other class or classes of the poor, chargeable in its unions and parishes, with greater completeness than any other group of Poor Law unions in the country. For this purpose the Poor Law unions of London are combined in one district, under managers partly elective, that is, partly elected by boards of guardians, and partly nominated, that is, nominated by the Local Government Board. Subject to the control of the Local Government Board, the managers have the powers of guardians for the relief, maintenance, and management of inmates, and for the control and payment of officers of the asylums; and the word "asylum" in this reference has a wide meaning, for it may include a ship, vessel, hut, tent, or any other erection. And such an asylum is available for any class of poor. Hence, to take an example, provided they are housed, for "housing is the primary aim of all combinations," the term "asylum" might include such an institution as a labour colony for sane pauper epileptics.

Adrian, Vol. I., 63.

Adrian, Vol. I., 39, 71.

45. In the Metropolis under these statutes institutions are provided for "children, who, by reason of defect of intellect, or physical infirmity, cannot properly be trained in association with children in ordinary schools"; and there are also institutions for adult paupers who are chronic and harmless lunatics, idiots, or imbeciles, such as might be lawfully retained in a workhouse.

Distinctive features of the London system of Indoor Relief in relation to the afflicted classes.

46. Apart, then, from any details as to the nature of the special institutions available for London in connection with the Metropolitan Asylums Board—for to these matters reference will be made later on—the following points are distinctive of London, and suggestive in relation to any general organisation that may be proposed for the country at large:—

(i.) In London there is a single board, consisting of members who are partly representative of boards of guardians and partly nominated, instituted in order to provide separate establishments for the reception and relief of the sick, insane, or infirm, *or other class or classes of the poor*, who are chargeable. Thus in London, on behalf of the unions in the Metropolitan area, separate provision is, or may be, made for all the uncertified classes, included in the reference to the Commission, if they are poor and chargeable.

(ii.) The cost of the maintenance of the indoor poor, including these classes, is largely or entirely met: (1) by grants of 4d. a day from the county as a whole; and (2) by grants of 5d. a day from the Metropolitan Common Poor Fund, that is, in effect, by grants from the richer unions of London to the poorer unions. Indoor relief thus becomes in part a county charge, in part a charge equalised according to the rateable value of the unions; and it is thus only, in a minor degree, a charge imposed on the individual union.

Shadwell, 1490, Vol. I., p. 82 c. 2. Downes, Vol. I., 1787–1788.

(iii.) In London, under these special financial conditions, there is a large supply of institutional accommodation for the housing and maintenance of the chargeable poor, which supplements that of the institutions managed by the several boards of guardians themselves; and this supply is increased from time to time to meet new or greater demands.

The provision of indoor relief outside London.

47. In the country, apart from the powers of the guardians of each union to provide for the housing of destitute "uncertified persons," there are no county organisations similar to the Metropolitan Asylums Board, nor is there any similar financial method for the maintenance of inmates.

Combinations of Unions. Adrian, Vol. I., 21, 36. Section 8, Poor Law Act, 1879.

48. In the country it is possible—as set out in par. 59 below—for the workhouse of a union to be used for the reception of idiotic, imbecile and insane paupers from another union, and special provision is made by law whereby two or more unions may, with the consent of the guardians, be combined for any purpose connected with the administration of the relief of the poor, if the Local Government Board make an order to that effect. The combination may be effected on the ground that "it would tend to diminish expense," or on the ground that "it would otherwise be of public or local advantage." The management of the institution created by the combination is placed in the hands of a joint committee.

49. In 1897 a combination between the Chorlton and Manchester Boards of Guardians was approved by the Local Government Board for the establishment of an institution for "imbecile paupers, and persons who may be insane or suffering from epilepsy and might be relieved in the workhouses of Poor Law Unions." And later (1906), the Birmingham, Aston, and King's Norton Boards combined to provide a joint workhouse for:— Combinations of Unions—*cont.* *See* Part X. below. *See* Pars. 177–188 below. Adrian, Vol. I., 22. Adrian, Vol. I. 27.

(i) Epileptic persons who being chargeable to one of the combined unions have not been certified as lunatics; and (ii) Feeble-minded persons who being chargeable to one of the combined unions have not been certified as lunatics; and (*a*) who by reason of mental deficiency are incapable of receiving proper benefit from ordinary instruction, or are incapable of using ordinary means or precautions for protecting themselves from injury or improper usage or treatment, or are incapable of maintaining themselves by work; and (*b*) who are, in the opinion of a medical officer of a workhouse of any of the combined unions, suitable persons for treatment in the joint workhouse.

The Local Government Board have also issued an Order empowering the Croydon, Kingston, and Richmond Unions to combine to provide joint workhouses for these purposes, but we understand that no action has yet been taken on this Order. These are the only instances of combination brought to our knowledge. Downes, Vol. I. 1824.

50. It is obvious, therefore, that, though boards of guardians have large powers for forming combinations of unions in the country with a view to the provision of accommodation for mentally defective or epileptic persons, they have taken little advantage of these powers to establish joint institutions, and that there are in force in the country no financial arrangements, such as prevail in the Metropolis, which tend to promote the erection of institutions for special classes of uncertified persons who are chargeable to the poor rate.

(ii.) Outdoor Relief.

51. It remains for us to refer to outdoor relief. This is regulated by the Orders of the Local Government Board. All relief granted contrary to those Orders is by the Poor Law Amendment Act of 1834, made unlawful and subject to disallowance. By its Orders the Board declares "to what extent and for what period relief given to able-bodied persons or to their families . . . may be administered out of the workhouse by payments in money or with food or clothing in kind, or partly in kind and partly in money, and in what proportion, to what persons or class of persons, at what times and places, on what conditions and in what manner such outdoor relief may be afforded." Regulations as to Outdoor Relief. Adrian, Vol. I. 77, 80, 82, 83, Section 52, 4 and 5 Wm. IV. c. 76.

52. Under these powers in 1844 and 1852 two Orders were issued, one the Outdoor Relief Prohibitory Order, the other the Outdoor Relief Regulation Order. The principle on which these Orders are drafted is that indoor relief should be the rule and that outdoor relief should be the exception. Accordingly, in the former Order, relief outside the workhouse is prohibited unless in certain exceptional cases, and in the latter Order, while it is taken for granted that indoor relief is still to be the rule, a much greater latitude is allowed in regard to the exceptions. Most large towns come under the Regulation Order; the less populous unions come under the Prohibitory Order. Outdoor Relief Prohibitory Order (21st December, 1844). Outdoor Relief Regulation Order (14th December, 1852).

53. According to the rule laid down in the Prohibitory Order all able-bodied paupers must be relieved in the workhouse, but under the following amongst other conditions:— Section 1, Poor Relief Act, 1601. Adrian, 80, 82.

(i.) Where such able-bodied person shall require relief on account of . . . bodily or mental infirmity affecting the person or any of his or her family. In these cases a minute has to be made, or a medical certificate furnished by the medical officer of the union, stating the nature of the infirmity.

(ii.) Again, though, as a rule, relief may not be given from the poor rates "to any person who does not reside in some place within the union," persons "who require relief on account of . . . bodily or mental infirmity affecting such person or any of his or her family" are an exception to this rule. Such persons may receive non-resident relief. Article 3.

(iii.) Also, another exception, the guardians may pay for temporary lodging in any case of . . . mental imbecility. Article 5.

Regulations as to Outdoor Relief —*cont.*

54. Next, in the Outdoor Relief Regulation Order, there are exceptions under which outdoor relief may be given in the above three cases, as it is given under the Prohibitory Order; but, under the Regulation Order, there is also a further exception in cases of bodily or mental infirmity. An able-bodied male person (Art. 5) may not receive poor relief while he is employed for wages or other hire or remuneration, and such a person, if he is relieved out of the workhouse, has to be set to work. But this does not apply to men suffering from mental or bodily infirmity. They may receive relief outside the workhouse while they are being employed for wages or other hire or remuneration, and, though they are relieved outside the workhouse, it is not required that they should be set to work.

Outdoor Relief Regulation Order (1852). Adrian, Vol. I., 83.

55. The regulations quoted from these two Orders refer, it will be noted, in broad terms, to "mental infirmity," and "mental imbecility"; and they might receive a very wide application. They permit the guardians to give outdoor relief at their discretion to persons suffering from mental infirmity, and to persons members of whose families are so suffering, whether or not such persons be resident in the union, and whether or not they be employed and receive wages. The guardians may also pay for their temporary shelter.

(iii.) Poor Law Institutional Relief Outside the "Workhouse."

The maintenance and education of idiots in certified and uncertified schools.

56. Apart from their maintenance in an establishment of a board of guardians, such as the "workhouse," or in any wards or buildings coming under that designation, and apart also from the possibility of their receiving non-resident and other outdoor relief, the "uncertified" poor who are afflicted may also, under several statutes, be lodged or cared for by boards of guardians in institutions not managed by the guardians themselves.

Adrian, Vol. I., 84. Section 10, Poor Law (Certified Schools) Act, 1862, and other subsequent Acts.

57. Children who are idiotic may be sent to certified or to uncertified schools.

Thus the guardians may send a child, who is an orphan or deserted by his or her parents or surviving parent, or one whose parents or surviving parent consent, to a certified school supported wholly or partially by voluntary subscriptions, and may pay the expenses incurred in conveyance, maintenance, clothing and education; and the word "school" includes any institution established for the instruction of blind, deaf, dumb, lame, deformed, or idiotic persons.

Adrian, Vol. I., 86.

Also the guardians may send children who are under the age of sixteen, who are idiots or imbeciles resident in a workhouse or institution to which they have been sent from a workhouse or boarded out, to suitable schools that may not have been certified.

The maintenance of idiotic paupers in Asylums, Hospitals, &c.

58. Adults and children alike who are idiotic or imbecile may be sent to institutions established for their reception, whether maintained by a county rate or by voluntary contributions.

Section 13, Poor Law Amendment Act, 1868.

The guardians can, with the consent of the Local Government Board, send an idiot pauper to an asylum or establishment for the reception and relief of idiots maintained at the charge of the county rate or by public subscription.

Section 15, Idiots Act, 1886. Adrian, Vol. I., 90.

And under the Idiots Act, 1886, the guardians retain their power of sending pauper idiots or imbeciles to hospitals, institutions, and licensed houses registered under the Act, and receive in respect of them "such sums of money as shall from time to time be granted by Parliament towards the maintenance and care of pauper lunatics, as if the same idiots and imbeciles were pauper lunatics."

Section 17, Idiots Act, 1886.

Under the Idiots Act, the words "hospital" and "institution" mean any hospital or institution or part of a hospital or institution (not being an asylum for lunatics) wherein idiots or imbeciles are received and supported wholly or partly by voluntary contributions, or by any charitable bequest or gift, or by applying the excess of payments of some patients for or towards the support, provision, or benefit of other patients.

Workhouses used for idiots. Adrian, Vol. I., 90.

59. Again, with the consent of the Local Government Board guardians may send to the workhouses of other unions "any idiotic, imbecile or insane pauper who may lawfully be detained in a workhouse."

Section 13, Poor Law Amendment Act, 1868.

Assistance of Voluntary Associations for persons suffering from "natural infirmity."

60. Guardians, too, may make grants to voluntary associations which are dealing with persons who are suffering from any permanent or "natural infirmity" but are not themselves paupers.

This can be done with the consent of the Local Government Board, either by the guardians paying any sum of money as an annual subscription towards the support and maintenance of any public hospital or infirmary for the reception of sick, diseased, disabled or wounded persons,

tion 10, or Law t, 1879.

or of persons suffering from any permanent or natural infirmity, or by the guardians subscribing to any association or society for aiding the same, or for providing nurses or for aiding girls or boys in service, or towards any asylum or institution which appears calculated to render useful aid in the administration of the relief of the poor. And it may be added, that with the consent of the Local Government Board, the guardians may enter into an arrangement with a hospital or dispensary in the union for the treatment of pauper patients. Adrian, Vol. I., p. 88. Section 4, Poor Law Amendment Act, 1851.

61. Proprietary establishments may also be used by guardians, under a contract between the guardians of a union and the proprietor, subject to the rules, orders and regulations for the management . . . of any house . . . wherein any poor person is lodged . . . for hire or remuneration; and the Local Government Board may prohibit the reception or retention of any poor person, or class of poor persons in any such house. . . . They may remove officers, servants and assistants . . . and appoint persons temporarily or permanently to visit and inspect the house and the pauper inmates. Proprietary establishments under the Act do not include county lunatic asylums, registered hospitals, or licensed houses for lunatics. Institutions supported by public subscriptions, and maintained for purposes of charity alone, are also excluded. Use of proprietary establishments by guardians. Adrian, p. 89. and the Poor Relief Act, 1849.

(iv.) Further Powers of Guardians.

62. Two other powers of the guardians may be mentioned, one which refers to defective and epileptic children, and one which refers to children alleged to be suffering from neglect or cruelty. Adrian, Vol. I., p. 87.

63. If, owing wholly or in part to the attendance of scholars who are resident in a workhouse or in an institution to which they have been sent by the guardians of a workhouse or who are boarded out, a certified special class or school for defective or epileptic children has to be provided, enlarged, or maintained by the local education authority, the guardians may contribute towards the expenses incurred by that authority, as certified by the Board of Education. And the local education authority is not bound to receive such children in a special class or school unless the guardians are willing to contribute towards their education and maintenance. Contributions to expenses of special schools or classes. Section 9 Elementary Education (Defective and Epileptic Children) Act, 1899.

64. As to children dealt with under the Act for the Prevention of Cruelty to Children, 1904, the child may (Section 5, Subsection 4) be committed to the workhouse "as a place of safety" during the proceedings in the case. And the guardians may (Sec. 21) "pay the reasonable costs and expenses of any proceedings which they have directed to be taken under the Act in regard to the assault, illtreatment, neglect, abandonment or exposure of any child." They may also pay the cost of prosecutions for ill-treatment of servants or apprentices, or bodily injury to persons under sixteen where two justices certify that the prosecution ought in the interests of justice to be conducted by the guardians (Offences against the Person Act, 1861, 24 Vict., c. 100, Sec. 73). Prevention of Cruelty to Children. Adrian, Vol. I., p. 94.

acy Act, , 53 and ict. s. 24.

65. Lastly, the workhouse is used as a place for the reception, relief and detention of alleged lunatics, and for the detention of lunatics certified as proper persons to be allowed to remain in a workhouse and there ordered to be detained, and under an Order of December, 1841, provision has been made for facilitating the identification of children supposed to have strayed or insane persons wandering abroad. Detention of Lunatics in Workhouses. Adrian, p. 94.

66. Thus, speaking generally, there are in the hands of the Poor Law guardians, on certain conditions and subject to the consent of the Local Government Board, ample legislative powers for providing for mentally defective paupers who are not certifiable, in "workhouses," wards of workhouses, or in separate institutions. In London by combination the guardians, through the Metropolitan Asylums Board, have special accommodation at their disposal and they receive aid through the County Fund and also in poor unions through the Metropolitan Common Poor Fund. General powers of guardians as to mentally defective persons.

67. Throughout the country, also, outdoor relief is available for persons suffering from mental infirmity. And, under certain conditions the guardians are empowered to maintain idiotic or imbecile children in suitable schools (certified or not certified), and imbecile adults, in suitable institutions; and these institutions may be supported out of the rates or by voluntary contributions.

General powers of guardians as to mentally defective persons—*cont.*

68. Further, the guardians may pay for the maintenance and education of epileptic and defective children who attend special classes and schools, and they have at their disposal powers of prosecution in cases of cruelty, ill-treatment, and neglect, while the workhouse serves as a place of detention for certified lunatics including idiots, for whom the accommodation there is considered sufficient and suitable, and also as an immediate refuge for children who have strayed, or insane persons who have wandered abroad.

69. The responsibilities of the guardians in relation to lunatics, the questions of classification in workhouses, detention, admission and discharge, and the powers of the guardians in acquiring land and borrowing, will be dealt with later. Here it is sufficient to note that these ample legislative enactments form part of the general poor relief system of the county, and are not applicable to mentally defective persons as such, but only on the ground of their pauperism, and that under the law as it now stands the father of an idiot or imbecile child who is relieved by the Poor Law loses the Parliamentary franchise.

CHAPTER II.

The Care of Mentally Defective Persons in Poor Law Institutions outside the Metropolis.

70. There are, as we have seen, two groups of Poor Law statutes, one in accordance with which the administration for the care of the defective classes in the Metropolis has been promoted, and another group under which are controlled the less developed and less specialised arrangements of Poor Law authorities in the country. These latter arrangements we will consider first.

Specially investigated areas.

71. We have had at our disposal two main sources of information—the reports of the medical investigators, whom we appointed to ascertain the number of mentally defective persons in certain typical urban and rural areas, and who made special inquiries in regard to the Poor Law institutions; and the evidence of witnesses. This evidence came from many quarters and referred to many districts. The whole of it is so important that we propose to set it out at some length, without at this stage attempting to define the several classes of mentally defective persons to which reference is made, but alluding to them generally in such terms as the witnesses used in giving evidence. The investigators' reports we take first, and afterwards the statements made to us by witnesses, which we have arranged according to their geographical areas.

The urban areas investigated. Vol. VI., pp. 13, 21, 28, 85-365.

72. The reports of the medical investigators refer to four urban centres, Stoke-on-Trent, Birmingham, Manchester with Chorlton and Prestwich, and Hull and Sculcoates; to one mining area in the county of Durham, containing three Poor Law unions; and to four rural districts, one in Somersetshire containing six unions, one in Wiltshire containing ten unions, one in Nottinghamshire containing four unions, and one in Lincolnshire containing six unions. In Wales, also, two areas were selected, one covering four unions in Carmarthenshire and the other covering four in Carnarvonshire. One of the instructions given to the investigators was that they should make enquiry in regard to the number of mentally defective persons in the workhouses and workhouse infirmaries in the unions in these districts.

Work-houses and Workhouse Infirmaries.

73. The following table shows the number of the mentally defective in the population of recipients of indoor relief and outdoor relief, excluding persons certified under the Lunacy Acts and casual ward cases in the above urban centres. Vol. VI. pp. 85-1

INDOOR RELIEF.

Work-houses and Workhouse Infirmaries —*contd.*

1. Urban Areas (Unions).	2. Paupers, adults and children, *excluding* cases certified under the Lunacy Act and Casual Ward cases.*	3. Paupers in the preceding column *who are mentally defective.*	4. Percentage of col. 3 on col. 2.
Stoke-upon-Trent	1,376	365	26·4
Birmingham	3,391	477	14·1
Manchester, Chorlton and Prestwich	7,510	726	9·7
Hull and Sculcoates	1,680	198	11·8
	13,957	1,766	12·7

Vol. VI., p. 20.

* These figures do not include the certified insane, for the certified lunatics lay outside the inquiries of the Medical Investigators. Nor are the figures in relation to the Casual Wards included: the investigation in regard to them was made on different lines—for a one month's period or for periods specially stated in each case.

74. In these four fairly typical urban areas we find, then, that 12·7 of the population of the Poor Law institutions of the four districts are mentally defective, excluding those certified under the Lunacy Acts, and cases in the casual wards. The variation is considerable between district and district, but in every case the number and percentage are large. In the case of the Manchester area we find that 22 per cent. of the mentally defective in the Poor Law institutions need other provision.† We cannot make a similar statement in regard to Stoke-upon-Trent and Birmingham, for there the medical investigator who inquired into both districts reported that in the case of the former only seven, and in the case of the latter none of the recipients of indoor relief were urgently in need of further provision, on the ground, as to Stoke-upon-Trent, that :—"For children and others requiring permanent care, who cannot afford a private institution, I consider the workhouse the most suitable place—of course, with modifications and extensions of the existing arrangements." His reasons for suggesting this were that it would, or should be, the most economical arrangement, and also that it involved the least re-adjustment. "We have seen," he wrote, "that practically half the feeble-minded are in the workhouse already, and that most of the others are slowly drifting there. Surely, then, it is their natural bourne." There were there "many persons incapable of ordinary work, yet quite capable of helping to look after those weaker than themselves." Nor was there, he thought, any objection on the ground of "a stigma attaching to help from the Poor Law." And in the case of Birmingham the same medical investigator reported that "for children and others requiring permanent care I still think that the workhouse affords one solution of the problem," and he gave similar reasons for his opinion, concluding that "the Birmingham workhouse is a standing instance of the possibility of providing both instruction and work for defectives under the Poor Law." But he added, "At the same time I fully appreciate the disabilities of the workhouse. In the first place the stigma associated with it, in consequence of which only the most severe pressure will compel defectives of a certain class to be placed there. Secondly, the complete failure of many boards of guardians to grapple with social problems; and thirdly, the scandalous expenditure of some boards." We have set out this opinion, as it indicates one view of the situation and coincides generally with the policy of the

Stoke-upon-Trent and Birmingham.

Vol. VI., p. 102.

Vol. VI. p. 132.

† What is meant by "need of provision" is explained by the footnote placed under the Tables of the medical investigator, entitled "Special summary of all cases needing provision." It is as follows :—The object of this table is to supply an estimate of the number of persons at the present time urgently in need of provision, either: (1) in their own interest; or (2) for the public safety. It is recognised that there may be many others for whom the present accommodation is not ideal; these are not here included, but only such cases as are, in the opinion of the investigator, improperly, unsuitably, or unkindly cared for; or who, by reason of particular habits and characteristics, are a source of danger to the community in which they live.

Stoke-upon-Trent and Birmingham—*contd.*

Birmingham Board of Guardians, who have paid special attention to the care and control of the mentally deficient. It also represents the general evidence on one side of the question. Undoubtedly a different opinion on this issue would have led the inevstigator to make a selection of the mentally defective persons who should and of those who should not remain in the workhouse. We notice that the Birmingham investigation followed that for Stoke-upon-Trent, and that further experience led the investigator to modify his opinion. During his second investigation he recognised that the "stigma attaching to help from the Poor Law" is a serious drawback, for, speaking of the workhouse, he says: "Only the most severe pressure will compel defectives of a certain class to be placed there." This latter opinion is fully borne out by other witnesses, and cases are quoted where the parents were anxious to obtain institutional care for their defective children, but refused to ask for such care on hearing that application must be made to the guardians, and that, in the event of the application being successful, the effect would be to pauperise them. In fourteen cases in Birmingham the parents refused to apply on this ground.

Vol. VI., p. 132.

Vol. II., p. 461.

Manchester. Vol. VI., p. 149.

75. Turning now to the Manchester, Chorlton, and Prestwich unions, where out of the 7,510 recipients of indoor relief 726 were mentally defective, and 162 or 22 per cent. were in urgent need of other provision,* we have the following report of our investigator:—

Vol. VI., p. 169.

"The great majority of the mentally affected persons met with in the Poor Law institutions are satisfactorily looked after. Of the *senile dements*, all except one are in the workhouse. This one was met with in the tramp ward, and requires permanent provision. Of the other persons of *unsound mind*, three who are in the workhouse should be certified as lunatics, the rest are sufficiently cared for under present conditions. There were six in this category whom I saw in the tramp wards; they are certainly in need of provision. Speaking generally, I would say that all the feeble-minded who find their way into the tramp wards are certainly unsuitably cared for, even if not in addition a source of danger to the community from the great temptation to drift into criminal courses."

Vol. VI., p. 170.

"The *feeble-minded* in the workhouse are sufficiently well looked after, and it cannot be said that they are urgently in need of provision, and yet their condition is by no means satisfactory. They are perfectly free to leave the workhouse at will, and when it is borne in mind how many young women, who have already had illegitimate children, there are amongst them, it will be recognised what grave risk there is, in both sexes, of the further propagation of their defect. The occupation of those who are in the workhouse is also capable of radical improvement; many of them could do, under efficient supervision, a certain amount of useful work, which would make them much more serviceable members of society than they are at present in enforced idleness or doing only the roughest or most unskilled work. In the case of the 145 feeble-minded in the casual wards what I have written above applies; they are in urgent need of provision."

"Special provision is called for for the fifty-one *defective children* attending the workhouse schools, as also for the eight defective children who were in the workhouses, and the one child met with in the tramp wards; none of these appeared to me beyond the reach of special teaching."

"The position of the sane epileptics in the workhouses I have already commented upon as being unsuitably cared for, and the whole of the ninety-two cases in this column (which included also one seen in the tramp wards) I consider to be in need of further provision. This provision the seventy-one under the care of the Manchester and Chorlton Unions are shortly to receive in their joint Colony home at Langho, and it is to be hoped that there may be some provision for the separation of the twenty-one sane epileptics from the insane in the new hospital which the Prestwich Guardians are in process of erecting."

Hull and Sculcoates, and Durham. Vol. VI., pp. 20 & 180.

76. At Hull and Sculcoates, and in the mining unions of the county of Durham the numbers of the mentally defective in the population are comparatively few. In the workhouses at Hull and Sculcoates, 11·8 per cent. of the inmates are mentally defective, and in the Durham counties 18·16. And of the care bestowed on them, it is said at Hull, there can be no doubt that the establishment of some

Vol. VI., p. 194.

Vol. VI., p. 183.

* *See* foot-note on previous page.

provision for the feeble-minded would be of much benefit to these unfortunate people, and of comfort to their friends. In the more pronounced class of defectives, the City Asylum, and for those less so, the workhouses—as things now are—are the only available refuges. Thus, the feeble-minded in this district seem to be fairly well provided for, so far as accommodation is concerned. Still some of the mentally deficient young persons would derive much improvement if they were placed in an institution and trained. In the Durham unions the report, as to idiots and imbeciles in the workhouses, is that "the number is so small, and the cases are uniformly so well looked after that I should not deem it necessary to provide an institution specially for them, although of course, if such an establishment existed, say for a group of counties, it would be advisable, and no doubt beneficial, to have them removed, so as to secure proper treatment and supervision. Of the total seventy-three feeble-minded, no less than forty-three are already in the workhouses, where they certainly appear to be well cared for, and as far as my observation goes, they do not require a great amount of supervision. I am of opinion that they are as comfortably and economically provided for as if they occupied a separate institution."

Hull and Sculcoates, and Durham—*contd.* Vol. VI., p. 183.

Vol. VI., p. 197.

77. This evidence, except in the case of Manchester, appears with certain reservations, as in a measure in the case of Birmingham, to favour the existing state of things. Neither at Hull and Sculcoates, nor in the Durham unions, has the question assumed any special importance, at least in the opinion of the medical investigators. Such criticisms as those made later on in regard to Wakefield, York, Newcastle, Leicester, Bristol, and generally as to several counties, do not appear to have presented themselves to them—for, indeed, as the statistics suggest, the proportion of the mentally defective in these two areas (Hull and Sculcoates and the Durham unions) is remarkably low. This, too, would, in some degree, account for the different character which the subject assumes here and elsewhere.

78. For the rural areas we have the following table :—

INDOOR RELIEF.

The rural areas investigated Vol. VI., p. 27.

1. Rural Areas (Unions).	2. Paupers, adults and children, *excluding* cases certified under the Lunacy Acts and Casual Ward cases*	3. Mentally Defective Persons.	4. Percentage of col. 3 on col. 2.	5. Percentage of Mentally Defective Persons (col. 3) needing provision.†
Somerset - - - -	740	166	22·43	3·01
Wilts - - - - -	1,146	229	20·00	3·06
Notts - - - -	591	117	19·80	1·71
Lincoln - - - -	665	77	11·58	6·50
	3,142	589	18·75	3·22

* These figures do not include the certified insane, for certified lunatics lay outside the inquiries of the Medical Investigators. Nor are the figures in relation to the Casual Wards included; the investigation in regard to them was made on different lines—for a one-month period or for a period specially stated in each case.

† See foot-note on p. 19 above.

In these rural areas we find that the mentally defectives form a larger percentage of the inmates of workhouses than in the urban districts: 18·75, as against 12·7, and as compared with Manchester, for instance, those who are returned as in urgent need of other provision are proportionately much fewer, 3·22 per cent. instead of 22 per cent.

79. Of Somersetshire, we have the following notes, which furnish practically a census and a sketch of the mentally defective in a group of workhouses :— Somersetshire.

"It thus appears that on the average a little more than one-fifth of the entire workhouse population come within the scope of the enquiry. . . . In some unions the proportion of the workhouse population who are mentally affected is not so great, in others it is greater than one-fifth; the smallest number being found at Taunton, 17·7 per cent., and the largest at Yeovil, 25·4 per cent. These differences are in great measure attributable to local customs as to the granting of relief." Vol. VI., p. 221.

Somersetshire—*contd.* Vol. VI., p. 222.

Passing by the notes on the senile dements (39), and lunatics (20), in the workhouse, there appears to be "only one idiot, a female child of six years, who would be better in a special institution"; and there are twenty-three imbeciles, of whom "sixteen are incapable of doing any work, four do a certain amount of useful work under supervision, and three are children of school age; one of these is attending school, and two are not attending school." The feeble-minded number seventy-four, thirty males and forty-four females. "About half the males are occupied in useful work, such as coal-carrying, wood-chopping, and the ordinary domestic work of the institution, whilst about two-thirds of the females are usefully employed in scrubbing, mending, and laundry work. On the whole I find that routine work of this character is done fairly well by them. The remainder are practically idle, and simply loaf about, either because they are too old, incorrigibly lazy, or require so much supervision that their labour is unprofitable—they are more bother than they are worth."

"I may refer to an episode in connection with one feeble-minded woman, who was set to wash a baby; she did so in boiling water, and it died. It is only fair to remember that practically none of these persons have received any training, so that their capacity for work is comparatively uncultivated.

"Seven females and one male are of very unstable equilibrium, they are troublesome, very untrustworthy, and require a good deal of watching; whilst in the case of another woman before mentioned who is subject to attacks of insanity I do not consider the control efficient.

"Five females and four males are unemployed owing to epileptic fits; and two females are bedridden from old age."

Vol. VI., p. 222.

As a result of enquiries into the previous history of these feeble-minded persons, the medical investigator adds, "I find that they fall into the following groups:—

"*A.*—Those born in the house (nearly always illegitimate) or else admitted at a very early age owing to the death of parents.

"*B.*—Those admitted during adolescence in consequence of their inability to earn their living. Many members of this class have been taken in hand and placed in one situation after another by charitably disposed persons, but partly owing to their bad temper and partly to their ever-changing disposition, employers find it impossible to put up with them, and they finally drift into the House. I came across one girl who had been placed in twenty-two situations in less than two years.

"*C.*—Those admitted somewhat later in life owing to the death of friends who have hitherto looked after them. This class represents a later development of the condition of many persons who will be met with in Group C., that is, persons in receipt of outdoor relief, and Group H., persons living at large or known to be mentally defective.

"*D.*—Street loafers and vagrants who have either been brought in by the police or driven in by destitution and stress of weather. A few of these are regular ins-and-outs.

"*E.*—Women who have come in to be confined of illegitimate children.

"*Defective Children.*—Total number three (male one, female two). All these were born in the workhouse, and are attending the town school.

"*Sane Epileptics.*—Total number six (two males, four females). The two males are father and son; the father is a regular in-and-out, and gets work as a labourer during the summer months. The four women are practically unemployable, owing to the severity of the fits."

This statement may be taken as a fair description of the mentally defective as they are living in the workhouses of these rural unions. To the general needs of these unions we have already referred.

Wiltshire. Vol. VI., p. 258.

80. From Dr. Pearse in regard to Wiltshire the criticism comes that, apart from the feeble-minded who have been brought up in the workhouse, "there are others who have entered because they have failed in the struggle outside; and these do a certain amount of routine work in the institution, wood-chopping, gardening, laundry work; many of them work well, others only under supervision. There is, however, absolutely no recognition of the fact that they need special training. After treatment suited to their requirements they would be able to provide for themselves much better than they do."

Another criticism is that though the number of certified lunatics is considerable, in only one workhouse is there separate accommodation for them with a special attendant; in all other cases they mingle freely with the other inmates, a state of matters which is hardly desirable, and may readily have a deleterious influence on the feeble-minded. Most of the cases can be readily controlled, but separate wards are certainly advisable, or as some of the workhouses have considerable spare accommodation the certified cases might be drafted to these. Wiltshire—*contd.*

81. Dr. Stracey, writing of the idiots and imbeciles in the district which he investigated, says: "At present there are no means of providing for these cases; the workhouses under present conditions are unsuitable, the lunatic asylums are full, and there are no idiot asylums in the district;" and he suggests that the empty accommodation in the workhouses should be adapted for use under a larger staff. And of the feeble-minded he says: "There are thirty who require provision and should certainly be under some sort of control. The workhouses are unsuitable, as they have neither power to detain such cases, nor suitable work to give them." Lincolnshire. Vol. VI., p. 309.

82. Of three of the four workhouses in the area of Carnarvonshire which Dr. Parry investigated, he says that "they are situated in the towns, where little space is provided to give exercise and to organise manual work for the inmates. The disciplinary methods of these institutions are decidedly bad at present, for a feeble-minded woman can at any time claim her discharge, and, when pressed by circumstances or misfortune, demand re-admission and burden posterity with her offspring." Carnarvonshire. Vol. VI., p. 351.

83. The general impression made by this evidence is that the mentally defective in the workhouses are kindly treated, but that they are rather maintained than thoughtfully considered, and that much more could be done for the children and younger persons, if attention were given to their training and if the accommodation at the workhouses were adapted to new needs, better utilised, and supplemented by farm colonies and other industrial institutions where such capacity as the inmates have may be developed.

84. The maternity wards at the workhouses in the several districts which were investigated in most cases were under observation for some time. The Maternity Wards. Vol. VI., pp. 19, 27, 95, 122, 152, 180, 194, 223, 258, 279, 303.

Among the women in the maternity wards in some districts a small proportion are reported to be feeble-minded. In Stoke-upon-Trent in the Lock ward were five feeble-minded women, all of them prostitutes. In the maternity ward in Birmingham during two months thirty-four women were admitted, of whom four were feeble-minded, three of them being unmarried. In the Manchester district in three months ninety-four were admitted, of whom nineteen were feeble-minded. "In all but two cases the children were illegitimate." Thirteen feeble-minded women, who were in the body of the house, admitted having had one or more illegitimate children. In the Durham county areas the maternity wards were empty at the time of enquiry, "and do not appear to be extensively used." In the Somersetshire union, there were during the period of enquiry only six women, three of whom were feeble-minded. "Taking all the unions together, the average total per year for the last five years was nearly four in each union. Of this number fully three-quarters of the children were illegitimate and fully half of the women feeble-minded." In the Wiltshire unions the wards were little used. In the Nottinghamshire district there were "twenty-three feeble-minded women in the workhouses, of whom eleven had at one time or another had children, all illegitimate." In the Lincolnshire district no mentally abnormal women were found in the wards, and they were very seldom met with there.

From this short abstract of the evidence it may be concluded that while in the maternity wards only a small number of the women are feeble-minded, women who are feeble-minded in very many cases have illegitimate children, and that at present they are not and cannot well be protected. They are under no guardianship that might prevent their having recourse to the workhouse, and even when there they cannot be detained, however desirable such a course might be.

Nottinghamshire. Out-door Relief. Vol. VI., p. 280.

85. In regard to outdoor relief one note may be quoted. It occurs in Dr. Gill's report of the Nottinghamshire unions. Ninety-three persons were in receipt of outdoor relief—men and women of every class of mental defect. "Taking half a crown as an average weekly payment to each of them (and it is probably a good deal below the mark) the annual amount paid comes to a little over £600, and this without any hope or expectation of return. Thirty-five out of the ninety-three are feeble-minded, and all are capable of work under careful supervision."

East and West Riding: The defective classes under the Poor Law. Bagenal, Vol. I., p. 130, c. 1 & 2.

86. Turning next to the witnesses who submitted evidence to us, we take the East and West Riding first. Mr. Bagenal, a general inspector of the Local Government Board for the Yorkshire District, who has paid special attention to this subject, described to us the conditions that prevail at the Wakefield Union Workhouse, not as exceptional, but as fairly typical of the rest of the country. The Wakefield Union, he said, had in 1901 a population of 112,365, and included a considerable rural area, thus combining in some degree the characteristics of an urban and a rural district.

In the workhouse he said "there were sixteen male certified lunatics, and eight female certified lunatics, making a total of twenty-four. Of these three males were idiots, and three females idiots. There were also five male feeble-minded epileptics not certified, who were warded with the lunatics or with the infirm men. All these . . . occupy the same block and intermingle freely, though classified on the male and female side, after a fashion, in separate day rooms. There were numbers of idiots and imbeciles, and inmates with their senses, all mixing together—which is a very undesirable thing. It is explained by the fact that they have not room in the workhouse. . . . . But that is the condition of a great number of workhouses—that the imbeciles are mixed up with the sane, which is very undesirable and very hard lines upon the respectable poor."

He proceeded to go into detail:—

"There were four feeble-minded, of whom one was an epileptic. Of these one has an illegitimate child, and there is trouble in keeping her segregated from the men. There is another whom the superintendent said was very likely to go wrong, and with whom she has had trouble in the same way. All the above are under special observation, and supervised by special officers, and are accommodated in a separate block divided into male and female quarters."

In the main block where inmates in health were kept he found the following feeble-minded: "eight women between twenty and forty years of age, of whom the master said it would be most inadvisable to let them out; one epileptic of the same character. All these the master manages to detain in the workhouse by persuasion, or by putting difficulties in the way, such as asking whether they have any friends to go to, whether they are likely to keep them, and so on. As a matter of fact, he knows that he has no legal right to prevent them discharging themselves."

Besides these, there are the following cases:

"A woman, aged thirty-eight, who has no sense of morality and is a source of constant trouble to the matron and master. She has had five children, all by different fathers. This woman is now practically a permanent inmate of the house and is not allowed out. She makes no application to be discharged, but uses very bad language when she is refused liberty to go out for an afternoon. Of her five children, three died, very degenerate offspring. The survivors are under the custody of the guardians.

"The second case is a woman aged forty-five, who has three illegitimate children. She is on the border line of imbecility, but the medical officer will not certify her as insane. Two of the children are said to be the result of an incestuous connection. She makes no application to go out, but there is no means of legally detaining her.

"There is a third case of a woman, aged twenty, bordering on imbecility. She has been in the workhouse for ten years, and is an active and useful person in work."

Then, continuing his statement in regard to the females, Mr. Bagenal said that he found, in the infirmary or hospital wards, that in 1904 there had been three cases of illegitimate births, all the offspring of feeble-minded women. One was the result of an incestuous connection. The superintendent nurse told him that the mothers of all these cases were distinctly feeble-minded, and her experience was that illegitimacy was very frequently the result of this.

On the male side, he found that there were five men who could be described as feeble-minded, who are useful and active workers about the place, going messages, and so on. They showed no desire to leave the institution; they were

quite content to remain there. Those would seem to be people ear-marked, as it were, for a labour colony, or a department of a labour colony for the feeble-minded, if such were established.

East and West Riding: The defective classes under the Poor Law—*contd.*

Thus his summary for that workhouse was: there were twenty-four certified insane, and twenty-six feeble-minded. That morning he had received a return of the mentally defective who were in receipt of outdoor relief; there were four relieving officers, and between them they returned: Imbeciles, five males, four females; one idiot male; eight male and fourteen female feeble-minded; total, thirty-two. And he concluded: "so you there get practically what the feeble-mindedness is in one union which I have taken at random in my district. I do not know that there is any reason to suppose it is above the average or under the average; I simply state these facts." Bagenal, Vol. I., p. 130, col. 2.

87. At Wakefield Workhouse, according to the Half-yearly Returns of Pauperism (England and Wales) January 1st, 1905, there were 395 indoor paupers. Mr. Bagenal found twenty-six feeble-minded, apart from the twenty-four certified lunatics, *i.e.*, 6·6 per cent. of the inmates of the workhouse: and of 1,908 persons on the outdoor relief list, thirty-two, *i.e.*, 1·6 of the applicants were mentally defective.

88. Of the Sheffield Union which is urban, Mr. Bagenal says:— Bagenal, Vol. I., p. 130, col. 1.

"The superintendent of outdoor relief stated that there were in receipt of outdoor relief twenty-seven males, forty-one females, total sixty-eight, who might be classed as feeble-minded. Of course, it seems obvious that any person of this class who is in receipt of outdoor relief, a female especially, is more or less a source of danger to the community."

89. Speaking further of feeble-minded women in the workhouses of his district, Mr. Bagenal said:— Feeble-minded women in the workhouses in the Yorkshire District.

"Feeble-minded women are particularly open to the seductions of men. They seem to be deficient in will power and the power of resistance to attacks upon their virtue. In some the moral sense is altogether absent. The consequences we see in the frequency of this class in the lying-in wards of the workhouse.

"In one workhouse I found five young women, all of whom were feeble-minded. Number one was going to be confined and had had two children before; number two had had two children; number three had had two children; number four had had one child; and number five had been confined in the summer, and had three children previously. All these were illegitimate. The cost of these cases is a very great burden on the ratepayers, especially as the children will probably turn out to be feeble-minded also. The fact is, this class become practically the prostitutes of the rural districts. Bagenal, Vol. I., p. 132, col. 1.

"I made an enquiry on this question into the number of illegitimate births in the workhouses of my present district in the year ending the 31st December, 1901, and the number of mothers of illegitimate children who were feeble-minded. There were 462 illegitimate births, 6 per cent. of whom came of feeble-minded mothers. The returns were incomplete as to numbers, owing to the fact that no record was kept in two of the largest workhouses in the district."

90. Commenting on a return of defective children of school age which had been made by the head teachers of the elementary schools at Ipswich, and showed that "approximately 1 per cent. of the children were feebly gifted," Mr. Bagenal said that he felt pretty confident that this 1 per cent. contributed many recruits to our workhouses and our gaols, and speaking generally of the workhouses in his district he said that he ascertained in 1900 that in ten unions in the East Riding of Yorkshire there were 161 "who were of weak intellect, but who were not certifiable as imbecile or insane, and who could not therefore be detained in workhouses or elsewhere except at their own pleasure," and in the thirty-five unions in the West Riding there were 670 such persons. General returns of feeble-minded in workhouses in the Yorkshire district. Bagenal, Vol. I., p. 132, c. 1.

91. As to the practical definition of this class in the returns which he collected, Mr. Bagenal said that he gave the officials "a definition of what a feeble-minded person was to the best of his ability," and though "the evidence on this particular point might not be scientifically correct" he thought the workhouse masters would take the medical officers into their confidence. The relieving officers "seemed to understand perfectly that the 'feeble-minded' were on the border line—cases with which they were perfectly familiar, which, they say, are 'softies,' or 'not all there,' or are defective. Among these cases returned, were no 'senile decay, hospital cases, or bedridden cases at all.'" Bagenal, Vol. I., 2472, 2473, 2474, 2476, 2346.

Mr. Bagenal added that he thought that it was very likely that the vagrant class was largely recruited from the ranks of feeble-minded boys. These boys were practically unemployable, and at the age of sixteen drifted out into the high roads and swelled the ranks of the nomad population. The feeble-minded men in the workhouses, he says, are very often "ins-and-outs." They go into the workhouses in winter and come out in summer, picking up a precarious livelihood in one way or another. Bagenal, Vol. I., p. 132, c. 1.

York. Skinner, Vol. II., 14784, pp. 218, 219, 220.

92. Miss Skinner, the superintendent nurse of the York Union Infirmary, reported to us on the feeble-minded there. Her evidence corroborates the evidence of Mr. Bagenal and many others :—

In the imbecile wards, she said, were 78 beds, and fifty-two patients detained under certificate; twenty-four of these were certified imbeciles; fourteen had chronic mania; five were old senile cases and there was one idiot. Of epileptics there are eight 'mental,' and to be counted among the 'certified imbeciles,' two feeble-minded, and four epileptic imbeciles. Besides the fifty-two certified cases, there were a great many cases of senile dementia; these were not fit to be in the sick wards, some of them being very noisy at times and troublesome, but too old to certify.

A great many girls admitted to lying-in wards were more or less feeble-minded, and unfit to look after themselves, but after their recovery, they were discharged out, and went to the bad, because no one had the power to protect them against their will. For cases of this kind, she thought, a Home should be provided and certified by law, with power to detain. The medical officers of workhouses should be allowed power to transfer any patient that they considered fit to such a Home from the workhouse or lying-in wards; subject to a certificate signed by a magistrate.

Miss Skinner mentioned many individual cases which threw light on the condition of the feeble-minded inmates; and she urged that children, on being sent out to earn their living should be carefully examined by the medical officer. She mentioned four cases, in which children, unfit to look after themselves, were sent to farms.

Since 1900, she said, the number of confinements had been 135. Out of this number 115 were illegitimate; 107 were unmarried women. The other cases were married women and eight of these also had illegitimate children. Thirty-five pregnant cases were suffering from a severe form of syphilis. Many of the children died from syphilis either a few minutes after birth, still-born, or under a year old. When at the latter age the child was usually suffering from a few weeks after birth until it died.

From July to November, 1901, she said, four infants died, the oldest eleven months old; in the year 1902 seven infants died, the oldest two years; in the year 1903 thirteen infants died, the oldest three years; in the year 1904 eleven infants died, the oldest four months; in the year 1905 twenty infants died, the oldest fourteen months.

Of the cases one or two may be quoted as typical:—

"*F.S.*—Brought up here; always a troublesome, violent-tempered, immoral-minded girl, several times sent out to service; always returned with bad reports, and in a dirty and verminous condition—her hair had to be cut or shaved off; sent to imbecile wards two or three times for observation, but was not certified; she has been a source of great trouble this last year (suffering from syphilis). A guardian has recently obtained a situation for her on a farm. She is sure to return in the same condition. Her mother is in the asylum. Her father deserted the family when young.

"*H.D.*—Single woman. Age 25 years.—One illegitimate child; grandmother and mother died in the imbecile wards of this workhouse; she was brought up here; went to service, returned pregnant; the child was a miserable puny infant. The girl I consider 'mental'; she had very violent fits of temper. The child improved, and later the woman went out and lived with a man who is frequently an inmate of the house. This man is also mentally deficient. A few weeks ago a situation was got for her, and she ran away from it; she has refused to go to a Home. This man and woman have been seen about York together.

"*A.C.*—Epileptic; has had one illegitimate child; F.C. also epileptic, had two illegitimate children. F. became so violent and troublesome that she was sent to the asylum; she died there in 1904 from malignant disease. Agnes had also malignant disease of the breast which has been amputated. Two aunts died here; they were both 'mental' and had been at an asylum; a nephew committed suicide by drowning in the river Ouse in July of this year. One nephew living looks 'mental.'

"*M.P.* Single woman. Age 29 years.—She was a cook; she drank heavily; brought in in a dirty condition, suffering from the effects of drink; recovered, and went out, back on to the streets; brought in again; was certified for imbecile ward. She improved wonderfully, and worked well; after begging for some time, the doctor allowed her to go out again; later was brought back again as bad as ever, was not certified; she improved and went out again, and went to the bad again; tried to commit suicide, threw herself out of the window; taken to county hospital; admitted since then in a deplorable condition. She again went out, and has been several times since in Wakefield prison, for theft and immoral living. Family history, parents are aged and most respectable people; one sister a lady's maid. She has been two or three times to the Refuge here in York. Her own friends and several of the lady guardians have tried to persuade her to go to a Home, but she absolutely refuses. Still at large.

"*H.I.*—Single woman. Age 40 years.—Farm servant, sixth child. Her father had charge of the eldest child, four were dead; feeble-minded woman.

"*H.D.*—Single woman. Age 27 years.—Six illegitimate children. Clean girl, but feeble-minded.

"*J.B.*—Single woman. Age 26 years.—Has been in the imbecile wards here several times; has been twice to Bootham Asylum; violent and dangerous; she had a child here in 1902, who lived seven months, and died in convulsions. She is now at home with her parents."

93. Miss Pease, a guardian of the Newcastle Union, and a member of the Northumberland Education Committee, described the state of the feeble-minded "able-bodied" in the Newcastle workhouse. Newcastle. Pease, Vol. II., 15060, p. 232, c. 1.

Each year since she had been a guardian, she said that she had felt the need of some change in the law regarding the detention of the feeble-minded. This view was held by most women guardians, and by many Poor Law inspectors. The evil results of allowing mental defectives to go in and out of workhouses as they pleased were always under their eyes.

At the present moment, in the Newcastle workhouse, there were sixty so-called able-bodied women; out of this number, there were—according to the views of the two medical officers, the matron, and herself,—thirty-nine women of varying degrees of feeble-mindedness; sixteen of these had children, and none of them were able to take care of themselves. There were sixty able-bodied men, and of these the doctors considered that twenty-three ought to be kept under permanent care. As they were not able to do this, they tried to persuade them to stay in the House by giving them a certain amount of preferential treatment, but often all their efforts were defeated by a depraved woman getting an influence over those who were younger and more innocent, with no wills of their own, and then nothing would keep them in the House. Others who did not realise their mental condition genuinely wished to try and earn their own living; they were seized with a restless fit and took their discharge, and too often their next appearance was in the maternity wards.

Miss Pease also stated that a census of the mentally defective children throughout the county had been made between the ages of seven and fourteen. The number returned was 288, less than three in every 1,000; hardly a complete census, she considered.

94. Speaking of Lancashire, Mr. Jenner-Fust, General Inspector of the Local Government Board for Lancashire and Westmoreland and part of Cumberland, said that the imbeciles and insane epileptics were chiefly maintained in the workhouses of the district mingled with epileptics not classed as insane. In many instances, separate blocks or pavilions had been provided for their use, but, in all these cases, if the imbeciles and epileptics were removed, the accommodation provided could in future be appropriated to other classes of inmates. There was a general concensus of opinion in Lancashire that a workhouse was not the right place for imbeciles or epileptics of either class, sane or insane. Lancashire. Jenner-Fust, Vol. I., 2530, p. 138, col. 1.

95. Dr. Milsom Rhodes, Chairman of the Manchester and Chorlton Asylums Board, who has a wide knowledge of Poor Law administration in Lancashire and elsewhere, stated:— Rhodes, Vol. I., 9436, p. 549 col. 1

That no one who had really studied the question could be satisfied with the present provision for mental cases in workhouses. An alteration was necessary, in the interests of the sick as well as the insane, in the smaller workhouses. The mentally unfit were placed in the sick wards and were a cause of very great trouble to serious cases. He had known a noisy dement in the next bed to a patient suffering from acute pneumonia, to whom sleep was an absolute necessity, a *sine quâ non* she had small chance of obtaining. The treatment of the mentally and physically unfit in the same ward, should, he thought, be abolished.

96. At Norwich it was stated that there were forty-two "feeble-minded" persons in the workhouse, and twenty-four in receipt of outdoor relief; and sixteen epileptics in the workhouse and ten in receipt of outdoor relief. It was found that in most of the indoor cases chargeable, the persons had been admitted on many occasions. Most of those who were in receipt of outdoor relief were resident with either parents or relations. Of the feeble-minded in the workhouse, four, it was said, required treatment in a special home; and of the epileptics, in-and-out, eight required that treatment. Norwich: Odhams, Vol. II., 13629, pp. 152–153.

97. Miss Clephan, for a long time a member of the Leicester School Board, and now manager of the Deaf and Special Classes under the Leicester Education Committee, and Honorary Secretary of the After-Care Committee, said of the Leicester: Clephan, Vol. II., 18442, p. 424, col. 2.

Leicester—*contd.* Clephan, Vol. II., 18442, p. 424, c. 2.

workhouse there, that there was in it an inevitable lack of just what was most needed—individual training and development; there was ignorance of the family history of cases (which was very evident on special enquiries being made in regard to after care); there was no specialisation of treatment; cases drifted in and out at intervals: boys were placed with men and soon got out of hand; some drifted into the imbecile ward as the safest place; others were declared to be feeble-minded who might be improvable; some were found there though they had never passed through a Special school.

Hampshire, Wiltshire, Dorsetshire.

98. Quoting from a report made by him to the Local Government Board in 1904, Mr. Baldwyn Fleming, a General Inspector, described the condition of the feeble-minded in workhouses in his district, Hampshire, Wiltshire and Dorset. The account he gave was like those submitted by the witnesses whose evidence has been already quoted. He mentioned the following cases merely as samples of a class of case with which every board of guardians is familiar.

Fleming, Vol. I., 2078, p. 115, col. 1.

"In C. workhouse a girl, D.F., aged twenty-five, had come into the workhouse to be confined. She was physically and mentally defective, but the medical officer could not class her as insane. She had no idea what to do with her child, which was a poor, undersized little object. The matron had managed to keep it alive, and if it remained in the workhouse it would very likely continue to live. There was no power to retain the mother against her wish, and it was stated that she would probably leave the house as soon as the child was strong enough to go out. What would be the almost inevitable result? That in a few more months the child would be dead, and the mother would again be pregnant.

"In the same workhouse was a child, W.B., aged fourteen. She had been sent to the workhouse with the consent of her parents and of the guardians, to prevent her seduction. She was of unusual physical development for her age, and had evinced propensities which would have certainly led her into trouble if she had not been placed under restraint. She was defective mentally, but was not classed as insane. Unless she can be so classed when she is sixteen, she will be entitled to take her discharge, and the consequences are apparent.

"In another workhouse there was an inmate, F.A., aged thirty-three. She was seduced when she was sixteen, and her first child was born when she was seventeen. She has had five children, and three of them died when babies. This woman is less defective mentally than the two cases previously referred to, but she is quite unable to protect herself from the danger she incurs when free from restraint."

In support of his statement, that it was very necessary that feeble-minded girls should be detained, he gave particulars of a family in which the father was mentally deficient and the mother extremely deaf, and in which the daughters each in turn on becoming independent took to a profligate life.

99. Further, in advocacy of a policy of separating the feeble-minded in country workhouses into offensive and inoffensive feeble-minded, and removing the former from the workhouses, but retaining the latter, Mr. Fleming described in some detail the state of things at a country workhouse.

Fleming, Vol. I., p. 121, col. 2

A chattering old woman of eighty years of age, a senile dement, and two other women who could not be removed, unless they were certified as insane, were in this workhouse, he said, a constant trouble to the quiet and well disposed inmates—especially in the sick wards. There was no remedy indeed, but to obtain certification, a course which was not adopted because it was thought that it would be wrong to brand the families to which they belonged with insanity. On the other hand, there were in the same workhouse four male imbeciles, who represented, Mr. Fleming urged, a class of persons who might very well be left in the workhouses. These were:—

Fleming, Vol. I., 2181. p. 122, col. 1.

"A. G., 70; E. B., 45; F. M., 45, and A. P., 29. A. G. is a most useful general handy man. He works in a garden and helps with the pigs, looks after the vegetables and turns his hand to anything that he is put to. The master describes him as very useful and thoroughly contented and happy. He is well-known throughout W., and is often allowed to go into the town for errands or other purposes. There he has many friends whom he meets with great pleasure, and who are glad to see him. E. B. goes about with the firewood barrow. He has a cousin in W. whom he frequently visits. In the workhouse he helps in the kitchen, where he is said to be of great use and to do a great deal of work. He also is said to be thoroughly happy in his surroundings. F. M. has friends at C., and regularly goes to spend the day with them. Sometimes he has exceeded his leave and has stayed with them for the night. The guardians would not object to this, except that it is doubtful whether there is sufficient sleeping room. He does much of the scrubbing in the workhouse, and again is said to be useful and very happy. A. P., twenty-nine, makes himself very useful at any work allotted to him. He is a keen sportsman and runs like a hare. When the hounds are about he loves to get after them, and within reasonable limits he is allowed to do so. He has a father and a mother, and periodically goes to see them. He also is said to have a very happy life. The master who gave me the above particulars says that if these four men were taken away from the house, the work could not be done without further paid labour. He says further that at the house they would be very sorry to lose them, and

that he is sure the men themselves would be very wretched if they were removed from their own surroundings and association to an establishment where they would have none but their own unfortunate class for companions. These men work well and willingly, and are quite happy in their work. They are no nuisance and give no trouble and no cause of complaint to any other inmates. The guardians appeared to think that they did not want to get rid of them. It would be a grave hardship with no compensating advantage to add to the misfortune of insanity the pain of taking them away from their present happy condition of life." Hampshire, Wiltshire, Dorsetshire—*contd.* Fleming, Vol. I., 2181, p. 122, col. 1.

Mr. Fleming had, he said, made inquiries with similar results in other unions. Many imbecile-insane people, feeble-minded people, had offensive habits and were a nuisance to other people, and these ought to be removed; but people of unsound mind who were happy should be left where they were, where everybody was good to them, and tried to make life pleasant for them. Fleming, Vol. I., 2182.

100. In regard to children, Mr. Fleming quoted the case of Portsmouth, where they had got a dozen children in the imbecile block of the workhouse simply because they could find no place to which they could send them to be trained. Speaking generally of his district, which includes Hampshire, Wiltshire, Dorsetshire, and the Farnham Union in Surrey, fifty-four unions, he found that there were 889 persons in receipt of indoor or outdoor relief, as epileptics, idiots, and insane. Of these 696 would be certified as insane, and 193 are sane epileptics. "The proportion of feeble-minded who were not classed as insane was very considerable, possibly half as many as those who were classed." Fleming, Vol. I., 2199, 2185, 2187, 2188, 2190.

101. Of the feeble-minded children in the Bristol Workhouse, Miss F. M. Townsend, member of the Bristol Education Committee and Chairman of the Industrial Schools Sub-Committee, gave a very unsatisfactory account:— Bristol. Townsend, Vol. II. 18324, p. 417, c. 2.,

A recent visit paid to the Eastville and Stapleton workhouses she said, showed imbeciles, idiots, and slightly feeble-minded living in wards together, all ages from fourteen to ninety. Hardly any attempt was made to teach or occupy the children. On the men's side the boys were partially separated from the men, but the accommodation was cheerless, and the life of the boys idle and dreary. Slightly feeble-minded children were associated with the saddest, most hopeless idiots. I saw six children who had formerly been in Bristol special schools. Five of them had greatly deteriorated, probably through lack of training and association with low type imbeciles. Three boys had been sent to Starcross by the guardians and returned as too deficient for training in that institution. In each case the workhouse medical officer was of opinion that the boys were improvable, but would deteriorate under workhouse conditions. A girl of fourteen, who had made considerable progress at the special school was associating with a room full of low type imbecile women."

102. Of the adults in the Bristol and Barton Regis Workhouses, Miss Clifford, who has been a guardian for many years, submitted the following notes:— Clifford, Vol. II., 16267, p. 301, c. 1.

"There are just now in Bristol workhouse eighteen men and thirty-four women of weak mind classified as able-bodied. They are chiefly of a very low type. Many of them have been inmates for a long time; others drift in and out again. There were two women who died, one at about seventy and one at about fifty years old, who had been born in the workhouse and had remained there all their lives. Among those eighteen men are some who have been brought up in the Poor Law schools. One man of about forty has been in the workhouse from infancy; he is the illegitimate son of a woman who was believed to have murdered an older child. During the last two years the guardians have ordered him out of the workhouse, not recognising his incapacity to maintain himself. He returns from time to time to the casual wards in a miserable condition. There are not any weak-minded girls in the workhouse who have been educated in the schools or homes, because the guardians have, since 1890, sent all such to one or other of the voluntary homes opened about that time for girls. With one exception, these girls have remained happily in the homes unless they have been discharged to friends. The exception was a girl of curiously restless and mischievous character, who habitually upset the others and had to be dismissed on that account.

"There are seven other girls possibly not quite normal, all over school age, who are employed in the new Home's laundry. They are unfit for service, but are probably backward in various ways, rather than weak-minded, and we hope that after a time they will develop into capable girls.

"The able-bodied weak-minded adults in the workhouse are very useful and generally well-behaved and deserve a less dreary life than they have; they are, however, in the Bristol workhouses, allowed by the doctor better diet, and if well-behaved they are placed in one of the workhouses in a superior living room and dormitory.

"In addition to the above there are a large number of the unmarried mothers, probably about a third of the number, who are of weak mind. Out of 148, fifty-six were, in the opinion of the medical officers, of feeble mind. They have had altogether ninety-five children. The larger number of these children die in infancy, but the preventible suffering is great. It is difficult to trace most of these mothers or to find out whether the children who survive are feeble-minded or not. In some few cases a weak-minded child has returned with the mother, and both have remained for some time chargeable."

Somerset. Wills, Vol. II., 14842, p. 222, cols. 1 and 2.

103. In regard to the feeble-minded and epileptic in the rural districts of Somersetshire, an extremely unsatisfactory state of things has been disclosed. At the Axbridge union, the following typical case is mentioned, in which endeavour was made to provide for a young woman in the asylum for idiots at Starcross, where improvable cases are taken :—

"*Typical Case.*—A.W., sent home from Starcross at the age of twenty-three because she had one fit. She is now in the hospital ward of our workhouse, where she is a source of great trouble and discomfort, whereas with skilled supervision she could be kept employed, happy and harmless.

"Within the last eighteen months three Axbridge cases have been dismissed from Starcross—one because he was unruly; one because she had one fit; one because his heart was bad. These cases were all over twenty years of age and all three have now come back to the workhouse."

104. In rural workhouses, judging from those in the neighbourhood of Axbridge, there is no separate accommodation for epileptics and feeble-minded, whether adult or children. The adults are generally classed with the sick and infirm, to the great danger and discomfort of the latter.

p. 223, c. 1. "Feeble-minded girls and women," it is stated, "form a large proportion of the unmarried mothers who come to the lying-in wards of our workhouses, where they often appear again and again, adding to the rates and to the deterioration of the race by producing sickly and deficient children."

p. 223, c. 1. "Also, sane epileptics of respectable character, are often compelled to enter workhouses because no one is willing or able to care for them. The want of occupation, close confinement, often unsuitable diet of workhouses, are very detrimental to them; they lead lives of extreme misery, and degenerate rapidly into a state of idiocy, or lunacy, otherwise probably preventible. It is a great hardship to class *sane* epileptics with feeble-minded and imbeciles. Dangerous epileptics cannot be compelled to enter any institution, but may, if they choose, remain at home, a constant source of danger to themselves and their families."

Fry, Vol. II., p. 226, cols. 1 and 2, p. 227, col. 1.

105. Miss Fry, another witness, who speaks also of Somersetshire, says in regard to the children that the Elementary Education (Defective and Epileptic Children) Act, 1899, has not been adopted by the Somerset County Council; and that feeble-minded children are therefore to be found either in the ordinary elementary schools or in their own homes, except in a very few cases where they have been sent by the guardians or by private charity to idiot asylums, or to Homes for the feeble-minded. Their place is not in the ordinary elementary school, where their example is bad for the other children, and their habits frequently a source of amusement to them. On account of their backwardness they are sometimes placed with the younger children or infants, and I have seen, Miss Fry says, big feeble-minded children sitting at infant desks and kept quiet by being allowed a slate and pencil. The teachers, especially those in small rural schools, find it impossible to give such children any individual attention, and much time is spent by young monitors in vainly endeavouring to teach them to read, write, and count. From motives of humanity, managers are unwilling to turn these children away, but there are other children who are too deficient to attend school at all, and they have to be kept at home. Some of these children are very difficult to control, and others need more careful and constant watching than their parents can give them; both classes tend to become worse when left without any training. Private charity cannot deal with all these cases. The voluntary homes are full. The guardians on the other hand are unwilling to pay for children who might be dealt with by the Education Authorities under the Act of 1899, if that Act were adopted, and they are also unwilling to contribute much more than such children would cost if maintained in the workhouse.

It is very undesirable, Miss Fry argues, to bring children who are not paupers under the Poor Law in this way, but the inaction of the Education Authorities leads to this. If they are dealt with now, they have to be certified as idiots, and sent to the West of England Asylum at Starcross. But parents often object to their feeble-minded children being certified as idiots, and medical men often hesitate to certify them as such. Further, at Starcross, only children capable of improvement are admitted, children of feeble intellect, viz., those who, unable to keep pace with normal children at an ordinary school, yet possess sufficient intelligence to learn some light trade or industrial occupation, to fit them, as far as possible, to be able to contribute to their own support; and thus, to provide for actual idiots remains a difficulty, while to obtain admission for the improvable feeble-minded they have to be certified as idiots.

106. Further, in regard to Somersetshire, Miss Joseph, who is a Poor Law guardian, and was a member of a voluntary committee for securing provision for pauper defectives, submitted the cases of several feeble-minded women in workhouses. It is unnecessary to enlarge the records of these cases, of which the evidence is practically endless. But two may be mentioned :— Somerset—*contd.* Joseph, Vol. II., 17012, p. 352, c. 2.

(1) Mrs. C., daughter of a publican. She was an only child, married a man who kept a public-house, and took to drink young. Fairly prosperous for some years, but ruined by drink. She came into the workhouse with three sons and one daughter, all certified imbeciles ; one son had subsequently to be removed to the county asylum. The daughter is fairly intelligent and if properly trained would have been capable of improvement.

A second daughter, E. C., markedly feeble-minded, came into the workhouse twice for the birth of illegitimate children ; the second time she was well over forty. One child, an idiot, died in the house, the other she took out, he got into trouble and was subsequently sent to an industrial school. E. C. afterwards married but after a time refused to live with her husband, who is at present in the workhouse, and from what I am told she is not leading a very respectable life.

A third daughter, J. C., also had two illegitimate children in the house, one of whom was deformed and died. She afterwards married and had five children, two of fair mental capacity and the other three weak-minded. She also is of unsatisfactory character. If it had been possible to detain these women in the first instance the community would have been relieved of considerable expense.

(2) Mother, woman of immoral life. Two daughters, M. and R., both physical defectives, and R. morally and mentally so. M. had one illegitimate child, who died in the workhouse in infancy—previous to admission she was in receipt of out-relief. R. is syphilitic—had one illegitimate child in the workhouse—still-born. Both women are now in the workhouse. There is no classification between R. and the other able-bodied women, which include decent feeble-minded girls, with whom on physical and moral grounds it is inexpedient she should associate.

Miss Joseph summed up her case for reform with the words :—

" The condition of a defective child or adult in a small country workhouse where no special classification, care, or training can be obtained, is an injustice to the individual, and often a source of great annoyance to the other inmates." p. 351, c. 1.

107. In 1900, Miss Joseph stated, an enquiry was made as to the number of pauper idiots and imbeciles in Somerset, exclusive of those in asylums, and special institutions, and statistics were furnished by the unions, which showed that there were 349 ; 212 being inmates of workhouses, and 137 in receipt of outdoor relief, while the number of sane epileptics was 78, and of feeble-minded, 276. In no workhouse were they under the charge of specially trained officers, or receiving training of any kind, and in many instances their accommodation left much to be desired. An exception should, however, be made as regards the Bath workhouse, where the imbecile wards are excellent, though, even there, definite employments are not taught. These returns could not be regarded as strictly accurate, but the numbers were not likely to err on the side of excess. Joseph, Vol. II., 17012, p. 351, c. 1.

108. Next in regard to Wales. As to children, Miss Evans, Local Government Board Inspector of Boarded-out Children for the Northern and Midland Counties, stated that some boards of guardians do not attempt to classify them. My experience, she says, of the guardians in a small union (North Wales) was that we did not classify. If the child was feeble-minded it was sent to school with the others, and if it was too bad it was kept in the workhouse. If it was not very feeble-minded, it was sent to service. Wales. Walton Evans, Vol. I., 2743.

109. Mr. J. T. Jones, who has been a guardian for thirty-six years and is also a member of the Carnarvonshire County Council, while appreciating the difficulty of classification, and recognising the kindness shown to the feeble-minded by officials, criticised the method of providing for them in small workhouses in Wales. He said :— Jones, Vol. II. 20496, p. 553, c. 1.

" This class is very well looked after as a rule. They are given some light work, and appear to do it very cheerfully. The constant presence of the resident officials, and the frequent visit of the medical officers, are a sufficient safeguard against anything approaching cruelty being practised upon them.

" The classification in small rural workhouses is not of a first rate order. The feeble-minded cannot be accommodated in the same room as the able-bodied, because they would be a source of constant hindrance to the workers. They are consequently housed with the aged and infirm. This arrangement cannot be regarded as a satisfactory one. The old and infirm wish for quiet, and rest, which is impossible while the jabbering idiots and the low grade imbeciles occupy the same rooms as they do. In fine weather the weak-minded are out in some parts of the grounds, but during wet and stormy weather there is nowhere for them to go but to the day rooms of the old and infirm ; and also during the leisure time after meals. They occupy the same dormitories as the old people.

Wales—*contd.* Jones, Vol. II., p. 553, c. 1.

"The officers are very kind to these poor unfortunates, but they have no time to give special attention to them; even if they had, very few of them have any kind of qualification to train them in any way, with the result that they are allowed to go their own way, and to live their own lives, which is very little superior to that of a well-cared-for dog or other animal. Notwithstanding all this, one is bound to admit that they are as well cared for as the circumstances of rural workhouses admit. The fact that they have been sent into a workhouse is fair evidence that they have no home or friends outside who would take half the trouble or care as much for them as the officials do."

Returns of feeble-minded persons chargeable to Poor Law, 1905-1906. Appendix Vol. V., p. 75.

110. As a summary of the position, the following returns may be quoted. The returns were made by the clerks to the guardians, that of 1905 at the request of the Local Government Board, and that of 1906 at the request of the Commission.*

In England and Wales, exclusive of London, the total number of those paupers was in 1906 returned at 11,219; and of these 1,275 were in special wards or establishments, 6,319 in other wards, 410 in other institutions, and 3,215 in receipt of outdoor relief.

Thus it will be seen that more than half of the feeble-minded are in wards not specially appropriated to their use, while comparing 1905 with 1906 the figures stand thus:—

England and Wales (less London).	In Workhouses or other Institutions belonging to Guardians.		In other Institutions.	Receiving Outdoor Relief.	Total.
	In Special Wards or Establishments.	In other Wards.			
1.	2.	3.	4.	5.	6.
1905 - -	1,126	5,890	182	1,870	9,065
1906 - -	1,275	6,319	410	3,215	11,219

111. The increase in the total number of feeble-minded who are in the hands of the Poor Law guardians is remarkable—an increase of 23 per cent. This is recorded in most of the counties, and presumably implies rather a closer registration than an actual addition to the number of paupers.† The increase of the number in special wards is due to changes made in one or two counties, as, for instance, Warwick, Lancaster, and the East Riding. On the other hand, it is significant that the feeble-minded persons in receipt of outdoor relief have increased 70 per cent. The figures are:—

Appendix Vol. V., p. 75.

England and Wales (less London).	Men Outdoor.	Women Outdoor.	Children Outdoor.
1.	2.	3.	4.
1905 - - - -	585	1,193	92
1906 - - - -	1,119	1,984	112

The increase in the number of the feeble-minded "in other institutions" (col. 4 in the previous table), from 182 to 410, may be accounted for, in part by a closer registration of mentally defective persons who are boarded in institutions, as well as by an increase in the number of these cases. The increase is general, and marked in such different areas as Essex, Suffolk and Norfolk, Lancaster, the West Riding, Durham and Northumberland.

* With regard to the information given in this Summary generally, it should be mentioned that the registers kept in the Poor Law unions do not specifically provide for a record of persons who could be classed as feeble-minded but not certifiable as insane. The particulars given in the Returns are based on the opinion of the medical officers in the matter.

† The total number of paupers, excluding insane paupers and casual paupers, was in England and Wales on the 1st January, 1905, 808,929, and on the 1st January, 1906, 802,068. *See* Report, Local Government Board (1904–5) p. lvi. and (1905–6) p. cxvi. Thus, while the number of the feeble-minded as returned increased in number, the total pauperism decreased.

112. This mass of evidence is, we think, quite conclusive. It comes almost entirely from persons who, as inspectors of the Local Government Board, or as guardians, are thoroughly familiar with the facts, and it relates practically to the whole country. It might be largely augmented by reference to other witnesses; and it is practically unanimous. It has been verified by the personal observation of members of the Commission visiting Poor Law institutions. Its cumulative effect, therefore, can hardly be set aside. There are special arrangements, here and there, for the care of the mentally defective, and some witnesses suggest that for certain classes the present workhouses may be of service, but it is admitted that, as a whole, the accommodation now provided for these persons is insufficient, unsatisfactory, and unsuitable. It is not alleged that they are treated with unkindness; on the contrary, it is stated that, considered merely as inmates, they are well cared for. Nor, again, is it asserted that the Poor Law guardians throughout the country are to blame. We do not think that any such inference can be drawn from the evidence. The system of indoor relief is, as Mr. Adrian, Legal Adviser and Assistant Secretary to the Local Government Board, has pointed out, a housing system, and of late years, with an increased sympathy for those who are suffering from mental weakness and defect, with a closer study of mental science, and with the general application of the principle of educational equality to all classes of children, including the feeble-minded, there has sprung up a demand for a more discriminative and individual treatment of mentally defective persons, which cannot but entail a reorganisation of the public provision hitherto furnished for the afflicted.

Summary of evidence as to Poor Law accommodation.

CHAPTER III.

Classification in Poor Law Institutions outside the Metropolis.

113. In reference to the present provision for the mentally defective in connection with the Poor Law we have now to consider the question of the classification which is at present in force, and the procedure of boards of guardians as applicable, more particularly, to the admission, detention, and discharge of mentally defective paupers.

114. The better use of existing or additional accommodation in or adjoined to the workhouse depends primarily on classification. In the definition of the word "workhouse" in the Poor Law Amendment Act of 1834, it is stated that it includes, besides "any house in which the poor of any parish or union shall be lodged and maintained," "any house or building purchased, erected, hired, or used, at the expense of the poor rate by any parish . . . for the reception, employment, classification, or relief, of any poor person therein at the expense of such parish." Classification can thus be secured by arrangements within the workhouse, or by the utilisation of houses outside, which may equally bear the name "workhouse."

The system of classification. Poor Law Amendment Act, 1834, Section 109 Adrian, Vol. I., pp. 10, 15, 102.

115. The Order of the Local Government Board as to classification requires (Art. 98) that "the paupers so far as the workhouse admits thereof shall be classed as follows":—

General Consolidation Order (Unions), 24th July 1847.

Class 1.—Men infirm through age *or any other cause.*
Class 2.—Able-bodied men, and youths above the age of fifteen years.
Class 3.—Boys above the age of seven years and under that of fifteen.
Class 4.—Women infirm through age *or any other cause.*
Class 5.—Able-bodied women and girls above the age of fifteen years.
Class 6.—Girls above the age of seven years and under that of fifteen.
Class 7.—Children under seven years.

To each class shall be assigned that ward or separate building and yard which may be best fitted for the reception of such class, and each class of paupers shall remain therein, without communication with those of any other class.

116. This quite general classification, modified and expanded now in many ways, is supplemented especially by two directions:—

(1) That the guardians shall from time to time, after consulting the medical officer, make such arrangements as they deem necessary with regard to persons labouring under any disease of body or mind; and

The system of classification—*contd.*

(2) That the guardians shall, so far as circumstances will permit, further sub-divide any of the classes enumerated in Art. 98 (above), with reference to the general character or behaviour, or the previous habits of the inmates or to such other grounds as may seem expedient.

Thus the guardians have instructions to extend their system of classification in regard to cases of disease of mind, and are also instructed, so far as circumstances will permit, to classify them on grounds of moral character and behaviour, or previous habits, or for any similar reasons.

117. As regards the extension of classification, it appears from the evidence which we have submitted that, except in the case of the certified lunatics, there is among the boards of guardians no general or universal acceptance of the obligation to provide for the care and treatment of the mentally defective, whether idiots, imbeciles, or feeble-minded, in any special or effectual manner. The guardians are no doubt allowed considerable latitude by the words "as they may deem necessary," and "so far as the workhouse admits thereof." But former standards of treatment and classification no longer suffice. With a demand for a more discerning treatment and supervision of individual cases, a better adjusted and more suitable classification is required, equally in the interest of the defectives themselves and in that of the normal inmates who suffer from the infirmities of their fellow patients.

118. That classification which the second instruction suggests is based on habit and behaviour; and though, in that guise, it might be applied to "moral imbeciles," yet its object is a segregation recommended on moral grounds, rather than on those mental grounds which affect the whole management of different classes of mentally defective persons.

Bagenal, Vol. I., 2336.

119. It would seem, then, that if the Poor Law administration of the country were to be expanded to meet the actual needs of mentally defective persons, very great changes would have to be made in its whole structure. The system of classification, so far as it affects this class, would have to be entirely revised. That "intermingling" to which in different processes many witnesses referred would have to come to an end. And, as we shall see, that primary classification by which mentally defective persons receive relief rather as paupers, than treatment as persons suffering from mental defect, would have to be set aside. The present position is indeed fairly indicated by the two following statements. Out of 8,004 feeble-minded persons in receipt of indoor relief only about 22 per cent. were in special wards or establishments of the guardians or in other institutions; and (as Miss Clifford said) "There is of course no *official recognition* of feeble-minded persons as a class, *i.e.*, no Poor Law Order has ever been issued ordering them special classification or treatment. Any consideration of them as persons of feeble-mind is due to the thoughtfulness of medical officers, matrons or guardians. Official recognition is most necessary."

Clifford, Vol. II., 16267, p. 301, c. 1.

CHAPTER IV.

Procedure of Boards of Guardians and Detention in Relation to the Mentally Defective.

Present methods of procedure regarding applications for relief.

120. Before, however, dealing with the classification of the mentally defective by boards of guardians, we think it well to describe generally the procedure usually followed in regard to applications for relief, including applications by, or on behalf of, the mentally defective.

The Application and Report Book.

121. The application is made on his or her own behalf, or on behalf of any member of the family, to the relieving officer of the district of the union where the applicant resides, and it is entered in the Application and Report Book. This book should show, amongst other details, the "Names of the applicants, their wives, and children under sixteen, dependent on them," the applicant's "calling or occupation;" if the applicant be "adult, whether single, married, widow, or widower;" and if the applicant be "child, whether

Bagenal, Vol. I., 2486, 2488.

orphan, deserted, or illegitimate." Next there is the question of physical ability: "If the applicant is ordinarily ablebodied," and "If partially or wholly disabled, and the description of the disability." Then comes the question of the relief already received by the applicant from any source: thus, if "receiving (*a*) medical relief only," or (*b*) regular or temporary relief, and any other, and what relief from clubs, charitable institutions. . . . And then, the "Present cause of seeking relief, or nature of the application." And then there follow questions as to relations liable to assist, and as to weekly earnings and income. The Application and Report Book—*contd.*

122. Two of the notes appended to the form should be added. "4. Care must be taken to inquire closely into the causes of the applications for relief"; and "7. In cases of application arising from infirmity of mind or body, designate the nature and extent of the infirmity; as a 'lunatic,' or 'idiot,' or 'deaf and dumb,' or 'crippled in hand or foot,' or 'helpless from old age.'"

123. The form, if carefully filled up, would give much valuable information. Considering it in the light of the evidence, it might reveal the circumstances of families in which there were one or more mentally defective children; and a thorough scrutiny of the "present cause of seeking relief" might show not only what is the cause of trouble, but also suggest how it might be met. Yet, after all said, the form would seem rather to serve the purpose of a general inquiry, the object for which it was no doubt principally framed, than to serve the purpose of that kind of special investigation which is necessary in the case of the mentally defective. A comparison between it and the form used by the Board of Education emphasises this distinction. The whole object of the educational form is to ascertain the facts bearing on the mental capacity of the child with a view to education; and a similar form applicable to adults would be equally useful in obtaining the kind of information required in cases of alleged mental defect. But the object of the Poor Law form is different, as the work of the Poor Law is different. Its aim is general, and it is suitable primarily for applications made on the ground of poverty or destitution. Hence, if really utilised for cases of mental defect, its use would have to be very largely supplemented by special reports, containing many of the details required in the educational form. For such a purpose it is defective, as it has no close bearing on the chief question, the nature and character of the mental defect itself. Appendices to Vol. I., pp. 685, 688.

It may be said that the district medical officer, or the medical officer of the workhouse, would in all these cases make a special examination of the alleged mentally defective person, and that therefore the nature and character of the form is of little importance one way or the other. This is so far true, that the report of the medical officer is indispensable, whether the form be suitable or not. But, so far as the evidence goes, there does not appear to be, in the administration of the Poor Law, any general system of investigation and record in these cases from the point of view of mental defect, either before or after the medical examination. No other document takes the place of such a record as the education form to which we have referred; and without it the material for the right administrative settlement of the case must often be wanting.

124. Next, in these cases of infirmity of mind it would be the duty of the relieving officer to bring the application with the report of the medical officer before the meeting of the board of guardians or of a relief committee of the board before whom the applicant appears. The applicants, as Mr. Bagenal says, "are destitute—they come before the boards as destitute people, and the guardians are bound by law to deal with them." The guardians representative of different districts, rural, semi-rural, urban, and particularly mining and manufacturing districts, present different characteristics and have different views;" but "the people are themselves beginning to see that the workhouses are much safer and better places for the treatment of these defectives and aged epileptics than their own homes, and the tendency is that they are coming into the workhouse and we are getting more control of them;" and further "the guardians are more and more anxious to deal with this class of unfortunate cases that come before them and to deal with them in institutions of some sort." Bagenal, Vol. I., 2488, 2350, 2335. Bagenal, Vol. I. 2351-2353.

The Application and Report Book—*contd.*

125. Finally, the usual alternatives before the guardians, if applicants of this kind are not certified under the Lunacy Acts, are, either to receive them into the workhouse, and to keep them there; or to pay for their maintenance in a suitable institution; or under certain conditions, if they are children, to adopt them, and so, even if they are outside the workhouse, to keep them under supervision up to the age of eighteen.

Present methods of detention and discharge.

126. As the method of enquiry adopted by the board of guardians is, of necessity, founded on the requirements suitable for dealing with poor and destitute rather than with mentally afflicted persons, so also is the method of detention and discharge. Thus, in the first place, paupers who are dangerous can be kept in the workhouse for fourteen days only.

Adrian, Vol. I., p. 103. General Consolidated Order, Article 101.

"No pauper of unsound mind who may be dangerous or who may have been reported as such by the medical officer, or who may require habitual or frequent restraint shall be detained in the workhouse for any period exceeding fourteen days; and the guardians shall cause the proper steps to be taken for the removal of every such pauper to some asylum or licensed house as soon as may be practicable."

Clifford, Vol. II., 16367, 16384. Fleming, Vol. I., 2213–2216.

In the next place there are in the workhouses other paupers of unsound mind—according to the practice of the individual medical officer—sometimes very many, sometimes very few, who are certified, but not "dangerous." These, if they are certified, must be detained in the workhouse until their discharge. If they are not certified, they can leave, with the usual notice, practically when they like.

Adrian, Vol. I., p. 103. General Consolidated Order, Article 115.

127. Lastly, there is a power of detention which is disciplinary only, and intended to prevent the workhouse being used by inmates for their own convenience.

"The pauper who has not previously discharged himself within one month before giving notice, has to give twenty-four hours' notice; if he has discharged himself once or oftener within the month before giving notice, forty-eight hours—and so on, up to seventy-four hours. Otherwise any pauper may quit the workhouse upon giving to the master . . . a reasonable notice of his wish to do so, and in the event of any able-bodied pauper, having a family, so quitting the house, the whole of such family should be sent with him, unless the guardians shall, for any special reason, otherwise direct."

Clephan, Vol. II., 18499, 18502.

128. Thus we may conclude that the conditions of investigation, supervision, detention and discharge of paupers are devised principally for destitute poor persons, and are chiefly suitable for them, but that they have no bearing on the special needs and requirements of the mentally defective. The regulations that prevent paupers from discharging themselves are applicable to those who are constantly in and out of the workhouse, and, in some measure no doubt, they hamper their movements, but they are not a suitable or sufficient safeguard in the case of the mentally defective, who with their children may frequently be found in the less settled class of workhouse inmates. Thus, as Mr. Bagenal states, "feeble-minded boys, who are practically unemployable, at the age of sixteen, drift out into the high roads and swell the ranks of the nomad class," while "the feeble-minded men in the workhouses are very often 'ins-and-outs.'"

Bagenal, Vol. I., 2341, p. 132, c. 1.

Further, "the powers of detention, which at present guardians possess, do not," he says, "cover what I think are the necessities of the situation with regard to the feeble-minded, be they children or young women."

In these circumstances, the master and matron, and the medical officer of the workhouse, have to rely on contrivance and persuasion in order to prevent mentally defective persons from taking their discharge.

Delay of discharge by remand to ward for observation.

129. One plan is to use a ward in the workhouse for observation. Thus in answer to a question whether at the Newcastle Workhouse "thirty-nine women described as of varying degrees of feebleness—sixteen of them with children—and none of them able to take care of themselves" went in and out, it was stated that to a certain extent they did, but many remained.

Pease, Vol. II., 15061, 15062, 15066.

"Our medical officer," Miss Pease said, "has the power of remanding cases for observation and he uses that in the case of some of these 'feeble-minds' by remanding them for a fortnight at a time, which he continues. I do not know whether this is quite legal, but he has done it now for a considerable time." He remands them and they stay in another part of the workhouse

"under his observation. He has found that useful. When a woman comes up, or a man, and wishes to take their discharge, he says, 'you cannot take your discharge; you can either stay here in this comfortable ward, or I will remand you to an imbecile ward'—a block of buildings in which the imbeciles used to be kept. I do not think this is strictly legal. The Commissioners in Lunacy were at Newcastle Workhouse some time ago, when a good many of these people were in the imbecile ward, of course not certified. The Commissioners objected to this; they said they ought not to be there. Then they were dispersed through the house, but the doctor still occasionally uses this method of detention. It really stops them going out of the house. He says, 'I will not discharge you, but I will remand you to this ward under observation.' They do not like it; they say, 'We will stay where we are.'" Delay of discharge by remand to ward for observation—*contd.* Pease, Vol. II. 15065, 15066.

130. Besides such a contrivance as this, over and over again, as the evidence shows, the utmost persuasion is used to prevent the mentally defective from leaving the workhouse, but very often without result.

131. Another plan is certification under the Lunacy Acts:—

"A great many," Miss Clephan said, "are kept in the imbecile wards who are certified as imbecile, and who have improved. I think they were certified probably in order that their friends should not be constantly taking them out, not particularly because they were imbecile, but because they were difficult to deal with, or because the main body of the workhouse was not the right place for them. They have been considered safest in the imbecile ward. I do not think it is at all a place for them." Detention by certification. Clephan. Vol. II., 18499.

132. Detention by certificate under the Lunacy Acts is also applied in order to remove to asylums imbeciles who are troublesome in the workhouse, or perhaps even, in some instances, to make room in the workhouse.

"Directly an imbecile or feeble-minded person in the workhouse becomes too troublesome to be conveniently dealt with there, an effort is made to obtain his or her admission to the county asylum, and in order to do this it is necessary that the patient should be certified as insane. Therefore many cases which are really feeble-minded or cases of senile decay are classed as cases of insanity merely to authorise their removal from a workhouse to an asylum. It is quite right that they should be removed from the workhouses, but it is not necessary that they should be classed as insane, or that they should receive the expensive care afforded at the asylum. They go there because there is no other institution to which they can be sent." Detention and removal of feeble-minded persons to asylums. Fleming, Vol. I., 2078, p. 115, c. 2. and 2189. Fox, Vol. II., 11553. Clifford of Chudleigh, Vol. II., p. 40, c. 1 & 2.

133. This kind of detention by certificate is due to a cause which is affecting the whole administration of the Poor Law—want of space in the workhouses; and one result of it is that it very seriously disorganises the accommodation in the asylums. A chief function of the asylums is to cure the patients admitted to them as far as may be possible. They are not asylums merely, but they are, or should be, hospitals for the mentally defective. Dangerous cases, cases of acute mania, are by the Order of the Local Government Board, sent to asylums, and must almost of necessity be there treated. But now "the county asylums," it is said, "are very congested," partly in consequence of the presence of the "feeble-minded or senile" class of patient sent to them by the guardians; and the treatment of these patients in "county asylums is harmful in two ways: (1) It is more costly than these patients require; (2) their presence may keep out, or delay the admission of, cases which would really benefit by asylum treatment." This detention, then, is detention in the interest rather of the Poor Law institution than in that of the inmate, or of the community. It is detention owing to want of space—want of space in the workhouse combined with the possible supply of accommodation in the asylum. Fleming, Vol. I., 2078, p. 116, c. 1. Davy, Vol. IV., p. 350, c. 1. Stracey, Vol. VI., p. 302.

134. The converse of this is the detention of persons in the workhouse who cannot be certified under the Lunacy Acts and for whom, thought it be desirable, no provision can be made elsewhere, owing to lack of accommodation in suitable homes or other institutions. This refers expressly to improvable cases. Of it, Mr. Baldwyn Fleming says:— Detention owing to inadequate provision elsewhere. Fleming, Vol. I, 2199.

"At present the provision for the training of feeble-minded children is absolutely inadequate. I was at Portsmouth the other day. They have got about a dozen children in the imbecile block of the Portsmouth workhouse, simply because they can find no place to which they can send them to be trained. If the guardians could find any place to which they could send them, they would send them with pleasure, but there is no place to which they can send them.

"They wanted to send some to Starcross, but those are epileptics. They have a good many cases at Starcross, but Starcross will not take an epileptic case. If a child is feeble-minded and epileptic, it is extremely difficult to find any place which will take him. If, in addition, children have any defect which requires special nursing, such as skin disease, it is additionally difficult to find a place for them.

Fleming, Vol. I., 2199.

"As a matter of fact now there are a very large number of deficient children who certainly might be improved, who are necessarily kept in the workhouse because there is no place to which guardians, with the most willing hearts in the world, are able to send them. I am most anxious that provision should be made for the children, both non-pauper and pauper. That is even more important than for adults, for the children could be done a good deal with.

"The results they achieve at Starcross are simply wonderful. Anybody who has seen what they can do with almost hopeless cases cannot come away without the most complete conviction how very sad it is that the provision does not extend so as to be generally applicable."

Detention owing to unwillingness of guardians to pay for feeble-minded outside.

135. On the other hand, sometimes, perhaps often, the feeble-minded remain on the guardians' hands because they are unwilling to pay for them in an institution: or both causes are at work. The guardians are unwilling to contribute much more than such children would cost if maintained in the workhouse.* Or, if they do so, they are tempted to have "feeble-minded children (such as in London, Bristol, and elsewhere, would attend a special school) certified as *idiots*, in order to enable them to send the children to an idiot asylum."

Fry, Vol. II., 14924, p. 226, c. 1

Joseph, Vol. II., 17012, p. 351, c. 1.

Detention, certification and removal of "feeble-minded" as "idiots." Fry, Vol. II., p. 226, c. 1.

136. And this, in turn, leads to another difficulty. As the asylums for idiots, or for the feeble-minded, as they are now generally called, take the improvable cases in preference to others, "it is difficult to know what is to become of the real idiots under the Act of 1886." The improvable cases, as we shall see, both in asylums and in charitable institutions for the care of the feeble-minded, naturally are regarded as having the first claim to help; and hence, more than ever, the less improvable cases come under the care of the guardians.

Wemyss, Vol. II., 18513. Sterling, Vol. II., 14417, 14384.

Evils resultant from present disorganised methods of detention. Fry, Vol. II., p. 226, c. 2.

137. The following typical instance sums up the matter:—

"W.P., a boy of eight or nine, an inmate of a workhouse. This is a case in which the guardians were willing to send the child to a Home for the feeble-minded. Applications were made to seven institutions on his behalf. In two of them, only improvable cases were received and the guardians were not allowed to be the judges as to the possibility of improvement; in two there were no vacancies; two were judged by the guardians to be too expensive —being 14s. and 15s. per week respectively—and one, the county asylum, refused to receive him. The guardians then determined to keep the boy and give him weekly instruction under a lady, and he improved in a few months. The same board have another boy and a girl whom they would like to send away, but having failed in the case of W.P., they have taken no further steps."

Vol. VI., p. 221

138. And incidentally two plans for detention which are noted by the medical investigators may be mentioned. Dr. Tredgold, in Somersetshire, at first thought that a considerable number of the mentally abnormal were certified under the Lunacy Acts, but on asking to see the Detention Orders he found that there were in reality very few. "A very formidable 'quarterly list of lunatic paupers' was sent up regularly to the Commissioners, but the great majority of such persons, although notified, were under no Detention Order whatever, and could walk out of the house any time they felt inclined." In regard to some of the Lincolnshire unions, Dr. Stracey says that the statistics which he submits do not give a correct idea of the number of feeble-minded which occur in the workhouse. "At one workhouse he was much astonished to find every male mentally abnormal case had been certified as insane, and he examined their Detention Orders to satisfy himself as to that point. These cases had been sent to the asylum, but the authorities there would not keep them and sent them back, though in his opinion certainly one of the cases should have been in an asylum. Another workhouse sent most of the mentally abnormal cases to the asylum. The remaining workhouses only sent insane persons away." We have here as elsewhere a conflict of authorities, linked together under no common organisation, similar to that which, as we shall see, prevails under different conditions in the Metropolis.

Vol. VI., p. 302.

139. The above instances are all, or most of them, we may say, improper modes of detention. They are due to the imperfections of the present system, which does not meet the needs of the applicants. A system applicable to poor and destitute persons is turned to account for dealing with the mentally defective. Except in the case of paupers of unsound mind, who can, on certificate, be consigned to an asylum, or detained in the workhouse under the Lunacy Acts, there is no detention undertaken on legal grounds strictly in the interest of the inmate.

* The cost of maintenance in the workhouse would be between 4s. 6d. and 5s. 6d., nearly 5s. 6d. (Bagenal, Vol. I., 2509) a week or rather more; at asylums for idiots, and at some charitable institutions it would be about 10s., at others less, 8s. or 9s.

Yet the necessity of detention for mentally defective persons other than lunatics is universally felt. To keep some of these persons in the workhouse contrivance and persuasion are used, but very many are not open to the influence of persuasion, and, after all, contrivance has its limits. The asylums for idiots or feeble-minded and the charitable societies take, as far as possible, the improvable cases and reject the others. The accommodation in both asylums and charitable institutions, whether for the idiots or for feeble-minded, is full or nearly full. These bodies consequently throw the unimprovable cases back on the guardians, who, in their turn, owing to want of space, strive by certification under the Lunacy Acts to transfer their mentally defective patients to the asylums for lunatics. In so doing they cause another evil. They turn the asylum to account in a manner that was not intended, throwing on the country a larger expense and reducing the asylums from what they should largely be, curative and scientific institutions, to refuges for imbeciles, who require care and nursing and simple supervision, but not the peculiar treatment and oversight of a hospital specially devised, in a large degree, for acute cases. Lastly, the asylums for lunatics become "congested," for in the struggle for space they serve as the final clearing ground. Thus everywhere we find—and it is an entire confirmation of our argument—that it is urged either that the asylums should not be extended, on the ground that they are institutions too expensive for the cases for which accommodation is desired; or that, if they are enlarged, only comparatively cheap and simple buildings, suitable for imbecile or senile cases, should be added to them. All are in favour of detention, but obviously, if the method of detention is extended, the lack of suitable accommodation, which is now so generally felt, must become an overwhelming difficulty, unless the accommodation now available is greatly augmented, and more aptly designed for the needs of the different classes of mentally defective persons.

Evils resultant from present disorganised methods of detention —*contd.*

140. This statement presents only the evidence of persons connected with the Poor Law. We will consider later on the opinions of those who are interested in the question from educational and other points of view. In the meantime, two or three conclusions may, we think, be drawn: (1) that if the present extremely unsatisfactory state of things is to be improved, some system of classification of the whole of the mentally defective class from lunatics down to the feeble-minded must be devised and generally accepted, so that each institution, and each group of institutions, shall fulfil a definite purpose and deal with a special section of the whole class. And (2) that consistently with this system of classification, whatever it be, there must be a method of certification, so that those for whom the special type of institution is deemed necessary should have a certificate granted under whatever conditions of time, renewal of certificate, etc., may be deemed indispensable to ensure the proper use of that type of institution. Lastly, (3) it is evident that a large increase of accommodation is necessary, and that for that purpose the utmost use should be made of any available accommodation, if it be only until a more complete and properly classified provision can be made.

General conclusions on insufficiency of present system.

141. With these general conclusions before us, we have to ascertain what are the opinions of guardians, and Poor Law officials, as to the methods of certification, detention, and discharge which should be adopted with a view to a proper system of classification and treatment, and then what proposals they have to make for meeting the want of accommodation, either by the adaptation of existing institutions or by the creation of new agencies.

Suggestions in regard to detention from the Poor Law side.

142. The need of detention is evident, in order to prevent the degradation of many of the mentally afflicted. In many instances, detention in the workhouse would appear to be desirable, at least as a temporary measure; and at the outset, we would point out that the principle of enforced detention in the workhouse has, in certain circumstances, been accepted by the legislature. In the Poor Law Amendment Act of 1867 there was this section: "When there shall be in any workhouse a poor person suffering from mental disease, or from bodily disease of an infectious or contagious character, and the medical officer of such workhouse shall upon examination report in writing that such person is not in a proper state to leave the workhouse without danger to himself or others, the guardians may direct the master to detain such person

30 and 31 Vict., c. 106, Section 22.

Suggestions in regard to detention from the Poor Law side—*contd*

therein, or, if the guardians be not sitting, the master of the workhouse may, until the next meeting of the guardians, detain him therein, and such person shall not be discharged from such workhouse until the medical officer shall in writing certify that such discharge may take place: Provided, however, that this enactment shall not prevent the removal of a lunatic to a lunatic asylum. . . ."

143. By the Lunacy Act, 1890, 53 & 54 Vict., c. 5, Sec. 342, this clause was repealed except as regards persons suffering from bodily disease of a contagious or infectious character; and clauses in the Lunacy Act of 1890, Sections 20 to 26, took its place in relation to the detention of insane paupers in workhouses. The words "mental disease" of the Act of 1890 were thus construed as equivalent to the words "lunatic or idiot or person of unsound mind" in a certification under the Lunacy Act; and the clause in virtue of which mentally defective persons, on a broad interpretation of the phrase "mental disease" might have been detained, was so modified as to be inapplicable to the bulk of the class which we are now considering.

See Form of Certificate No. 11—for detention in workhouse.

Detention of young persons "over 16." Fleming, Vol. I., 2078, p. 115, c. 1. and 2. 2125, 2132, 2203. Skinner, Vol. II., 14826. Fleming, Vol. I., 2143, 2255, 2123, 2266.

144. Now, however, further suggestions for detention and control have been made to us. Until sixteen a mentally defective, like any other child, can be detained in the "workhouse," unless, dependent on parents, he or she leaves the house with them when they go out. At sixteen, it is suggested, the guardians might have permissive power to detain, just as they have now permissive power to adopt, children, under certain conditions, till the age of eighteen. This power would be exercised subject to certification, the certification being entirely distinct from that under the lunacy laws. Or a further suggestion, the guardians, or possibly some other authority, might be given a power to detain without limit of age, subject to restrictions which would guard against any improper exercise of power, though the parents or anybody *in loco parentis* should have some power of appeal if they wanted to have a child under their own control. The guardians, or some other authority with the power of detention, would have also a power of discharge similar to that they have under the Lunacy Acts, if they thought discharge safe. There would thus be created a system of detention, without any limit of age, applicable to the individual case.

Fleming, Vol. I., 2078, p. 115, c. 2.

To make this policy practicable, it is urged that intermediate institutions should be established:

(*a*) Between the workhouse and the county asylum; and

(*b*) between the county asylum and the costly private asylum.

Fleming, Vol. I., p. 116, c. 1. 2143, 2146.

The intermediate institutions would take "feeble-minded and harmless cases of mental failure from ordinary senile decay." Further, for the control and education of feeble-minded children, there should, it is said, be yet other institutions in which the guardians should pay for their maintenance and education, for "it seems very clear that the workhouse is not the proper place for any person of defective intellect who can benefit from treatment or who requires special care or mental nursing." And coupled with this, again, the suggestion is made that the county councils might establish and conduct these institutions and exercise the powers of detention.

Fleming, Vol. I., 2078, p. 116, c. 2.

This statement represents very fairly the general tenor of the proposals for detention which have been frequently pressed on us in many vague forms.

Long or permanent detention. Townsend and Jefferies, Vol. I., 4259. Sayer, Vol. II., 19007, 452, c. 2. Clifford of Chudleigh, Vol. II., 11711–11712. Raw, Vol. II. 18083, 18090–18098.

145. In cases of long or permanent detention, some witnesses suggest that the medical certificate of an expert should be required, in addition to any certificate that may be granted by the medical officer of a workhouse; that the detention should be approved by a magistrate, and that it should not be final, but renewable from time to time. Or again, it is suggested that "powers should be given to magistrates upon the application of boards of guardians to make an order for the detention of feeble-minded persons for a fixed period of, say, twelve months; such order to be renewable." In this case, presumably, the medical officer of the workhouse alone would be required to give the medical certificate. Speaking of feeble-minded women who "come into the workhouse repeatedly with various illnesses, and with illegitimate children," Dr. Raw, Visiting Medical Superintendent, West Derby Union Infirmary, Liverpool, agreed that pending any large change the medical officer should give a certificate

Raw, Vol. II. 18086.

of detention on the birth of two illegitimate children; and that for longer detention in a colony, the certificate should be safeguarded by the certificate of a magistrate and two medical officers, be in force for two years, and be subsequently renewable; and the applicant should also, he suggested, be examined and re-examined very often. Another similar suggestion was pressed on us by Mr. Fox, who gave evidence on behalf of the Somersetshire County Council, in regard to "feeble-minded or immoral women," namely, that "additional power should be given to the guardians under the Poor Law to detain permanently such cases as apply a second time to any workhouse" on account of the birth of an illegitimate child.

Long or permanent detention—*contd.*

Fox, Vol. II. 11455, p. 30, c. 2. 11520, 11542-3, 11577.

146. It was also suggested to us that all children under sixteen who are not paupers or detained in asylums, should be cared for by the local education authority; that, after sixteen, they should be maintained by boards of guardians in their own institutions, supplemented to some extent by voluntary homes in those cases in which the parents were able to contribute to their support; and that the certificates for detention should be granted for a fixed period and renewable, and should not require that the patient is of "unsound mind," as those words are now interpreted. On this proposal, except in lunacy cases, the board of guardians would become the sole local authority over mentally defective persons after sixteen; and before sixteen, except in lunacy cases, the local education committees would be the sole local authority. But, it should be remembered that apart from its meaning under the Lunacy and Idiots Acts, "detention" covers many different issues; detention of a person in a workhouse, or in some special quarter, ward, or building attached to a workhouse; in an "intermediate institution" in the case of a person discharged from a workhouse; in a boarding and training home; in a custodial home established and managed by a public authority; in a voluntary or charitable home, certified and inspected; and lastly, in a colony.

Detention suggested under Local Education and Poor Law Authorities.

Curtis, Vol. II., 18946.

147. On this evidence these two questions arise:—

(1) How should the workhouses be used in cases in which detention is necessary? What classes of mentally defective persons should be allowed to remain in them, either provisionally, until other arrangements are made, or permanently?

Detention: whether in workhouses or elsewhere?

Any system of detention which we can recommend will be largely regulated by this consideration.

(2) What other forms of detention should there be? Should we have one system of certification and one method of admission in regard to all these various institutions, or should we have several? With this question we will deal later.

148. To take, then, the former question now. Almost all those who have made suggestions from the point of view of the Poor Law take for granted that in some way institutions will be established to provide for the mentally defective at different periods of life, and thus under various conditions of detention.

There is great variety of opinion as to the use that can be made of the workhouses. Some would use them for "inoffensive" feeble-minded people, who "get fond of the workhouse and of the people in the workhouse and they practically go along their normal life." They are "perfectly harmless in the workhouse" and "they do a great deal of useful work."

Bagenal, Vol. I., 2403. Fleming, Vol. I., 2181, 2182. Fox, Vol II., 11455, p. 30, c. 2.

149. In this relation Miss Skinner's evidence as to York, and Miss Clifford's as to Bristol, may be quoted. Miss Skinner described the sick and imbecile wards and their inmates. She said:—

"I have been in charge of the sick wards, lying-in wards and imbecile wards for the past five and a half years. The number of beds in the infirmary are 277, and the number of beds in the imbecile wards are seventy-eight. . . . . I find, as a rule, that epileptic patients are good, clean workers, and nine of these cases are employed in different ways in the wards, and they do work that, if they were removed from here, either women from the body of the house or paid people would have to do. Four of these cases do scrubbing in the wards. Three of them do all the repairing of linen, etc., for the floor. One washes up after each meal and keeps the day room tidy. One helps about, doing odd work. The other cases are not able to do much, as several are old and infirm or otherwise unfit to work. The beds in the imbecile wards are all occupied always. . . . Many of the imbeciles are able to do a certain amount of work, but they need constant supervision or they forget; a few of them go to the laundry every day. On the whole I find the patients are very happy and contented, and I consider that imbeciles, decided feeble-minded cases, and idiots, can be well cared for in any workhouse, and from my own experience these cases are well cared for in workhouses, and I think it is

Skinner, Vol. II., 14784, p. 218, cols. 1 and 2.

Detention: whether in workhouses or elsewhere?—*contd.*

the proper place for them; all they need is kindness and proper care and supervision. Some of the patients have been here for years, and they are clean, healthy, and happy, and I know the most sensible of them would not like being removed. Much depends on the attendants, but if trained nurses are employed to look after these cases, they are better cared for."

Speaking of the utilisation of the workhouse for feeble-minded women, also, she says:—

Skinner, Vol. II., 14833.

"I think a great deal could be done in workhouses in getting people detained, transferring them from the lying-in wards when they appear to be feeble-minded. I think the medical officer could do a lot in those cases."

Clifford, Vol. II., 16285.

150. Miss Clifford, a guardian of the Bristol Union, suggested that many of the weak-minded girls might be detained in the workhouse in separate quarters, and that very likely they would be able to undertake the whole of the laundry work of a large workhouse with supervision: the present adults in the workhouse might be detained in that way, in buildings attached to workhouses; but she added:—

Clifford, Vol. II., 16288–16289.

"Of course, the life in some of the small institutions is very preferable. I should be very sorry to see some of our feeble-minded girls, who are in some of the voluntary institutions, living in a workhouse. I think for those at present in the workhouses it is much better that, they should remain in suitable quarters in the workhouse. . . . . I should not propose to take the weak-minded inmates now in the workhouses, and put them into a voluntary institution. It would not answer after youth. They rarely receive any but girls straight from our schools into the voluntary institutions."

Clifford, Vol. II., 16332.

151. And speaking of imbeciles, both of the feeble-minded and imbecile people now in the workhouse at Bristol, Miss Clifford said:—

"I think that the ideal workhouse is a very suitable place for them, but the real workhouse is never ideal. Their happiness and well-being depend entirely on the people who are their attendants. There is the greatest possible difference in the tone of different imbecile wards. If you have a good, kind, careful headman, the people are very happy. We have two workhouses, everything is doubled unfortunately at present. In our men's imbecile department at one of the workhouses they are as happy and well-to-do as possible. The same thing applies to the women. I am rather influenced in giving an opinion on the subject by the fact that we women guardians can do a great deal for these people. There is one of our ladies who gives a very great deal of time and attention to them, and has very much brightened their lives."

Fox, Vol. II., 11457.

152. Other witnesses make more detailed suggestions. They propose that compulsory powers should be imposed on the Education Committees of counties and boroughs to send all such imbecile or defective children as cannot be instructed in primary or secondary schools to training schools provided by the county councils, and (*a*) that no children should be discharged from these homes "except such as under periodical medical examination can be certified as of sound mind"; and (*b*) that such as cannot be so certified, should be drafted to special departments of county or borough asylums—or "if they are only very slightly defective, they might be drafted into our workhouses and live there as useful persons." The power of certification by a magistrate and doctor would also be extended to the case of feeble-minded women who might be kept "under the name of idiots or imbeciles as members of the workhouse, where they are extremely useful in cultivating the garden or doing housework." "As a rule, it is said, our workhouses are very good homes for feeble-minded persons who are not violent." Mr. Fox added; "I consider that all these feeble-minded, whether such men as you have last mentioned or those who might be included in a wider scheme of certification, or these evil women who do so much harm in the world, should be detained in the workhouse under the powers of detention which we have."

Fox, Vol. II., 11455, p. 30, c. 2.

Fox, Vol. II., 11479.

11483.

Fox, Vol. II., 11484.

Fox, Vol. II., 11542, 11543.

153. In effect on this evidence we might, under definite conditions and safeguards, recommend the retention of inoffensive mentally defective people in the workhouses under certificate either permanently, or, if other more suitable provision were made, temporarily.

General conclusions as to utilisation of workhouses.

154. We are of opinion that, subject to special inspection as to the fitness, arrangements, and organisation of the particular workhouse, and subject to due individual certification, the older "inoffensive" mental defectives who are not "improvable" might be left in the workhouses in some cases permanently, in others temporarily, or at least until a general system for their care has been instituted. Our policy, indeed, would be to utilise particular workhouses, so long as is necessary for some cases, and perhaps permanently for other cases; but to do this, subject to a much more efficient system of inspection and certification; and chiefly as an interim measure, while more suitable provision for these classes is being organised.

CHAPTER V.

Suggestions for Improved Classification in connection with Poor Law Institutions.

(i). Classification by Adaptation of Workhouse.

155. The need of more accommodation for the mentally defective is admitted on all hands, as this report will witness again and again. To meet this, various suggestions have been made for the better use of unoccupied space in workhouses, and for the supply of additional accommodation by concerted action between boards of guardians.

156. One scheme which has been discussed is the adaptation of the workhouse of some one union in a county to the requirements of a custodial home, so that one or more classes of the mentally defective should be sent there by the guardians throughout the county. In some counties there are workhouses which are partly unoccupied. The cost of the supply of new accommodation is likely to press hard on local ratepayers, who already complain of the serious increase in the educational rate, and, especially in rural districts, where there is a comparatively low assessable value they feel keenly any large addition to their common charges. Accordingly, in these districts more particularly, the adaptation of an existing workhouse has seemed a possible device for providing the accommodation now required at a minimum cost.

As Mr. Bagenal, a General Inspector of the Local Government Board, says :—"The great difficulty is that the rates are going up. People will not do anything which makes the rates higher. They say, 'this is a small matter, these feeble-minded folk are insignificant; we will disregard them.' That is the great practical difficulty in the front of all reformers—the financial side of it." Where there is a high and increasing assessable value, considerations of economy may have less weight ; but in rural counties they are a chief part of the problem.

Bagenal, Vol. I., 2377. Acland, Vol. II., 11611. Cooke, Hurle, Vol. II., 11752.

157. Lord Clifford of Chudleigh, the Vice-Chairman of the Devon County Council, and Chairman of the Asylum Committee, and Sir C. Thomas Dyke Acland, the Chairman of the Devon County Council, have submitted to us a scheme, of which the utilisation of the workhouse forms part. This scheme we will describe.

Suggested scheme for utilisation of workhouses in Devon.

It appears that, in Devonshire, the pressure on the county lunatic asylum has been very acute. To a great extent, this has been caused by the readiness with which idiots, imbeciles and epileptics have been certified as lunatics, and sent to the asylum. For many of these, nothing could be done "beyond careful nursing and good and suitable diet." The asylum committee of the council protested, and issued notices to the board of guardians asking them to send only acute cases, but without result. A select committee was then appointed by the county council, and it reported that "it should be the duty of county councils to provide suitable accommodation in separate institutions for the proper treatment of all pauper imbeciles and epileptics." The advantages to be gained by this course would be, it was stated :—

Clifford of Chudleigh, Vol. II., p. 40, c. 1.

Clifford of Chudleigh, Vol. II., p. 40, c. 2.

"(1) That the expensive buildings and staff necessary for an asylum for lunatics would be unnecessary for these classes.

"(2) That it would be possible to train and employ the patients in useful and remunerative occupations which it is impossible to do to any considerable extent in a lunatic asylum.

"(3) That the patients themselves would be more favourably situated in separate establishments than in association with lunatics.

"On the question of cost, each patient in the Devon County Lunatic Asylum cost about 12s. 6d a week, including the cost of buildings. The cost of maintaining an imbecile or epileptic pauper in a workhouse varies in the county from 3s. to 7s. 6d. a week, the minimum sum being the charge in a purely rural union, and the maximum being the charge in a union largely composed of thickly populated urban districts."

158. The Devon Asylum is authorised to accommodate 1,254 patients. It was found in 1905, Lord Clifford stated, that of the inmates, 243 could be removed from the asylum if separate buildings were available. Of this number, 125 were epileptics, 80 were imbeciles, and 38 were idiots.

60th Report of the Lunacy Commission, p. 229. Clifford of Chudleigh, Vol. II., p. 41, c. 1.

Besides these, in the union workhouses in the county there were approximately 245 imbeciles (including idiots), and five dangerous epileptics.

Suggested scheme for utilisation of workhouses in Devon—*contd.*

Besides these, again, a county return showed that, apart from inmates at the Starcross Idiot Asylum, there were 153 mentally defective children; sixteen mentally defective and epileptic; and thirty-two epileptic, but not mentally deficient: in all 201. Clifford of Chudleigh Vol. II., p. 41, c. 1.

159. For the adult imbeciles and epileptics, the county council found that they had no power to provide separate accommodation, and they were of opinion that additional accommodation for lunatics was not to be desired. They wished to have the power of providing for "non-lunatics" conferred on them. Similarly in regard to the children, they found that they were unable to make any satisfactory provision. Seventy-five of these children were in attendance at public elementary schools, but the remainder were not receiving instruction in any form. Probably about a quarter of the total number would "receive benefit by being detained in a colony or workhouse ward and taught in the usual way." Clifford of Chudleigh, Vol. II., p. 40, c. 2. p. 41, c. 1.

160. The proposals made upon this summary of the facts were these:—

(1) That in the interests of the whole community, for reasons not only sanitary but also economical, it is undesirable that imbecile or feeble-minded paupers should be sent to lunatic asylums. Clifford of Chudleigh, Vol. II., 11689.

(2) That, as the workhouses in the county are not full, an existing workhouse might be utilised as a home for the feeble-minded, and the paupers, in the workhouse utilised, accommodated in some other workhouse. 11691.

(3) That the county council should have power to make provision for feeble-minded paupers in such a building. 11694. 11695-11696.

(4) That the entire county, under the county council, be a union area for providing and maintaining an institution for the feeble-minded and that the charges be met by a rate imposed on the various unions according to population and rateable value.

(5) That the management of these institutions might be left very much to an outside committee of the county council, but that the council should have power to supervise expenditure and to nominate a large proportion of its members so that the committee should be "something outside the actual work of the county council, although the county council would have to have a certain amount of control over it." 11740.

(6) That, with the exception of the expense of increased accommodation, the charge for maintenance should not exceed that of the more costly workhouses of the county—about 7s. 6d. a week. 11729.

(7) That as the "outside committee" of the county council would act as a county authority no "idea of pauperism would linger about it." 11708.

(8) That in the case of children reported to be feeble-minded, inquiry would be made to ascertain whether or not "their own surroundings afforded a sufficient and reasonable method of taking care of them," and if they did not, the children would be removed to a place where they would receive proper attention. This should be done on the order of a magistrate; and the order should be revised at stated intervals, "because no doubt a certain number of these feeble-minded people might recover sufficiently to be allowed to go back to their friends." 11709. 11712.

(9) That the chief reason why the guardians did not retain the imbecile and feeble-minded paupers, was that, when sent to the lunatic asylum they received the 4s. Exchequer grant towards their maintenance. "I do not think," Lord Clifford said, "from what we hear from the guardians, that the guardians are at all desirous of taking these feeble-minded; they would like to get rid of them as well. The temptation is to send them because they have only to make the contribution of a balance." 11721.

(10) That the counties might combine, where necessary, on some such lines as those indicated by Sir C. Thomas Dyke Acland, who gave evidence on behalf of the County Councils Association:—

"I should have thought you might ask the contributing counties to send up so many representatives, not necessarily from the county council, but appointed by the county council, and they would form the governors of such an institution as this, and be responsible just in the same way as the ordinary visiting committee of an asylum are responsible for the management of that. . . . . I should be almost in favour in that case of having some one nominated by the Local Government Board. I think you ought to have some special expert in a governing body distinctly . . . As to the finance, I should suggest in the first place that the parents should contribute something, say 2s. or 2s. 6d., according to their grade, and then the county also would have to contribute something. I Acland, Vol. II., 11667. 11668-11669.

should think that a good basis for any financial grant from the Exchequer would be the cost of the staff, because the cost of the staff would not vary very much up or down, and, in my opinion, the dismissal of the staff ought to be in the hands of the Local Government Board rather than in the hands of the governors, and appointments made subject to their approval."

Acland, Vol. II., 11670.

Suggested scheme for utilisation of workhouses in Devon—*cont'd.*

161. This scheme, it will be noted, provides for a standing committee of the county council responsible for the treatment of the imbecile or feeble-minded and epileptic paupers on behalf of all the unions. This committee is to be a nominated committee, composed in great part of persons who are not members of the council, and it would thus differ from the Asylum Committee of the Council, though in some ways its duties would be similar. The county council itself would assume a relation to its special Standing Committee not unlike that of the Metropolitan Asylums Board to the Poor Law guardians of the London unions. The classification of the mentally defective would be arranged as for the whole county—for a population of about 665,000 persons—and would be applied on lines consistent with the arrangements made for the accommodation of lunatics at the county asylum, not, as at present, adopted without regard to them. Counties requiring only a comparatively small amount of accommodation for a particular class would combine with other counties in order to provide a common institution. The scheme, too, is economical; and if the grant in aid which was received from the Exchequer were payable to the county council, the special Standing Committee of the council which would maintain its institutions, in part out of the county rate, in part out of the payments of relatives, and possibly in part out of the payments of boards of guardians, would itself receive and retain the Exchequer Grant which, in the case of lunatics, now passes to the account of the guardians. This change would greatly alter the position. On the strength of it the county council committee might offer such terms to the guardians as would induce them to send—not any cases they might wish to be rid of, such as the feeble-minded and imbecile paupers now sent to the Devon County Asylum—but such cases as the committee, on inquiry and certificate of detention, considered suitable for the particular institutions of which they had charge.

Acland, Vol. II., 11595-11597.

Clifford of Chudleigh, Vol. II., p. 40, c. 1.

162. This scheme appears to us to have been very carefully devised, but judging from the evidence submitted to us by Mr. Baldwyn Fleming, a General Inspector of the Local Government Board, and other witnesses, there is one weak point in it. To utilise any of the workhouses in a county as a home for the imbecile and feeble-minded would be very difficult. Mr. Fleming, in his evidence refers, it is true, in part to another class of the mentally defective—the senile cases; but he refers also to the feeble-minded, and so far his evidence is apposite.

"I do not think," he says, "that provision for accommodation for cases of senile decay and cases of chronic feeble-mindedness need be more expensive than workhouse provision . . . A good many of these cases are bedridden, and you would want more cubic space than where you had to deal with the able-bodied, but I think that the provision made in the ordinary workhouse sick ward would be quite enough for cases of senile decay and for ordinary cases of feeble-mindedness that merely want observation and proper nursing to prevent bed-sores, and to keep them clean, and details of that kind. . . If you could get one workhouse to spare, the accommodation might be sufficient for the class of case you are referring to. Can you get a workhouse to spare? . . . Can you get any board of guardians that is willing to be wiped out? I have never found one yet. I have tried to dissolve a union, but I have found I have had to give it up, because they would not consent to be dissolved. If you cannot wipe them out, you must get them to consent to take one particular class. If you combine by workhouses, would you get any board of guardians that would consent to take, as their class, the feeble-minded, the epileptic, and the insane" [*i.e.* cases of senile dementia]? "I do not think you would. Then you bring in the element of distance, which to me is a very serious one. The workhouses are now so placed that they are practically as a rule the centre of their own unions. The guardians come from all their parishes, the clergy come, the carriers come; there are endless sources of communication between the different parishes of the union and the union at the centre. By that means the people in the workhouses are kept more or less in constant touch with their old associations and their old homes; and their friends can come and see them." In the average union the boundary is perhaps seven or eight miles from the centre. . . . "Supposing you remove those people twenty miles away . . . that is a very great hardship, and one which would, I think, especially affect the sick and the feeble-minded. . . . I think that the interests of the feeble-minded and their relations are deserving of very serious consideration."

Fleming, Vol. I., 2176–2177. 2179. 2179. 2180.

163. Accepting then the scheme submitted in outline by Lord Clifford of Chudleigh as, subject to certain modification, suitable for most counties, we think that reliance cannot be placed on obtaining the accommodation required by

General conclusions as to the Devonshire scheme.

General conclusions as to the Devonshire scheme—*contd.*

taking over a partly occupied workhouse and dispersing the remaining inmates among other neighbouring unions. To take over the workhouse, it would not indeed be necessary to eliminate the board of guardians; the board of guardians might remain and might deal with such applicants as required indoor relief by placing them in neighbouring workhouses. Yet, even so, undoubtedly the plan would be difficult to execute. The workhouse serves as a poorhouse for those in the union who are aged and unable to work, and, as part of the equipment of public poor relief, some such house is almost indispensable. Possibly however, a standing committee of the county council could make arrangements for boarding patients in suitable workhouses under proper safeguards, at least as a temporary measure, on the lines now frequently adopted by urban unions who place their aged poor in the partially empty workhouses in country districts.

Suggested arrangement between country unions.

164. Mr. Vallance, who was for thirty-four years clerk to the Whitechapel Union, proposed an arrangement among country unions for mutual assistance in the care and classification of different classes of the mentally defective. He combated the view that it was necessary to form a separate district board consisting of the representatives of the associated unions, with a separate staff and much additional outlay and expenditure. He said:—

Vallance, Vol. II., 14631, 14632, 14635.

"The difficulty I see in the way of unions combining for the purpose of providing for certain classes of poor under a separate district board is the enormous expense to which it leads. My suggestions go in the direction of utilising as far as possible present means, trusting to medical inspection for development of provision in the future; not to launch all at once a scheme for big institutions. May I put it in a concrete form? Here are four, five, or six country unions; they have conferred together as to the best mode of providing for their feeble-minded children or adults; they have come to the conclusion that Union A. has got a separate building or a building which can be adapted to the special needs of this class, and the others would be prepared to enter loyally into the agreement for the maintenance and detention of those children there. In that case, with buildings already, in many cases, in existence, their needs would be provided for at a minimum cost. The country workhouses usually have a considerable portion of land attached to them, and certainly if five or six or even a larger number of unions get into combination and come to a mutual agreement they will soon find the workhouse which is best adapted to their purpose. In any adaptation of that sort there is no staff and no special administration."

165. This scheme is suggestive, and it indicates what may be done if some common authority could use the workhouses according to the needs of particular cases, instead of, as at present, guardians of particular unions receiving into their workhouses cases of every kind. There is, however, another criticism on Lord Clifford's scheme, and, in a lesser degree, on Mr. Vallance's. The Devon proposal is to utilise one workhouse in the county for the imbecile and feeble-minded; but it is evident that one workhouse adapted as a home would not suffice for dealing with the various classes for which provision is required—as, for instance, with the class of respectable girls who now "have to be placed in the same wards with women of the very worst type" and the many other classes of the mentally defective. On the other hand to classify, or rather separate, the girls in the rural half empty workhouses would in some cases be almost to commit them to solitary confinement. "There is occasionally an attempt at classification by day," Miss Fry states, "but they generally sleep in the same dormitory. Some of the girls by day are taken away from these women to do work in other parts of the house. . . . I am frequently told by guardians that there are a great many empty places, and that from the point of view of economy the workhouses ought to be utilised for some special class, but at the same time those very guardians say they do not think the workhouses would be very suitable places; they recommend them on grounds of economy."

Fry, Vol. II., 15023.

Fry, Vol. II., 15025, 15026.

Necessity of a larger scheme.

166. With this opinion we agree. We think that though under the conditions we have mentioned in paragraph 154 particular workhouses might be used temporarily for "imbeciles, decided feeble-minded cases, and idiots," they are not suitable for mentally defective girls or women who are in any sense "improvable" and for whom fitting provision can be made in voluntary or other homes. So also with cases of mental defect of other types. Indeed it seems to us that to meet the great diversity of these cases a proper classification must necessarily entail a larger scheme which would permit of much more diversified methods of treatment than could be provided by workhouses or by any single county workhouse, however carefully it might be adapted to its new purpose.

Wemyss, Vol. II. 18505, p. 430, c. 1 & 2. Sterling, Vol. II. 14377, pp. 190–191. Pease, Vol. II. 15069, p. 232, c. 1 & 2.

(ii.) Classification by Special Establishments in connection with the Poor Law.

167. The schemes we have next to consider refer chiefly to urban or quasi-urban areas, or to these in conjunction with the rural areas with which they may be most naturally associated. The financial position of these urban districts is very different from that of the rural. Here we find usually an assessable value that in recent years has largely increased; and the difference indicates one point in our problem, namely, whether, in order to deal effectually with the mentally defective, a financial scheme can be adopted which will secure to districts with a low assessable value some of the advantages available for districts where the assessable value is rising. To effect this and other results, some form of combination is clearly necessary.

Branch Institutions under Poor Law insufficient to meet necessities of the case.

168. To provide sufficient and suitable accommodation with proper classification, it is not enough for a board of guardians to open branch establishments for classes of the mentally defective—useful as that is as a partial measure. This the Preston board have done by opening a branch workhouse for male imbeciles and insane epileptics at Ribchester, and the Liverpool Select Vestry by opening one for female imbeciles and insane epileptics at Dingle Mount. Also, for epileptics, not classed as insane, the Liverpool Select Vestry have a branch workhouse at Highfield, and the West Derby Union have also a branch workhouse primarily intended for this class. Moreover, the Manchester guardians have provided separate quarters at their Crumpsall workhouse for this class, though the epileptics, finding themselves rather dull, asked to be allowed to go back among the imbeciles. So elsewhere, in many unions separate blocks or quarters or wards have been opened for special classes, as part of the more detailed classification of the workhouse; and hitherto this indeed, rather than the institution of separate establishments, has been the method preferred in providing for the mentally defective in urban areas. But neither method suffices for the classification, which the evidence that we have taken would appear to require and to justify: and hence various forms of combination, either of unions, or counties, or Poor Law Authorities or lunacy authorities, with or without co-operation with voluntary institutions, have been outlined and proposed.

(iii.) Classification by Combination of Unions.

169. The object of combination is classification, and it is evident that, if classification is to be pushed as far as many witnesses propose, the establishments required should be very various. For sane epileptics, and for insane, there should be separate homes or settlements; for idiots and unimprovable imbeciles, custodial asylums; for mentally defective children, special training schools or classes or boarding homes or colonies, and for mentally defective adults, colonies or open-air settlements. Also, as in London, for harmless certified lunatics, some special provision might have to be made, outside the ordinary workhouse buildings. It is clear, therefore, that as classification becomes more detailed, the district for which the institution is established must be enlarged; and it must deal with a larger area than that of a single union, even if the union be urban and populous. On the other hand, if the union be rural, it will have to deal with a few cases only and will rather desire to take advantage of any general organisation that may be available than to form part of a fixed combination. And in fact this represents a general division of opinion. In populous urban unions, though additions be made to the Poor Law buildings in order that they may meet new and more various needs, boards of guardians are pressed to deal with large classes of mentally defective paupers by combination with other unions, whenever they cannot do so by the mere extension of their workhouses. In rural unions, on the other hand, as we have seen, there is often sufficient or indeed ample space, but it is not possible to turn it to account and to make a satisfactory working classification with only a few inmates. Hence the two methods are suggested, combination and the use of special institutions by contract or by payment in the individual case.

170. The case for combination of urban unions was strongly pressed by Mr. J. Wycliffe Wilson, who has for a long time served as a guardian at Sheffield. He called our attention to the following resolution of the council of the Poor Law Unions Association:— Wilson, Vol. IV., 11318, p. 22, c. 2.

"That the provision for the epileptic, imbecile and feeble-minded, and also for harmless pauper lunatics, should be made by boards of guardians individually or in combination and not by county councils."

Classification by combination of unions.

171. He argued that as the guardians had "in readiness the best machinery for making the necessary inquiries, and for forming an opinion as to who is and who is not able to pay or contribute to the cost of maintenance . . . it would appear much better that the guardians should deal with all cases where any part of the cost of maintenance has to be provided from public funds." To promote this policy, he quoted another resolution of the Association that boards of guardians should receive a grant of not less than 4s. for "every harmless lunatic, epileptic, imbecile or feeble-minded person sent to a certified home or maintained in institutions provided by them, to the satisfaction of the Local Government Board." And further to enforce this method, and draw the unions in country districts into the combination, he would apply the compulsion of law; and he anticipated that even smaller boards of guardians representing a population of 10,000 or 15,000 "would have to join in the contribution to the combination, and pay so much per head, and have a joint committee of some kind." "If the law facilitates it," he said, "I think there ought not to be any difficulty. It is done in the Metropolitan Asylums Board: there is combination for providing hospitals and asylums."

Wilson, Vol. II., 11318, p. 22, c. 2.

11355.

11364.

Stone, Vol. II., 13759.

172. Mr. Henry Stone, Clerk to the Guardians of the Poor of the Norwich Incorporation, took a further step and advocated enforced combinations for institutions for the feeble-minded throughout the country, desiring that for the erection of these institutions the Local Government Board should map out so many areas administered by so many boards of guardians.

173. On the other hand, in reply to the question whether in the East and West Riding, provision for the feeble-minded might not be made by amalgamation and joint action, Mr. Bagenal, a General Inspector of the Local Government Board, said:—

Bagenal, Vol. I. 2364.

"I do not see exactly how you are to remedy it, because the great objection of the guardians is multiplication of institutions and officers. If you have joint action on the part of several boards you must have a joint institution."

Jenner-Fust, Vol. I., 2530, p. 139, c. 1.

And Mr. Jenner-Fust, a General Inspector of the Local Government Board, admitting that "there is a general consensus of opinion in Lancashire that a workhouse is not the right place for imbeciles or epileptics of either class" *i.e.*, sane or insane, proposed a county scheme, because as he says, "guardians could not provide satisfactorily for this class except in combination (to adopt which method for any purpose they have shown great unwillingness) and even then only for paupers."

p. 139, c 2.

2683.

And later he says, "I have always found boards of guardians extremely unwilling to combine for any purpose whatever. There have been a few instances in Lancashire of late years, but in the rest of England there have been hardly any. It is perhaps unfair in the case of a rural union, for instance, who have one epileptic in every two or three years to send to an institution, that their whole rateable value should be placed under contribution."

Pease, Vol. II., 15060, p. 233, c. 2.

174. Miss Pease, also, who has been most active in endeavouring to improve the position of the feeble-minded in connection with the Newcastle Board of Guardians, of which she is a member, took a very different view from that expressed by Mr. Wycliffe Wilson and Mr. Stone. She said—

> The county and town councils have already control over lunatics and over education. [They should therefore take charge of the feeble-minded also.] "This would be better than leaving some of them under the care of the guardians; because the councils have a much wider area to deal with, and would have much more power to effectively deal with the question. Boards of guardians cannot deal with all classes of the feeble-minded, and there would be numbers left out who would have to be provided for in different ways. Difficulties will always arise to prevent guardians combining to provide for their deficient and epileptic inmates. We have had in Newcastle several conferences of guardians to consider this question and to see if there could not be united action, but nothing has been done. The different boards felt they could not work together. My board then discussed the question whether it would not be possible to provide for our own imbecile, epileptic and feeble-minded children and adults, as we have plenty of land in the country where our cottage homes are built; but the guardians would not classify, they wanted to lump the three classes together, and as this would have wrecked the scheme the whole idea was allowed to drop."

Voluntary combinations would not meet the case.

175. The net result of this evidence appears to us to be, that if reliance is to be placed on the combination of unions to supply the institutions necessary for the care of the mentally defective in urban and rural districts alike, the combination of unions must be made compulsory. Otherwise little or no progress may be expected. This would in fact amount to the application of

the method of the Metropolitan Poor Act in some form throughout the country, in connection with the Poor Law guardians and not, as Lord Clifford suggested, in connection with the county councils. This proposal we will discuss later, only here entering our opinion that, in view of the very serious defects in the whole method and organisation for the care of the mentally defective in the workhouses at the present time, and of the evidence of the little desire to combine which guardians generally have hitherto shown, it appears to us that there is no alternative but to impose a statutory obligation to deal with this class on the authorities—whoever they may be—to whom this branch of work is assigned. What has recently been done in the country by way of combination is not sufficient, we think, to lead us to modify this conclusion—that obligatory measures are necessary.

Voluntary combinations would not meet the case—*contd.*

(iv.) Schemes of Combination of Unions proposed or adopted.

176. The case in regard to the combination of extra-metropolitan unions for the better care and control of the mentally defective was summed up by Dr. Downes, Senior Medical Inspector for Poor Law purposes of the Local Government Board, and one of the General Inspectors in charge of the London District:—

Proposed combination of Croydon, Kingston & Richmond Unions.

"The Order, which was issued in December, 1904, is based on Section 8 of the Poor Law Act, 1879, which authorises, with the consent of the Local Government Board, the combination of two or more unions outside the Metropolis for any purpose connected with the administration of the relief of the poor which would tend to diminish expense or would otherwise be of public or local advantage. Under that Order the Croydon, Kingston and Richmond Unions are empowered to provide and maintain institutions which are called joint workhouses; workhouses, of course, is rather a misnomer, but it is a statutory word, and has to be used. One section provides that the persons for whose reception the joint workhouse shall be provided are first, 'epileptic persons who being chargeable to one of the combined unions have not been certified as lunatics; secondly, feeble-minded persons who being chargeable to one of the combined unions, have not been certified as lunatics, and who by reason of mental deficiency are incapable of receiving proper benefit from ordinary instruction, or are incapable of using ordinary means or precautions for protecting themselves from injury or improper usage or treatment, or are incapable of maintaining themselves by work and who are, in the opinion of the medical officer or medical superintendent of a workhouse (including an infirmary) of any of the combined unions, suitable persons for treatment in a joint workhouse."

Downes, Vol. I. 1824.

"That establishments of this sort should be on a Poor Law basis is not in accordance with the view I expressed. This one is on a Poor Law basis. It is for uncertified paupers of the epileptic and feeble-minded class. We have not yet had any proposal as to the form of establishment which would be provided, but the Order is of interest because it is one of the first of a class."

Downes, Vol. I., 1824

177. Two very important instances of the combination of boards of guardians for joint workhouses have been submitted to us in detail—that in regard to the Monyhull Colony, established by the Birmingham, Aston, and King's Norton Boards of Guardians for epileptic and feeble-minded paupers not certified as insane; and that in regard to the Langho Colony, established by the Chorlton and Manchester Joint Committee, for epileptics not classed as insane. It will be more convenient to deal with the latter in the chapter of this Report in which the evidence we have received respecting epileptics is analysed and discussed. But the former scheme of combination may be most suitably considered now in relation to a large body of evidence that has been submitted to us in regard to Birmingham. We shall thus be able to compare several opinions, all of which are based on experience; and may thus arrive at a preliminary decision on the question whether, in order to provide the necessary accommodation, reliance should be placed on the Poor Law authorities and a combination of unions; or whether, subject to certain alterations, this task should not be undertaken by the authorities which are already dealing with the mentally defective as a class.

Combination of the Birmingham, Aston and King's Norton Unions.

Part X., paragraph 881 below.

178. An endeavour was made in 1901 to obtain from the unions in the counties of Warwick, Worcester, Stafford, and Salop, a complete return of the number of imbeciles, epileptics and feeble-minded persons who were chargeable to them on the 1st July, and who, in the opinion of the medical officers, were likely to improve or benefit by treatment in a home or institution specially adapted to their capacities and needs. Replies were received from thirty-five unions, but nineteen, some of them large and important, such as

Poor Law statistics of neighbouring counties.

Curtis, Vol. II., 18762, p. 443, c. 1, and p. 444, c. 1.

Poor Law statistics of neighbouring counties —*contd.*

Droitwich, Worcester, Stoke-on-Trent, West Bromwich, and Atcham, which includes Shrewsbury, did not reply. The number notified were as follows :— Curtis, Vol. II., p. 444.

—	Certified imbeciles and epileptics.	Epileptics not classed as insane.	Feeble-minded persons not classed as insane.	Totals.
Men - - - -	74	96	119	289
Women - - -	53	131	78	262
Children - - -	11	4	21	36
Total - - -	138	231	218	587

179. It thus appears that, excepting the unions that made no reply to the circular, in four counties in which there is a large urban population the total number of mentally defective persons who were chargeable to the rates, and would, in the opinion of the Poor Law medical officers, benefit by institutional treatment, other than the workhouse was only 587, and of these 138, or 23 per cent., were already certified—leaving only 449 available for "non-certified" treatment. These were approximately half epileptics, half feeble-minded; and amongst them there were only twenty-five children. From the Poor Law point of view, the problem thus appears comparatively easy of solution: an institution or institutions for 449 persons would meet the demand.

Poor Law statistics of Epileptic and Feeble-minded improvable and not improvable.

180. These figures are supplemented by others from the unions of Birmingham, Aston, and King's Norton, which have a joint population of 744,566, with a total indoor pauperism on 1st July, 1904, of 5,644.

In these unions (April 9th, 1904) the mentally defective paupers were, according to the judgment of the medical officers, classed as follows :—

L.G.B. Half-yearly Statement, 1 July, 1904, p. 25.

Curtis, Vol. II, 18762, p. 441, c. 1, and p. 442, c. 1.

1 —	2 Epileptics not classed as insane *who might improve* in a home specially adapted to their capacities and needs.	3 Epileptics not classed as insane, capable of appreciating such a home, but *not likely to improve.*	4 Feeble-minded persons who *might improve* in such a home.	5 Feeble-minded persons capable of appreciating such a home, but *not likely to improve.*	6 Total.
Men over 45 years -	6	20	1	28	55
Men over 16, under 45	25	6	13	25	69
Women over 45 years	14	25	2	27	68
Women over 16, under 45	21	18	17	53	109
Children not more than 16	5	1	36	10	52
Total - - -	71	70	69	143	*353

181. From these figures it appears that of the epileptics and feeble-minded capable of appreciating a home or of benefiting from it, 60 per cent. (cols. 3 and 5) are probably unimprovable; of the remainder—140 persons, men and women, twenty-three are over forty-five years of age, with, on the ground of age, probably a lesser chance of improving. Thus, on the strength of these figures, it would seem that, if these unions combined, the task before them would be comparatively small, particularly if they dealt with only actually improvable cases in special homes. The children who are improvable number in all forty-one.

Birmingham Education Committee, statistics of the mentally deficient children. Pinsent, Vol. II., 19148, p 456, c. 2.

182. But when we turn to the general population the numbers are very different. The report presented by Mrs. Hume Pinsent to the Birmingham Education Committee states that 386 mentally defective children are in special day schools, while for want of accommodation, 214 defective children as well as twenty epileptics are awaiting admission to special classes. Further, there are fifty cases in which blindness or deafness or crippling is associated with mental defect; and under the supervision of the After-care Committee are sixty-nine idiots and imbeciles. Thus in the area of the Birmingham Education Committee, with a population of 93,896 children on the rolls, there are, according to this count,

* Of these cases 231 were in the Birmingham Union.

739 mentally defective children, exclusive of any children who are under the care of the guardians; or, in other words, in the Birmingham Education Area the number of mentally defective children alone is more than double the total of epileptic and insane persons, adults and children, improvable and unimprovable, who are being dealt with by all three unions put together. Of the 739 children, 600 are reported as being educated in, or suitable for, special classes, according to the judgment of the medical officer, Dr. Caroline O'Connor, and duly qualified medical practitioners; and of these, as the evidence shows, a large number will have to be provided for after sixteen, or even before, if the education at the special schools is not to be thrown away. Birmingham Education Committee, statistics of the mentally deficient children—*contd.*

183. With these figures we may compare those of Dr. Potts, the Medical Investigator who made inquiry at Birmingham on our behalf. He returned the total number of all the mentally defective in the Birmingham Union area (a smaller area than that of the Education Committee taken by Mrs. Hume Pinsent) at 1,359, and of these he reports that 426—256 males and 170 females—need provision according to the definition of these words, as adopted by the Medical Investigators.* Unlike other Investigators, Dr. Potts, as we have before pointed out, concluded that the workhouse formed a principal solution of the problem, and thus in the two areas which he examined—Stoke-on-Trent and Birmingham—he omitted from the list of persons needing provision almost all of the mentally defective persons in receipt of relief in the workhouse and infirmary or Poor Law schools—at Birmingham 581 in all—as being provided for sufficiently, but he included in his list casual ward cases—at Birmingham 104 in all. Here, then, acquiescing for the moment in this entire exclusion from the mentally defective class of those persons (except casuals) who are in receipt of indoor relief, we have, we think, a good criterion—a well-qualified judgment pronounced on all the cases in the city by one person. The result is that, apart from any action now being taken either by the Poor Law guardians, all of whose cases, except those of casuals, are here excluded from consideration, or by the local education authority, provision is at the present moment required for 426 persons. It is evident, therefore, that though, as we have suggested, Poor Law institutions might on certain conditions be utilised for particular classes of the mentally defective, they cannot well provide for the great mass and variety of the cases of mental defect, including both those who now require care and those, a considerable number, who will probably need it on leaving the special schools. Statistics of our Medical Investigation in Birmingham. Vol. VI. Tables I. to VII. pp. 53-65. Part III. and Table and Notes, p. 19.

184. But, however this may be, the scheme of the three boards is planned on a very large scale and might assume very large proportions. By the order of the Local Government Board (27th March, 1905) the joint committee was constituted for the purpose of fitting up, furnishing, and maintaining a workhouse or workhouses for the reception of epileptic and feeble-minded persons chargeable to one of the combined unions. The definition of those who may be admitted is as follows:— The Birmingham, Aston and King's Norton scheme. Curtis, Vol. II., 18762 p. 441, c. 2.

"1. Epileptic persons who being chargeable to one of the combined unions have not been certified as lunatics; and

"2. Feeble-minded persons who being chargeable to one of the combined unions have not been certified as lunatics; and

"(*a*) Who, by reason of mental deficiency, are incapable of receiving proper benefit from ordinary instruction or are incapable of using ordinary means or precautions for protecting themselves from injury or improper usage or treatment, or are incapable of maintaining themselves by work; and

"(*b*) Who are, in the opinion of a medical officer of any of the combined unions, suitable persons for treatment in the joint workhouse."

185. The second paragraph of this definition is so broad that it might admit to the new institution any feeble-minded uncertified person who is incapable of maintaining himself by work, or whom the medical officer thinks suitable for treatment there. These persons are to be admitted direct and not through the "workhouse." Each union is to bear the cost of the maintenance of the inmates who are chargeable to it; and other expenses are to be borne *pro rata*. The Government, it is desired, should allow 3s. per week in respect of all imbeciles and epileptics maintained by guardians in institutions (other than county or borough asylums) provided by Guardians to the Curtis, Vol. II., 18897, 18898, 18940. Curtis, Vol. II. p. 443, c. 2.

* For definition, *see* footnote, p. 19.

The Birmingham, Aston and King's Norton scheme—*contd.*

Curtis, Vol. II., 18947.

18833.

18841.

18865, 18797.

satisfaction of the Local Government Board, the word "epileptics and imbeciles" being taken as equivalent to the words "epileptics and feeble-minded," as defined so broadly in the Board's order. The mentally defective up to sixteen would be dealt with by the local education authority, unless they had to be cared for in asylums, and at the age of sixteen, on the certification of the medical man attached to the central authority—which should be final—the child would be admitted to an institution of the guardians, unless the parents can pay the full weekly cost, at 10s. 6d. a week. In that case the child might be sent to a registered institution, probably a voluntary home; but where the parents could not pay the full cost the board of guardians would deal with the cases, thus adhering to the principle that the child must be technically "destitute" if assisted by the Poor Law.

Sayer, Vol. II., 19053, 19057. 19038, 19008.

186. On this general theory, a "colony" is to be established by the three boards where sane epileptics and feeble-minded "could be of some useful service, where the epileptics, instead of sitting in wards looking at each other and waiting for the fits to come, could be at work on the land, and farming work, fruit growing, rearing poultry, and other such-like agricultural pursuits, and where they might ameliorate to some extent their condition and reduce the cost of their maintenance."

Sayer, Vol. II., p. 452, c. 1. 19102, 19015-19018, 19038.

Curtis, Vol. II., 18961-18962.

Sayer, Vol. II., 19022. 19072. 19143-7.

Curtis, Vol. II., 18959. 18965.

With this object a freehold of 175 acres has been acquired, with farm buildings, at a cost of £19,000, within six miles of Birmingham and fairly accessible by railway and tram. Houses of one storey, with some of two storeys, will be built on it, with a central administrative block, assembly hall and workshops. At first the houses will be built for 250 persons, subsequently for 500, and afterwards possibly for more. There is to be a supervisory staff of three attendants for every thirty-six inmates. The land which has been acquired is, it is urged, more than is necessary for 500 inmates, but if that number be provided for, the initial cost of starting the colony will be £194 per bed, or exclusive of the land, £156. The weekly cost of maintenance is set down at 4s. 9d., or if salaries and rations, furniture and repairs, and the repayment of the taxes be included, but the cost of the site excluded, 10s. 6d.

General policy of the Birmingham, Aston, King's Norton scheme.

Whitcombe, Vol. II., 18561. p. 432, c. 1.

p. 432, c. 2.

Whitcombe, Vol. II., 18568, 18646, 18648, 18679, 18656–58. 18660, 18675, 18688, 18699.

187. A scheme so carefully designed is worthy of close examination. Here we are concerned rather with its general policy; and in reference to that it is of interest to compare the views of Dr. Whitcombe, the medical superintendent of the City Asylum, and Dr. Potts, our medical investigator, both of whom gave evidence as to Birmingham. The former proposed that all *backward* children should be separated from defectives in schools; and that the backward should be educated in separate classes in ordinary schools, while the rest were reported to the Lunacy Commission and registered like other insane persons, and then "dealt with, in separate institutions, on the cottage principle, in which they could be classified." He thought that "the present system of educating these children in special schools" . . did not justify the expenditure incurred by it, while the majority of cases "deteriorated, and were unfit for any ordinary occupation, and became a danger to themselves and society." Accordingly all but the backward children should, he thought, be certified; and, speaking generally, he considered that the opinion of the medical man who certified should be accepted by the magistrate without his specifying the facts, that the word "lunatic" should be dropped, and that all persons suffering from mental disease or defect should be placed under one authority. Local authorities, counties and boroughs, should, he thought, have power to combine to build an asylum or hire premises for the mentally defective, and should not have to unite and become one corporate body, as the Lunacy Act now requires, if they wish to purchase land or buildings for joint use. Children, if mentally defective, should be removed early—at the age of five—after being tested, if necessary, from an ordinary school; for a school was not a "proper place for a feeble-minded child." Poor Law authorities should entirely cease to deal with cases of mental defect. There should be, with detention, farm colonies for chronic cases of adults, both men and women, and a special report should in each instance be forwarded to the central authority when detention is considered necessary. This detention should not take the form of an order for committal, as if the question at issue were one of crime, but it should take the form of decision by consultation, as the question was not one of crime but of disease and should therefore be settled on "some friendly system, an arrangement without the disgrace of going to a police court."

Whitcombe, Vol. II., 18717, 18720, 18728–30, 18734, 18746.

Whitcombe, Vol. II., 18749, 18751.

188. Dr. Potts, like Dr. Whitcombe, would exclude from the special classes the lowest grade of aments altogether, and would admit to them "almost entirely abnormally backward children." "The lower grades of feeble-minded," he thought, "did not come within the province of the education authorities at all, but should be relegated at an early age to that authority who would be ultimately responsible for them." Differing from Dr. Whitcombe he thought that the provision made by the guardians for the mentally defective should be utilised, because "the majority are there already, and it should therefore be the least expensive arrangement." However, the ideal he advocated, he said, "was of one authority for all those requiring care—criminals, lunatics, the aged, etc."; though in the meantime a central authority of a more limited character might well be instituted, in order to supervise the methods adopted for the care of the mentally defective, a body somewhat similar to the Lunacy Commission, consisting of medical men and district and local inspectors. The patients should be segregated; and the teaching of hygiene on practical and popular lines should be systematised. For detention "a medical inspector—a Government inspector, a medical man—could certify the case, and then the mere fact of certificate should be sufficient to give the workhouse authorities power to retain."

General policy of the Birmingham, Aston, King's Norton scheme—*contd.*
Potts, Vol. II. 19178, p. 475 c. 2. 19230, 19233.
Potts, Vol. II. 19283, 19192, 19250, 19252.

189. We have thus before us two very different policies, one suggested by boards of guardians, the other by medical men, both from different points of view amply competent to advise us on such a matter; and to state these plans in their completeness we have mentioned incidentally several points with which we must deal in connection with other branches of our subject.

CHAPTER VI.

Conclusions and Recommendations.

190. Before coming to a conclusion on the alternative, whether the Poor Law system should be expanded so that it may make entire provision for mentally defective persons, or whether this task should be assigned to some other central and local authorities, the ultimate question, which both parties raise, and which we have to decide, is whether the mentally defective should be considered and dealt with as suffering primarily from mental disease, or primarily from poverty or destitution, however caused? In the former case they would be relieved—whether paupers, or prisoners, or inebriates, or "feeble-minded," or persons of "unsound mind," as having a claim on the community on the common ground that they are mentally afflicted; and assistance for them would be organised with a view to their treatment as patients. In the latter case they would be relieved as poor or destitute persons who happen to be mentally defective, and who on that account are paupers as being in need of relief, but incidentally patients, as being in special need of treatment. But the evidence shows that the division between pauper and non-pauper is quite unreal in the case of the mentally defective. The son of respectable parents, who is permanently supported wholly or in part by relatives and friends, requires, as mentally defective, the same treatment as another person whose relatives and friends cannot help him at all; and the greater or lesser possibility of obtaining payment for the treatment—the more or less poverty or destitution—is not the dividing line in these cases, but the existence or non-existence of mental disease. Further, the distinction, on which we insist, is especially applicable to a class of case for which it would be difficult for the great mass of people to make any provision. These cases, wherever they may be, or whatever public department or organisation may deal with them, involve continuous expenditure, greater than can ordinarily be met by the people themselves, even when they are capable and industrious members of the middle and working

General conclusions as to adaptability of Poor Law system.

General conclusions as to adaptability of Poor Law system—*contd.*

classes. The households in which the presence of a mentally afflicted member of the family is a danger, a degradation and an intolerable burden, are not necessarily those of paupers. All possible obligations which can reasonably be imposed, should, indeed, in our opinion, be enforced on relatives; and the help of friends and voluntary agencies also should be used to the utmost. But in the development of any organisation for the care of the mentally defective, the precedent of the Lunacy Acts should, we think, be followed, rather than the precedent of the Poor Law. Under the Lunacy Acts intervention is due to the existence of mental incapacity; under the Poor Law to the existence of poverty and destitution. It must also be remembered that the certification, detention, and segregation, in regard to which almost all our witnesses are agreed, are advocated in the interest of the community at large, and not merely or chiefly, as relief is given under the Poor Law, in order to meet the personal needs of particular cases.

191. Thus, to cite several instances, it is agreed, as we shall see, that it is not good either for the individual or for the community that a person who is mentally defective and has been convicted of crime should be set free, like an ordinary prisoner, to go where he may on discharge. Equally is this so in the case of inebriates, or paupers, or children of school age, who are mentally deficient. All these, as well as persons certified under the Lunacy Act, are not so much prisoners, or inebriates, or paupers, or school children as persons who are mentally deficient. For them, while they are in the institutions of other authorities, Prison, Poor Law, or Education Authorities for instance, it is acknowledged by all that supervision and inspection by a single authority is desirable. But when these persons leave the institutions to which they have been admitted they are now under no care; and the result is disastrous. Further, as has been shown, the number of the mentally defective considerably exceeds the number of those for whom the Poor Law makes provision or indeed proposes to provide, while also those assisted have a claim on the community, not as paupers and thus rightly coming under the Poor Law, but as mentally deficient and thus claiming public aid on grounds similar to those on which help is already given to persons of unsound mind. Lastly, the cases of mental defect are of different types and require different methods of treatment, and the Poor Law, not primarily an institution intended for such a purpose or specially adapted to fulfil it, seems to us quite unlikely to meet the need effectually.

Authorities recommended to deal with care and control of the mentally defective.

192. On these and on other grounds which a consideration of the needs and condition of the mentally defective in elementary schools, prisons, inebriate homes, asylums, and voluntary institutions, will further justify, we think that there should be one central authority which, with the local authorities connected with it, should have the general control and supervision of mentally defective persons. And accordingly our first recommendation is :—

Recommendation I.

"That there be one Central Authority for the general protection and supervision of mentally defective persons and for the regulation of the provision made for their accommodation and maintenance, care, treatment, education, training and control."

We believe that without a single central authority it will not be possible to give that cohesion and unity to this branch of work which the evidence shows to be essential; nor without it will it be possible to provide with continuity and persistence the additional accommodation of various kinds which the different classes of mentally defective persons require; nor again without it will it be possible to utilise existing resources, as far as may be, and to supply new accommodation with economy and care for the comparatively large or populous areas which should, in our opinion, be adopted for the purposes of local administration in the future.

Recommendation XLIX.

193. We feel also that, to a large extent, the care, control and supervision of many of the mentally defective, especially of the feeble-minded, should in some degree take the form of public wardship, similar to that exercised by boards of guardians under the Poor Law Act of 1899; and we recommend:

Recommendation V.

"That the central authority, which would deal with the whole class of mentally defective persons and the divisions of that class be called: 'The Board of Control,' and the members thereof be called Commissioners of the Board of Control."

To facilitate the supervision of local work it is proposed (Recommendations XV.—XVIII.) that England and Wales be divided into districts suitable for purposes of supervision and visitation, and that the Commissioners be assisted by Assistant District Commissioners.

Authorities recommended to deal with care and control of the mentally defective—*contd.*

194. The local authority, it is suggested (Recommendation XXVIII.), should be "the council of each county and the council of each county borough," which should "be required by Statute to make suitable and sufficient provision for the care and control of the mentally defective in the county or county borough." And this "local authority" (Recommendations XXIX. and XXX.) should "exercise the powers proposed to be conferred on them under the proposed Act through a Statutory Committee" to "be called the Committee for the Care of the Mentally Defective, and take over the duties of the Visiting Committee or Visiting Committees of the council of the county or county borough as the case may be." The area of the local authority would thus be the county or county borough, and the settlement required in cases dealt with by it would be a county settlement. (Recommendation XLVI.)

In regard to all this we have, it will be seen, followed close upon the suggestions made by Lord Clifford of Chudleigh and Sir C. Thomas Dyke Acland; and, as they have suggested, we also (Recommendation XXXI.) propose that "the Committee for the Care of the Mentally Defective be constituted so as to include within it by co-option additional members, of whom one at least shall be a woman, who have special experience or knowledge." The evidence that has been submitted in our last chapter enforces the desirability both of appointing additional members and of including women among them; and the evidence contained in subsequent chapters further supports this decision.

The necessity of enabling the Council to make contracts of many kinds on behalf of the mentally defective and thus to utilise, under effectual conditions of adaptation and service, all accommodation that may seem suitable, has led us to propose that wide powers in this direction should be given to them. They may (Recommendation XLII.), subject to the approval of the Board of Control, use the means at their disposal "in any way they may think best for the well-being of the mentally defective, and may contract with any poor law or other public authority, public or voluntary agency, or private person, under such conditions as they may deem advisable for the care, education, training or maintenance of mentally defective persons, or of epileptics not mentally defective." And there is a statutory provision suggested with a view to the compliance of other public authorities in providing accommodation for Receiving Houses or Wards, at the request of the Council (Recommendation LXV.)

owne, Vol. 1821. eming, Vol. 2081. ist, Vol. I. 139, c. 2. ecommen- tionsXLII. d LXV. avy, Vol. ., 33860. 883. 930.

Use of Poor Law Accommodation by new authorities. Appendix, Vol. V. p. 226–231.

195. Many representations have been made to us by boards of guardians that the new organisation for the care of the mentally defective, which is admitted to be necessary, should form part of the Poor Law system of the country. We have considered that suggestion most carefully, but we have found ourselves unable to agree with it. A central body that has constant relations with a much larger circle of interests and requirements than has the Poor Law should, we think, be in charge of the work, with the aid and co-operation of local bodies of a similar type. But under our Recommendations it will be possible to utilise in a most economical and effectual manner any accommodation which may be available in Poor Law institutions and is suitable for the purpose. Only a public authority endowed with large powers of utilising the resources of a great variety of institutions, and also of making whatever additional provision may be necessary, will, it appears to us, be capable of coping with the problem on which we have been desired to report.

ocke, Vol. I., 966, p. 632, 2. Tycliffe Wilson, Vol. ., 11412. ullon, Vol. ., 12404, 88, c. 1. ennett, ol. II. 898-9.

Franchise, removal of disabilities. Dendy, Vol. I., 826. Fry, Vol. I., 5656–5657. Corner, Vol. I., 9745–9751 Sherlock, Vol. I., 8830 p. 513, c. 2. Ashby, Vol. I., 10088.

196. Many of the witnesses have expressed strong opinions in favour of removing the taint of pauperism from those who, while not being destitute, are at present classed as paupers because they are destitute of the means of paying for all or any of the cost of the expensive treatment of their mentally afflicted, or epileptic, though not mentally defective, relatives. The general feeling appears to be that where parents or relatives are able to contribute to the maintenance of the patient they should be required to do so, and among the poorer class, who may be only able to subscribe a portion of the cost, they should be required to pay such portion, but without, in any case, being pauperised and thus losing their right to vote, as would be the case, at present, where relief was received from the Poor Law on account of a dependent wife or child up to the age of 16.

Franchise, removal of disabilities —*contd.*

In the case of so-called pauper patients in idiot asylums, many of them have never been in a workhouse, and some of them cost the local rates nothing at all. Many of them are children of small farmers, tradesmen in a small way of business, clerks, artisans, and others, who, unable to pay the full charge, are yet able to contribute 5s. or 6s. per week, or even more, for the maintenance and training of their children. In order to make up the full charge of from 10s. 6d. to 14s. per week, the parents pay their contributions to the board of guardians, who receive the 4s. grant, add to it the parents' contributions, and thus in some instances make up the required amount. This pauperises the parent, though it does not do so in the case of children sent to blind or deaf and dumb institutions or educated at public elementary schools, where the schooling is paid for out of the rates, or even in the case of criminal or neglected children sent to reformatory or industrial schools.

Locke, Vol. I., 10966 p. 632, c 2 Elementary Education (Blind and Deaf Children) Act, 1893, Sec. 10, Sub-sec. (1). Kerr, Vol. I., 7768, p. 440, c. 2.

Recommendation XCII.

We have accordingly made a recommendation that a person who has received for any mentally defective, or epileptic though not mentally defective, member of his family any such assistance derived from any rate shall not by reason thereof be deprived of "any franchise, right, or privilege, or be subject to any disability or disqualification."

PART II.

THE PROBLEM OF THE METROPOLIS.

CHAPTER VII.

The "Mentally Defective" Population of London.

The general position of London as to the mentally defective.

197. As we have already stated, the position of London in regard to the care of the mentally defective is exceptional. Connected with the Poor Law, the Metropolitan Asylums Board is endowed with special powers for dealing with this class. Very considerable provision has also been made by the Education Committee of the London County Council for the education of feeble-minded or mentally defective children. The difficulties of London are thus due, less entirely to insufficiency of accommodation, than to the want of any machinery which would lead to a readjustment of the relations of the several authorities concerned in this administration. There is in the Metropolis a considerable population of persons who are living in conditions of degradation and crime owing to the mental defects from which they suffer. But we did not think it practicable to make a census of the mentally defective in London with the aid of medical investigators, as we did in some other localities. We would therefore submit some general evidence as to the state of this population, by way rather of sample and illustration, than with any endeavour to furnish precise statistics of the whole number of the class. The population of school age in London is in all its circumstances unusually well known to the education authority; and from other quarters, we have received specially detailed information as to the inmates of Metropolitan prisons. This evidence throws light on the lives and surroundings of the children and young persons who are unsuited for the normal curricula of elementary schools, who at the age of sixteen are unable to provide for themselves, and at every stage of life are likely to fall into the hands of the police in consequence of the committal of offences of all kinds.

Children at the remand home.

198. To begin with the children. Notes of 100 cases of boys and twenty-eight cases of girls, juvenile offenders under sixteen years of age, who were placed, between arrest and conviction or discharge, in the remand home of the Metropolitan Asylums Board, supply one set of statistics which illustrate the connection of child criminality with mental defect. In the three years 1902 to 1904 inclusive, there passed through these homes 3,119 juvenile offenders. Two classes of offence are constantly registered against them. One large class comes under the title "wandering;" another under "stealing and larceny." Miss Turner, medical attendant to the Metropolitan Asylums Board's Home for Feeble-minded children, says, "It appears to me, that the charge of 'wandering' is often preferred to a graver one for placing on the charge sheet, but as a rule it covers some petty offence such as pilfering, begging, playing truant, etc.; and it was consequently impossible for me to find out the number of cases of 'wandering' in its simplest sense of aimless straying or loitering. These are evidently few." Taking the entry "wandering" in the wider sense, it is one of general significance, and it is thus specially noteworthy for our purpose, as it is a very common charge on which children, who have fallen or are in danger of falling into crime, are brought before magistrates with a view to their committal to industrial schools. In the following statistics "wandering" appears to be constant and seems to increase from the age of seven to that of thirteen; while stealing and larceny, often also associated with mental defect, rise from a comparatively small percentage at eight years of age to forming the bulk of the charges at fifteen. The following figures indicate this :—

Turner, Vol. I., p. 503, c. 1. I., p. 704.

Boys: In the M. A. B. Homes, 1902–4, who had been charged with "wandering," which term includes sleeping out, playing truant, begging, being beyond control, etc.

Cases of Stealing and Larceny.	–	–	–	2	4	5	8	15	20	42	9	–

Turner, Vol. I. cf. p. 503 and Vol. I., p. 704.

199. It is noticeable how young are many of the children in the remand home—a fact suggestive of the necessity of commencing the education of habit at a very early age. Of these children, 164 were seven years of age or under seven years of age, and as many as 591 were nine years of age or under nine. The figures suggest whether in London the early education that might prevent this juvenile crime is forthcoming. In any case, however, here we find in association "wandering, etc.," and "stealing and larceny," two traits which are closely connected with mental defect and both of which occur at an early age in a marked form—that is, to the extent of leading to the arrest of the child. Out of these "Remand Home" children were taken at haphazard the hundred boys and the twenty-eight girls who were medically examined, and in regard to whom special inquiries were made. These were classified as follows :—

	Boys.		Girls.	
Above the average	2		1	
Eccentric (not feeble-minded)	5		0	
Normal	56		11	
		— 63		— 12
Backward	18		7	
Slightly mentally deficient	10		5	
Mentally deficient	9		4	
		— 37		— 16
		100		28

200. The result is remarkable. Out of the boys thirty-seven were graded as between "backward" and "mentally deficient"; out of the girls sixteen out of twenty-eight were so graded. If these proportions are applied to the numbers of boys and girls treated year by year as juvenile offenders the seriousness of the question becomes apparent. Thus, if we take

girls at the remand home who were under seven years of age, in the three years they numbered thirty-two, of whom fifteen were living with prostitutes; and of girls thirteen years of age, ninety-three in all, fifteen were charged with stealing and larceny, ten with living with prostitutes and thirty-six with wandering, etc. As mentally defective, after sixteen or later, more than half of these would be likely to come upon the public authorities, or on voluntary charity for support. The same would apply to over one-third of the boys under seven—forty-two in all—of whom nine are living with prostitutes and twenty-eight charged with "wandering"; while of the age of thirteen, in the three years 1902 to 1904, there were three hundred and ninety-seven in the remand home, one hundred and eleven charged with stealing, fifty-three with felony, six with living with prostitutes, and one hundred and thirty-nine with wandering, etc.

Children at the remand home—*contd.* Turner, Vol. I., pp. 704 and 707.

201. Again, if, as seems quite likely, the home circumstances of these "backward" and "slightly mentally deficient" and "mentally deficient" children are similar to those of the children admitted to the residential homes of the Metropolitan Asylums Board, where, while they attend special schools, children maintained by the Poor Law are boarded, an examination into the circumstances of these "residential children" should throw light on the condition of the others—the mentally defective in the remand homes. Accordingly we submit particulars about the home circumstances of these "residential" cases. Forty of these cases have been specially investigated and were put before us as illustrative of the conditions of degradation which are thought to be productive of feeble-mindedness. In the forty cases, fourteen fathers (35 per cent.) and ten mothers (25 per cent.) were known to have been heavy drinkers. In two cases (5 per cent.) death took place as the result of drinking. Phthisis was found in eleven fathers (27·5 per cent.) and seven mothers (17·5 per cent.). In the case of five fathers and one mother it was aggravated by alcoholism. Thus, of the total cases, 60 per cent. were those of drinkers, and 30 per cent. of phthisical persons.

Cases at residential homes of the Metropolitan Asylums Board. Turner, Vol. I., p. 501.

Flagrant immorality was charged against six fathers (15 per cent.) and seven mothers (17·5 per cent.). Of the 127 children under care, nineteen (14·9) were illegitimate, and seventeen were deserted, many of whom it might reasonably be concluded were illegitimate also.

Eight fathers (20 per cent.) had been insane, five had died insane, and four mothers (10 per cent.), of whom one had died in an asylum. Seven fathers (17·5 per cent.) and five mothers (12·5 per cent.) had suffered from nervous disorders. These included two cases of epilepsy in the mother, and cases of paralysis, chorea, and mental deficiency; and three cases of such violent temper on the part of the father, that the wife in giving the information in each case suggested that her husband must be insane! "In three cases there was a definite history of syphilis, but probably the percentage of this disease was usually very much higher, as suggested by the characteristic type of some of the children."

202. Information obtained in regard to the families of thirty-five out of forty mentally deficient children who were attended professionally otherwise than at the residential homes, though very incomplete, goes, it is said, to show that the same factors are at work here in the production of mental deficiency. An examination of cases of normal children among the private patients of the same witness, principally well-to-do people, suggested that the average of morbid "heredity" derived from such parents was very low indeed compared with the others—less than a fifth of what it was among the paupers.

Turner, Vol. I., p. 502, c. 2. 8717. 8719–8720. 8725.

203. This evidence seems to be conclusive on two or three points. The children charged with offences as juvenile offenders form a group large enough to merit special consideration. They should be examined at an early age, and if mentally deficient should be kept under such conditions of education and supervision as may, as far as possible, prevent their ultimate dependence on the community. On the part of those charged with this duty there should be co-operation with every other authority that may possibly know their history and home already. The circumstances of the family should be taken into account in any decision that may be adopted in regard to their future; and their education, from the point of view of self-control and habit should commence early. Evidently they are not likely to get this education at home. It would have to be furnished from without. Provision has not yet been made for it in London.

Necessity for examination and early treatment of juvenile offenders

Chapter VII.

The "Mentally Defective" Population of London.

Children not admissible to special schools and requiring custodial treatment, Kerr, Vol. I., p. 435. c. 1; Vol. I., p.441, c. 1; Vol. I., 7797.

204. The investigations of Dr. Kerr, the Medical Officer (Education) to the London County Council, and his assistants throw light on the same problem from another side. He has to select the children for admission to the special schools for mentally defective children. Out of 4,561 cases submitted to him as requiring examination with that object, 1,728 were entered as mentally defective, 187 rejected as imbecile—42 per cent. in all. For these cases when they reach the age of sixteen there is no suitable provision; yet, as we shall presently show, many of them under existing conditions are at that age incapable of even partial self-support. Of the 4,561 children, for instance, 434 were leaving school, and of these only 140 were "permitted to go to work," as being likely to be competent to do it without mishap to themselves or injury to the community. But the rest of the feeble-minded children were permitted to leave school without regard to ultimate results—though even at the age of twelve, a large number of them had been found to require custodial treatment. Thus, out of 455 children over twelve who were examined by Dr. Kerr, in 126 cases it was decided that in the future they would be fit only for custodial treatment. For these imbeciles who require custodial treatment at twelve, or even for the smaller number who require such treatment after sixteen, there is altogether insufficient provision in London, though each year the number of them at the schools is kept down by the refusal to admit them—177, for instance, in 1901.

Kerr, Vol. I., p. 435, c. 1. Vol. I., p. 430, c. 1.

Helby, 5375–5379. Stanley, 7236. Sherlock, 8853.

205. It is true that this insufficiency of provision may in part be due to the fact that the Metropolitan Asylums Board have not been pressed to deal with it. They are not in correspondence with the local education authority but only with the Poor Law guardians, who naturally approach the question from another standpoint, chiefly that of pauperism. But, however this be, as experienced witnesses have informed us, the general demand for accommodation after sixteen is to a very large extent unmet. The education authorities, and many managers of voluntary homes, have amply proved this. And there is not in these cases, it must be remembered, any special importance in dividing life into school life before sixteen and after-school life after sixteen, for in regard to them there is always a certain deterioration or backwardness to be overcome, and, under present conditions, it is often only at a much later age that general ability, resulting from training, can suffice wholly, or in great part, for self-maintenance.

Condition of feeble-minded children just after leaving school. Kerr, Vol. I., p. 442, c. 1.

206. Later in life in those cases in which protection is not forthcoming, the results are often fatal. We have received much evidence of this: but the following short Report of the head mistress of the special school at Bath Street sums the matter up in regard to children just at the point at which the breach occurs between school life and life after school.

"The head mistress of Bath Street Special school has analysed records of the ninety-five boys and forty-four girls who have passed out of the school in the last seven years, eighteen boys and fourteen girls being promoted to the elementary school, and, as a rule, doing fairly well afterwards. Nine boys and five girls were, after a probation, excluded as imbeciles, 'two are in institutions, two are well cared for, the rest running the streets.'

"On leaving, the girls mostly go to boxmaking, where, in a year or two, if they are fairly quick with their fingers, they earn 6s. to 7s. a week at piece work. Many are quiet and well-behaved, and attend an evening club for old members of the class, and in a few cases evening cookery classes. The boys, as a rule, go on vans, or as errand boys, where they generally obtain at first wages of 5s. to 8s. weekly. The real difficulty with boys commences at about seventeen. Such work as they do, means very long and late hours, and small wages. As they get older, feeling that they are only getting boys' wages, they throw up their situation, to find it almost impossible to get anything else to do. In most of the cases where boys have been taken in hand by some philanthropic agency in the neighbourhood, the effort has ended in failure. Fifty-five (twenty-five boys and thirty girls) of the 139 children it was impossible to trace, and probably it is the best of the children who have kept in touch with the school."

Adult feeble-minded in prisions. Griffiths, Vol. I, p. 199.

207. Later, many mentally defective persons pass through the prisons. Thus at the Holloway Prison, out of 803 women there on November 29th, 1904, eighty-three were of that type, forty-one of them chronic inebriates, thirty-nine feeble-minded, and three insane; and of 1,297 convicted prisoners received during that month, fifty-six were feeble-minded, suggesting that there is a constant procession of these feeble-minded persons, men and women, through

the prison, each in turn receiving a short or comparatively short sentence and then disappearing, sometimes only to return again. From particulars attached to a list of thirty-nine feeble-minded women in Holloway on November 29th, 1904, it appears that ten were in prison for stealing, eleven for indecency and similar offences, and five for drink. Apart from four epileptics, all were congenital imbeciles or feeble-minded. Seventeen of the thirty-nine were thirty years of age or under. Adult feeble-minded in prisons—*contd.*

208. There is thus a comparatively large class of feeble-minded persons who are not now considered as insane, but who cannot fairly be held responsible for their misdeeds, and who are the cause of great trouble and anxiety to those who deal with them. Many of them in their youth have not been kept under control by their parents. Frequently little attempt has been made to educate them, as they are undesirable in the ordinary schools and classes, and special schools and classes are comparatively few in number. When they come to the working age, their mental defect stands much in the way of their getting employment. They are only fit for unskilled labour, and most of them are so wanting in the power of continued application, that they soon leave of their own accord, if not previously dismissed for stupidity. They are greatly wanting in initiative, and they are easily influenced by others. Their moral sense is very defective. Scott, Vol. p. 276. Brayn, Vol. I p. 164. Smalley, Vol. I., 3538–3540. Treadwell, Vol. I., 4440. Tuke, Vol. I., 4674, 4678–4682.

This in general represents the later stages of the class for which no earlier or sufficient provision has been made. For this later period of life our present administrative organisation is quite unsuitable.

CHAPTER VIII.

Authorities in London for Dealing with the Mentally Defective.

209. The authorities which are concerned with the care and control of the mentally defective in London are the Guardians of the Poor, the Metropolitan Asylums Board, the London County Council through its Education Committee and its schools, and again the London County Council through its Asylums Committee and lunatic asylums. To explain and illustrate the working of the Poor Law in London in regard to the mentally defective it is necessary to take into consideration the work of all these agencies. Authorities in London for dealing with the mentally defective.

210. In the following table is shown the distribution of the mentally defective in London (including the insane) in relation to different authorities:—

Children who left on reaching the age of 16.	–	–	92	–	–	83	

N.B.—Besides these, on a day count there are probably some 140 mentally defective prisoners in the London prisons.

The Metropolitan Asylums Board.

211. London, under the Metropolitan Asylums Board, forms for the treatment of the mentally defective a single district comprising the unions or parishes of thirty-one boards of guardians. Accordingly the boards of guardians have at their disposal for these cases not only their workhouses and workhouse infirmaries, but, subject to the production of certain certificates, they have also the use of the asylums and homes of the Metropolitan Asylums Board. This system fulfils the principal conditions of the scheme which some of our witnesses have very strongly recommended for the treatment by the Poor Law of all cases of mental defect other than those of children being educated at special schools and of lunatics admitted to asylums for the insane. It is the more necessary, therefore, to examine it closely in order to ascertain whether it does in fact meet the requirements suggested by our reference of providing for the care, training and control of the mentally defective sufficiently and economically.

Helby, Vol. I., 5258.

Mann, Vol. I., pp. 281 and 693.

212. The following table contains recent figures in regard to these institutions. It indicates also the present policy of the board in general; a very clear and enlightened policy, as it seems to us: (1) to congregate the improvable adults and children in an industrial colony—that at Darenth; (2) to provide for the unimprovable children now in the Darenth pavilions ultimately in some separate institution; (3) to utilise the Belmont Asylum for unimprovable adult imbeciles* and (4) to deal with all senile cases at Tooting Bec:—

Chapter VIII.
Authorities in London for Dealing with the Mentally Defective.

General powers of Guardians in London. Adrian, Vol. I., 85, 86, 88.

213. The guardians in London have all the general powers which guardians in the country possess. They may, for instance, place an orphan or deserted child in a certified school supported wholly or in part by voluntary contributions. They may, with the approval of the Local Government Board, send to schools that may not have been certified, children under the age of sixteen who are idiots or imbeciles resident in a workhouse or an institution to which they have been sent or boarded out. With the same consent, they may subscribe to any asylum for "persons suffering from any permanent or natural infirmity." They may also send an idiotic pauper to an asylum or establishment for the reception and relief of idiots maintained at the charge of the county rate or by public subscriptions. They have thus the amplest opportunity of using voluntary associations for the feeble-minded with and without the guarantees of inspection and certification.

Adrian, Vol. I., 88. Poor Law Amendment Act, 1868, Sec. 13.

214. In regard to the feeble-minded, their position is shown in the following statement; according to a return made to the Commission by the clerks to the guardians,* the separate Metropolitan Boards of Guardians on January 1st, 1906, were dealing with 1,407 cases of feeble-minded persons (exclusive of persons certified as insane). Of these about 933, or 66 per cent., were in the ordinary wards of the workhouse, as the following table shows.

Appendix, Vol. V. p. 71.

London.	In Workhouses or other Institutions belonging to the Guardians.		In other Institutions.	Receiving outdoor relief.	Total.
	In special wards or establishments.	In other wards.			
1.	2.	3.	4.	5.	6.
1905	242	639	178	34	1,093
1906	248	933	170	56	1,407

There is no reason to believe that these feeble-minded are different from those dealt with by the Metropolitan Asylums Board in some one or other of their institutions, and our own observation detected a general similarity.

215. Besides the powers we have mentioned the guardians have also the use of the institutions of the Metropolitan Asylums Board. Amongst the persons, certified and uncertified, whom the guardians may recommend to the Metropolitan Asylums Board, there are certified persons of unsound mind who, from the point of view of the mental disorder from which they are suffering, are quite the same as those who are admitted to the lunatic asylums of the county of London, though, in fact, they are dealt with by the Metropolitan Asylums Board.

Mann, 4978. Vol. I., p. 280. c. 1. Rotherham, Vol. I., 8762.

In addition to these, there are also cases of defective children known to the education authorities, some of which at the age of sixteen come for care upon the boards of guardians and so upon the Metropolitan Asylums Board; and further there is, as the evidence shows, yet another considerable group of children under sixteen who cannot be certified as suitable for admission to the special classes of the Education Committee of the County Council, or who, after sixteen, not being passed on to any institution, remain as idiots and imbeciles or feeble-minded in the general population.

216. To judge, therefore, of the circumstances of London in reference to the care and treatment of the mentally defective, it is necessary to take into account all those authorities by whom such persons, the certified and the uncertified alike, are educated or maintained. These authorities may be considered as separate units, each fulfilling a different function in one common organisation or they may be considered as separate units which are not co-ordinated and are each fulfilling the same or similar functions.

* With regard to the information contained in this Summary, it should be mentioned that the registers kept in the Poor Law unions do not specifically provide for a record of persons who could be classed as feeble-minded but not certifiable as insane. The particulars given in the returns are based on the opinion of the medical officers in the matter.

CHAPTER IX.

Institutional Disorganisation as to the Mentally Defective.

217. In a previous chapter we referred to the question of detention and certification in relation to Poor Law administration outside London. We have now to consider it in relation to London. The conditions are different, but in general the system that we suggested will apply equally. As an indication of the method of admission and certification in connection with the Metropolitan Asylums Board, we would take first several classes of cases, as, for instance, the harmless chronic or imbecile, the senile, and the "unrecovered cases," and then we would follow out the procedure adopted in a simple case in relation to the several authorities concerned.

Want of Co-operation between the Authorities as to the harmless, chronic, or imbecile class.

218. The Metropolitan Poor Act, 1867 (30 & 31 Vict., c. 6), enabled the Local Government Board, or rather the Poor Law Board, as it then was called, to form the Metropolitan Asylums Board to provide asylums for London for the reception of the sick, insane, or infirm or other class or classes of the poor chargeable to unions or parishes in the Metropolis. Two conditions were insisted on by the Order. The insane paupers to be sent to the Metropolitan Asylum Board's institutions were to be "such harmless persons of the chronic or imbecile class as could be lawfully retained in a workhouse." "No dangerous or curable persons could be admitted, such as would under the statutes in that behalf require to be sent to a lunatic asylum." And next (by Order dated April 2nd, 1897) provision might be made for "children who, by reason of defect of intellect, could not properly be trained in association with children in ordinary schools." Such children (by Order, March 4th, 1903) might be retained until the age of twenty-one, but whether children or adults, the class with which the Asylums Board was authorised to deal was the "pauper class," that is, "persons for whose maintenance the guardians of the poor are or make themselves responsible."

219. This Act and these Orders suggest that a division of labour between the asylums authorities, the Poor Law, and the education authorities was intended. To the asylums authorities under the Lunacy Act were to go the dangerous or curable cases, and to the asylums of the Metropolitan Asylums Board were to go the harmless chronic insane or imbecile. It follows from this that as the Asylums Board could, if they desired, make separate provision for "feeble and decrepit old people" as "sick" or "infirm," these, if the suggested classification were to be enforced, should not be sent to the institutions of the Board, which were established for the harmless chronic "insane" or imbecile; but that the institutions created for the latter class should be definitely reserved for them, and them only. It follows further that under the above-quoted Order, all these harmless chronic insane and imbecile persons should be sent not to the asylums of the County Council, the lunacy authority, but to the asylums of the Metropolitan Asylums Board, the authority for dealing with harmless chronic and imbecile cases. Nevertheless, in both directions, apparently, there has been transgression. Not only have the "feeble and decrepit old people, who, it is stated, are not really insane" been sent to institutions of the Metropolitan Asylums Board built and intended only for imbeciles and the harmless chronic insane, but they have also been sent to the asylums of the County Council, which, according to the Order, were primarily intended for the dangerous and the curable.

220. The instructions thus laid down by the Local Government Board, and, apparently, in great measure ignored, came into force, it must be remembered, at a time when the only local bodies that could be adapted to meet the wants of a growing administration were the boards of guardians, and this involved another difficulty. The new arrangements under the Metropolitan Poor Act were made for the "pauper class" only, and no similar arrangements were made for those who could afford to pay for themselves or their dependents and who were not in any strict sense of the term "paupers." But for them, too, some provision was necessary. The same difficulty occurred in regard to the admission of persons suffering from infectious diseases to the institutions of the Metropolitan Asylums Board. At first these institutions were open to paupers only.

Want of Co-operation between the Authorities as to the harmless, chronic, or imbecile class—*contd.*

Later, that restriction was found to be unworkable, for the institutions were intended for the general use of the community and could not serve their purpose unless they were so used; and in this instance the restriction as to pauperism had therefore to be set aside.

221. Hence, on this ground and on the lines on which we have previously argued the case, it appears to us that, if there is to be co-ordination between the authorities and agencies concerned, it is essential that the care of the mentally defective should be made a duty not of the Poor Law authorities, but of specially qualified authorities organised with that object. It follows, further, that if the care of the mentally defective were transferred to another authority, on that authority should devolve, not only such duties as those included in the Metropolitan Poor Act of 1867, but those duties also, to which we first referred, which the guardians throughout the country possess for providing for the maintenance of this class in rate-supported or in voluntary homes.

Metropolitan Asylums Board and the local education authority.

222. As between the Metropolitan Asylums Board and the Education Committee of the London County Council there arises a question quite similar to that which we have discussed as between the Metropolitan Asylums Board and the Asylums Committee of the Council. The residential homes of the Metropolitan Asylums Board duplicate for so-called defective pauper children the homes which have been established by the Education Committee for school children who are equally defective, though not technically "pauper." Yet if it is desirable that the mentally defective children of whom the Board have charge should attend the special classes of the Education Committee, and should not, as some of the witnesses have suggested, be admitted at a very early age into the Darenth industrial colony or some similar institution, and there receive all their education, it would seem best and most economical to have one instead of two sets of ancillary homes, to be used alike by all the feeble-minded of the same mental grade.

Senile cases, certification and discharge.

223. The certification and discharge of senile cases is another matter to which several witnesses have drawn our attention. Dr. Campbell, the medical superintendent of the Caterham Asylum of the Metropolitan Asylums Board, states that:—

Metropolitan Asylums Board Annual Report for 1905, pp. 232, 225.

"The aged, feeble, and helpless condition of those sent down for care and treatment in this asylum has been the subject of comment in past annual reports, but in no previous year (in his opinion) have the admissions been as unsatisfactory as during the past twelve months."

And of Tooting Bec, also, an asylum under the Metropolitan Asylums Board, Dr. Beresford, the medical superintendent, writes:—

"The character of the admissions has comprised a large proportion of very feeble and decrepit old people. . . . At the present moment 489 [out of about 714] of our inmates are of faulty habits. These figures convey more eloquently than the longest report the endless work and ceaseless anxiety which the care of patients of this type entails to those in charge of them. The healthy strong congenital case has been conspicuous by its absence. Whether they are retained by the workhouses 'as hewers of wood and drawers of water,' or whether they are sent to the asylums of the London County Council, I have no very definite information; but the fact remains that they do not come here, and that Tooting Bec should be called an imbecile asylum does not convey a correct statement of fact. In the adult wards of this institution there is not, at the present moment, a higher percentage of congenital cases than one would find in any county asylum."

Beresford, Vol. I., 5433, 5434.

224. These asylums, then, it appears, are being used not for imbeciles so much as for "very feeble and decrepit old people," whom the guardians pass on to clear their workhouses of troublesome cases. That they get better attention there is admitted. They are nursed as in a hospital, and under very different conditions from those which they have left, as is illustrated by the fact that on the female side, "out of 302 admissions, ninety-four were sent in from the parishes with lice in their heads." But the institution which was established for helpless imbeciles requiring infirmary treatment is thus being diverted to the use of old or rather moribund people.

Beresford, Vol. I., 5484, 5487.

"The average age on the female side is seventy-five, and on the male side seventy-four." "Many cases come to Tooting Bec who have been in bed for months and months and months, who have been got up each day."

Mr. Helby, now Chairman of the Metropolitan Asylums Board, stated :— Senile cases, certification and discharge—*contd.* Helby, Vol. I., 5293.

"Since Tooting Bec Asylum has been opened the Boards of Guardians appear to send all the senile decay people to us, certifying them as imbeciles—a most cruel thing. Our Tooting Bec Asylum is practically nearly full of what are termed imbeciles of that character, nothing more nor less than old men and women suffering from senile decay. One of the guardians is a justice of the peace, who calls in a couple of medical officers, and they certify this poor old soul because she is troublesome and dirty, and so forth, and thus she becomes an inmate of an asylum. To my mind it is very cruel; not only so, but it is a great mistake, because in congregating this class of patient together the expenditure is so greatly increased. In my opinion the proper place for this class of patient would be an infirm ward in the workhouse infirmary, where the relatives could visit them. The cost would also be less."

225. But further, on the side of the asylum authorities of the London County Council there is the same complaint. Dr. Mott, Director of the Pathological Laboratory of the London County Council, says :— Mott, Vol. I., p. 455, c. 2. Tables as to aged patients. Report of the Asylums Committee of the London County Council, 1903, p. 22.

"The pressure for accommodation in the asylums is partly due to the admission of aged patients suffering with mild senile dementia, softening of the brain, etc., who have loss of memory and are sometimes noisy and troublesome and unable to take care of themselves."

In the four years, 1899 to 1902, 590 patients were admitted to the London county asylums over seventy years of age.

"All the patients in workhouses who are feeble-minded, whose mental defect is fairly obvious, in London come into the Metropolitan Asylums Board's institutions. They do not want them in the workhouse, and, if they can be moved on, the workhouse people move them on. The accommodation in London workhouses is limited: it is too small."

rlock, I. I., 8–8839.

Generally speaking, this is true, though apart from these cases it was found on special inquiry that there were in addition to the feeble-minded persons admitted to the asylums of the Board 1,181 others who were in the workhouses.* Appendix, Vol. V., p. 71.

226. It results from this pressure, as we have seen, that institutions intended for imbeciles are turned into institutions for senile and other cases, and there is an extreme insufficiency of accommodation in the county asylums for lunatics. London is more "under-asylumed" than Lancashire, which is itself "very much under-asylumed." "We have always had patients waiting to come in," Sir John McDougall said. "Many hundreds?" he was asked. "Yes," he answered, "if you include those boarded outside, we are always behind." To neutralise this pressure at the county asylums as much as possible there is a large discharge of cases that have not really recovered. Insufficiency of accommodation for lunatics in asylums. Marriott Cooke, Vol. I., 6465-6466. McDougall, Vol. II., 17503, 17504.

"Owing to the pressure of accommodation and legal difficulties of retention, a considerable number of patients have to be discharged annually who would be better retained in asylums. . . . If the friends press and they are desirous that they (the patients) should be taken out, they are sent out on a month's trial." Mott, Vol. I., p. 455, c. 2. Vol. I., 8084.

t, Vol. I., 457-458.

227. If we examine the recurrent cases we find that of 8,933 persons discharged as recovered in the eight years, January 1st, 1895, to December 31st, 1902, 1,119, or 12.52 per cent., were re-admitted *within twelve months of their discharge* (up to March 31st, 1903). And a further anomaly: while this method of "passing on" is in progress as between the guardians and the Metropolitan Asylums Board, and the guardians and the asylums of the London County Council, the board and the council are each in great measure dealing with the same class of case. Thus, the opening of the Tooting Bec Asylum by the board accounted in some measure for the diminished increase of the certified patients dealt with by the Asylums Committee of the County Council, as patients who had been sent to this asylum might otherwise have found their way into one of the county asylums; and the Asylums Committee by the courtesy of the board were able to draft 198 patients to the Tooting Bec Institution, "these patients being thus placed out of the category of certified lunatics in asylums." Recurrent and unrecovered and senile and imbecile cases. Fifteenth Annual Report of the Asylums Committee of the London County Council, p. 6.

228. This side of the case, the relation of the Asylums Committee of the County Council to the guardians of the poor on the one hand, and the Metropolitan Asylums Board on the other, is very fully dealt with by Sir John McDougall, who was for sixteen years a member of the Asylums Committee of the London County Council, and for three years Chairman of the Council; at the risk of some repetition, it is well, we think, to state his views in some detail.

*With regard to the information contained in this Summary, it should be mentioned that the registers kept in the Poor Law Unions do not specifically provide for a record of persons who could be classed as feeble-minded but not certifiable as insane. The particulars given in the Returns are based on the opinion of the Medical Officers in the matter.

Vol. II., p. 373, c. 2

Patients were sent to the asylums of the county council who were senile and not strictly lunatic. "I object to the pauper dement or senile being sent unnecessarily as a lunatic to an asylum. I think a little care and treatment, watching them in the workhouse or an associated workhouse, is quite sufficient." "They could be kept with all the care and all the nursing you could give them in the workhouses . . ." "There is a number of patients now certified that need not be certified." "Nine-tenths of the patients come through the workhouses." The old senile dements are sent to the county asylums practically because some one wants to get rid of them. A great number of the patients complain very much, and the friends complain very much, that they are sent without the knowledge of their friends." They represent "very nearly one-third of those we receive. We have hundreds and hundreds now that we could dispose of if we had asylums similar to the imbecile asylums belonging to the Metropolitan Asylums Board." "It is a serious matter affecting the relatives and as touching on the question of heredity, to brand as a lunatic a man or woman whose faculties are simply decayed by the advance of years." The County Council has no option but to receive the cases, if they are presented to them properly certified, "but we have written many times to the various boards of guardians, endeavouring to stop the import, but we cannot send a patient that we think might be kept in a workhouse back to the workhouse unless the workhouse medical man will certify that there is proper accommodation for him there, which we can never get done." And then as to the Metropolitan Asylums Board Sir John McDougall stated that between June, 1901, and February, 1903, —when the Tooting Bec Asylum was opened—it was agreed that "upon the transfer of a patient from one of the board's asylums, a patient from a county asylum would, if required, be immediately received." But when the Tooting Bec Asylum was opened for the further reception of all imbeciles, the board for some reason put an end to the exchange of accommodation and no longer sent in fortnightly lists of vacancies. Since then there had been no systematic distribution of the different classes of patients between the two bodies, by which the imbeciles were sent only to the institutions of the Asylums Board, the acute and dangerous patients only to the county asylums. He thought that at the asylums of the County Council they could pick out many patients, chronic patients, chronic feeble dements, who might be sent to cheaper asylums. "Some 4,000 to 5,000 harmless lunatics ought to have been sent direct to the Metropolitan Aslyums Board." Immediately any patient in the Asylums Board asylums gets troublesome or dangerous, the patient is certified for detention in a lunatic asylum, and is removed to one of the London County Council asylums. "There is thus a frequent interchange of patients between the two bodies, and I would say that, in my opinion, this kind of dual control is most unsatisfactory."

McDougall, Vol. II. 17547.

229. There is thus a pressure put upon the asylums of the County Council because the Poor Law guardians send their imbecile and senile cases to them, and because there is no distribution of these cases as between the Metropolitan Asylums Board and the County Council. The Asylums Board does not meet the need itself by providing for all harmless and chronic paupers; and thus the County Council, sorely in need of accommodation for acute and dangerous cases, cannot transfer the imbecile cases which block their establishment to the board that is primarily responsible for making provision for them. And so it comes to pass that, as Sir John McDougall says: "As far as I can judge there is no line between a lunatic and an imbecile of later age except that a very tiresome imbecile is a lunatic; a very quiet lunatic is an imbecile—that is the practical result of it."

230. These statements are supported by figures which show that the increase of lunatics belonging to the County of London is very large; that the lunatics have of late been transferred year by year from the guardians to the County Council asylums, and now few remain under the care of the guardians; that the pressure falls less and less upon the Metropolitan Asylums Board, and more and more upon asylums of the County Council, and that an increasing number of those who are sent as lunatics to these asylums are aged people.

231. The population of London has increased between 1890 and 1905 by 489,209, or 11·8 per cent.; the number of certified pauper lunatics for whom the council had to find accommodation increased from 10,100 to 17,770, or at the rate of 75·9 per cent. If the number of all classes of pauper lunatics be totalled—those in the Metropolitan Asylums Board asylums, those in workhouses and those with relatives and friends—the increase is from 16,358 to 24,652, or 50·7 per cent. The demand for accommodation is thus outstripping largely the increase of population.

Pauper lunatics and division of work as between the County Asylums Committee and the Metropolitan Asylums Board.

232. The following table indicates the movement of pauper lunatics :—

McDougall, Vol. II., p. 372, and p. 373.

London Pauper Lunatics Resident.	1st January, 1890.		1st January, 1905.		1st January, 1906.*	
	Numbers.	Per Cent.	Numbers.	Per Cent.	Numbers.	Per Cent.
In County Asylums and Licensed Houses.	10,100	61·74	17,770	72·08	18,130	72·64
In Imbecile Asylums - - -	5,566	34·03	6,450	26·16	6,411	25·69
In Workhouses - - - -	408	2·49	280	1·14	264	1·06
With Relatives and Friends - -	284	1·74	152	·62	152	·61
	16,358	100·00	24,652	100·00	24,957	100·00

The pressure on the County Council asylums thus continues to increase, yet not, in 1905 or 1906,† at the high rate of former years, while of the whole number of persons certified as "insane" a smaller proportion of "imbeciles" is maintained by the Metropolitan Asylums Board—though the distinction between those who are properly "imbecile" and should be maintained by the board, and those who are "insane" and should be maintained by the Council, is not preserved. And in general confirmation of this, we may mention that we learnt from Dr. Tredgold, who spent two years studying the various aspects of mental defect under the County Council, that in the asylums of the County Council there were during that period about 700 idiots and imbeciles in a total population of 14,000, or roughly about 5 per cent.

Tredgold. Vol. I., 7281. p. 399. c. 2.

233. Lastly, in a Return made in the year 1903 of those in that period admitted to the County Council Asylums, it appeared that out of 4,502 admitted, 483 were sixty-five years of age and upwards, and of those 311 had never been previously certified. Hence, as in the case of the Metropolitan Asylums Board, so in the case of the county asylums, those institutions appear to be becoming more and more a refuge of the aged, whose minds and bodies are alike in decay.

McDougall, Vol. II. p. 374, c.1.

234. All this demonstrates that there is no systematic division of labour between the board and the council, and that they deal with the same class of case to a very large extent. It results that many are certified and dealt with as lunatics unnecessarily, inasmuch as they do not need the special care and treatment which a lunatic asylum is designed to provide. This is a strong argument for unification of control and uniformity of certification. But the financial arrangements of the administration of the Metropolis represent a further element of difficulty. They put a premium on the Poor Law Guardians sending out of the workhouses all cases that can be certified. This is very clearly shown by Sir John McDougall :—

Financial considerations affecting the policy of the guardians in sending cases to the county asylums.

McDougall, Vol. II., p. 374 c. 1.

"The whole cost of the maintenance of pauper lunatics, paid by the guardians, is, after allowing for the grant, borne by the Common Poor Fund, and the grant of 4s. per week is, in effect, paid into the Common Poor Fund, and acts as a relief to the rates of London as a whole. In the case of London, however, the fact that the whole cost of lunatics is centralised, while the cost of ordinary paupers is only partially centralised, offers a strong inducement to the guardians to send paupers from the workhouse or infirmary to county asylums. The same remark applies to the sending of paupers to the asylums of the Metropolitan Asylums Board, as the cost of those is also wholly centralised."

* The Seventeenth Report of the Asylums Committee of the London County Council to March 31st, 1906, p. 1.

† In 1906 the increase was 305; the corresponding increase in 1905 being 704; Sixteenth and Seventeenth Reports, Asylums Committee of the London County Council.

Financial considerations affecting the policy of the guardians in sending cases to the county asylums—*contd.*

"The average cost of the maintenance and accommodation of indoor paupers in London Unions in 1902–3 (so far as it can be ascertained from the published Local Taxation Returns) works out at £35 9s. 3d. per head. Of this cost an amount equal to £20 4s. 5d. per head is borne by central funds by means of the county grants and Common Poor Fund. The remaining cost, amounting to £15 4s. 10d. per head, is borne by the guardians on local rates. When, therefore, a pauper is transferred from a workhouse or infirmary to an asylum, he becomes chargeable to London as a whole and the guardians save this expenditure of £15 per annum, or at least that part of it which represents actual maintenance (after deducting the grant from the Common Poor Fund of 5d. a day, or £7 12s. 1d. per annum) as distinguished from charges which are more or less permanent, such as debt charge, maintenance of buildings, etc.

There is a thus a strong financial reason for sending as many paupers as possible to asylums. This inducement appeals most strongly to those unions which are pressed for accommodation and have to board out some of their paupers, as in such cases the whole cost of maintenance and accommodation would be saved by the transfer. While the individual unions thus gain a financial advantage by sending paupers to an asylum, such a transfer throws additional burdens on London as a whole because the cost of maintenance and accommodation is higher in the case of inmates of asylums than in the case of inmates of workhouses. Thus in the year 1902–3 the average cost of lunatics in the London County Council's asylums works out at £42 7s. 10d. per head, while the cost of the inmates of the imbecile asylums of the Metropolitan Asylums Board for the same year is estimated at £44 per head as against £35 9s. 3d. per head in respect of ordinary indoor paupers.

The area responsible for the patient has, of course, to bear its rateable value proportion of this additional cost; but this would be a very small matter as compared with the direct saving referred to above."

McDougall, Vol. II., p. 374, c. 2.

235. The effect of this financial arrangement—applied to one particular class, the insane—would appear to be, that those who are considered insane increase in number, and that many who were not formerly so called or considered are placed in that class and so dealt with. The assistance from the Exchequer does not aid the mentally defective in all their sub-classes, that is, for instance, as imbecile or feeble-minded; it tends to push into the one sub-class "lunatic" all those cases which the guardians would wish to transfer. Be this done rightly or be it done wrongly, these cases would not all be termed "lunatic," if there were other recognised classes in which they might be placed and other suitable institutions to which, if it were right, they might be sent; nor would admission to an asylum then remain a form of treatment which is practically adopted in preference to all others.

McDougall, Vol. II., 17607–17611.

236. Another cause of disorganisation, according to Sir John McDougall, is the method of discharge from the asylums. "Unrecovered" cases are frequently discharged. This is partly the result of the need of more accommodation, partly the result of the policy adopted by the Visiting Committee of the London County Council, as they believe, in accordance with the Lunacy Act of 1890.

By Sec. 38 of the Act of 1890 a reception order remains in force for a period of one, two, three, and five years respectively, subject to a special report of the medical officer of the institution or of the medical attendant of the single patient as to the patient's mental and bodily condition; and a certificate that the patient is still of unsound mind or a proper person to be detained permits of his being detained. But if, in the opinion of the Lunacy Commission, the special report of which a copy is sent to them, does not justify the certificate, they make further inquiry, or if the patient is in an asylum, they ask the visiting committee of the asylum to do so—leaving them to discharge the patient or give such directions regarding him as they think proper. This Section would seem to give to the Visiting Committee full discretionary power to discharge the patient on revision. In practice, however, this does not represent what is desired by the Visiting Committee of the London County Council, and what they believe would prevent unnecessary and injurious discharges. Their scheme would be on admission to refer patients not direct to an asylum, but to a receiving house where "we should see a great deal of weeding out," for instance, "some drink cases which need not be certified when they are almost recovering medically before they are sent to an asylum." On discharge, on the other hand, they would desire to control the patient after the passing of the actual attack of insanity, when ordinarily the discharge would take place. "Even after persons seem fairly well," they might advantageously be under control for some months afterwards, and there might be "a stepping-stone between actual insanity and discharge." Then, when they were actually discharged, they would be kept under the friendly supervision of an after-care association. Now, when under the 38th Section of the Lunacy Act, 1890, a continuation certificate is sent to the Lunacy Commissioners and the facts do

McDougall, Vol. II., 17670.

17798.

17781.

17783.

McDougall, Vol. II., 17819-17820.

not in their opinion justify it, the document has to be forwarded to the Visiting Committee for inquiry and decision by them, and the latter often give the patient the benefit of the doubt and discharge him with injurious results.

Financial considerations affecting the policy of the guardians in sending cases to the county asylums—*contd.*

237. On this point our opinion is that, in the case of certified lunatics, the present law allows sufficient powers for the prevention of the discharge of "unrecovered" cases, if the medical officer bases his certification not on the actual and momentary state of the patient, but on his knowledge of the case as a whole, and the anticipations in regard to it which the facts warrant. In regard to this no legal limitation is imposed on the discretion of the medical officer: and it is of the highest importance that nothing should be allowed to interfere with his discretion to detain persons whose release would be a danger, although, for the moment, they appear to be rational and tranquil. But, unfortunately, there is another reason for the discharge of "unrecovered" cases, the pressure on accommodation, to which reference has already been made.

Mentally defective children.

238. We have now to pass to the children; and in their case too there is a similar want of co-ordination. In order that some of the mentally defective children cared for by the Metropolitan Asylums Board may attend the special classes of the Education Committee, the Board has opened residential homes for these children near the special class centres. The Education Committee for the same purpose has also opened residential homes for the same class of children, who are not under the Board. The Board may not take charge of mentally defective children under five years of age, nor keep them after twenty-one, unless they are certified as lunatics or idiots. The Education Committee, on the other hand, receives the children into its special classes between the ages of five and sixteen; but at sixteen no provision for them is forthcoming, however defective they may be, unless a board of guardians obtain for them admission into an institution of the board until the age of twenty-one. And, again, if at the age of seven they are disqualified for attendance at a special school as not "capable of receiving benefit from instruction in a special class," then, unless their relations or friends are able to maintain and look after them, they are left uncared for, if the guardians do not intervene, which, it is stated, they are often very unwilling to do. It has been ascertained directly," so the evidence runs, "that in some cases these children have been refused, and the guardians' refusal not infrequently has been backed up by a certificate from their own medical officer, while in other cases the refusal has been backed up by such statements from the guardians or relieving officer to the parents, that they have refused to allow the child to be submitted to the hardships they were afraid of; and so these cases remain about the houses and streets, meanwhile degrading and exhausting the whole family in which they live.

Regulations. Board of Education, 1907, Cd. 3636.

Kerr, Vol. I, p. 440, c. 2; p. 433, c. 2; 7958, 7961, 8007.

239. Our general conclusion on this branch of the subject is that there is in London a division of authority and a want of administrative accord which is fatal to any successful treatment of the problem, and which is the strongest argument for some such settled uniformity of procedure and unification of authorities as several of our witnesses have very strongly advocated.

Procedure for certification, etc., under the Lunacy Act, etc.

240. We would now consider in more detail the questions which are raised by a study of the table printed above (Par. 210), and by these general conclusions. We will follow out the procedure in a simple case.

First, we may take those cases in which the person has been brought to the workhouse by the relieving officer, and may or may not be there retained as a lunatic. "Lunatic" means an idiot or person of unsound mind"; and "workhouse" "includes an asylum provided for reception and relief of the insane under the Metropolitan Poor Act, 1867, and the managers of every such asylum shall exercise the powers and perform the duties by this Act conferred and imposed upon the guardians of the union to which a workhouse belongs."

The Lunacy Act, 1890, 53 and 54 Vic., c. 5, Sec. 341.

If the lunatic is to remain in the workhouse, the medical officer of the workhouse "certifies in writing (*a*) that such person is a lunatic, with the grounds for the opinion; (*b*) that he is a proper person to be allowed to remain in a workhouse as a lunatic; and (*c*) that the accommodation in the workhouse is sufficient for his proper care and treatment, separate from the inmates of the workhouse not lunatics, unless the medical officer certifies that

The Lunacy Act, 1890, Sec. 24.

Procedure for certification, etc., under the Lunacy Act, etc.—*contd.*

the lunatic's condition is such that it is not necessary for the convenience of the lunatic or of the other inmates that he should be kept separate." And the medical officer has to state the grounds of his opinion that the person is a lunatic.

Lunacy Act, 1890. Form 11.

On this certificate, which is sufficient authority for detaining the lunatic for fourteen days, supported by a further certificate under the hand of a medical practitioner not being an officer of the workhouse, the relieving officer may apply to a Justice of the Peace, and the Justice may give an order of detention to the master of the workhouse to the effect that the pauper in the said workhouse is "a lunatic, or idiot, or person of unsound mind," and "a proper person to be taken charge of under care and treatment in the workhouse, and being satisfied that the accommodation in the workhouse is sufficient" for that purpose, either separately from other inmates who are not lunatics or not apart from them; and that the master of the workhouse should take charge of him, and, if the workhouse medical officer should certify it to be necessary, should detain him as a patient in the workhouse. A statement of particulars signed by the relieving officer follows.

On the other hand, if the lunatic is not to be detained in the workhouse, but to be sent to an asylum, the justice (having called to his assistance a duly qualified medical practitioner) may make an order of reception in similar terms, and may direct the superintendent of the asylum of the county to receive the pauper lunatic as a proper person for detention in an asylum. A statement of particulars by the relieving officer in this case also follows. This would be the normal procedure in the case of pauper lunatics.

Mann, 4978. Vol. I., p. 282, c. 1, and Metropolitan Asylums District Asylums Amended Regulations Consolidated. Art. 2 and 3 and forms. Local Government Board Order, Feb. 20th, 1875.

241. We turn next to admissions to the asylums of the Metropolitan Asylums Board. In the case of these admissions the medical officer of the workhouse certifies that he has personally examined the individual, and that he is, in his opinion, a chronic and harmless lunatic, idiot or imbecile, and, as such, might be lawfully detained in a workhouse, and a fit person for admission into the Metropolitan Asylums District Asylum at . . . . . ; and that he has formed his opinion on (1) facts observed by himself, which he states; (2) on facts communicated to him by others—which he states, together with the names of those from whom they have been ascertained. This certificate is accompanied by an admittance order from the clerk of the union sending the pauper, and a report from the chairman, vice-chairman or member of the visiting committee of the board of guardians from whose union the pauper is sent, stating that he is satisfied that the individual is a proper person to be sent to that asylum.

Mann, Vol. I., 5010, 5011, 5012, 5070, 5098.

242. There are thus two concurrent methods of certification. The "certificate" of the medical officer, the "order" of the clerk, and the "report" of the chairman just referred to are sufficient to transfer a lunatic who is "chronic and harmless" from the workhouse to the asylum of the Metropolitan Asylums Board. But they are not enough to detain him. He has only been removed from one kind of workhouse—the ordinary workhouse—to another kind of workhouse, the asylum-workhouse, as defined by the Lunacy Act of 1890 (*see* above). Consequently he retains his right of free egress, subject to the notice of twenty-four hours. To detain him at the asylum workhouse, an order for detention under Sec. 24 of the Act of 1890 is necessary, just as it would be required if he were detained in the workhouse; and though the person might remain uncertified in the workhouse for a long period, yet if he is removed to one of the Boand's asylums he must be certified. And thus, as we have seen, under the guise of "chronic and harmless lunatic or idiot" and "lunatic or idiot or person of unsound mind," old paupers, long bed-ridden in a workhouse, are transferred to the Board's asylums.

Mann, Vol. I., 5060.

Adrian, Vol. I., 103.

Mann, Vol. I., p. 282, c. 1.

Mann, Vol. I., p. 282, c. 1. 5015.

243. The complication is still greater in the case of children.

"In the Lunacy Act of 1890 there is no mention of age, so that strictly speaking every lunatic, whether a child or an adult, should be certified," that is, if these persons are to be detained, they must be detained as lunatics in an asylum workhouse. The Lunacy Commissioners themselves, however, were not accustomed to require certificates in the case "of idiot children under sixteen years." So the Asylums Board did not require the certificates in these cases. But after the age of sixteen these persons could take their discharge, unless they were certified—that is, just at the period when "this training was producing the most substantial results," and, it may be added, the danger of discharge was greatest. This was unsatisfactory, and hence each child under sixteen is now certified as "lunatic, or idiot, or person of unsound mind," and unless he become chargeable to some country union, or be discharged for

Mann, Vol. I. 5015.

certain habits which are regarded as very unsuitable for a child who mixes with other children, he goes to the over-sixteen colony at Darenth. Of these "imbecile" children the Asylums Board cannot take charge till they are five years of age. Accordingly, if they are placed in the guardians' hands and their parents cannot take proper care of them, they must, unless they are boarded-out, remain in the workhouse or infirmary till that age.

Procedure for certification under the Lunacy Act., etc.—*contd.*

Rotherhar Vol. I., 8759.

244. There is yet another distinction. In the case of "feeble-minded" children—the Asylums Board deal with children of seven years of age and upwards. In their case, as in that of adults, two Poor Law certificates are necessary, one signed by the clerk to the board of guardians sending the child, the other by the medical officer, "to the effect that the child is one who by reason of defect of intellect cannot properly be trained in association with children in ordinary schools." There is not, as in the case of "imbecile" adults, any report from the chairman or member of the visiting committee. But, by its medical officer, the education authority has to give a further certificate that the child "is likely to be improved by the training given in the special classes," and then the child, having been admitted to one of the Asylums Board's residential homes can also attend the special classes. At sixteen, however, the child can no longer attend the special classes—and then, without further examination by the medical officer of the education authority, but on the order of the medical officer of the board he is transferred to the Industrial Colony at Darenth. But, if he has not already been certified under the Lunacy Act to ensure his detention he must now be so certified as "lunatic or idiot or person of unsound mind." For child and adult alike, this conjunction of certificates is necessary to lodge him and to detain him. For the child at the special class, the education authority's certificate is also necessary. But for the child who is attending a special class, and is not in a residential home of the Asylums Board and under their charge as a "pauper," there is no home available as a matter of course after sixteen. His friends must have him certified as "lunatic or idiot or person of unsound mind" and he must become a "pauper" to gain admission.

Local Government Order, April 2nd, 1897. Mann, Vol. I., p. 282, c. 1 and c. 2.

245. It is stated that cases of misdirection, due to the opposite views of medical men attached to different authorities sometimes arise, and one instance was mentioned, which, though exceptional, indicates the deadlock that may occur in these circumstances. The child in question, maintained by a board of guardians, was rejected for the special schools of the education committee as being an "imbecile." He was, therefore, retained by the guardians and sent to the Asylum Board's Reception Home. There, with a view to permanent detention it was necessary to have him certified under the Lunacy Act. "Under the present practice of applying at once for its certification under the Lunacy Act for permanent detention, we found it impossible to retain the child, on the ground that our own medical superintendent cannot sign a fourteen-day order." He therefore called in the assistance of an outside medical practitioner, but this medical man, very naturally, would not certify for the permanent detention of the child as a "lunatic." Hence at the time at which our evidence was received the child was too "imbecile" to be educated at a special class and for that purpose received into one of the board's residentiary homes, and not "lunatic" enough to be admitted into the board's industrial colony and trained there. This case is "quite exceptional, but still there are children just on the border line between the two classes with whom it is very difficult to deal. In London very much depends on the difference between the different medical officers in the different districts."

Mann, Vol. I., 5098.

Mann, Vol. I., 5098.

Mann, Vol. I., 5102, 5103. Helby, Vol. I. 5152, 5361.

246. In connection with the education authorities there is a similar difficulty, when their medical officer has, under the Elementary Education (Defective and Epileptic Children) Act, 1899, certified that a child should be educated in special classes, the parents may obtain certificates from local practitioners to the effect that the child is fit for education in an ordinary class. These certificates come, on the parents' appeal, before a magistrate, who on occasion sends for a teacher, and on his evidence and that of the certificate, decides whether the certificates of the medical officer should be supported or set aside.

Kerr, Vol. I., p. 436, c. 1.

Unification of Authorities necessary to avoid conflicting certification.

247. We cannot but conclude that there should be such a unification of authorities as should operate, so as to dispense with this duplication or even triplication of certificates and Orders, from the officers of the boards of guardians and the Asylums Board, the education authority, and the justice of the peace under the Lunacy Act. The children in the different institutions and under the different authorities appear to be more homogeneous than the system of certificates that separates and classifies them. Mr. Helby, who is now chairman of the Metropolitan Asylums Board and was for six years a member of the London School Board, says in regard to the similar characteristics of the children maintained in the institutions of the Asylums Board and those taught in the special classes by the Education Committee of the London County Council—

Helby, Vol. I., 5152, p. 296, c. 2.

> "At the present moment my experience has been this, that you may get a medical man in one room and another in another room, and the same patient may go before one who would certify him as only being feeble-minded, and the other would certify him as being imbecile. I have seen it over and over again. . . . . I have gone, for instance, when I was on the School Board, and seen what they call the 'defective' children, I have seen also those which are feeble-minded under the Children's Committee of the Asylums Board, and I have seen also very many of those and examined them at the Darenth Improvable Schools, and I am bound to say this, that I have seen some of those, and examined them, spoken to them and so forth, at Darenth Asylum, where they are under detention, and found a better class of child than those whom I have seen either at the School Board Defective Schools or under the Children's Committee."

This corresponds closely with the view to which we have been led by our personal experience.

For children so closely akin in mental ability and defect one system of administration, certification and detention may well suffice.

Discharge from Asylums, etc., of the Metropolitan Asylums Board.

248. Of the present system of discharge from the asylums and homes of the Asylums Board, the inconvenience of which is prevented in part by the contrivance of certifying the inmates under the Lunacy Act, there is also criticism. The power of discharge which the guardians have is used much too freely, it is stated.

Sherlock, Vol. I., 8870.

Dr. Rotherham, the medical superintendent of Darenth Asylum, says :—

Rotherham, Vol. I., 8752. Rotherham, Vol. I., p. 509, c. 1. Mott, 8051, 8052. Vol. 1. Shuttleworth, Vol. 1., p. 573, c. 2.

> "I can have a notice sent down by the board of guardians, ordering me to deliver over a patient I have got next morning to the patient's friends; and the guardians will make no application to me first to know what condition the child is in, whether it is fit to be discharged or otherwise. I had a notice a little time ago which ordered me to discharge a very bad epileptic who was not fit to be taken away by the friends, but I was quite helpless. I had to let it go."

249. In view of these difficulties it has been suggested that certificates should be made by a special board of medical men, who should have a special knowledge of this type of case, "defective children, including epileptics," and that the power of discharge should also be in their hands; that some simple process of certification should be adopted applicable to all classes of the feeble-minded and replacing the cumbrous procedure at present required under the Lunacy Act, 1890; that for permanent renewable detention there should be a magistrate's certificate, with subsequently a fresh certificate given by the medical superintendent of the institution every three years until the patient reaches twenty-five years of age; and that no further certificate should be necessary after that time; and that "there should be a very much more careful selection of children (for special schools) than is possible at present." "We want," Dr. Kerr says :—

Sherlock, Vol. I. 8864. Rotherham, Vol. I. 8745. Rotherham, Vol. I., p. 509, c. 1. Kerr, Vol. I., 7843. Kerr, Vol. I. p. 439, c. 2, 7943. Bond, Vol. I., p. 469, c. 2.

> "An hour spent on them perhaps one week, and an hour the week afterwards, in the case of special children. Nine-tenths you can settle at once, but probably one-tenth would require careful medical inspection and supervision with a view to classification."

Further, it is suggested that there should be a recognised "standard of imbecility," in order that, where a child is certified to be imbecile by the medical officer of the Education Committee he (or she) may not be refused by the medical officer of the guardians on the ground that he (or she) is not imbecile enough for admission to an institution; and that the public authority or authorities should take into consideration the total needs of the cases as brought out by a study of their life-history at various ages, and that if possible the provision of those needs be entrusted to a single authority.

250. We have now to consider the work of the Metropolitan Asylums Board, especially in reference to the residential homes for defective children which are associated with the special classes of the Education Committee of the London County Council and to the Darenth Industrial Colony; and we have also to consider the work of the Education Committee in this department.

CHAPTER X.

Educational and Industrial Institutions of the Metropolitan Asylums Board.

251. To two types of institutions managed by the Asylums Board we would draw special attention; the residential homes and the industrial colony at Darenth.

The Residential Homes.

252. There are seven homes of the board for defective children: three for boys and three for girls, and one—an experimental home for elder cases up to twenty-one years of age. In the last there is accommodation for forty-three pupils. The others are small homes, with from ten to twenty-two inmates. The board has thus had considerable experience in this branch of work.

Annual Report Metropolitan Asylums Board 1905, pp. 28 and 41.

The Hon. Maude Stanley, who is Chairman of the home for feeble-minded girls at Lloyd House, gave us an account of the residential homes. She said that at Lloyd House there were twenty girls, and in an adjoining house eight.

Stanley, Vol. I., 7217 and 7218.

We send them every year to the seaside for four weeks to one of the homes belonging to the Metropolitan Asylums Board during the school holidays. When they do not go there, they are taken out for excursions. Everything is done to try and brighten them up. I took them once to see Westminster Abbey. They have been taken to see other places to try and give them fresh ideas. In the home we give them work to do. They do some washing and cleaning on Saturdays, and some needlework, they have a lesson in musical drill once a week. They do that very well. They are very happy here, and they have no wish to leave the home.

Vol. I., 7236.

By keeping the children in special homes and allowing them to go out to the public elementary schools in the neighbourhood, they "get the advantage of mixing with other children in the day schools;" while they are also under "the kindly supervision of the matron and servants in the home. These children are very affectionate children."

Turner, Vol. I., 8617.

Classification of cases in residential homes and early training.

253. Miss Turner, who was medical attendant at five of those residential homes, said that she classified the children as (1) very mentally deficient; (2) mentally deficient; (3) backward; (4) normal; (5) over bright and eccentric. She had classified them after special investigation. Most of the children had been already in truant schools. A great number had been charged before for small offences, playing truant, being beyond control, and many had already been in truant schools from six months to two years. Of 100 boys and twenty-eight girls, she thought that only 19 per cent. ought to be in special schools. "Ten per cent. were absolutely deficient, and some could be certified at the present time as imbeciles." About 20 per cent. would require permanent detention, but probably only half the number if they had been taken early." And on this point Miss Turner insisted. She thought there would be a considerable number of backward children who, if dealt with early, would only require temporary detention, at the very most a year or two's training.

Vol. I., p. 502, c. 2. Vol. I. 8624. 8628. 8631.

Vol. I., 8676–8678.

"If it is a bad case that wants attention the child should get a chance of early training. I should have it certified and sent to a colony, but if not a bad case I should see that the surroundings are healthy. In my opinion seven years old for a deficient child is too old to start treatment; a deficient child ought to be taken in hand long before that. With many of the children I have had in these homes, and privately, the mothers have said that they noticed things were wrong from the beginning. . . If the mothers notice this (and they are not so quick to notice these things in their own children) I think that proves that deficiency may be noticed early and ought to be under treatment early."

Turner, Vol. I., 8695–8698.

There might be total recoveries, "if they were started young enough. That has been the difficulty all along. We have had them so old, after they have formed all their habits and been in unhealthy surroundings too long. Then it takes twice the time to get them into decent ways of living than if we had them quite young." "Five is really too old to start special training; three would be better." The home was necessary for "bringing up," which was of more importance than head training. In the home that would be provided in the first instance by kindergarten teaching.

8702.

Mann, Vol. I., 5029.

Cost in small residential homes.

254. The cost of maintenance in these small homes was naturally high, viz., £37 1s. per head in addition to the cost of education, which is provided by the special schools.

Turner, Vol. I., p. 500, c. 2., and 8714.

The beneficial effect of employment.

255. In regard to results under present conditions, witnesses have stated before us, that these feeble-minded grown-ups, at eighteen or nineteen, could really do as good work as an ordinary average person of the servant class, "under supervision"; but for other reasons one could not risk it." Drafted into a

The beneficial effect of employment—*contd.*

large home—such as the home for "ophthalmic" children, they can do other things besides laundry work; they can help in cooking and housework. There would not be enough work for them to do, if the adult homes were by themselves. The productive work that they can do, if carried on in an institution—their work as servants—is quite as good as that of an ordinary intelligent person.

Stanley, Vol. I., 7263. Hargreaves, Vol. I., p. 322, c. I.

This view was fully confirmed by Miss Hargreaves, who was matron at Rochester House, which was opened in 1901 for improvable imbeciles—ninety-six males and sixty females. There the children had been carefully selected as improvable, but they included instances of marked imbecility. There were two buildings, one for males and the other for females. In amusements and outdoor recreations all joined. Supervision was exercised in such a manner that the children seemed scarcely aware of it. This gave them self-confidence and helped them to work on their own initiative. All the children were under training in the school, or the workshops, or engaged in household work, the kitchen and the laundry. Simple kindergarten instruction and elementary lessons in the three R.'s formed the basis of the education, with object and nature lessons. And much was taught by drawing. "Manual work was begun as soon as the child showed any aptitude in that direction."

Vol. I., p. 322, c. 2.

"I am of opinion that boys learn a trade much more quickly and more easily if their tuition is commenced early, provided that their strength is not overtaxed. and that sufficient relaxation is given."

Vol. I., p. 323, c. I.

5907. 5908. 5976,

As far as possible the boys and girls did the work of the place. An assistant gardener was dispensed with, and the boys did his work; others helped the handyman; one paid woman and six girls did the work of the laundry; the cook with the assistance of five girls did all the cooking and work in the kitchen. So in the needlework room. On the male side, when the institution was opened six girls were sent over daily to make beds, etc., in the boys' dormitories. The boys had now been taught to do the work themselves. With this, as part of the method of education, systematic recreation was carried out on a large scale, and book learning was at a minimum.

Financial Results of Training. Vol. I., 5898. 5926, 5923.

256. This training in employment had an important financial result. It was found quite unnecessary to engage the paid labour which it was intended to have when the premises were acquired; and as the children grew and improved, they would take the work off the hands of yet other servants. Miss Hargreaves said:—

"From careful study of the working of Rochester House during the four years it has been open, I am of the decided opinion that at the end of eight years the same staff would be quite capable of dealing with double the number of children."

Vol. I., p. 323, c. I.

The average annual cost, with only 156 inmates, is not more than £29 9s. This is attributed "entirely to the training of the inmates and to the great amount of work in the institution performed by them." The success of this institution received immediate recognition, and now with equal advantage, but on a much larger scale, the same method is adopted in the Darenth Industrial Colony to which the children from "Rochester House" have been transferred.

The Darenth Industrial Colony. Mann, Vol. I, 4998.

257. A "colony" for this purpose may be defined as an institution where the central buildings and the infirmary, and so on, are on the smallest scale necessary, and where the living and working arrangements are of an economical description, and the inmates spend most of their time in workshops or working on the land. It would lie within one curtilage, and the children in it would be separated from normal children.

Annual Report of the Metropolitan Asylums Board for 1905, p. 234. Helby, Vol. I., 5214–5242. Mann, Vol. I., Table p. 261.

The Darenth institutions may be said in some measure to represent the first experiment of uniting in one colony improvable children, young persons over sixteen, and adults, an experiment which is not yet fully made, but is in process of development. The buildings stand in 164 acres of land, and are placed on an open, breezy hill slope. Besides pavilions temporarily used for unimprovable children, there is an asylum for improvable adults and houses and workshops for the colony. Altogether there are about 1,900 persons, excluding the staff. About 500 of these, under sixteen, are in the schools; another 400 helpless and hopeless cases are in the pavilions, and in the industrial colony there are about 1,053. Of these there were 440 males and 315 females usefully employed. These give not more than two hours a day at most to non-manual work. There is an upholsterer's shop where furniture is upholstered for other

institutions of the Asylums Board; a shoemaker's and a tailor's shop, a brush shop, a basket shop, and, besides other employments, work under an "industrial painter" and an "industrial carpenter" under whom the inmates work for other Asylums Board establishments. Their work, in the year, in the painting of buildings was valued at £550. The inmates also take a large part of the work in the kitchens and laundries. "Up to within the last six months a large number of the adult imbeciles were simply wasting their time, though they were capable of doing work," Mr. Helby said. Yet an industrial colony should, in his opinion, in the course of time be made to a large extent self-supporting. The Darenth Industrial Colony—*contd.* Helby, Vol. I., 5183, 5188, 5210.

"The children could be very greatly improved," Dr. Rotherham, the superintendent, said; "they could do anything mechanical so long as they were looked after. They could not initiate anything at all; they were only good when they were being constantly supervised." For instance, one patient now at Darenth was worth to the institution 15s. a week as a labourer, and a few others were getting on nearly as well perhaps. Out of 425 male patients, 412 were at present working. "Quite half of those were doing something towards their own maintenance, and the others are beginning to help to do something, and in time will do something, towards their own maintenance." Rotherham, Vol. I., 8773–8779.

258. Parallel to this evidence of improvement is as strong evidence of deterioration if the children are withdrawn from instruction and supervision. "Those who go back," Dr. Turner says, "should be looked after. They go back to surroundings probably bad, to parents afflicted just in the same way as the children, probably neurotic or of the criminal class, whose influences accentuate the very thing you want to eradicate." And Mrs. Burgwin, Superintendent of the Special Schools under the London County Council, says of the children in special classes on their leaving: "Some of them have been certified and taken away, others have been had up for petty thefts, or cruelty, or fighting in street brawls. They are subject to spasms of anger. Some of the girls drift into the maternity wards." Turner, Vol. I., p. 500, c. 2. Burgwin, Vol. I., 8572.

259. In 1904 the cost of maintenance in the colony, including the unimprovable children, the adults, and the improvable children, was £31 4s. a head. This included all charges except central charges and capital expenditure and rent. Cost in the "Colony" at Darenth.

Answering a question in regard to the colonies abroad, Mr. Helby said that the inmates could do a lot of building themselves in their own industrial colony, could gradually work it up, and so could get it established for half the cost. Labour at the present time, with the trade union rates of wages and hours of labour, render it most difficult to know where you are. It is not only a question of the rate of pay; but you have three men to do the work of two. That would mean a considerable saving. The cost of maintenance at Darenth (1905) was 10s. 6·8d. a week. The more the colony became industrial the more this could be reduced. In an entirely industrial colony the cost of maintenance might be reduced 50 per cent. Mann, Vol. I., p. 284, c. 2. Helby, Vol. I., 5236. 5200, 5286. Annual Report of the Metropolitan Asylums Board, for the year 1905, p. 117,

260. The superintendent of such a colony, Mr. Helby said, should be a non-medical man with a medical assistant, as so much of the work was administrative. But another and well-informed opinion was that the medical man should be supreme and that there should be a steward who should consult the medical man on all details connected with the food supply and matters of that kind. Helby, Vol I., 5316. Beresford. 5457.

261. From this evidence we may conclude, in regard to the residential homes, that in most instances early treatment—treatment before school age, and often from the age of three—is necessary to produce satisfactory results in the case of mentally defective children; and that such early education in habits might be to some extent preventive; that the response of those children to manual and industrial work is frequently very quick and effective, and that by training they may, as they grow older, meet an appreciable part of the cost of their maintenance; that work may be done by the inmates of one home or colony for other homes or colonies by a division of labour and by attaching the institution for the mentally defective to one department supervised by one authority; that the colony system is likely to produce the best moral and economic results; and that the cost of initiating it may be greatly reduced if it is adopted gradually, General conclusions as to residential homes.

the inmates themselves being employed in building, equipping, and creating the colony. It does not seem to us necessary that such a colony should be quite close to London. It should not be impossible to bring the cost of establishing down to £100 a bed, and the maintenance below the 10s. 6·8d. which the inmates of Darenth (including the unimprovable cases) now cost.

Sherlock, Vol. I., p. 514, c. 1. *See* Pars. 702–705 below.

The question remains of the comparative value of the residential home, but of this we shall judge better when we have reviewed the position of London in regard to the provision made by the Education Committee for the mentally defective.

CHAPTER XI.

The Education Committee of the London County Council and the Mentally Defective.

Procedure in examination of children and classification. Kerr, Vol. I. p. 434.

262. The procedure of the medical officer attached to the Education Committee of the London County Council in detecting the children suitable for the special schools may be said to begin with the notification of cases to the officer by head teachers, divisional superintendents, charitable bodies, managers, and others.

A family history in regard to each child is filled up, and a "nomination" for him allocated to the centre nearest the child's home. When a sufficient number of "nominations" have been sent in a medical examination is held. Ten of these examinations are held weekly, and twenty children are asked to attend each examination. The medical officer's decision on the future education of each child is entered on a card. The cards are forwarded to the education officer, and the decisions entered in a register. From this register the classified returns of blind and deaf children, defective children, etc., are made up.

The classification of mentally defective children in the London schools.

263. The Elementary Education (Defective and Epileptic Children) Act of 1899 empowers a school authority to provide for the education in special classes of children who, *not being* imbecile, and not merely dull or backward, are incapable of receiving proper benefit in the ordinary public elementary schools. This definition implies a classification into three divisions at least: (1) Those who are imbecile, and unsuitable therefore for even "special education"; (2) dull or backward, yet not requiring "special" education on that account, but presumably suitable for the ordinary school; and (3) "special class children."

Kerr, Vol. I., p. 434, c. 1.

264. Dr. Kerr, Medical Officer (Education), of the London County Council, classifies the children into four groups:—

(1) "Merely dull or backward," as in the Act. These he classifies as having "spurious mental defect"—"a large class of cases in which it is doubtful whether they should be sent to an ordinary school or to a special class." These are cases of children in whom there is a want of spontaneity, due to environment, want of natural education, exhaustion from want of proper rest and sleep, and debility for want of proper nourishment. In these cases there is little abnormal to note. He concludes that some intermediate school is required for this group. Accordingly at the outset we find a want that is not met, but the recognition of which is the outcome of the Elementary Education (Defective and Epileptic Children) Act, 1899.

(2) His next class is "true mental defect." These cases are those which are suitable for a special class. Here are two divisions: (*a*) In one the characteristic is not a want of spontaneity, but a general want of development of the higher brain functions. In the other (*b*) "feeble-mindedness" appears "chiefly in relation to special faculties with comparatively normal development in other ways." "Socially this class embraces the criminal and moral defective in other ways, and also may include children who have hitherto been in some cases treated as imbecile."

(3) and (4) The third and fourth classes are at the lower end of the scale: they are divisions of the group of children excluded from 'special' teaching under the Act—the "imbecile" children. The children in the third class are so very defective that it is doubtful if they are good enough for the special classes. They

are sent to the special classes on probation. If they are proved unsuitable for these classes on probation, they fall into the fourth class—imbecile—and are refused. The classification of mentally defective children in London Schools—*contd.*

The corollaries of this classification are several:—

I. There should be a division of the mental defectives Class (2), into special classes, according as the children suffer, as stated above, (*a*) from general want of development of the higher brain functions; or (*b*) from abnormal development of special faculties with comparatively normal development in other ways. In 1905 there were three * special schools for elder boys, and two residential schools, one for defective deaf mutes and one for defective blind children; and there was also a residential school for elder morally defective girls.† But there appears to be no general classification of special education on the lines here noted; and yet the difference between these two groups (*a*) and (*b*) is distinctive and vital from the point of view of education and development.

II. The next corollary is the necessity of establishing a reception or classification home, which, in competent medical hands, would serve as a centre for observation; and Cf. Recommendation LXXXII., *below.*

III. The third is the adoption of a sufficient system of dealing with the "imbecile" children, the final residue of the unfit. To the need of this we have already drawn attention.

265. There was in London on December 23rd, 1904, accommodation for 4,446 children in special schools for the mentally defective, and 4,191 of these children were on the roll ‡. It was proposed to increase the accommodation so that it might serve for 5,346 children. This represents a considerable increase, but it is clear that a further question will have to be met, as Dr. Kerr's classifications also suggest. Special schools do not meet the need of many children. Even at the age of twelve, residential homes are required for many. "After the age of twelve a considerable number of children would be better if under complete control in small residential homes;" and Dr. Kerr adds, "by this age it is also possible to assess the child's future capacity in providing for itself." At the age of twelve, out of 455 mentally defective children examined, 126, or 27 per cent., were found to be "only fit for custodial treatment in the future." And the tendency of the education committee is, it would seem, to come to this conclusion in regard to an even larger proportion of cases. Accommodation in London for mentally defective children. Lawrence, Vol. I., p. 426. Kerr, Vol. I. p. 435, c. 1

266. The school board proposed six custodial (or residential) homes for: (*a*) mentally defective children who, but for their defect would be committed to industrial and truant schools; (*b*) mentally defective children living in very bad homes; (*c*) mentally defective children whose regular attendance it is not possible to secure at day schools; (*d*) mentally defective children living so far from any special school that it would be impossible for them to attend; (*e*) certain defective children known as moral defectives; and (*f*) elder children. The Education Committee has now, as stated above, two homes for cases of double defectiveness—the conjunction of blindness or deaf mutism with mental defect—and one for morally defective girls. And the residential home is now being used for at least two of the classes suggested by the school board "for cases of children very difficult to train in the ordinary special school; that is to say, who upset the class and cause a good deal of waste of time and education to the other children," and for "children who have particularly bad homes." "These children," it is added, "are very amenable so long as we have them in the school, but they would at once relapse into unfortunate habits even in the matter of going to and fro to their homes." "They go to a neighbouring school under the guidance of a matron who takes them there and back in the morning and evening." Residential homes of the Education Committee. Kerr, Vol. I., p. 435, c. 2, and p. 437, c. 1. Lawrence, Vol. I., 7655 and 7657.

267. This statement indicates, we think, the general movement of thought in the matter. In many instances the special class or school does not furnish all the conditions for the formation of habits and conduct, which in many instances are the supreme necessity Hence a more complete method has to be tried. For those who suffer only from "mere dulness" the intermediate class may suffice Special schools and classes do not meet the needs of many of the mentally defective children.

* There are now 9. (Information supplied by London County Council.)

† This Home was closed in 1906. (Information supplied by London County Council.)

‡ From the List of Certified Schools on August 1st, 1907, published by the Board of Education, it would appear that, at that time, accommodation had been provided in London for 4,946 mentally defective children.

3970.

Special schools and classes do not meet the needs of many of the mentally defective children. —*contd.*

and also for those who suffer from "general want of development of the higher brain functions;" but it will not meet the needs of those whose feeble-mindedness is found "chiefly in relation to special faculties with comparatively normal development in other ways." Hence with further differentiation it is likely that more special homes will be proposed and established, or different and more various methods of supervision introduced. Thus now some witnesses urge that the age of education should be raised from sixteen to twenty-one in the special schools, as, under an order of the Local Government Board, it has already been raised in the schools and industrial colony of the Asylums Board, and such a proposal would entail yet further "special" and probably residential accommodation.

Fleming, Vol. I., 2
Tredgold, Vol. I., p. c. 1.
Lawrence Vol. I., p. c. 2.
Kerr, Vo I., p. 436 c. 2.

268. It will thus be seen that in London the special school or class stands for less than it did. Under the Act of 1899 the three courses are suggested—special classes; boarding homes near special classes or schools: and "day or boarding special schools"; and experience is attaching more and more importance to the last proposal, especially if the scheme of instruction is modified as suggested. The evidence of the Metropolitan Asylums Board is to the effect that it is doubtful whether the children whom they maintain in rather expensive small homes near the special schools of the education committee would not be better educated if they were in boarding homes in an industrial colony; and it strongly supports the view that early training before seven years of age, and before the children would come under the education committee, is desirable, often, indeed, quite essential, if there is to be any real amelioration. If this be the case, instead of the children at the special schools being retained under the control of the education committee till sixteen, and at that age, as many witnesses propose, handed over to another authority, it is evident that many must be placed in custodial homes or colonies long before that age—at eleven or twelve or earlier. In these circumstances, if there be a transfer of the children from the education committee to some other authority, it would probably be made at any age that might be desirable in the individual instance, as the occasion arose. At present some hold that "a great deal of the education between fourteen and sixteen is practically waste—the child cannot learn." It follows that with these changes the whole importance of the line of demarcation at sixteen disappears. Instead of discharge and transference at sixteen or twenty-one, all practically are agreed that in many of these cases there should be detention or continuing control on a renewable certificate. It may thus be said that the whole aspect of the question has altered since the Act of 1899, in London at least, where the system of special schools has been established on a larger scale than anywhere else in the country.

Elementary Education (Defective and Epileptic Children) Act, 1899, 62 & 63 Vict., c. 32, Sec. 2.
Helby, Vol. I., 5143, p. 296, c. 1.
Kerr, Vol. I., p. 435, c. 1, 7924, 7993, 7998, 8000.
Dendy, Vol. I., 853.
Berry, Vol. I., p. 543, c. 2.

269. It follows, further, that the method of transferring mentally defective children to special homes or colonies should be as simple as possible; and we think that if, in accordance with the conclusion which we adopted in regard to the counties, the Asylums Committee of the London County Council were specially organised and reinforced as the local authority to carry on this extended work, there would be such a coalition of interests as between that committee and the education committee that all difficulty in the transfer of children would disappear. This would no doubt entail the non-pauperisation of the parents of mentally defective children who require special education, but that, too, we recommend. Probably, in the future, more reliance will be placed upon the education of these children at an early age, and often continuously, in colonies like that at Darenth and Sandlebridge, than in scattered residential homes. On this plan, however, at whatever age a child was ascertained to be unsuitable for the special school of the education committee he would pass to the residential school or colony maintained, or contributed to, by the county asylums committee. The local authority for the care of the mentally defective would, as we have said before, be made responsible for the care and supervision of all such cases, and it would be enabled to arrange for their maintenance, education, training, and control, directly by, or on contract with, any authority, body, or person that, subject to approval, they may think fit. In this way, the local authority would be able to contract with the local education authority in regard to the children that should attend special schools or classes under their care. Thus, in a manner, both authorities would deal with education, for in the case

Recommendation XCII.
Recommendation XLII.
Recommendations LXXIX–LXXXII.

of the feeble-minded education lasts far into life, and, indeed, passes unconsciously into prolonged supervision. Special schools and classes for the mentally defective might thus, under contract, remain in the hands of the education committee where the special class system has been developed, whilst institutional training and supervision would be undertaken by the asylums committee. This, on the basis of there being one central authority in charge of all cases of mentally defective persons, appears to us to be the best administrative division.

Special schools and classes do not meet the needs of many of the mentally defective children—*contd.*

270. But one question remains. If this division of administrative control is to be effected, divergency in decisions as to admission or non-admission to homes or colonies must be avoided.

There must be consultation in common amongst the authorities concerned The central point for this purpose might be the register. The certification of the mentally afflicted connects itself with the family history and the register of the education authority; and the information there entered, augmented from time to time, would be the basis of all future certification, and would be available for many miscellaneous purposes, as, for instance, as part of the prisoner's record, if, as a juvenile offender or later, a mentally defective person were arrested, and brought before the courts, or for the transfer of a person from one institution to another, as, for instance, from a residential home to a colony, or from a colony to an asylum.

Prevention of divergency in decision as to mental defect.

271. Of the extent to which provision would have to be made in London the results of the special classes may give some indication. It is said that at present about a third of the children on leaving school are able to maintain themselves materially or partially; and tables have been prepared to show what the numbers are. These tables considered together, suggest what the claims of the future may be. "Dr. Collie has based his Report chiefly on what the children will do on leaving school"; Dr. Berry has adopted a "very strict interpretation, and explains that many of her second class" will contribute partially to their support and might be custodial cases; Dr. Thomas has selected the children in view of their whole social prospects; and Mrs. Burgwin with reference to "heredity and home conditions."

{ Girls 53 } Under 12	14	19	10	9	11	13	

272. The different results of the examination of the children in these groups of schools are remarkable. Dr. Collie reports 62 per cent. of the boys and 67 per cent. of the girls in the Bath Street Schools to be likely to be self-supporting—taking, as we understand it, the test of what the children will be able to do when they leave school, that is, at the age when the demand for the cheap labour of children is greatest. Later on, as several witnesses have said, they might be able to earn little or nothing. This percentage of estimated success is indeed very high, if tested by other records such as those of Mrs. Owen Fleming, the manager of a "Special School," in Southwark, which cover a long period of observation. Dr. Thomas has made his examination in view of the whole social prospects of the child, and he returns only 32 per cent. of the boys and 29 per cent. of the girls as likely to be self-supporting, showing, as we understand him, that this much smaller number of mentally defective children is likely to be self-supporting continuously. Dr. Berry's return is stated to be drawn on a very strict interpretation of the facts; and it is noticeable that she concludes that a much smaller number of the boys than of the girls will contribute to their own maintenance. Mrs. Burgwin, judging from "heredity and home conditions," practically comes to the same conclusion as Dr. Berry in regard to the boys, but grades the girls who would be able to earn their living at 23 per cent., rather less than Dr. Thomas's figures. Taken together, these statements suggest that on a careful and continuous scrutiny of cases only a very small proportion of feeble-minded children, probably less than one-third, will be able to support themselves materially or partially.

273. In view of such figures as these, provision and supervision for this class in their after-school life is of overwhelming importance. It affects especially the large section of those who are not able to support themselves in life, the 60 or 70 per cent., and who will either require custodial treatment, or, being able to contribute only partially to their own support, will often require "after treatment." And another question arises which further affects the utility of the special schools as means of enabling the children to support themselves, as far as their abilities will enable them to do so. From the tables of the ages of children in special schools it appears that the attendance of boys at special schools falls off steadily after the ninth and tenth year. In that year it reaches its maximum —345. At twelve (twelve to thirteen) only 236 of that age are attending. In the girls' department there is also a decrease—a rapid fall from 244 to 192 between the years ten to eleven and the years eleven to twelve; and at twelve (twelve to thirteen) only 189 of that age are attending. Accordingly it seems that before twelve there is a considerable withdrawal of mentally defective children—boys and girls, who cannot nearly all of them have been moved up into the ordinary schools, and so must slip out of sight. For the rest, the following table states the position:

Provision required for mentally defective children—*contd.*

Lawrence, Vol. I., p. 429.

MENTALLY DEFECTIVE CHILDREN.

	Over 12.	Under 12.		Over 12.	Under 12.
Boys in school - 2,057	572	1,485	Girls in school - 1,501	472	1,029
Boys examined - -	135	307	Girls examined - - -	119	237
Requiring custodial treatment.	61	80	Requiring custodial treatment.	40	70
Proportional number of boys requiring custodial treatment among mentally deficient boys at schools. (Special).	258	386	Proportional number of girls requiring custodial treatment among the mentally deficient girls at schools. (Special).	158	303

274. If then, those inquiries which have been made by specially skilled persons be considered approximately correct, it would seem that custodial provision would have to be made for 644 boys and 461 girls; and in view of the fact that there is a large declension in the number of boys and girls attending school in the last three or four years of the school life, it would seem noteworthy that so much larger a provision should have to be made for children under twelve than for children over twelve, a fact that appears to confirm the opinion that the transition step from the class or probationary system to the institutional is reached in most cases much before sixteen, the age at which feeble-minded children have now to leave the special classes.

275. On the assessable value of London the expense of making provision for such cases as need institutional treatment, and the further similar expense of providing for other classes of mentally defective is a comparatively small charge, while the unification of authorities and the simplification of organisation and procedure should lead to considerable savings in some directions. Thus, for instance, a single contracting body, working on the lines of the Metropolitan Asylums Board, might make contracts for the supply of provisions on such a basis that with the full and useful employment of all inmates and a simple diet the cost per head for maintenance might be reduced to five or six shillings a week, at least for large institutions, houses and colonies of the type we are now considering.

Legge, Vol. I., 1253.

Lewis, Vol. II., 11280.

CHAPTER XII.

CONCLUSIONS AND RECOMMENDATIONS.

276. We find no points of difference in regard to London which would lead us to recommend for it a scheme different from that which we have recommended for England generally. There, as elsewhere, the care of the mentally defective should, we think, be brought under one local authority. On this point our

Sherlock, Vol. I., 8951. Beresford, Vol. I., 5480.

Downes, Vol. I., 1899.
Kerr, Vol. I., p. 439, col. 2.

evidence has been unanimous. Apart from the Education Committee, there are at present in London two local authorities dealing with mentally defectives, viz., the London County Council and the Metropolitan Asylums Board, the latter a Poor Law body. We have given, in Chapter VI. above, our reasons for concluding in general that a Poor Law authority cannot suitably undertake the care of the mentally defective, and, for these reasons, we are unable to recommend that the Metropolitan Asylums Board should be the local authority in London to deal with them. We recommend, therefore, that in London, as elsewhere, the care and control of all mentally defective persons should become part of the duties of the County Council acting through a Statutory Committee for the care and control of mentally defective persons. This committee would take the place of the Asylums Committee of the Council. The existing asylums of the Council and the institutions of the Metropolitan Asylums Board which have been established for the care of any class of mentally defective persons, would be under the control of this committee, which would also have the oversight of their education and of all public and voluntary provision made on their behalf. There would be a central system of certification with which the managers of the different institutions would be associated, so that children suitable for admission to an institution or to a special school would be admitted to one or the other directly by the decision of the same committee, without being subject to the decision of the officers of other intervening authorities, such as the Poor Law guardians or the Education Committee. The committee for the mentally defective, subject to report to the Board of Control and approval by them, would be able to provide for its wards by contracting on their behalf that they should be placed and maintained under such conditions as they may think desirable, in Poor Law, voluntary and other institutions, or they may furnish the necessary accommodation themselves. With the Education Committee they might arrange, as seemed best, to take over or hire the special schools from them, or to contract with them for the education of mentally defective children at a fixed rate. As elsewhere, there would be a medical officer appointed by the committee for the care and control of mentally defective persons, and he or a certifying medical practitioner, on the lines of Recommendation XXXVI. would ensure unity of method in certification, as far as possible. For the transfer of cases from one institution to another there would be a simple method of certification. (*See* Recommendation LX.) For London, therefore, no special recommendations are necessary, except one only, which is required in order to arrange the transfer of the institutions of the Metropolitan Asylums Board to the County Council. This recommendation is as follows :—

Recommendation XLII.

Recommendations LXXIX–LXXXII.

Recommendation XXXV.

Recommendation XCVI.

"That, notwithstanding any existing Statutes, the general Act for the care and control of the mentally defective should provide that in the case of the administrative County of London :—

(*a*) The institutions of the Metropolitan Asylums Board for mentally defective persons should be transferred (on such terms, and subject to such arrangements as may be provided in the Act) to the London County Council for the use of its Statutory Committee for the care of the mentally defective, on whom the duty to make suitable and sufficient provision for the care and control of the mentally defective in the administrative County of London, will, by the said Act, devolve.

And that (*b*) all grants now payable to the Metropolitan Asylums Board and to Boards of Guardians from the Metropolitan Common Poor Fund and from the Exchequer for the maintenance of lunatics or imbeciles, and any sums in future payable from the Exchequer on account of mentally defective persons, or epileptics not mentally defective, should, after the passing of the proposed Act, be payable to the London County Council for the use of the Statutory Committee for the care of the mentally defective (*see* Recommendations XXVIII.–XXXIV. and XC. below)."

PART III.

THE EDUCATION AUTHORITIES AND MENTALLY DEFECTIVE CHILDREN.

CHAPTER XIII.

The Law Relating to the Education of Mentally Defective Children and the Movement in Favour of it.

277. The compulsory Elementary Education Acts imposed on all children the obligation to attend school, and presently revealed the fact that there were a large number who, on account of mental or physical defect, could not be suitably educated in the large classes of public elementary schools. The children who suffered from obvious physical defects were the first to whom public attention was drawn, and a Royal Commission, which reported in 1889 on the Blind, the Deaf and the Dumb, was appointed to consider what steps should be taken for their care and education. Pooley, Vol. I., 204, 217 and 234.

This Report resulted in the passing of the Elementary Education (Blind and Deaf Children) Act of 1893, which made it a legal obligation on the part of the parent to cause his child to "receive instruction suitable to it," and it was made the duty of every school authority to provide suitable education (including industrial training) for blind and deaf children. The provisions of this Act have been satisfactorily carried out, and it is probable that few blind or deaf children are now left without suitable education. Pooley, Vol. I., 205.

278. The Report of the Royal Commission on the Blind, the Deaf and the Dumb contained the following recommendation :— Report of the Royal Commission on the Blind, Deaf and Dumb, 1889, par. 724, p. cvi.

> "That with regard to feeble-minded children, they should be separated from ordinary scholars in public elementary schools, in order that they may receive special instruction, and that the attention of school authorities be particularly directed towards this object."

Acting on this suggestion, the school authorities in London and seven provincial towns organised special classes for feeble-minded children. These were found to be a heavy charge on local expenditure, as they received no special Government grant, and representations were made by the London School Board and other school authorities in favour of special legislation for feeble-minded and epileptic children.

279. A Departmental Committee on Defective and Epileptic Children was appointed in 1896, and the terms of their reference were :— Report of Departmental Committee on Defective and Epileptic Children, 1898. (p. 1, par. 1.)

> "To enquire into the existing systems for the education of feeble-minded and defective children not under the charge of guardians, and not idiots or imbeciles, and to advise as to any changes, either with or without legislation, that may be desirable :
>
> "To report particularly upon the best practical means for discriminating on the one hand between the educable and non-educable classes of feeble-minded and defective children, and on the other hand between those children who may properly be taught in ordinary elementary schools by ordinary methods and those who should be taught in special schools :
>
> "To enquire and report as to the provision of suitable elementary education for epileptic children, and to advise as to any changes that may be desirable."

280. To show the kind of children who were thought by this Committee to form the object of their enquiry, the following passages may be quoted :— Type of Children under Consideration.

> "*Existence of feeble-minded children not imbeciles.*—That children exist who, on the one hand, are too feeble-minded to be properly taught in ordinary elementary schools by ordinary methods, and, on the other hand, are not so feeble-minded as to be imbecile or idiotic is assumed in the terms of reference to us. With this assumption we are in entire agreement. From the normal child down to the lowest idiot there are all degrees of deficiency of mental power ; and it is only a difference of degree which distinguishes the feeble-minded children, referred to in our enquiry, on the one side from the backward children who are found in every ordinary school and, on the other side, from the children who are too deficient to receive proper benefit from any teaching which the school authorities can give. . . . Thus the feeble-minded children referred to in our enquiry exist as a distinct class from imbeciles ; they are not, in fact, certified as imbeciles, they are not provided for as imbeciles ; they are not classified as imbeciles by most scientific authorities ; and they differ, both from ordinary children and from imbeciles, in the treatment which they require during their school life." Report of Departmental Committee (p. 3, par. 13) Report of Departmental Committee. (par. 12, pp. 3 & 4.)

With regard to *epileptic children*, the Departmental Committee say :—

> "'Epileptic children,' as used in the terms of reference, we have understood as covering children of all degrees of mental power and all degrees of epilepsy." (par. 12, p. 3.)

Chapter XIII.
The Law Relating to the Education of Mentally Defective Children and the Movement in Favour of it.

Type of Children under Consideration.

Report of Departmental Committee on Defective and Epileptic Children, 1898—*contd.*

281. The Departmental Committee give it as their opinion that :—

> "Approximately 1 per cent. of the children of the public elementary school class appear to be feeble-minded. An exact estimate will only be possible when more complete measures shall have been taken for discriminating and dealing with them."

They further state :—

> "The number of epileptic children appears to be currently estimated at 1 per 1,000, excluding epileptic lunatics, but otherwise including all cases, mild or severe. . . . Of those afflicted with epilepsy one-sixth are estimated to be severely afflicted."

(p. 9, par. 22.)

282. Their principal recommendations were that every child who by reason of physical or mental defect is not attending school should be examined by a medical officer appointed by the school authority. He should sign a certificate, stating whether the child is capable or incapable of receiving proper benefit from instruction (i) in ordinary schools, or (ii) in special classes for feeble-minded children. They further suggested that, if the medical officer should be of opinion that the child is imbecile, he should sign a certificate to that effect, and that the child should be excluded from school on that certificate. They suggested that this certificate might be used for the purpose of admitting children to Darenth or to certified institutions for imbeciles, as there was a difficulty in obtaining admission to Darenth by means of a certificate of the medical officer of the guardians. They said :—

(Par. 22 and 23.)

> "It is desirable that the authorities dealing with imbeciles should take the same view of imbecility as the school authority, and that no children should be left to whom both authorities refuse provision . . . ."

(Par. 23, p. 10.)

With regard to the establishment of special classes the Departmental Committee said :—

> "We consider that the Department should be empowered to require the provision of special classes in all districts where they think special provision necessary; and that for towns of a population of 20,000, special classes will almost certainly be required, and that enquiry should at once be made in all towns with a population of 10,000 or over with the view of ascertaining whether a special class is necessary . . . ."

(p. 22, par. 57.)

And they also recommended that the Education Department should require the school authority to provide for defective children and that :—

> "For the purpose of providing for defective children school authorities should have power to combine and to contribute and that the Education Department should have power to compel contribution in respect both of provision and maintenance of school accommodation."

(p. 22, par. 59.)

They pointed out that the Department had this power with regard to blind and deaf children and they recommended that :—

> "These powers should also be conferred on the Department in regard to the provision for the education of defective children."

(p. 23, par. 59.)

Further they recommended that where a special class was within reach of a child's home, it should be obligatory on the parent to cause his child to attend such a class.

(p. 15, par. 36.)

283. Three methods of providing education for defective and epileptic children were suggested :—

(p. 36, par. 104.(4).)

(i.) Special day classes (for town populations).

(ii.) Boarding-out, subject to the Regulations of the Education Department, in a home conveniently near to the special class (for country cases).

(iii.) Homes for defective or epileptic children certified by the Education Department.

(p. 36, par. 104, (10).)

The Departmental Committee did not suggest the compulsory removal of defective children from their homes to be boarded out or placed in Homes for defective children, but they did suggest that a magistrate's order should be obtained in the case of an epileptic child, requiring the child to be sent to a certified Epileptic Home.

284. Their principal recommendations with regard to epileptics were :

That children of normal intellect with slight epilepsy should be left in the ordinary elementary schools.

(pp. 30 and 31, par. 82.)

That feeble-minded children with slight epilepsy should be sent to special classes for the feeble-minded.

(p. 31, par. 84.)

That children with severe epilepsy, but not insane (estimated at one-sixth of the total number of epileptic children), should be provided for in certified Homes for epileptic children under the Education Department. With regard to the provision of such Homes and the maintenance of children therein and the

(p. 32, par. 87.)

(p. 34, par. 94 and 95.)

obligation of parents to cause their children to attend, the Departmental Committee recommended that the powers given in the Blind and Deaf Children Act should apply to epileptic children. (p. 36, pars. 164) (11) (12) (14) (15) (17).)

285. The principal suggestions made by the Departmental Committee were embodied in the Elementary Education (Defective and Epileptic Children) Act of 1899, but the Act was permissive in character. Education authorities were empowered, but not required, to make provision for defectives. No action was taken on the suggestion that the certificate excluding a child from a special class on account of imbecility should admit such child to an institution for imbecile children. The same difficulties still exist in getting such children certified and provided for by the guardians.

Elementary Education (Defective and Epileptic Children) Act, 1899, 62 & 63 Vic. cap. 32, Sec. 1 (1). Pooley, Vol. I., 224 Dendy, Vol. I., 825, 902, 903, 904. Kerr, Vol. I., 8007.

286. By this Act defective children are defined as children who, "not being imbecile and not merely dull and backward, are by reason of mental or physical defect incapable of receiving proper benefit from the instruction in the ordinary public elementary schools, but are not incapable, by reason of such defect, of receiving benefit from instruction in such special classes or schools as are in this Act mentioned." Epileptic children are defined as those who, "not being idiots or imbeciles, are unfit by reason of severe epilepsy to attend the ordinary public elementary schools."

Elementary Education (Defective and Epileptic Children) Act, 1899, Sec. 1 (1.) (a) and (b).

School authorities may, with the approval of the Board of Education, make such arrangements as they think fit for ascertaining the number of defective and epileptic children in their district. But they are not obliged to do this. If they do, however, they must provide facilities for enabling parents to send to them for examination such of their children as they think should be dealt with under the Act: and they can compel parents to do so subject to a £5 fine in default.

Sec. 1 (2) and (4).

287. When a school authority has ascertained the existence of defective children, it is under no obligation to deal with them specially, but it may do so—

(i.) By establishing special classes for them in some of its schools.
(ii.) By boarding them out in houses near to special classes or schools.
(iii.) By establishing either day or boarding special schools for them.

Sec. 2.

When a school authority has ascertained the existence of epileptic children, it may, but it is not obliged to, establish special schools for them. The omission of power to board-out or to establish classes for epileptics should be noted. For epileptics, the Board of Education certify boarding schools only. Full power is given, not only to establish, but to acquire, maintain or contribute to special schools or classes; and guides and conveyances may be provided for children who require them.

Secs. 3 and 4.

288. No fees can be charged for the instruction given in special schools, but parents may be compelled to pay what they can towards the cost of guides and conveyances, and all other expenses of the child incurred by the education authority. Parents are bound to send their defective and epileptic children between seven and sixteen to special schools and classes to the same extent as they are bound to send their normal children to ordinary schools. The maximum Government grant is £5 *per capita*, but the average obtained is about £4 3s. With regard to epileptic children, parents may be compelled by a justice's order to send them to a special school, no matter at what distance.

Obligations of Parents.
Sec. 8.
Sec. 4.
Sec. 11.
Sec. 4.

289. Schools cannot be certified for defective and epileptic children—

(i.) If conducted for private profit.
(ii.) Unless managed by a school authority.
(iii.) Or by managers whose maintenance accounts are published and audited in compliance with Regulations of the Board of Education.
(iv.) Unless open to the inpectors of the Board and of school authorities sending children to it.

Elementary Education (Blind and Deaf Children Act, 1893. Sec. 7.

Elementary Education (Defective and Epileptic Children) Act, 1899. Sec. 9, sec 10.

Education authorities are not bound to receive in their special schools or classes workhouse or boarded-out children, but guardians of the poor may contribute to the provision and maintenance of schools and classes in which their children are received.

103.—VIII. M 2

Chapter XIII.
The Law Relating to the Education of Mentally Defective Children and the Movement in Favour of it.

Elementary Education (Defective and Epileptic Children) Amendment Act. 1903, 3 Edw. vii., cap. 13. Pooley, Vol. I., 223.

290. The Elementary Education (Defective and Epileptic Children) Amendment Act modified the regulations under the Act of 1899 with regard to boarding schools for defective and epileptic children. It is now possible to have more than fifteen children in one building, and more than four such buildings in one establishment.

Number of Education Authorities who have adopted the Act.

Pooley, Vol. I., 243.

291. From the passing of the Act of 1899 until the Education Act of 1902, the Education Authorities of thirty-one County Boroughs (including London),—out of sixty-nine, eight non-county Boroughs, four Urban Districts and four small School Boards or District Councils, subsequently merged in the areas of nine County Councils, adopted the Act. Up to the 30th September, 1906, the Elementary Education (Defective and Epileptic Children) Act had been adopted by eighty-seven Local Education Authorities. "The county authorities are waiting, seeing how things develop, and attending in the first instance to the ordinary children."

Distribution of Schools.

Appendix Vol. V., p. 188–193.

292. A statement respecting the position of the Special Council Schools by counties will indicate better than a numerical summary what is their real extent and distribution.* In the North of England there are thirty-one; in Lancashire, fifteen; in Derbyshire, one; in Cheshire, one; in the County of Durham, two; in Northumberland, one; in Yorkshire, twelve Special Council Schools, four being in Bradford, four in Leeds, three in Sheffield, and one in Halifax. Of the Lancashire schools five are in Liverpool, three in Manchester, two in Bolton, and two in Burnley; and in Blackburn and Oldham, one each.

The schools are all in urban centres, and, it will be seen, not distributed throughout the middle sized towns or the country, but chiefly clustered in a few very large towns.

In the south the chief centre is London, where there are seventy-nine Special Council Schools, with one at Wimbledon and two at Willesden; in Essex, four; in Kent, two; in Sussex (Brighton), one; in Berkshire, one; and one in Oxford.

In the more Midland counties, there are thirteen; in Staffordshire (Wolverhampton), one; in Warwick (Birmingham), seven; in Nottingham, three; in Leicester, one; and Northampton, one.

In the south-west, there are four schools; two in Bristol, and two in Devonshire—at Devonport and at Plymouth.

Appendix Vol. V., p. 193.

In Wales, there are two schools, one at Cardiff and one at Barry. Besides these Special Council Schools there are some voluntary home schools, such as that at Sandlebridge, and Sandwell Hall, West Bromwich, which has been recently opened, and others.

293. These figures show that the Special Council Schools have been established wholly in urban centres and usually where there is a large industrial population, and a high assessable value. They show, also, that taking England and Wales as a whole, the schools are few in number and very unevenly distributed.

294. Having stated the terms of the Elementary Education (Defective and Epileptic Children) Act and drawn attention to the present distribution of the special schools or classes for defective children, we would deal with the number of these children as indicated by the evidence we have received and by the returns made by our medical inspectors; and we would then pass to such questions as the notification and registration of children and the use of the special class as a centre for selection and discrimination. Subsequently, we would compare the general results obtained in special schools in several of the cities and towns where they have been established, the methods of education to be adopted, the training and selection of teachers, the relations to be formed with the parents, and the arrangements to be made for the after-care and supervision of children when they leave school.

* From the list of Certified Schools on August 1st, 1907, published by the Board of Education, it would appear that at that time, accommodation had been provided for 9,082 children, but that of this accommodation no less than 4,946 was in London. [Cd. 3970.]

The Reports of the Medical Investigators in regard to Mentally Defective Children.

295. The reports of the medical investigators throw light on the state of things in towns and rural districts where there is no educational or other organisation for the care of mentally defective children. In those places, whether these children are few or many, they cannot be dealt with to good effect. There is usually no medical officer in charge of the health of the school children; and concerted action for their benefit in the local area or in the county, the first preliminary to reform, is wanting.* The following table shows the proportion of mentally defective children to the total registered school population:— The Reports of the Medical Investigators in regard to mentally defective children.

Urban Districts.	
Stoke-on-Trent	·60
Birmingham	1·12
Manchester, Chorlton and Prestwich	1·24
Hull and Sculcoates	·40
Mining District.	
Unions in:—	
Durham County	·28
Rural Areas.	
Somerset	·58
Wiltshire	·47
Nottinghamshire (partly rural)	·60
Lincolnshire	1·10

Vol. VI., p. 59, col. 19.

296. The northerly districts of the Durham Counties and Hull stand best. The large urban areas come last. Stoke-on-Trent stands with the county areas, for there, in spite of many drawbacks, the medical investigator reports well of the school population. The Lincoln unions, though rural, stand with the large urban districts, and have a percentage of 1·10 of mentally defective children.

297. A few notes will show how great the want is where there are not even special classes for "defective" children as defined by the Act of 1899.

The Manchester area is only partially provided for with special schools. Dr. Melland's survey of the schools shows that besides 1,328 defective children, of whom only 273 were in special schools, there were :— Manchester: Vol. VI., p. 147.

"Sixty-five imbeciles, almost half of whom (thirty-two) were children who had either never attended school or who, having proved unteachable in the ordinary school, were excused attendance and left to run the streets, getting into mischief, and also showing dangerous and destructive tendencies. Five had been tried in one or other of the special schools for defective children, but had proved themselves incapable of profiting by the teaching there, and the other ten had been examined for the schools, but had been recognised as too markedly defective for admission. The remaining eighteen were met with in the ordinary day schools, gaining nothing from the teaching there, and only serving to interfere with the order and progress of the classes in which they were placed."

In Somersetshire, to refer to one group of children only, 153 defective children were in the ordinary elementary schools. "They were receiving practically no training and were often a source of distraction to the other scholars. When the time comes for them to leave school, the educable period will have passed, and they will be turned adrift, with their capacity for useful work entirely uncultivated, to swell the ranks of the feeble-minded." Somerset: Vol. VI., p. 219.

In the elementary schools in the Wiltshire unions, there were 113 defective children and nineteen epileptics; and the conclusion in regard to them is: "the large proportion of them, however trained, will never be able to take an independent position. They are, however, capable of instruction in manual work and agriculture, and if thus trained could work under supervision." Wilts: Vol. VI., pp. 253, 255.

In the elementary schools in the Lincolnshire unions, there were nineteen imbeciles and 248 defective children. The investigator attributes the large number of the latter, in part, to the low standard of average intelligence in the rural districts in that county. Lincolnshire: Vol. VI., p. 300.

298. Taken altogether, this evidence supports strongly the view of the Commission that permissive legislation has failed and that some public organisation should at an early date be established to deal with these cases in a systematic manner. Failure of permissive legislation.

* Since this was written, the Education (Administrative Provisions) Act of 1907 has been passed, by Section 13 of which it is provided that the local education authority shall "provide for the medical inspection of children immediately before or at the time or as soon as possible after their admission to a public elementary school, and on such other occasions as the Board of Education may direct."

Evidence Regarding the Number of Mentally Defective Children on the School Registers.

Evidence regarding the number of mentally defective children on the school registers.

299. The figures submitted to us by witnesses in regard to the number of feeble-minded children of school age differ in some measure. All through, indeed, in statistics and estimates of witnesses in reference to this branch of our subject allowance must be made for a certain difference in the standard applied to the cases considered suitable for admission to the special classes, which is the criterion on which the count or estimate of these cases depends. The definition of the Act of 1899 was necessarily perhaps vague—the class coming between the "imbecile" and the "dull and backward." In Manchester, as we have seen, the "dull and backward" formed the bulk of the special class, and until observation has led to a more discriminating classification, such as is now being applied, many dull and backward cases, cases of "spurious mental defect," must be included among the "defective children" of the Act.

Ashby, Vol. I., pp. 580–581, 9996–9998.

The figures, however, grade themselves fairly and it may be said that they are generally confirmed by the returns of the medical investigators. We will set the two groups of figures side by side.*

Urban and Rural areas compared.

300. We take the towns and the rural districts separately. Dr. Ethel Williams after a careful examination of the school population of Newcastle reported that 113 out of 46,000 were mentally defective. This gives a proportion of under ·25 per cent. Accounting for this small percentage, she was of opinion that a higher type of children was admitted to special schools in other towns than in Newcastle. For Leeds the estimate was 0·8 per cent., for London 0·5 or 0·6 per cent., for Bradford 0·5 per cent., for Bolton about 1 per cent., and for Birmingham about 1 per cent., of the school population. Dr. Francis Warner's general estimate was 0·8 per cent. We have thus variations in estimate from ·25 per cent., ·5, ·8 to 1 per cent., and even 2 per cent.

Williams, Vol. II., p. 285, 15851.
Buckle, Vol. II., p. 543, col. 1.
Pooley, Vol. I., 247.
Garbutt, Vol. II., p. 121, col. 1.
Wilkinson, Vol. II., 12718.
Pinsent, Vol. II., p. 456, cols. 1 and 2.
Warner, Vol. II., 11026.

We may compare the above-quoted percentages with the figures of the medical investigators of areas in England and Wales. The percentages of mentally defective children amongst the children on the school registers in urban areas are: Stoke-on-Trent, ·60; Birmingham, 1·12; Manchester, with Chorlton and Prestwich, 1·24; and Hull, ·40.

Vol. VI., p. 59, col. 19.

301. Next, if we take a mining district, the Durham county areas, we find that the percentage is ·28, almost the same as that given by Miss Williams in regard to Newcastle.

Vol. VI., p. 23.

The figures in regard to rural districts submitted to us by witnesses were, as to Worcestershire, 350 or ·75 mentally defective children in a school population of 46,368 (exclusive of the population of county boroughs) and in the administrative county of Southampton, popularly called Hampshire, 145 in a school population of 52,000, or ·27 per cent., which, judged by the standard of the neighbouring county of Wiltshire, seems a very low percentage.

Willis Bund, Vol. II., 19347.
Cowan, Vol. II., 19808–19809.

The returns of the investigators as to the percentages of mentally defective children amongst the children on the school registers for the areas are:—in Somerset, ·58; Wiltshire, ·47; Nottinghamshire, ·60; Lincolnshire, 1·10. And in Wales the returns for the areas in Carmarthenshire and in Carnarvonshire give as percentages ·67 and ·33.

Vol. VI., pp. 26, 31.

302. In conclusion, following the data of the medical investigators, we may say that, in England and Wales, the number of mentally defective children may be expected to be, in the areas urban and rural, ·79 per cent. of the number of children on the school registers, falling as low as ·28 in a northern colliery district, and rising as high as 1·12 and 1·24 in urban areas.

Vol. VI., p. 59.

Number of mentally defective children needing provision on school registers.

303. As the tables show, the number of children for whom provision is required varies considerably. By "needing provision" is meant "the number" at the time of the investigation "urgently in need of provision, either: (1) in their own interest; or (2) for the public safety;" or "such cases as are in the opinion of the investigator improperly, unsuitably or unkindly cared for, or who, by reason of particular habits and characteristics, are a source of danger to the

Vol. VI., p. 65, col. 18.

* By the words "*mentally* defective" in reference to children is meant children in Public Elementary Schools suffering from all kinds of mental defect. By "defective" children is meant children defined as defective under the Elementary Education (Defective and Epileptic Children) Act, 1899, excluding the merely physically defective cases. See p. 87 above.

community in which they live." Thus the need of provision, as reported, varies primarily with the extent to which special classes have been brought into existence. Hence, at Birmingham, where there are seven special schools, it amounts to 18.53 per cent. of the total number of mentally defective children on the school rolls; at Stoke-on-Trent to 100·00; at Hull and Sculcoates to 97·38 per cent.—that is to say, to nearly the total number of mentally defective children on the school registers; at Manchester to 74·22 per cent. Number of mentally defective children on school registers "needing provision."—*contd.*

Stated generally, in the urban areas, as a whole, the number of mentally defective children to be provided for out of the total number of these children amounts to 67·39 per cent.; in the rural districts of England and Wales their number is 91·67; in the Welsh areas, 96·44; and in the mining Durham areas, 90·70. We may conclude that in the judgment of the medical investigators nearly all the mentally defective children in the schools have in some way to be provided for. Taken as a proportion on the number of children on the rolls of public elementary schools in England and Wales, the total needing provision would amount to 35,662, as will be seen by the Table below.

Total Children on the School Registers in Medical Investigators' Area.	Total Children needing Provision. CHAPTER XIV.

The Registration, Notification, and Observation of Mentally Defective Children.

304. The Elementary Education (Defective and Epileptic Children) Act of 1899 has, as we have seen, been of great service in bringing to light the nature and extent of mental defect among children of school age; and this question has now to be considered in its further developments; that is to say, in relation to the medical inspection of schools as a necessary means of obtaining information about these cases; in relation to a system of notification, if such be desirable; and in relation to special schools or classes considered as centres for observation with a view to the right treatment of individual cases.

305. The medical inspection of schools on general grounds appears to us to be the condition precedent to any progress in the care and treatment of the mentally defective.* Without it no system of registration is possible, nor can the special class or school be made a centre of observation in these cases. Without the medical officer to use and apply the knowledge which attendance and other officers accumulate in regard to individual cases in the enrolment of children and in their other work, the opinion which the teachers form may be of little or no service in dealing with mental defects. To compile and keep a register of defectives the medical examination of all children is necessary. The utility of the register is obvious. Unless there be a register "many cases in which the grade of mental defect is small [will] escape notice altogether, or be recognised after considerable delay and loss of most valuable time." Medical inspection and registration. Mott, Vol. I., p. 455, c. 1 & 2. Bond, Vol. I, p. 470, col. 1.

"If the Defective and Epileptic Children Act of 1899 were made compulsory and properly carried out," Mrs. Hume Pinsent said, "there would be no need of registration; it would act in itself as a registering authority; every case would be carefully considered by it, the consideration lasting in some cases a few months or a year, in other cases the whole of the child's career. That authority would know who were the defectives in any district." Pinsent, Vol. II., 19175.

But in the evidence submitted to us the question was not confined to this issue; and perhaps it is convenient to consider it here in its more general

* This inspection has now been made statutory under the Education (Administrative Provisions) Act, 1907. 7 Edw. VII. ch. 43, s. 13. By this section the local education authority is required "to provide for the medical inspection of children immediately before or at the time of or as soon as possible after their admission to a public elementary school."

Medical inspection and registration.—*contd.*

bearings, though undoubtedly the registration of these cases, in connection with the work of the attendance or other officers of the elementary schools, is the primary procedure on which the whole method of registration and notification should be founded.

Warner, Vol. II., 11102–11104. Fry, Vol. I., 5772–5776. Turner, Vol. I., 8670. Helby, Vol. I., 5169–5176. Odhams, Vol. II., 13629, p. 153, col. 2. Stone, Vol. II., 13694, p. 156, col. 1.

306. It is agreed that in the registration of the defective children there should be no publicity; and that the registers should be available for use in relation to the whole subsequent education, training, control, or supervision of the children. Further, it is suggested that the area of registration should be enlarged, and that officials and others who come across cases which appear to be of this type, medical officers of health, and hospital and dispensary doctors and relieving officers of the Poor Law should report them to some authority, whose business it would be to keep this enlarged register. Others propose a further step—that "it should be compulsory for the parents and guardians to register"; and others suggest "that to ensure that every case be brought to light it should be made the duty of the medical officers of education authorities, and of all practitioners, to report all such cases to the Central Authority, on the lines of the Act for the notification of infectious diseases."

Helby, Vol. I., p. 295, col. 2.

Notification.

307. The question of notification is closely connected with that of registration. So far as the schools are concerned, "notification can only be done effectively by medical men," Dr. Jackson stated; and in his view only "through the district medical officer or clerk to the guardians, the last-named officer sending in the report to the Commissioners in Lunacy along with his other reports at the end of each three months." "It would be useless to insist that the parents should notify, as relatives rarely admit that a kinsman is mentally afflicted." Notification is necessary "for statistical purposes. I feel sure that the number of cases is greatly in excess of that usually estimated"; and "on the score of economy idiots, imbeciles, epileptics and others are repeatedly thrown on to the rates at a late period of their lives, when they are practically useless and incapable of any training. Such cases in their own homes have been spoiled, pampered and sometimes cruelly punished, but any attempt at education has been quickly abandoned. As a consequence they have to be taken over by the parish in a wretched condition, both mentally and bodily." "Early notification, if followed by removal to an institution, not only may make the individual useful, or self-supporting, but also adds considerably to his mental capacity. There is also a secondary benefit to the family when relieved of the continued presence of a weak-minded relative."

Jackson, Vol. II., 18283, p. 414, col. 1.

Jackson, Vol. II., 18283 and 18304.

Cf. Booth, Vol. II., p. 174, col. 2, and 14063–14066, 14135. and Whitcombe, Vol. II., p. 432, col. 1½; and 18562.

308. The importance of these statements it is not possible to overrate, and, obviously, they are so worded as to admit of no exceptions; and yet it is a question whether there are not many cases in which the means and medical advice necessary for making proper provision for a child or other dependant are forthcoming, and in which both means and advice are properly applied already. But, however this may be, here we have the definite proposal that there should be compulsory notification, that is, notification, subject to penalty, on the part of all medical men cognisant of any case of medical defect, whatever the circumstances may be.

309. With this view we cannot agree. According to the proposals submitted to us, there would be, by general consent, a school register of defective children of the class attending public elementary schools, as ascertained by the medical officer of the school. This, it seems to us, would be the nucleus of a more general registration, and it is indispensable. It would be private, and would not be formed by means of public notification, but in the course of the daily administrative work of the educational authority. The school register of mental defect would be utilised again for compiling the register of the local authority which deals with the mentally defective generally, and with that authority would be registered all other cases which have to be notified to it by the officers of other authorities. Further, if parents and guardians notified voluntarily cases for whose care they were responsible, information as to these cases would also be added; and again, as endeavours would be made to promote the well-being of individual children systematically in connection with their life after school as well as at school, it is possible that the notification by parents and guardians, though voluntary, might become general. To make it compulsory,

at this stage, would, we fear, raise needless apprehension and prevent—what the general evidence strongly supports—the introduction of some kind of continuing supervision and, as far as is necessary, of segregation in these cases. Notification—*contd.*

310. And further the argument against compulsory notification on the part of medical practitioners has also to be considered. Dr. Shuttleworth, consulting medical officer to the National Association for the Welfare of the Feeble-minded, said that in the case of "well-off feeble-minded people" to make "mental defect" a "notifiable disease" "would be really impracticable," and if practicable, would be unnecessary, for "they generally have very good homes to go to, and their parents and friends manage with them afterwards." Yet, though not on the lines of notification, a responsibility, he urged, lay with the community in regard to these cases also. For "as regards mentally defective children of a higher social class than those attending public elementary schools, the education (or other) authority should be satisfied," he said, "that the parents provided special instruction of a suitable character in early life, and that, as far as might be necessary, adequate care and control was provided in adult life." This, he thought, could be done with all respect for the susceptibilities of the parents, "so as to avoid unnecessary publicity, and too stringent certification, especially in the case of children whose defect may possibly be transient." Shuttleworth, Vol. I., 9962-9964. Shuttleworth, Vol. I., 9957. 9842, p. 574, c. 1 and 2.

Dr. Whiteside Hime argued that the results of the Notification of Infectious Diseases Act were not such as to justify the application of the method to mentally defective cases; and "another Compulsory Notification Act would be an increase of the unconstitutional burden of obligatory State service imposed on medical men and an additional interference with private life." Besides "it was quite unnecessary." And Sir James Crichton-Browne, one of the Lord Chancellor's Visitors in Lunacy, summed up the question thus: To require a medical man "to notify every defective child he saw in his practice would be putting a very onerous and disagreeable duty upon the doctor. If a medical man happened in the course of his practice to see a child living in private life suffering from imbecility, maintained by parents, and reported it, he would give great offence. If it became his duty to notify it, it must be done in all cases. It would be an invidious duty to put on the profession; and it would be highly resented both by the profession and by the public." But when aid of any kind was given by a public authority, for instance, in connection with the Poor Law, the application for such aid became practically a notification, and the discovery of any such case in an institution to which persons are committed involuntarily justifies all steps which are called for by the nature and degree of the mental defect which is ascertained. This principle we accept, and it would, we believe, enable the community to do all that it is incumbent on it to do in aid of mentally defective persons, adults or children; for Dr. Shuttleworth's insistence on the necessity of the community being assured that in the case of "mentally defective children of a higher social class" proper instruction is given and a proper maintenance supplied, is open to the objection that without notification the case will not become known to any authority; but he deprecates notification, and hence no precautions can be taken that will immediately ensure what he desires. Hime, Vol. II., 19918, p. 520, col. 2. Crichton-Browne, Vol. I., 6104. Shuttleworth, Vol. I., 9842, p. 574, col. 1.

311. We recommend, however, in order to meet this contingency and the evident disinclination to accept the duty of notification on the part of medical practitioners, that, with a view to facilitate the work of the committee of the county or county borough council for the care of the mentally defective in the first instance, it shall be the duty of that committee, in pursuance of regulations to be made by the Board of Control, to ascertain, as far as possible, the number of mentally defective persons for whom the council is liable to provide. The inquiry would be made by the medical officers of the committee, or by a well-qualified medical man appointed for the purpose, acting under the supervision of the medical officer. This inquiry would be similar to that which has been made by the medical investigators who have been employed by us in connection with this Commission; and this, we think, would meet the purpose sufficiently. Inquiry as to number of mentally defective persons. Recommendation LV.

For this investigation, the entries on school registers would serve as a basis. Further, we recommend that a statutory duty as to notification of cases of mental defect coming to their knowledge in the course of duty should be imposed on the medical officers of the guardians of the poor, public health committees, and of convict and local prisons, the relieving officers, the police, the (*See* forms of investigation.) Vol. VI., p. 53.) Recommendation LVI

Inquiry as to number of mentally defective persons—*contd.*

naval and military authorities, and the managers of any inebriate reformatories or homes, or charitable, religious or voluntary institutions. Particular authorities, may, however, on special grounds be exempted by the Secretary of State from the performance of this duty. We do not recommend in general that private persons or medical practitioners should be compelled to notify cases of mental defect, but anyone who, *for profit*, shall receive to reside as a patient or maintain any mentally defective person should, within seven days thereafter, notify the same to the Board of Control.

Recommendation L

312. As provision for the mentally defective by "colonies" and other suitable institutions increased, on the advice of medical men, the parents and guardians of children of a "higher social class" would probably take advantage of them, for their dependants or wards, paying higher fees possibly for superior accommodation. Thus many cases would be practically notified without publicity, incidentally, in the arrangements made for their help and education. At present there are no such opportunities for admission to suitable institutions such as these colonies, open to the well-to-do, and the general sentiment of the class has not yet been quickened to approve of them, or to make use of them; but hereafter, as is already the case in some of the institutions abroad which we describe below, "colonies" may, and, we believe, will, become the accepted method of treatment, for all classes will, in different ways, make use of the same establishments.

Observation centres and classes.

Recommendation LXXXII.

313. In the case of both children and adults the use of observation centres is advocated. The children may belong to any of the classes of mental defect with which we are dealing, and it may be possible in many instances to diagnose quickly the nature and extent of the retardation that has taken place in their development. But often, on what are called border-line cases, much thought, coupled with observation and re-examination, has to be expended before a decision is possible. In the slighter phases of retardation, in instances of mal-development that affect some particular faculty or sense among the feeble-minded, and in cases in which it is doubtful whether there is any inherent mental defect or only a general failure and decline of power due to the neglect and starvation of life and its growing needs—in all these cases, continuous or repeated observation is necessary. And upon the sufficiency of the observation depend the practical measures which have to be subsequently adopted. Without this it is often impossible to gauge with any accuracy the "improvability" of a mentally defective mind, which is always subject to a certain irresponsibility that has to be dominated by the energy, initiation, and supervision of others. Nor, without observation, is it possible to forecast whether in all probability the mental powers will quickly weaken and fade away and become entirely useless, so that it is waste labour to expend on their development much time, thought, and money; or to ascertain whether the defect is a passing phase of weakness and not the result of any permanent check in development. It is evident, therefore, that in the interest both of science and of economy, there should be, either at special classes or in some other way, suitable centres for observation and testing. Thus, if the systematic use of observation centres enables medical officers to decide that, in some otherwise doubtful cases, no special education of any kind should be provided, there will be a great economy of thought, labour, and means; and again, in the better cases, the question whether it is worth while to teach a child an industry may, on these conditions, be rightly settled in the negative, and this may prevent the expenditure of considerable sums in fruitless attempts to do the impossible; and subsequently attention may be concentrated on enabling such a child to require just the routine skill, in some one or two ways, which will represent all that it is in the child's power to accomplish. It is admitted that it is both wasteful and injurious, without constant revision and testing, to continue to keep in special classes children whose educability is very limited.

Kerr, 7768, Vol. I., p. 439, c. 2.

Dickinson Berry, Vol. I., p. 542, c. 2. Potts, Vol. II., 19227–19229. Thompson, Vol. II., 18212, p. 410, c. 2.

Ashby, Vol. I., 9996–9999.

314. Dr. Ashby, Medical Officer to Special Schools in Manchester, and Dr. Damer Harrisson, Medical Officer to Special Schools in Liverpool, both consider that, when once suitable provision is made for the worse cases of mental defect, special classes will be needed more and more for those that are in a minor degree defective; and for observation. They will serve for "those that are in a minor degree defective, in the sense that they have a weak memory for words and

9999.

figures, but as far as intelligence is concerned they can polish door handles or black boots. Then there is a middle class of children who are at school on probation, as their future for the time is uncertain. Then there is the low grade class; those belonging to this grade should be sent to a colony at once, as the problem of how to deal with it is as pressing at sixteen years of age as at seven years." And Dr. Damer Harrisson says: "What I find in my five years' observation in Liverpool is, that it is extremely difficult—in fact, I think it is impossible—to decide by two or three examinations of a child how far it is amenable to ordinary elementary education . . . Some of them are congenital idiots; some of them are accidentally defective, either from accident at birth or afterwards. These children are bright and interesting, but as time goes on they are unamenable to any education and worse than some of the definitely congenitally defective children." Dr. Hutchison, Assistant Physician to the Hospital for Sick Children, Great Ormond Street, also says: "I would regard the special classes as largely sorting places where those that are going to improve are recognised, and those that are not going to improve are also recognised. The classification would come after a year or two at one of the special schools." And Dr. Potts, a member of the Special Schools Committee at Birmingham, says: "I would have special schools for the purpose of watching doubtful cases." Moreover, in order to ensure proper classification, an earlier age of entry to the school than seven is suggested. "If you get the children in at five instead of seven," Miss M. F. Townsend, a member of the Bristol Education Committee, said, "and have them under your care for a year or two, you classify and draft those that need permanent control into a proper home."

Observation centres and classes—*contd.* Ashby, Vol. I., 9999.

Townsend, Vol. II. 18359.

315. We may conclude, then, that special arrangements for the observation and for the manual, industrial and other training of mentally defective children are indispensable. We think, however, that these may be provided in more ways than one. Therefore, we do not propose that, in order to increase the number of special classes or schools, the Elementary Education (Defective and Epileptic Children) Act of 1899 should be made compulsory. We believe that by itself, and without many modifications and changes in other directions, that Act cannot meet the needs of the mentally defective; but this view is quite consistent with the opinion that a special class of some kind for the observation and training of mentally defective children should be associated with other means of dealing with the mentally defective as part of a common system. We propose accordingly that where there are special classes they should be used primarily for teaching those who, later in life, would in all-probability be able to look after themselves and to do useful work under supervision, and secondly for purposes of observation. Such classes or schools would, however, pass under the control of the Board of Control and would not remain under the Board of Education. The committee for the care of the mentally defective would, in their discretion, either accept a transfer of the schools or classes from the school authority, or would contract with the latter for the education of such mentally defective children as the committee thought it advisable to send to them. The committee for the care of the mentally defective would, of course, pay the expenses incurred on behalf of these children. And where there are no special classes, we propose that the committee, subject to the approval and regulations of the Board of Control, may provide them or arrange for their establishment by the local education authority, the former entering upon such contracts as may be necessary for that purpose and paying for the children on the lines of the scheme which we submit later on. The relation of the special schools or classes to our problem will, we think, be largely altered by the general appointment of medical officers to public elementary schools; and much regularised observation of children that is now altogether overlooked will then probably be carried on in the ordinary elementary schools. Thus, while the special schools or classes serve for places of observation, the ordinary schools will, we believe, be very much more largely used for that purpose also, with the result that the "special" class will be still further specialised To take an instance. There is now one class, that in the selection of cases for admission to special schools, appears to be constantly overlapping the class "mentally defective," namely, the "dull and backward." We think that as the special class becomes more definitely specialised, the local education authority, as a part of their ordinary duty, should make provision for these dull and backward children, in separate classes.

Conclusion as to special classes and observation centres.

Recommendation LXXIX.

Recommendation LXXXI.

Whitcombe, Vol. II. 18708–18718.

Conclusions as to special classes and observation centres—*contd.* Recommendation LXXXII–LXXXIV

They should not be passed into the "defective" class, as they are under the Act of 1899, unless it be to ascertain whether they are or are not "defective"; and they should be retained in the special class only until that point has been tested. By presumption they form a part of the group of normal children, and not a part of the group of exceptional children who are retarded owing to mental defect.

CHAPTER XV.

Results of Education in Special Schools and Classes.

316. We have now to consider how far the special schools or classes have been successful in enabling children to make a fair start in life, who would otherwise have entirely failed to do so. If the educational opportunities provided in the special schools and classes established hitherto, are fairly equal, we should expect that, except possibly in some very degraded districts, the number of the children who, on leaving school, were in some measure able to provide for themselves would also be proportionately the same everywhere. On the other hand, very much would depend on the standard of mental defect that was applied in determining the type of children to be admitted to the special schools, or excluded from them. Accordingly without explicit information on that point the variations in the after results can hardly be accounted for satisfactorily. If, for instance, the "dull and backward" children who were admitted were relatively large, the results should be to that extent better, and so, relatively, in other classes. The extent to which this has been the case, it is not possible to ascertain. We have therefore to take the results as general indications of the effect of teaching and training rather than as precise and sufficient statistics. We take London first, in regard to which Mrs. Owen Fleming has given us some valuable figures.

London.

317. Mrs. Owen Fleming submitted to us the results of thirteen years' work at a special school in South London, with such statements respecting the classes of children as made it possible to gauge in some measure what, in regard to these children, is meant by the words "satisfactory," "partially self-supporting," and other descriptive terms. In the district to which she refers the majority of the homes are of a very low class. The "ignorance and want of foresight of the parents" is very great. They "constantly refuse offers of industrial training, and will not forego even small immediate earnings to gain possible future efficiency." And illness, (especially consumption), is very common in the families. At first, the children were sent by the ordinary school teachers and were put, on probation, in the special school for a few months, and then taken by the teacher if considered suitable. That was at the beginning. But the tendency has been to make the school more and more a school for the really feeble-minded, and thus, owing to the lower class that are now admitted, very few, fewer than at the commencement, could support themselves through life. Accordingly, as the school specialises, the results of its training may appear to be less successful from this point of view, though, in fact, it may be more efficient in educating the really feeble-minded up to the standard of their ability. The number dealt with at the South London School was 343. Of these fifty-eight left over age, and of them we have histories; fifty returned to the ordinary school and raise another problem, the actual utility of this replacement of feeble-minded children (if they be really feeble-minded) in the ordinary school; and seven are entered as "uneducable" and, with twenty-two "removed to institutions," raise yet another question which we have to settle under the new conditions that we propose —and lastly, apart from seven children who died and 102 who remained in the school, eighty-eight left the district under school age.

Fleming, Vol II., p. 279, c. 1.

Fleming, Vol. II., 15779–15783.

Children leaving over age.

318. We take the first group then—those who left over age, and had presumably, therefore, the full schooling available. Of these, thirty-nine are over

Fleming, Vol II, p. 279, c. 2.,

eighteen, so that the likelihood of their ability to provide for themselves may be in some measure ascertained. Of this the following table represents the analysis : Children leaving over age—*contd.*

LEFT OVER AGE—58 CHILDREN.
Particulars of (a) Economic and (b) Moral Condition. Owen Fleming, Vol. II., p. 279, c. 2.

(a)			(b)		
		Per cent.			Per cent.
1. Not earning at all -	16	27·6	1. Satisfactory or harmless	20	34·48
2. Occasional small earnings	8	13·8	2. Unsatisfactory - -	13	22·40
3. At fairly regular unskilled work.	26	44·8	3. Doubtful - - -	7	12·06
4. Earning good wages -	7	12·1	4. Acknowledged as Imbecile.	4	6·94
5. Supported by husband -	1	1·7	5. No record - - -	14	24·12
	58	100·		58	100·

319. Typical cases show what is meant by "not earning at all," or "at home," or "with parents." Typical cases of children leaving special school over age. Fleming, Vol. II., p. 280, c. 1.

A.—Girl, imbecile, admitted to the school in 1894, aged ten ; respectable home ; sent to Darenth in 1896 ; brought home by her parents in 1898 ; cigar making and training home tried unsuccessfully ; 1905, aged twenty-one ; at home doing nothing, distinctly imbecile, needs careful watching.

B.—Boy, admitted 1892, aged ten. Specialist reports : "Congenital imbecility and epileptic fits"—home, low class ; father seventy-nine, blind ; mother consumptive, six children living, ten dead ; elder brother in an asylum ; left school, 1898, help refused, 1902 in Peckham Asylum ; 1904, workhouse, 1905 Caterham Asylum. Reported no trouble, does light work in the grounds. It will be noted that for four years (sixteen to twenty) he was at home under no control.

It is clear that these cases become in the course of time either "home" cases that very often require oversight, or "institution" cases.

320. The next class are those who earn a little occasionally ; and the phrase stands for hardly more than "not earning." These children will "never be self-supporting, and probably will soon be on the rates." Typical cases of children leaving special school over age. Fleming, Vol. II., p. 280, c. 1.

C.—Girl, admitted to school, 1892, aged eight ; stupid, but willing ; home very low class, not to say bad ; father deserted, mother living with another man ; reported for over-crowding seven in one room 1905, both men in the house. A preventive home for child was offered and refused ; in 1899, aged fifteen, a training home was offered and refused ; in 1903 the girl applied for help to get work. She was sent to a home, but reported hopeless for service. In 1905, aged twenty-one, she is living in this bad home and doing odd jobs for neighbours. Possibly something might have been made of this girl if she had been sent to a home at fourteen or even earlier.

D.—A boy admitted in 1892, aged eight ; had fits and bad sight, very small and delicate ; home low class ; father was a cooper, now has a barrow ; had a sunstroke and now ill-treats wife and children ; brother, also in special class, killed by a street accident. In 1899 he left school ; several trades tried unsuccessfully ; too dull. A place in a good firm was found at last, but the pay was too small, 2s. while learning, and work too hard. In 1903 he was going with a man who had a barrel organ ; in 1905 he is lost sight of.

321. The third class is "fairly regular and unskilled work." Even here one does not find steadiness of employment. "It appears fairly certain that an in-and-out condition with regard to employment is the rule, but whether this is more marked than in normal children of the same class it would be difficult to say." The difference would lie in the eventual ability to become self-supporting.

E.—Three boys were admitted in 1892–93 from one family, all deaf and bad tempered ; home very low class ; father a compositor, diseased and drank ; ill-treated wife and children ; mother's family of weak intellect and consumptive ; in 1898 all went into the workhouse. The first boy left in 1896 ; repeated attempts to get work for him failed. He became violent, and in 1897 was placed in an asylum. In 1902 he was still in the asylum and the report was good. In 1905 he is at home, aged twenty-five, earning 3s. and food at a greengrocer's. His employer is very kind, but says he has to be very careful not to put him out. The second boy, aged twenty-three, has been in Darenth since 1898. The third boy, aged twenty-one, is at home and earning 14s. and doing well. The father is dead. Two sisters, both weak, are in service. Fleming, Vol. II., p. 280, c. 1.

This is a representative case of a low class home ; the drink, the weakness of intellect, the workhouse, the asylum—with at the end, the one boy earning 3s. a week and food at the age of twenty-five, the third boy doing well, and the two "weak" sisters in service—no doubt all of them kept in view and visited. Between these three classes the grades of self-support are not strongly marked,

though we reach higher ground with the third boy, aged twenty-one, who is at home and earning 14s. and doing well—receiving a boy's wage at a man's age.

Typical cases of children leaving special school over age—*contd.*

322. Of the class "earning good wages" it is definitely stated: "Of these there are several who would hardly be admitted now to the special classes. They were taken when the school was first started and when the demand for accommodation was not so great as at present." In other words, the children that earn good wages were probably not "really feeble-minded," but rather dull and backward; and even so, they account for 12·1 per cent. only. But the case following "would probably be admitted now," though he hardly seems "feeble-minded."

Fleming, Vol. II., p. 280, c. 1 and 2.

F.—This boy would probably be admitted now as in 1892, when he was described as deficient and dangerous to the younger children. He was aged eight. Home very low class—the stepfather drank and ill-treated the boy. He was prosecuted by the Society for the Prevention of Cruelty to Children. The offer of a training ship or home was refused; in 1898, left school, aged fourteen, and found work in the fur trade; in 1905, aged twenty-one, he is still with the same firm earning £1 a week, saving money, and very superior to his family.

323. It will be noticed that these cases have all been kept in view for several years; they are specially valuable, therefore, as evidence; and they supply a standard by which to judge results quoted elsewhere. In interpreting the titles of the several classes it should be remembered that the words "satisfactory" or "good work" are used, as a rule, in reference to a "special class" standard. In this instance we may say that 86·2 of the fifty-eight children—the classes entered in the table as "not earning at all," "occasional small earnings," and "at fairly unskilled work"—stand very close together, while those "earning good wages" come mostly among the "dull and backward."

London. Proportion of defective children in schools whose after-career is satisfactory.

324. In the light of this record we cannot but minimise, we think, some of the results of Special Schools which appear more satisfactory. In each instance we have to consider whether dull and backward children have been admitted to the Special Schools in disproportionate number, or whether the school has been kept rigidly for the mentally defective and for doubtful cases. We will take several of these statements in turn.

"Of 138 children who have left Edward Street School, in Deptford, in the last eleven years"—108 boys and thirty girls—in the case of forty-eight boys and fifteen girls the after-career was satisfactory; twenty-two—eighteen boys and four girls—were promoted to elementary schools. Thus, if the admission to the elementary school is taken as equivalent to a satisfactory after-career, the numbers that have done well are: amongst the boys, sixty-six, or 60 per cent.; and amongst the girls nineteen, or 63 per cent. Of the rest, besides those under other heads, three boys are entered as vicious and dangerous; seventeen—sixteen boys and one girl—are entered as transferred to other special schools. All these 138 children are now grown up, "anything up to twenty-three;" and thus, it is concluded time enough has elapsed to show that their start in life has been good.

Eichholz, Vol. I., p. 209, c. 2.

In a criminal and vicious neighbourhood at the Sirdar Road School, Notting Dale, 170 children "have left during the last nine years," and of these thirty, or 18 per cent., were transferred to the ordinary schools. The children partly earning their livelihood are twenty-one, or 12 per cent. Including "the partially satisfactory," those who started well number fifty-one, or 30 per cent. But we note that among the remainder are twenty-six, transferred to other special schools and cripple homes, and sixty-five are entered "lost."

Eichholz, Vol. I., p. 210, c. 1.

In the Brecknock Special School, Camden Town, "the total number left" was 230; of these fifty-five were returned to the elementary school; forty were entered "in good work"; fifty were "lost"; seventy-one were "at home," and fourteen were in asylums and workhouses.

No figures could better show the necessity of supplementing the special class by other measures. In the last instance, if we exclude the cases returned to the elementary schools, only forty, or 17 per cent., came under the head "good work"; and the large numbers "lost" and "at home" suggest the need of some system of after-care and supervision.

325. In connection with this evidence we would consider the statement of Dr. Kerr, the Medical Officer (Education) of the London County Council, in regard to the kind of children handled in special classes and the results: "Many who can contribute materially to their own livelihood would," he says, "be better if under permanent custodial treatment." Judging from "the detailed reports of these classes," it appears "that a considerable proportion show little moral restraint; some are almost without speech, some seem incapable of work, others work without progress or intelligence; very frequently, too, they are addicted to staying out or even wandering at night, and many of this last class come into the hands of the police. Some have bad habits, and immoral tendencies are common. Many are capable of control while in the special school, but speedily become irregular and incontrollable on leaving it. From a consideration of the tables it appears that about one-third will be capable of materially contributing to their own livelihood after leaving, one-third will partially contribute, but require an after-care association of some kind to watch over them, whilst the remainder should not be allowed to mix with the rest of the community, but should receive some kind of custodial treatment." . . .

The after results of special class education and a classification of children accordingly, Kerr, Vol. I., 7768, p. 435, cols. 1 and 2.

"Compulsory powers for detention will be required for many cases, and compulsory custodial treatment can scarcely be satisfactorily considered apart from the question of the care of juvenile imbeciles into which it merges. Socially they are as troublesome, and in powers of future mischief more harmful, than the imbeciles, and custodial treatment under similar conditions is required."

"The matter as a State provision for the improvement of social conditions will be almost futile, if provision is not also made for continuing the custodial treatment after school ages."

"One-third of these children can do some simple things and earn a little, but not provide for themselves. In many cases, working with fathers or mothers, they are kept usefully employed; others without some oversight will become useless burdens, loafers or criminals, always out of the ordinary run of life, and apart from the ordinary population. For this group some after-care association might be organised to help them in the first few years of inexperience and danger. Such a committee is working in connection with the Birmingham School Board."

"The remaining third, who are intellectually the better class, will go through life at a low level, some improving their circumstances, some sinking, much as is found among the ordinary population of which they are a part. For these children manual work in the carpenter's shop or laundry is the most useful employment after twelve. Attempts at more formal education seem almost wasted effort, of little practical value. The consideration of these higher grade feeble-minded also suggests the large group of 'dull and backward,' on whom years of school work seem a wasteful outlay, and where, if they could be separated effectively at the age of ten to twelve, a training to become 'hewers of wood and drawers of water' might make them happier and more useful to others."

The estimate of one-third of successes, according to the reports of the special classes, appeared to Dr. Kerr to be over-sanguine. Kerr, Vol. I., 984-7985.

326. Mrs. Dickinson Berry, Assistant Medical Officer (Education) to the London County Council, supplements this statement by an analysis of the results in 100 cases.

Children from Special Schools classed according to the "ultimate destination." Dickinson Berry, Vol. I., 9323, p. 542, col. 1.

"*Class* I.—*Children passed up into ordinary schools.*—I cannot give the exact percentage of children who are thus passed up, but I should give it roughly as from 5 to 10 per cent. I enquired particularly in six special centres into the subsequent progress of the children passed up, 102 in number. In two cases only had unsatisfactory reports been received—one of these cases was at home doing nothing, the other was in a home for feeble-minded girls. The large majority had done fairly well at school, though few had got beyond the 3rd or 4th Standards. Several were known to be earning good wages, but several had, of course, been lost sight of. In no case had there been a request for re-admission into the special school. I consider that the cases in Class I. requiring treatment in a Custodial Home are exceptional and may be disregarded."

"*Class* II.—*Those who leave the Special Schools at* 14 *or* 16 *and are considered capable of wholly or materially earning their own living.*—I would include in this class about 45 per cent. of all cases admitted. Among them are a good many whose attainments in school subjects, especially reading, are very low, but they

Children from Special Schools classed according to the "ultimate destination"—*contd.*

are children who do manual work well and are of fair general intelligence as regards ordinary matters of life. Teachers have recorded to me many cases of boys or girls of this class who have done well in factories or domestic service, and have even cited instances in which employers have preferred boys of this type for certain mechanical kinds of work as being more reliable and less volatile than those of normal intelligence. I consider that in this class also it is only exceptional cases who will be suitable for custodial homes."

"*Class* III.—*Cases unable to do more than partially support themselves.*—These I should put at about 50 per cent. of all cases admitted. This class includes: (1) Those wholly incapable of contributing to their own support, and who may be practically considered imbeciles, roughly speaking about 10 per cent. These are the cases I classified as fit only for a Custodial Home in a report already quoted by Dr. Kerr. (2) Those capable, under supervision, of doing a certain amount of work of a useful or remunerative character—about 40 per cent. A certain number of these have homes where, after leaving school, they are looked after fairly satisfactorily and where they are of use in helping parents, but in most cases they are only a burden at home, are most inefficiently looked after, and after sundry ineffectual attempts to obtain or retain work, end by becoming in one way or another a burden on the rates."

"Roughly speaking, I should consider that at least 50 per cent. of the children in London County Council Special Schools are suitable for permanent care in homes. The small number excepted from Class III. is more than compensated for by cases in Classes I. and II."

327. The result would thus appear to be that from 5 to 10 per cent. of the children are moved into the ordinary schools and do well. Of the class below them, some 45 per cent. at most "do manual work well and are of fair intelligence as regards ordinary matters of life"; and they are considered capable of earning their own living altogether or to a material extent. The third class, about 50 per cent. of the whole, are 10 per cent. of them "fit only for a custodial home," and about 40 per cent. capable of doing a certain amount of work under supervision. These figures, however, and the others which we have quoted above from various sources, should probably be subjected to some reduction, in the light of Mrs. Fleming's records above.

Birmingham, Pinsent, Vol. II. p. 456, c. 1.

328. In Birmingham, probably to as large an extent as anywhere, have the cases of mental defect among children in the district been brought to light. As a member of the special schools committee, Mrs. Hume Pinsent was struck by the small number of children in special classes; subsequently visiting all the fifty-six elementary board schools in Birmingham, containing about 60,000 children, she found, on an average, four in a school whom she thought sufficiently defective to bring up for medical examination; and there has been a periodic examination ever since. For this repeated inspection a permanent official was appointed, and "we now know of over 600 mentally deficient children needing education in a special school." It is probable, therefore, that the mass of these children who can come under the Elementary Education (Defective and Epileptic Children) Act of 1899 are passing through the Birmingham schools.

The first question that requires attention is the age at which the children leave. A return like that made in regard to children leaving the London schools is furnished in regard to the Birmingham children. From this it appears that "it is almost impossible to retain the better children in special day classes after the age of fourteen; the parents withdraw them if they are capable of earning anything, and as the fines seldom exceed the money earned by the child, the exaction of the fine fails to ensure the child's attendance." Thus, out of eighty-two children, forty-one left the district at ages between seven and fifteen; twelve at fourteen without leave; and four at fourteen with leave. Of the remainder, the reasons given for their leaving the special schools are as follows: eight are in the workhouse and seven in private schools or homes; and two are marked off "epilepsy," four "ill-health," and four "distance."

Pinsent, Vol. II., p. 457, c. 2.

Vol. II., p. 459, c. 1.

Another table deals with the wage-earning power of the children who have left school. Fifty-one children have been noted; nineteen are wage-earners, thirty-two are doing no work. Of the wage-earners three were at school under one year, five between one and two, eight between two and five, and three between five and nine years. The wages run from 4s. to 9s., 10s., and 12s., the average being 7s. 2d. But turning to those "doing no work," we find that they stayed

at school much longer than those that are earning—nine as against five were at school between one and two years, ten as against eight between two and five years, and twelve as against three between five and nine years. "Only three of the wage-earners on the after-care list remained in school for anything approaching the full period, while twelve children who are now doing no work had a long school career"; and "it is probable that all the forty-one children who left the Birmingham special schools while still of school age had their education continued in ordinary schools or went to no schools at all. In either case the years of special and expensive education were probably entirely wasted." There is thus abundant ground for a change of system. Birmingham—*contd.* Pinsent, Vol. II., p. 457, c. 2.

The "After-care" Sub-Committee reported on 104 mentally defective cases visited during four years. Nineteen, as stated above, are earning wages, and of these "fourteen have a good chance of becoming self-supporting, but five need permanent protection, though they could do remunerative work under supervision in an industrial colony." Two other classes—three who work with parents and receive no wages, and thirty-two who are doing no work, "ought all to be in an industrial colony." "If they had been placed in a boarding school and given regular manual training they would have been far less useless than they are at present"; and cases are quoted to show the urgent need of an industrial colony.* Vol. II., p. 458, c. 1. p. 458, c. 2.

329. This evidence has been so carefully analysed and is so thorough that it seems to us to qualify largely any assumption that may at first sight be based on the returns quoted by Dr. Eichholz, His Majesty's Inspector of Schools for the Blind, Deaf, Defective and Epileptic in England and Wales, and others, and it suggests that the educational part that the special class should play in the future is much smaller than that which it has played heretofore. The industrial colony combined with educational opportunities available for children admitted to it, would seem likely to be more useful than special classes from which the children can be taken away almost at will, allied to an industrial colony separate and detached in which no similar educational opportunities are provided; and, indeed, the question arises whether in these circumstances the present intermediary boarding home system itself is required, unless to a very minor extent for particular types of mental defect. But this question we have to discuss in more detail later on. Eichholz, Vol. I., p. 208, c. 1.

330. At Liverpool, the observation of mentally defective children has extended over a period of from three to five years. This, admittedly, is too short a period from which to draw sufficient conclusions. The children too have been received into the schools at varying ages from five to fifteen. There have been examined 1,239 children: 265 cases were rejected as "hopeless" and fifty-eight were found to be so after admission to the special school. On the rolls there were at the time at which the evidence was given 322 cases, and of these 222, it is stated, would require permanent control. Very careful returns are given of the children—classified according to their prospective ability. Taking these returns solely from the point of view of the extent to which the children can earn a living later on, we have the following results:— Liverpool. Damer Harrisson, Vol. I., p. 617, c. 1. Vol. I., p. 617, c. 2.

Children in School:		
(*a*) Who will never be able to earn their own living	96	
(*b*) Who could probably earn their living under control	126	
(*c*) Who would become wage-earners	100	
		322
Children:		
Left as hopeless cases	58	
Left who should be under permanent care	69	
		127
Total		449

Vol. I., pp. 617-619.

331. It thus appears that even allowing for a large exclusion of cases at the out-set as unsuitable for admission to the special classes, about 47 per cent. (ninety-six) will never earn their own living, or are (fifty-eight) hopeless cases, or (sixty-nine) should be under permanent care, and 28 per cent. (126) would probably earn under control, and 22 per cent. (100) would become wage earners. This, it appears, confirms the view that we have expressed, namely, that the special school should serve as a place for the education of those likely to be able

* "We have recently received further information from the same source showing that, of 208 mentally defective persons who have been watched over by the 'After-care Committee, only 3·9 per cent. earn as much as 10s. a week, and only 19·8 per cent. have become wage-earners at all. This information is of great value, as it is the result of seven years' investigation."

Liverpool—*contd.* to look after themselves and to be employed under supervision, and for testing and observing the children, and should be treated rather as an introduction to a wider system of training and occupation than as an educational institution by itself. The survey of these cases, it must be remembered, does not extend to any number of years after attendance at the school has ceased, so that we cannot judge of the actual results as against the results estimated; and from the number of those who are set down as "could become wage earners" some further deductions would have to be made.

Bolton.
Wilkinson, 12713.
Vol. II., p. 102, c. 2

332. At Bolton there are two schools: through one, sixty-nine, through the other forty-five pupils have passed, twelve and sixteen have been transferred to the normal school, and of the rest twenty-one and five (or in all 23 per cent.) are entered as left and gone to work—a percentage that may be compared with the 28 per cent. of probable wage earners at Liverpool, the 20 per cent. successes at some of the London classes, etc.

Leicester.
Clephan, 18442.
Vol. II., p. 425, c. 2.

333. In regard to Leicester, Miss Clephan, the manager of the special schools submitted a note in regard to fifty-seven cases which during the past three years had been under special treatment, but had left the Special School. Of those, thirty-three were at home or with friends; and of the rest, eleven were in pauper establishments, five in asylums, four dead, one no record, and three abroad or in home or in private school. Fourteen boys and two girls (in all 28 per cent.) have become wage-earners with an average wage (full work) of 10s. 9d. weekly.

Cf. Bennett.
Vol. II., p. 162, c. 1.

The "merely scholastic results" in the case of twenty boys examined after leaving school justifies the general substitution of manual for "scholastic" work. Of twenty boys, twelve could not read at all, four "doubtful," two "could read," and two "only just left."

Bennett, Vol. II.,
13867, p. 162, c. 1.

At Willow Street, Leicester, out of 126 children, forty-three had been transferred to normal schools; four had died; three were unfit for school, and twelve were transferred to local asylums, the workhouse, or reformatory, four had left the town, and twenty-one were sent to work or working at home (girls). Thirty-nine were in the school. Here the transfer of 34 per cent. to normal schools suggests that a higher grade of cases has been dealt with than elsewhere.

Bradford.
Garbutt, 13045
Vol. II., p. 121,
c. 1.

334. The after history of 210 cases at Bradford gives these results; fifty-seven not traced; eighty-nine in regular employment; five at home performing domestic duties; two enlisted; eleven in ordinary schools; twenty-four unfit for regular employment; and for the rest, eleven dead, and the remainder in institutions, besides two imbeciles at home. This return, if the grade of children who are admitted is the same as the grade of children admitted elsewhere, is extraordinarily satisfactory. In 107 out of 210 cases of mental defect the child has returned to normal conditions. The average wage earned by the boys is

p. 121, c. 2.

9s. 10d.; that of the girls 8s. 5d., "the employment in the vast majority of cases being in the mills." The average age of the children who had left school varied from about thirteen to twenty-two. The average time spent at school was two years and three months; the average time since the children left the schools was five years and three months, varying from a few months up to eight years.

Bristol.
Townsend, 18824.
Vol. II., p. 416, c. 1.
and 2.

335. At Bristol, as in Leicester, there are data of results under both heads, industrial and scholastic; we give the former; the classification of the mentally defective cases with regard to scholastic results is not precise enough to make it of much value.

Redcross Street Centre:		Transferred to ordinary schools	9
Dismissed	59	Over age living at home, either helping in the house or idle	10
		Over age: gone to work	12
		Under age: but uneducable	7
		Sent to workhouse or to institutions	8
		Miscellaneous	13
			59

It is difficult to give precision to all these entries, but in general they do not seem encouraging.

336. We may conclude that the results of this survey confirm the opinion that the special school or class is to be regarded rather as incidental to a general organisation of industrial and institutional training than as of main or ultimate importance in itself. This conclusion is far reaching. If it be accepted, the special class or school as part of the elementary education of the country does not remain the central point of organisation round which an industrial and institutional system should be organised. The latter becomes the central point, and the special class becomes incidental to its working and development.

General Conclusion as to the utility of existing special schools and classes.

CHAPTER XVI.

Methods of Education in Reference to Institutional Care and the Family Supervision and Wardship.

337. We have entered on this discussion of results in some detail. Very much turns on it. If the evidence on this head shows that the special schools or classes under the Elementary Education (Defective and Epileptic Children) Act, 1899, are turning out children who become self-supporting and satisfactory citizens then, one of the first things necessary would be that the Act should be made compulsory. If this is not the case, or if there be some better scheme altogether, then there must be a considerable readjustment of administration to meet the conditions now considered necessary with the least waste of effort and resources.

338. Many desire that the Elementary Education (Defective and Epileptic Children) Act, 1899, should be made compulsory, and there is no doubt that very much good is to be attributed to it. Following earlier experiments it gave to those interested in education the first opportunity of trying what could be done for these children on day school lines and under a special curriculum. Whether the number of those who, when they left school, could materially support themselves were few or many, it helped to make the larger number of the children cleaner in person and habits, more orderly and more moral; it did this where the parents cared for their children and wished to do the best for them, and it did it, as far as might be, where the parents were careless and inconsiderate of their children's welfare. The scrutiny of the lives and mental condition of children, made in consequence of the investigations of Dr. Francis Warner, Dr. Shuttleworth and others, led to the passing of the Act; and the Act itself has been instrumental in producing still further enquiries of the same nature. And now, by degrees, with greater knowledge, the demand which it first created has assumed larger proportions. Schooling in personal habits was found to be the first step in education. Then, more and more, it was made evident that the intelligence was roused through the hands and eyes working together in making or doing some actual thing rather than by the secondary and more abstract accomplishments of reading, writing and arithmetic. This suggested great changes in teaching. And now, in the opinion of many, the simple "occupations" of the earliest years of schooling should develop into systematic industrial teaching, while the "scholastic" teaching should become entirely subordinate, and indeed, in some cases, should be discontinued. But, as we have seen, criticism has gone further still. Analysis has shown that the special school by itself is largely unserviceable, from the point of view of the after-life of the child. The feeble-minded child can, in the main, become only a feeble-minded adult educated into a rather better routine of thought and habit. If special education is required on his behalf in his school days, special care will probably be necessary for him when he has left school; and, moreover, later on in life. All this by degrees, the Act of 1899 has enabled many to learn.

Result of the Elementary Education (Defective and Epileptic Children) Act, 1899.

Result of the Elementary Education (Defective and Epileptic Children) Act, 1899—*contd.*
Shuttleworth, Vol. I., 9881–9891.
Ashby, Vol. I., 9996.
James, Vol. II., 14277, p. 187, c. 1.
Kerr, Vol. I., p. 435, c. 1.

339. We have come now to this point. Though in one or two places, such as Leicester and Bradford, a comparatively large number of the mentally defective children have passed into the ordinary elementary classes, under possibly rather different conditions of selection and employment than prevail elsewhere, as a rule it may be concluded that the special class has done well, if about 33 per cent. of the children are "capable of contributing materially to their own livelihood after leaving." Thus the question has arisen: are the remainder—the 67 per cent., taught sufficiently well or in a manner sufficiently adapted to their particular wants and requirements? What is to be done for them? If, as many witnesses contend, they represent a most difficult class, for whom in the common interest provision or supervision is necessary, what measures are we to adopt? And if we are to look forward to completing and modifying the "Special School" system what should be our methods of education? This raises the following points:—

(1) *Is the institutional system, coupled with admission to an institution at an early age, better than the special class system?*

(2) *What, in the future, should be the relation of the special class to after-school life at home or in some kind of colony or institution?*

(3) *What should be the relation of the plan of education to the family?*

(4) *What should be the system of after-care and after-control in relation to the family or life in a colony or institution?*

(5) *What should be the method of education in regard to manual work?*

(6) *What should be the conditions of selecting and training teachers?*

Relation of Institutions to the family and the special class.

340. *Is the institutional system, coupled with admission to the institution at an early age, better than the special class system?* This is the first question.

The answer to this and the other questions turns largely on the competence of the family to care for and train their mentally defective child, and these questions may, in part, be settled by using that standard—the competence of the family—as a measure of the extent of intervention actually necessary, considering at the same time how limited is the scope of education in the case of the mentally defective. But in any case it seems clear that early attention to the child's special needs is most desirable. Dr. Rayner, formerly Medical Superintendent of the Hanwell Asylum, for instance, says: "I should hope that if that system of early discovery and early treatment of defective children, and, of course, coincident with that, the education of mothers in the care of children, were carried out very extensively, many of these children who now come to school as distinct imbeciles might be in a very much better condition for treatment, and that probably the amount of after-care would be much less . . . . and the institutional treatment later on . . . to some extent lessened by the care given at this early stage of life." But it is urged that the early treatment should be wholly institutional, and that only under that condition will the best results follow. Miss Anderson, who has had considerable experience in training mentally defective children, took this view and quoted some strong instances in favour of it. She argued that the greatest want in the feeble-minded was that of self-control; that certain impulses common to all animals, in their minds could only be kept in check by outside pressure; and that "in the long run to the community at large" the least expensive way of imposing this check was to deal with the feeble-minded, not at the adult stage when "in ninety-nine cases out of 100 only amelioration of a non-lasting character could be achieved," but in the earliest infancy, when great results could be produced. Accordingly she took charge of children, she said, at the ages of two to ten, provided for them good physical nourishment and then trained them in self-control by personal teaching, by stimulating the brain, through the exercise of the senses, and manual work, and by letting the competitions of child life have their place in education. As one, among many instances, she mentioned the following:—

Rayner, Vol. II., 15222.

Anderson, Vol. II., p. 261, c. 1, 15470.

Anderson, Vol. p. 262.

> P. L. at three years old was a wailing baby, unable to stand or feed himself; with constant catarrh; looked like an imbecile; with no control. The physical condition after three years training was: "Walks three miles; marches well, clean, grown six inches, a pretty sturdy boy. On admission he was 'nervous and excitable and had no speech.' After the three years he 'talks nicely, knows letters, etc., and is very observant'; and the diagnosis of his intellectual development is good; of his moral 'possibly good,' and in adult life 'he will probably be self-supporting in some controlled community.'"

Anderson, Vol. II., p. 261, c. 1.

341. With such experiences as these, it is natural to suggest that in addition to a law giving "power of compulsory detention of those among the feeble-minded who, unless under outside control, are a danger to the community,"

there should be a law "compelling parents and guardians of all ranks to place their children in properly graded homes at the earliest age when the defects of the mind show themselves." Dr. Bevan Lewis, the Medical Director of the West Riding Asylum at Wakefield, also gives instances of very great mental progress made in a comparatively short time in low grade defectives at the Stanley Hall Home in the West Riding; so, also, do the managers of idiot asylums and of homes. And in general the evidence is, we think, strong enough to prove that at a comparatively early age and combined with a good system of training, institutional life for a time produces extraordinarily successful results within those limits which confine the development of a feeble-minded child. If this conclusion is correct, the system of the special day school should be largely superseded or supplemented by an institutional system of some kind, or should be connected with it. But the point has to be considered further.

Relation of Institutions to the family and the special class. – *contd.*

Anderson, Vol. II., p. 261, c. 1.

Bevan Lewis, Vol. II., p. 12, c. 2.

Anderson, Vol. II. 15479–15486.

Wilson, Vol. II., p. 24, c. 1, and 11320

342. Thus we come to the second question: *What in the future should be the relation of the special class to after-school life at home or in some kind of colony or other institution?*

Relation of the special class to later life.

To answer this, it is necessary to refer to the evidence which we have received in regard to the families of these mentally defective children.

The parents are very often much attached to their feeble-minded children. Their dependence seems to strengthen the claim to affection.

"In one or two cases I have known the mother wished to have the imbecile and would have been very much distressed to have it taken away. Thus, in one case, the mother took away the child from Darenth. It was a hopeless case: she would never be self-supporting. I do not see why the mother should not support her, if she can. . . . A bad case which would be a nuisance to neighbours, or the normal children in a family, I should advocate removing. It is the harmless cases I would leave in their homes. The family are often much attached to them. I knew a boy who was perfectly imbecile, whose mother was devoted to him; she took great care of him at home."

Fleming, Vol. II., 15807–15811.

Cf. Warner, Vol. II, 11055.

These one or two instances represent many, and we may conclude that, as a rule, in harmless unimprovable cases, where the family circumstances admit of it, the children may be left at home, subject, we should add, to such friendly supervision as we propose below.

343. The question then arises what should be done in the definitely improvable, and often difficult, cases of feeble-mindedness, especially so as to avoid what many notice, their relapse after the "special class" period. In view of the general and acknowledged attachment of parents to mentally defective children, it seems to us quite wrong to accept the policy of removing all mentally defective children at the earliest age to institutions of some kind. From the point of view of administration also, it appears to be financially impossible, even if it were—as would seem to be very doubtful—always to the educational interest of the individual child. In the greater number of cases reliance must be placed on the parents, and the means of education within their reach. Two things, therefore, must go together—especially in improvable cases—supervision and training at the home, which involves very often the exertion of some external influence over the parent from the earliest years of the child, and the special use of educational means.

Bennett, Vol. II., 13880, 13881.

344. Many witnesses have insisted on the necessity of after-care, but, considering the number of the children, and the difficulties of continuous supervision, we can hardly rely on voluntary effort in "after-care," unless it be combined with a much more effectual system of general supervision. It has seemed to us, therefore, that some completer method should be adopted.

After-care on a completer method.

Pinsent, Vol, II., 19174.

Clephan, Vol. II., 18455–18462.

345. On the plan we propose, there will be one central authority responsible for the general supervision of all mentally defective persons, associated with local authorities engaged in the practical work of providing for them and caring for them. Cases of mental defect will be reported to these authorities by other bodies, so that, as far as possible, the ultimate responsibility of dealing with them will be definitely placed upon their shoulders. When the parents care for their children and look after them, it is suggested that a friendly visitor may, if desirable, be appointed by the local authority to advise and assist the parents as to the proper treatment of the case. This would be an honourable office, and many—especially women—well qualified for it, might be willing to undertake

Recommendations I., XXVIII.

Recommendation LVI.

Recommendation LI.

After-care on a completer method.—*contd.*

Poole, Vol. II., 13545, p. 147. c, 1 and 2.

it. In this way, the early care of the child in the development of the senses and of self-control may be exercised and in every way promoted. More thought would be given to the individual child and its concerns on lines not unlike those which are adopted by the Metropolitan Association for Befriending Young Servants, which, by arrangement with boards of guardians and with the sanction of the Local Government Board, visits and helps girls when they leave the Poor Law schools. The visitor, in co-operation with the local authority, and by voluntary agreement with the parents, would arrange that the child should go for a time to a special home in the country, or to a special class, so that what is possible on the educational side should be achieved. The education in the home and that at the school would thus be brought into some kind of unity.

Recommendations XLIX & L.

There are, however, many cases in which the home influence is extremely bad and the family neglects or ill-treats the child, or where the parents are themselves mentally defective or criminal and quite unable to take care of and control their defective children. A great deal of evidence has been given as to such cases and there is a striking unanimity of opinion that power should be given to compel these parents to send their defective children to a Residential Training School or Colony. In these and in other instances in which it seemed desirable, the child could, by resolution of the local authority, become the ward of the local authority until the age of twenty-one, with the possibility of their continuing to supervise him after that age by leave of the Board of Control. There will thus be in the hands of the local authority a large power to promote the well-being of the child in supplementation of the activities of the home, or, if the parents neglect the child and wish to make use of it for their own purposes, apart from them and independently.

Recommendations LV. and LVI.

Other measures would support these arrangements. All mentally defective children who require care and control would be reported and registered. It would be the statutory duty of the Medical Officers of Local Education Authorities, of Guardians of the Poor, and of Public Health Committees, the Relieving Officers of Boards of Guardians, the Medical Officers of Convict and Local Prisons, the Police, and the Managers of any Homes for Inebriates or any Charitable or Voluntary Societies, to notify all cases of mental defect to the Medical Officer of the Committee of the Local Authority for the care and control of mentally defective persons. The registration of children in connection with the Public Elementary Schools would thus have a new purpose, and it is hoped that the supervision that will be made possible under this plan will prevent very many feeble-minded children from disappearing during or after the school period and being written off as 'lost.' The Local Authority of each County or County Borough will appoint a Medical Officer and also certifying Medical practitioners, who, apart from the duties imposed on the Medical Officers of Institutions, would be responsible for all Certificates relating to mental defect, and would, in conjunction with the Medical Officer of the Committee, make the certification of the cases of children more uniform, inasmuch as, acting as the officers of a common administration, they may adopt by degrees a common standard. There would also be an annual revision of all cases of mentally defective persons in Institutions: and the transfer from a special class to an Institution or from one Institution to another, in the case of Wards of the Local Authority (that is, probably in all cases of difficulty due to parental conditions), would be arranged by the Committee, while in other cases the continuous supervision of the Friendly Visitor, joined with the system of notification and registration, would be likely to lead to much greater influence being brought to bear in particular instances, in which, though there is no control by wardship, better care should, in the public interest, be taken of the child in an Institution or otherwise. And finally, the certification of a child as an idiot, or imbecile, or feeble-minded, or a moral imbecile, or a mentally defective epileptic, or deaf and dumb, or blind person would impose upon the Committee the duty of making the necessary provision for him, and, coupled with an order for detention, would give them the power to remove him. Thus, wherever needful, education under Institutional conditions might at any time supplement or follow education in the Special School, or take its place.

Recommendations XXXV. and XXXVI.

Recommendations LX. and LXI.

Recommendation LI.

Recommendations IV. and XXVIII.

We recommend, indeed, that a system of wardship and friendly supervision should be adopted that would in many cases fulfil the purposes of "after-care."

346. The fact that there was throughout and for all purposes one single and responsible authority, would make irrelevant all proposals for the transfer of the child at a certain age from one authority to another, as for instance, as some have suggested, at sixteen or any age up to twenty-one, from the care of the education authority to the board of guardians, and from them to the lunacy authorities. Wherever the mentally defective person might be, and in whatever way the local authority might provide for his maintenance, he would remain under the care and control of one local authority only, subject to the supervision of the Board of Control. A new Act for the care and control of the mentally defective has become necessary. The Elementary Education (Defective and Epileptic Children) Act, 1899, as far as it relates to the mentally defective, or to epileptic children so afflicted by severe epilepsy as to be unfit to attend public elementary schools, should be repealed.

Partial Repeal of the Elementary Education (Defective and Epileptic Children) Act of 1899.

Recommendations II., LXXII.—LXXIII

As regards epileptics not mentally defective, see Paragraphs 883–894 below, and Recommendation XC.

347. In answering the second question therefore, "*What in the future should be the relation of the special class to after-school life at home or in some kind of colony or other institution?*" we have answered incidentally two others; (3). *What should be the plan of education in relation to the family;* and (4). *What should be the system of after-care and after-control in relation to the family or life in a colony or institution?*

The two remaining questions raised above are: *What should be the method of education in regard to manual work;* and *what should be the conditions of selecting and training teachers?* The answers to them will be found in our next Chapter XVII.

CHAPTER XVII.

Manual and Industrial Training and the Education of Teachers.

348. The pupils in special schools do not consist wholly of feeble-minded children who are to receive a special education. After all are excluded, who, under the Elementary Education (Defective and Epileptic) Children Act, cannot be benefited by the special schools, those, namely, who suffer from the more marked forms of mental incapacity, idiots and imbeciles, there remain the feeble-minded and generally, to some extent, the dull or backward, or at least those who, whether so adjudged or not, are expected to be able to return to the normal classes of the elementary school. These are not merely children who are on probation or under observation because, being so near the border line of the normal, it is doubtful whether they are feeble-minded of the highest type, or "merely dull or backward," but they are feeble-minded children who it is thought may, after all, find a place in the common school. Hence the "special" school has to cater for two grades. As Miss Gavin, a teacher at Orange Street Special School, said, "I think there are two sets of children in the school. I think the children who are going back must have book-work; but I do not see much good in book-work for those who are never going back." There is, in fact, one syllabus applicable to two sets of children. And the fact is recognised by others also. Thus Mr. Garbutt and Dr. Crowley, who gave evidence on behalf of the Bradford Education Committee, say: "The special schools need supplementing by more definite provision for the milder cases of mental deficiency. This should take the form of a special class under Sec. 2 (1) (a) of the Act in the ordinary school taught by a teacher well trained in infants' school methods, and not comprising more than, say, sixteen children. In such a class a considerable number of these very backward children would be made capable eventually of passing with moderate success through the ordinary school." The special school must, no doubt, have its own classification according to the extent to which the development of the brain and mental capacity of the children tends to stop at an earlier or later stage. But this classification would be a classification of mentally defective children, and would be made in their interest solely. They are the set of children "who are never going back." In the special school there must always also be space and opportunity for the observation of children in doubtful

Classes of children in special schools.

Bennett, Vol. II., 13878–13879

Garbutt and Crowley, Vol. II., p. 122, c. 1.

Classes of children in special schools—*contd.*
Rayner, Vol. II., p. 238, c. 2.

cases of feeble-mindedness; and some may stray into the school who, as it is said, "have some inherent defective tendency," and on whom "conditions of ill-feeding of disordered digestions and defective hygiene, that in normal children would produce little effect, produce on these the most serious results, such as insomnia." "I have had normal children brought to me as defective," Dr. Rayner, formerly Medical Superintendent of Hanwell Asylum, says, "simply as a result of insomnia"; yet in these circumstances there would not be two sets in the school, but one set, with exceptional cases which are under observation.

Rayner, Vol. II., p. 239, col. 1.

Returning defective children to the normal classes.
Bennett, Vol. II., 13879–13880

349. If, then, we are to judge of the utility of manual training or "scholastic" teaching for the feeble-minded, it is essential that the classes should contain feeble-minded children only. If the children are not really normal, only harm is done by teaching them as such, and returning them to the ordinary classes. Dr. Bennett, who gave evidence on behalf of the Leicester Education Committee, says: "A feeble-minded child is going to be a feeble-minded child always; but one who through ill-health, bad feeding, or whose nervous system is not active, is merely backward, is only feeble-minded in appearance. I have traced the history of a fair number—about forty, who have returned from the backward or feeble-minded school to the normal schools, and at least one-third ought not to have gone." And Dr. Eichholz, H.M. Inspector of Defective and Epileptic Schools, points out that two great disadvantages accompany the transference to the normal school, which, when it is made, usually takes place about twelve years of age. The child passes, he says, from a class of twenty to a class of sixty, and he ceases to receive manual instruction, for, in the lower classes of the elementary school it is not given. The removal may thus be of doubtful value. And Mrs. Owen Fleming, the manager of a special school at Southwark, writes: "Many of these children," who are returned to the ordinary school, "appear to need as much care as those retained in the special school, and at present there is no special organisation for watching them." And other witnesses also recognise the difficulty. It seems to us that to as small a degree as is possible, the special school should have this double character of school for the feeble-minded and school for the backward; it should not be both a school for the feeble-minded and also a class for the dull and backward. For the latter there should be classes forming part of the ordinary organisation of the normal elementary schools; and if it is doubtful whether a child is feeble-minded or dull and backward, the first reference of the child should be to such a class. If, being in that class it is still doubtful whether the child is feeble, then he should be transferred to the "special" class. But except in cases of extreme doubt, backward children should not be placed with feeble-minded children. "The feeble-minded child is going to be a feeble-minded child always," and can never achieve the compass of self-control and education that the backward child can reach in a few years. Hence there are limitations in the one case which have no special bearing in the other.

Eichholz, Vol. I., p. 210, c. 2.

Townsend, Vol. II., 18363.

350. Probably, if things remain as they are, in the course of time, by the sheer pressure of a selection of cases by which those will be chosen for "special" teaching who will best respond to it, either the special classes will become classes for the dull and backward, from which the feeble-minded, except possibly those who are of the very highest type, will, by degrees, be excluded; or, as at Leicester, new classes for the backward will be started, and the present classes for the feeble-minded will be continued as a kind of lowest class of all, and will be supplemented to a much larger extent by institutional care of some kind. According to our judgment this "backward" class should remain under the direct control of the education authorities, for the children in them could not be certified; while the children who are or may become certifiable as mentally defective, should fall within the province of the Committee for the Care of the Mentally Defective, who, either directly or by contract with the education authorities, should provide for them.

Manual and industrial training.

351. The drift of opinion favours the extension of manual or industrial training in special schools. Manual and industrial work represent, indeed, the appropriate instrument of an education which is specially concerned with the direct stimulation of the brain through the senses and with the control of movement, and thus ultimately with self-control generally. And on the teaching of children and the training of teachers with this object, Dr. Francis Warner, Dr. Rayner, Dr. Fletcher Beach, and others have given us evidence.

352. The methods which they advocate lead to success in industrial work, within the limits of a certain routine which marks the possibilities that are within the reach of the feeble-minded; and the evidence in favour of manual and industrial work forming a much larger part of their curriculum is conclusive. The code of the Board of Education, as a rule, requires for defective children a minimum of six hours' manual work per week, but apparently great latitude is allowed. In 137 time-tables of special schools it was found that only in fourteen instances did the time given to manual work fall below the six hours; in fifty-three the minimum was exceeded; in some instances even nine or ten hours were devoted to it. In London it is the policy of the Education Committee to give half time instruction in manual work to every defective child above the age of twelve. Dr. Fletcher Beach reported to us as to the London time-table. Manual and industrial training.—*contd.* Appendix Vol. V., p. 168, c. 2. Fletcher Beach, Vol. I., 380, 2.

The senior and junior boys and girls have the same number of hours of reading, writing, arithmetic, object lessons, singing, recitation, prayer and Scripture lessons, and drill, per week, two hours and half being allowed for recreation, but in manual work the number of hours differs. Thus, the senior boys are employed nine hours and the senior girls nine hours and a half per week in laundry-work, cooking, clay modelling, basket-weaving, drawing and brush-work, the boys also doing woodwork and the girls needlework, while the junior boys and girls are only employed seven hours per week. During this time they are instructed in mat-plaiting, kindergarten, sewing, drawing and colouring, clay modelling, paper folding, and drawing. Two hours are devoted by the girls to needlework, the corresponding period of time being utilised by the boys in learning macramé and bead threading.

This time table is evidently the result of a Minute of the Committee of Council on Education, dated February 26th, 1900, which prescribed the conditions to be fulfilled by certified schools for defective and epileptic children. According to this Minute, the time-table provided for instruction in the elements of reading, writing, and arithmetic, singing and recitation, object lessons, drawing, needlework for girls, physical exercises and manual instruction. Not less than six hours of manual instruction must be given weekly to each child. The Minute names the different forms of manual instruction which are to be taught, and includes the subjects already mentioned, and in addition, worsted-work, tailoring, shoemaking, gardening, and farming work, and practical housewifery.

353. In favour of giving half time or more to manual and industrial training, there are many witnesses. Dr. Bevan Lewis's time-table at the Stanley Hall Home shows that writing and reading each are given only for quarter of an hour lessons in the week, with two lessons to counting and two to arithmetic; and the rest of the time is given chiefly to movement, sense, and imitation lessons, and this is often the case elsewhere. Miss Dendy, Honorary Secretary of the Lancashire and Cheshire Association for the Permanent Care of the Feeble-minded, much prefers to make the training of older children, with few exceptions, entirely manual. Dr. Eichholz says: "I should prefer a greater preponderance of manual training than is at present customary in many of the schools." Miss Poole, Secretary of the Metropolitan Association for Befriending Young Servants, says: "I think at least half their work ought to be manual from the beginning." Dr. Odhams, Chairman of the Norwich Elementary Education Committee: "The greater part of their time should be spent in the open air, and manual work of various kinds should be the principal part of the instruction." Dr. Damer Harrisson, Medical Officer of Special Schools at Liverpool: "The teaching of the three R's to a large number of children in special classes is an entire mistake." Dr. Beresford: "Their education should be almost entirely manual." Miss James, Head Mistress of a special school at Liverpool, says:— Bevan Lewis, Vol. II. p. 13. Dendy, Vol. I., 979. Eichholz, Vol. I., 208, c. 1. 3852. Poole, Vol. II., 13615. Odhams, Vol. II., p. 153, c. 1. Harrisson, Vol. I., 10749. Beresford, Vol. I., p. 306, c. 2. Crichton-Brown, Vol. I., 6258 Wilkinson, Vol. II., 12800, 12921.

"I would ask for absolute freedom with regard to the subjects taught, so that if necessary the whole of the training should be through the manual occupations. . . . . I strongly urge that as much time as possible should be given to manual occupations and industrial training, and that, where the medical officer and head teacher agree on this, it should be left entirely in their hands to arrange with the committee that the Code should be so interpreted. At present it says not less than six hours, but it gives so many compulsory things to be taught that it is most difficult to find more time." James, Vol. II., p. 185, c. 2. Coward, Vol. II., 14285–41287.

Mr. Garbutt and Dr. Crowley, on behalf of the Bradford Education Committee, express the opinion that in some cases it would be desirable to teach a definite trade or handicraft to children attending a day school; and Mr. Jones, who is clerk to the Burnley Education Committee, thinks that manual instruction should be given "with a more pronounced view to the future employment and maintenance" of the children; and Dr. Bennett, on behalf of the Leicester Education Committee, says: "For the worst types of children, teaching reading, writing, and arithmetic is a grotesque waste. In the better classes a certain amount is good; but to hear children struggling vainly with head work when they could be well trained in gardening, and so on, is a waste of money." And Mrs. Hume Pinsent defines the position thus: "The education should be manual with classes in the three R's for *those capable of benefiting by such classes.*" Garbutt, Vol. II., p. 122, c. 2. Jones, Vol. II., p. 85, c. 1. Bennett, Vol II., 13877. Pinsent, Vol. II., p. 457, c. 1.

Chapter XVII.
Manual and Industrial Training and the Education of Teachers.

The "scholastic" education for defective children.

354. The burden of the mass of evidence that we have taken on this subject is that, if feeble-minded children are to be usefully employed, and enabled to support themselves to some extent, manual training must form the chief part of their education. It is the proper complement of the Froebel method of training on which they have been taught, so far as they are able to follow it; and if ultimately their education becomes definitely industrial, it may help them in life most effectually. On the other hand, the "scholastic" education remains for those who can acquire it. How far this may be the following summary of notes respecting 100 children over twelve years of age at five centres in London, furnished to us by Mrs. Dickinson Berry, indicates :—

Dickinson Berry, Vol. I., 9323, p. 542, c. 2.

Reading.

(1) Able to read Standard I. book fluently. (Several in this group can read Standard II. or III. books.)—Twenty-five.

(2) Able to read a Standard I. book, but not without considerable stumbling—fifteen.

(3) Able to read easy sentences—twenty-eight.

(4) Able only to read a few easy words—Twenty-seven.

(5) Unable to read at all, or at most, only knowing letters—five.

Arithmetic.

(1) Able to do Standard II. work (these all do multiplication sums and most also division sums)—Twenty-five.

(2) Doing Standard I. arithmetic—twenty-one.

(3) Able to do easy addition and subtraction sums, not up to Standard I. (often the sums are done mechanically and unintelligently)—fifteen.

(4) Able to do very small addition sums, usually with the help of dots or other concrete assistance—seventeen.

(5) Unable to add or subtract at all—twenty-two.

"I think these tables represent nearly, though not quite, the degree of proficiency attained when the children leave school. Those in Groups 1 and 2, *i.e.*, 40 per cent. of the whole, have learnt enough reading to be of use to them; in the case of the remaining 60 per cent. the reading they have attained to is not enough to be of much value."

"As regards arithmetic, the children in Groups 1 and 2 showed no marked deficiency in powers of calculation. Those in Group 3 were slow in their answers, but could do addition and subtraction of small numbers mentally. These figures are taken from the examination of but a few centres, and I do not claim that they do more than approximately represent the general results."

Dickinson Berry, Vol. I., 9323, p. 542, col. 2.

355. Mrs. Dickinson Berry proceeds: "As to what becomes of the children educated in the special schools, Dr. Kerr has already gone into this subject at length and given, among others, some figures drawn up by myself. The net result appears to be that we have turned out from our special schools (1) a large number of persons who are unable to earn their own living and who may practically be classed as imbeciles, (2) a still larger number who swell the ranks of inefficient and poorly paid workers, and (3) a small minority who become self-supporting and useful members of society. The majority of all these will have descendants who will tend to perpetuate their characteristics."

We thus have evidence that 25 per cent. read Standard I. book fluently; and the same number "do multiplication sums and most of them also division sums." Those in Groups 1 and 2, or about 47 per cent., learn enough reading to be of use to them.

Dickinson Berry, Vol. I., 9356.

"Those in (2) have," Mrs. Dickinson Berry states, "a certain benefit; for instance, they would be able, if they were errand boys, to read the names of streets or possibly make out addresses, but as to reading to themselves with advantage I do not suppose they could do that. I think the amount of reading they learn would be a certain amount of use to them in work, but I think to those in (3), (4), and (5), it would be of no use."

Plainly for the greater number of children, all but a fourth, reading and arithmetic as an instrument of advance in life can be counted on but little. At best they remain at Standard I. or II. The fourth profit greatly.

The Training of Teachers.

356. This appears to define the proportion and relation of "scholastic" teaching to manual and industrial teaching in the education of feeble-minded children. But the evidence not only indicates the kind of teaching that is required for defective children, it indicates also in part what should be the training of the teacher. Kindergarten teaching and manual or industrial training have to predominate; and the teachers must be able to provide these. The Board of Education requires

Eichholz, Vol. II., p. 267, c. 2.

"That the schools should be staffed by teachers who must in the case of head teachers possess the Government Elementary Teacher's Certificate or the Higher Certificate of the National Froebel Union; and in the case of assistant teachers must possess at least the Code qualification of 'Uncertificated' Teachers, or the Elementary Froebel Certificate."

357. Thus ex-pupil teachers who have not obtained their certificate are recognised as assistant teachers of the mentally defective, as are also holders of the junior Froebel Certificate; but teachers without any qualification are not recognised. Most of the witnesses were in favour of special training, some in the methods of Froebel, some in a home or asylum for mental defectives, such, for instance, as the Royal Albert Asylum. A teacher who was questioned on the subject, judging from her own experience, suggested, first, college training on Froebelian lines; then for a period training in the education of normal children; then, concurrently with the teaching of defective children, attendance at classes and lectures, practical classes which would include the actual lessons in articulation, breathing exercises, etc., and general lectures on scientific method and theory. And a scheme of this kind commends itself to us. But we would suggest that the Regulations of the Board of Education on this head might be amended and amplified, so that the conditions of training may be defined, and at the same time relaxed, and in addition to the minimum certificate now required—the Elementary Froebel Certificate—certain institutions and special schools may be registered as recognised places of teaching. Under our scheme all arrangements for the care and training of the mentally defective come under the Board of Control, and this body would therefore in future make regulations in this connection instead of the Board of Education. We think, also, that either the head teachers should have special certificates for ability to teach manual or industrial work of a kind recognised as likely to be useful to the elder children on leaving school, or that teachers who are particularly well qualified in this way, though they may not hold the Kindergarten Certificate, or, indeed, other certificates, should be employed in the school for the purpose of conducting manual classes. There might also, we think, be a further division in the teaching staff. Mrs. Hume Pinsent points out that day nurseries or classes for the lower grade of defectives could be provided "more cheaply than is at present possible under the requirements of the Education Department as regards staff and buildings." Mrs. Owen Fleming thinks that in teaching the lowest classes of defectives, when it is only a question of keeping them employed, and not of making them self-supporting, certificated teachers are not necessary, though she believes that the task requires very special capacity on the part of the teacher.

The Training of Teachers.—*contd.*

Gavin, Vol. II., 13236-13245, 13308.

Eichholz, Vol. I., p. 207, c. 2. Anderson, Vol. II., 15521, 15522.

Recommendation LXXIV.

Pinsent, Vol. II., p. 457, col. 1, also 19166 and 19167.

Owen Fleming, Vol. II., 15833–15836.

We should like to point out that some of the best teaching we have seen both in England and in America has been done by teachers who have been trained in institutions, for example the Starcross Asylum, where the assistant teachers are taken into the institution when quite young and trained by the matron and head teacher. The results at Starcross, both literary and industrial, are quite as satisfactory, if not more so, than any attained by certificated teachers employed under the present regulations of the Board of Education.

358. Dr. Ethel Williams' experience in Newcastle is of interest; she makes the following statement:—

Williams, Vol. II., p. 285, cols. 1 and 2.

"Our staff consists of a head and three assistants. Only the head had any special training. She was sent on a six weeks' visit to London before the school opened, and saw the work being done there. All have thrown themselves into the work with great enthusiasm. I think our staff has been exceptional, and for that reason we have suffered but little from the lack of special training, though I should consider this, as a general rule, essential. Special courses of lectures on physiology and psychology, with special reference to mental defects and mental development, would be very helpful to them, would tend to keep up their enthusiasm and to prepare candidates for future posts."

She admitted that popular opinion made everyone inclined to say that special training was required. Her long experience on the education committee had enabled her to choose the right kind of teachers for special schools. If she found that other people's experience had given them a similar advantage in the choice of teachers, she would modify her opinion as to the need of special training. She thinks that teacher's training of some kind is a necessity for special classes, but believes that "nous" and capacity are more important than special training. For the hopeless, unimprovable cases, she would suggest "housework and rough cleaning and that kind of thing." She believes that the employment of a kindly competent woman "who could teach them household matters" would lead to economy. This plan has been tried in Birmingham, where capable and intelligent women have been engaged to teach simple forms of manual work to children of such a low grade as to be incapable of obtaining benefit from instruction in the three R's, or whose education should *begin* with a

Williams, Vol. II. 15861–15865.

Williams, Vol. II., 15958.

Williams, Vol. II., 16904–16906.

The Training of Teachers—*contd.*

training in the use of their fingers. These women, who were not teachers, were given a probationary period of six to nine months, during which they worked in the Birmingham Special Schools, and picked up methods of discipline and class management, and a knowledge of the kind of manual work considered best for feeble-minded children. In the opinion of the Birmingham Special Schools Committee this experiment has been decidedly successful, and it has resulted in a considerable saving of expenditure. The employment of teachers of this class would be rendered impossible if, as we understand, the Board of Education are likely in future to require them to sign a statement to the effect that it is their intention to enter for the Preliminary Examination for the Certificate. It is long since they have left school, and it can hardly be expected that they would resume their studies with a view to taking a Preliminary Examination. Nor indeed would these studies conduce to efficiency in teaching low grade children how to knit or net, how to thread beads or to sew, or how to cook and do simple household work.

Recommendation LXXIV

With these views we agree, and we conclude that local authorities should have a free hand in this matter. We think that there might be a class of attendant teachers, whose services in many instances would suffice both in the lower grade cases and, to a certain extent, in the cases of the quite young children who require the supervision of a nurse combined with the aid of a teacher.

CHAPTER XVIII.

Combined Defects.

62 & 63 Vict. (1899), c. 32, Sec. I. (1).

359. Cases of combined defect, though not very numerous, cause much difficulty in the classes, and there is a general desire that special arrangements should be made for them. By the definition of epileptics in the Elementary Education (Epileptic and Defective Children) Act, 1899, epileptics who are also idiot or imbecile are excluded from the benefit of the Act. The greater affliction governs the lesser, and the provision required for idiots or imbeciles who are epileptic must rather be supplied as suitable to them on the ground of their suffering from idiocy or imbecility than on account of their suffering from epilepsy. In the corresponding Act, the Elementary Education (Blind and Deaf Children) Act, 1893, blind and deaf children who are suffering from idiocy or imbecility are also excluded. But apparently it was considered that the combination of epilepsy or blindness, or deaf-mutism, with the higher grade of mental defect such as feeble-mindedness, was not ground for exclusion from schools or classes for the epileptic, or the blind, or the deaf. The same principle has been applied to cripples who, if they are incapable of receiving benefit on account of physical defect, that is, if they are practically idiot or imbecile, are excluded under the Elementary Education (Defective and Epileptic Children) Act of 1899, but, if they are "defective" only, that is, capable of receiving "special school" instruction, they are not excluded. Feeble-mindedness, in fact, has been considered relatively to epilepsy, blindness and deafness of less importance, and epileptic, blind, or deaf children, who were feeble-minded, were allowed to be educated with the normal epileptic blind or deaf children. But in the case of their suffering from any greater degree of mental defect, they were not allowed. The evidence now appears to show that this difference can no longer be maintained, and that educational classification should be still further extended; for, feeble-mindedness is a greater affliction than blindness, or deafness, or crippling, and should govern the method of education when these defects are combined with it.

56 & 57 Vict. (1893), c. 42, Sec. II. (2).

From this there follows a demand for accommodation for the education of these cases of two-fold defect in other than special classes for the blind, deaf and dumb, and crippled.

360. The numbers of blind and mentally defective and of deaf and mentally defective do not appear to be very great, and it is probable that one or two large institutions would be sufficient for the whole country. The cripple and mentally defective are much more numerous, but owing to the large number of paralytics among them, few of these are capable of much improvement, though greatly in need of care and treatment. With regard to imbecile, idiotic, and feeble-minded epileptics, there seems no reason why they should not be dealt with in the same institutions as other feeble-minded imbecile and idiotic cases, provided such institutions provide facilities for the adequate grading of all degrees of mental deficiency.

Whitwell, Vol. II., 12556–12557. Dendy, Vol. I., 862. Passmore, Vol. II., 20048, p. 534, c. 1. Rotherham, Vol. I., p. 509, c. 1. Allbutt, Vol. I., 9182. Down, Vol. I., p. 538. Stainsby, Vol. II., p. 269, col. 2.

361. At present there is only one institution in the country for blind and mentally defective children. This is Stormont House, and has been established by the London County Council. Mr. Stainsby, Secretary of the Institution for the Blind, Birmingham, referred to the Report of a Conference for the Welfare of the Blind (1902), which obtained statistics and opinions on the subject of defective blind children. There was some difference of opinion as to the advisability of special institutions for these children, but as it appeared that most blind institutions either refused to accept mentally deficient cases, or discharged them after a period of trial, the need for a special institution for such children became apparent. The Committee say that:—

Blind and Mentally Defective or Epileptic. Stainsby, Vol. II., p. 269, c. 1. Eichholz, Vol. I., p. 208, col. 1. Townsend, Vol. I., p. 224. Stainsby, Vol. II., p. 274–275. 15667, 15671.

"Considering the peculiar difficulties of these cases, and the hardship that at present arises from the want of provision for them, the Committee are of opinion that, in spite of the great care bestowed on this class in those institutions for the blind, in which they are now sometimes admitted, there is at the present time the great need for the creation of a special institution for defective blind children, available for school authorities throughout England and Wales."

Stainsby, Vol. II., p. 275, c. 1.

362. This Committee estimates that there are about 160 such children in England and Wales. It has followed the definition of the phrase "defective children" as given in the Elementary Education (Defective and Epileptic Children) Act, and has, therefore, taken no account of blind children who are idiotic, or imbecile. But Mr. Stainsby draws attention to their need. "They are," he says, "refused admission into schools for the blind, whether day or residential, and so far as he is aware, are entirely unprovided for, being either at large or in workhouses. As a class they are untrained, unprotected, and uncontrolled." Further, he would, he says, remove such children compulsorily from their parents, but does not anticipate much difficulty on this head. In the case of the blind, where such compulsory powers exist, they have seldom had to be put into operation. He prefers the block to the cottage system for the purposes of administration. He thinks one or two institutions would be enough for the whole country.

Stainsby, Vol. II., p. 274, col. 1., 15632 15637. Stainsby, Vol. II., p. 270, col. 1. 15604. 15607. 15609. Stainsby, Vol. II., p. 270, col. 1. 15614–15620. 15609.

363. These conclusions are confirmed by the statistics collected by Mrs. Hume Pinsent for the Birmingham Education Committee, from which it appears that only seven feeble-minded and blind children were found out of a total of 1,033 defectives of all descriptions. Miss Dendy says the numbers of blind and deaf feeble-minded are not large, and agrees that one institution for the whole country would probably be sufficient. Mrs. Burgwin estimates in London there are about thirty cases of school age of mentally defective blind. She thinks that these cases will be improved by training, but that few, if any, will be able to maintain themselves entirely, and will, therefore, need permanent institution care. Dr. Tredgold, and Mr. Illingworth, Superintendent of the Blind Asylum, Manchester, think that special institutions should be provided for blind epileptic children, as they cannot have sufficient care in ordinary blind schools, and the disturbance occasioned by the fits is detrimental to the other inmates.

Pinsent, Vol. II., p. 456, col. 1. Dendy, Vol. I., 862. Burgwin, Vol. I., p. 483, col. 2. Tredgold, Vol. I., p. 401, col. 1. Illingworth, Vol. II., p. 276, col. 1.

364. Mr. Barnes, who gave evidence on behalf of the National Association of Teachers of the Deaf, gives particulars of 4,000 deaf mutes, and states that very nearly 6 per cent. are feeble-minded. He agrees with Dr. Elliott, of Margate, and other heads of institutions that 5 to 6 per cent. represents the percentage of feeble-minded among deaf mutes. In London there are from fifty to sixty such children.

Deaf and Mentally Defective or Epileptic. Barnes, Vol. II., p. 511.

Pinsent, Vol. II., p. 456, col. 2.

Mrs. Hume Pinsent gives the number of feeble-minded deaf children in Birmingham as five, out of a total of seventy-nine deaf-mutes.

Turner, Vol. I., p. 503, cols. 1 and 2.

Miss Turner, quoting Dr. Thornton of the Deaf and Dumb Asylum, Margate, says :—

"Out of 909 children under his care he found sixty-five (7 per cent.) markedly deficient; 302 (33 per cent.) 'intermediate' (*i.e.*, backward, if not slightly deficient); and 542 (60 per cent.) normal. This percentage is seen to be particularly high when it is remembered that feeble-minded deaf mutes are strictly not eligible for this Home, and those here mentioned as feeble-minded were admitted unintentionally.

At present, Mr. Barnes thinks that the majority of feeble-minded deaf children are accepted by the institutions for the deaf, but that after trial some are excluded as being unsuitable for treatment with normal deaf children. He considers that education authorities should be obliged to provide separately for feeble-minded deaf children. He says that :—

Barnes, Vol. II., p. 511, c. 2; & 512, c.1.

"The retention of feeble-minded deaf children in ordinary schools for the deaf has been proved to be unsatisfactory; they either retard the progress of the rest of the class, or their own progress is retarded for lack of more individual attention. They should be placed in special residential schools, or in special departments attached to existing institutions for the deaf, where various methods of instruction suited to the mental capacity of each individual child might be adopted." He also says that :—

"The following resolutions were adopted at the Biennial Conference of the National Association of Teachers of the Deaf, at Norwich, in August, 1905 :—

"(1) That the presence of defective deaf mutes in our schools militating against their best interests, and the best interests of the normal pupils, special pupils, special residential schools should be provided, into which could be drafted defective deaf children from all parts of the kingdom.

"(2) That powers should be granted by legislation for committing feeble-minded deaf, who are eventually found incapable of self-support, or are not under proper control, to permanent care in an industrial home or colony."

Eichholz, Vol. I., p. 208, col. 1.
Burgwin, Vol. I., p. 484.

A school for mentally defective deaf mutes has been established by the London Education Committee at Homerton. It is the only school for such children in England. The accommodation in it is insufficient for London alone.

Crippled and Mentally Defective or Epileptic.
Baldwyn Fleming, Vol. I., 2143, 2270–2274.

365. Mr. Baldwyn Fleming thinks that counties should combine for the purpose of establishing institutions in which feeble-minded cripples could receive special medical and mental training. He would like one authority to deal with all defectives, including those suffering from combined defects.

Alderman Buckle says that in Leeds :—

Buckle, Vol. II., p. 543, col. 1.

"There are eight known epileptic and mentally defective children in the city, two epileptic and physically defective children, and eleven mentally and physically defective children for whom no type of school is available.

Pinsent, Vol. II., p 456, col. 2.

And Mrs. Hume Pinsent gives the number of feeble-minded cripples for Birmingham as thirty-eight, and states that some of these are capable of improvement.

Dendy, Vol. I., 862.

But, there and elsewhere, many of these crippled children, as they are called, are really paralytic. They "want nursing and they cannot be properly treated in an institution for other children." In London, this change has begun. The Education Committee have decided not to admit to the cripple schools cripple or invalid children who are also mentally defective, but are about to arrange that, "where possible, children suffering from the double affliction shall be taught at schools for the mentally defective, whither they are to be taken by the ambulance." It is very doubtful, however, whether these cases should not be considered either as "Home" cases for whom, indeed, but little can be done, or removed entirely, if circumstances require it, to some separate quarter of an industrial colony, such as Darenth.

Lawrence, Vol. I., p. 421, col. 1.

Lewis, Vol. II., p. 12, col. 2.

Imbecile or Idiot or Feeble-minded and Epileptic.
Fleming, Vol. I., 2199.

366. The difficulties of dealing with epileptic idiots and imbeciles have been pointed out forcibly. There are no institutions in the country which undertake to deal with this particular combination of defects. The idiot asylums, with the exception of the Eastern Counties Asylum, refuse to admit epileptic idiots. Again, the epileptic colonies refuse imbecile or idiotic cases.

Many witnesses point out that these cases might be dealt with in carefully graded colonies which would receive all types of defective children who could be classified in various departments, one of which should be an infirmary for paralysed, epileptic, and hopeless or degraded cases. Dr. Langdon Down, Licensee of Normansfield, a house registered under the Idiots Act, 1886, says :—

" It is more important that normal epileptics should be dissociated from mental defectives than that mental defectives should be dissociated from cases suffering from epilepsy. It seems better, therefore, in any scheme to consider the epileptic feeble-minded in connection with the mentally defective rather than in connection with the epileptics of normal mental development.

" On the other hand, the epilepsy is rather a concomitant than the prime factor in the other group, and can be dealt with by classification within the group. It may be said that, owing to their defect, the defectives are not greatly affected by the presence of epileptics, particularly the lower grades."

Dendy, Vol. I, 861, 863, 988. Wills, Vol. II., p. 222, col. 1. Brookes, Vol. II., 12103–12104. Buckle, Vol. II., p. 543, col. 1. Rotherham, Vol. I., p. 509, cols. 1 and 2. Albutt, Vol. I., 9182. Rudolf, Vol. II., p. 119, col. 1. Down, Vol. I., p. 537, cols. 1 and 2. Passmore, Vol. II., 20048, p. 533, c. 2.

Dr. McCallum, Physician to the Epileptic Colony at Starnthwaite, has expressed a similar view, namely that epileptic imbeciles might be classed with ordinary imbeciles and might be treated together in institutions such as the Royal Albert Asylum. Dr. J. R. Whitwell, Medical Superintendent of Suffolk County Asylum, agrees with this and also Sir James Crichton-Brown who says :—

" There is no necessity for difference in the treatment of epileptic idiots and imbeciles from that of other idiots and imbeciles, except that, having regard to the dangers attending their seizures, they require vigilant supervision day and night. Idiot establishments and asylums are therefore best adapted to their treatment. A large number of affluent epileptic idiots and imbeciles are in idiot establishments which do not refuse paying patients of this class or in asylums."

Down, Vol. I., p. 537, McCallum, Vol. II., 12213–12244. Whitwell, Vol. II., 12556–12557. Browne, Vol. I., p. 332, col. 1.

Further, he points out that, although some of the idiot establishments nominally refuse epileptic cases, yet epileptics are to be found in all of them.

For the maintenance of these persons arrangements of many kinds might, no doubt, be made by committees for the care and control of mentally defective persons. If they are idiotic, imbecile or feeble-minded the committees would have to assure themselves that they are properly provided for, or they would themselves have to provide for them. Dr. Tredgold says : " Feeble-mindedness accompanied by anything but the most occasional epilepsy is not worth the expense of training." Towards them, the public duty can consist of little more than supplying the means of medical care in a home that is more infirmary than school. And the numbers are so small that in most cases this duty will best be carried out by providing a small department for them in an institution established mainly for other types of defect.

Tredgold, Vol. I., p. 401, col. 1.

CHAPTER XIX.

Conclusions and Recommendations.

Conclusions.

367. We have seen that the number of defective or feeble-minded children is considerable both in town and country, and that where the special schools or classes have been established a distinct advance has been made, both in the study of the question and in a knowledge of the conditions and limitations under which education of any effectual kind is in their case feasible, but that no system has come into existence for providing for the permanent needs of mentally defective children. Where there are no special classes, that is, in most places, there is not any centre at all for dealing with these children in any suitable manner ; and there, all, or nearly all, of them require immediate attention, care or education. To ascertain the number of the children and to institute the organisation necessary for their education and training, supervision or segregation, it is recommended that the system of registration now in force in regard to school children be turned to account and be made the foundation of notes and records which would be of the greatest help in caring for them directly or indirectly throughout life. Notification from public authorities and private homes would be required by statute ; but there would otherwise be no compulsory notification, except in regard to patients received for profit.

Recommendations LV.–LVII., LXXV.

Where there are at present no special schools or classes, the Committee for the Care and Control of Mentally Defective Persons, may, subject to the approval and regulations of the Board of Control, intervene to make such provision in connection with education authorities, or directly, as it may think best. Where there are special schools or classes, these would as in other cases,

Recommendation LXXXI.

Conclusions—*contd.*
Recommendation LXXXII.

serve for purposes of observation as well as for teaching and training. As far as possible only mentally defective persons would be admitted to the classes, but there would be a margin allowed for the admission of children, of whom it was doubtful whether they should be considered mentally defective or placed in the "backward" class. Mentally defective children, and children who are on "probation" in the special classes would be a charge on the Committee for the care of the mentally defective. Dull and backward children would be a charge on the education authorities.

Recommendation XLII.

Arrangements between the Committee for the Care and Control of Mentally Defective Persons and the education and other authorities, voluntary agencies, or private persons might, subject to approval by the Board of Control, be of the most diverse description according to the needs of the different cases.

Recommendation XXVIII.

The difficulties of transferring children, when they leave school, from one authority to another are according to our suggestions met by the proposal that there should be one authority seised with the responsibility of caring for the child, as suffering from mental defect, not only during childhood, but, as far as need be, throughout its life. Instead of regulations as to detention there would be up to twenty-one a system of wardship and supervision, with at twenty-one, if need be, prolonged control or care under sufficient safeguards.

Recommendations XLIX–LI.

368. Another point was raised and much discussed with witnesses. It was whether the education authority should be the authority in charge of mentally defective children. As we have stated, we have, so far as it rests with us, decided this point in the negative, partly for the reasons we have just given. A single and continuous control over the child seems to us indispensable; and, by its very nature, as the educator of children and not the supervisor of adults, the education authority could not exercise this control. In the case of other afflicted children, the blind and the deaf, school time suffices for education; in the case of mentally defective children the special school or class represents but part of the education, and sometimes, indeed, the child is unfitted for any "special school" education at all. He has primarily to be treated as mentally defective, and then, subject to the limits of mental defect, as educable to a certain point. It is not, as in the case of the blind or deaf, that one faculty only is wanting. All his faculties are by reason of the mental defect reduced to a lower, or less than normal, standard. And just as the Poor Law, established for the care of the poor and destitute, is unsuitable for the care of the mentally defective, so the educational system of the country, established for the teaching of the normal child is, in our opinion, unsuitable for the child, who, unlike the blind and the deaf, can never reach the mental level of the normal. Also it is evident that the development of the institutional and other arrangements required for this class would lead education into a department of work largely foreign to it. Such extraneous questions, from the educational point of view, are those of wardship and custody, and questions of the establishment and use of institutions in the nature of farm colonies, of industrial homes, of homes of care and control, besides asylums of several kinds, questions which have to be settled in relation to the mentally defective generally, irrespective of the question of age; for it is only by taking care of children, who are mentally defective in various ways and degrees, as part of a common problem, that it becomes possible to provide for them systematically or adequately either during childhood or later. On these grounds it seemed to us indispensable that a new authority should be established for the care and control of this class, and that it should be responsible both for children and for adults.

Recommendations I, XXVIII.

PART IV.

MENTAL DEFECT AND CRIME.

CHAPTER XX.

The Mentally Defective in Prisons, Casual Wards, and Common Lodging-Houses.

369. We have now to trace the mentally defective from the schools to the institutions, in which, if not cared for, they are found in later life. The population of mentally defective persons is homogeneous, a population of persons of undeveloped brain who can usually be trained only within certain narrow limits and of persons whose mental force has been so gravely impaired that they are unable to manage themselves or their affairs. The after-school life of many of these persons in prisons, workhouses and casual wards, common lodging-houses and shelters, we have to consider. The problem which they represent is ably stated by Dr. Scott, who is now attached to Brixton Prison—the London House of Detention for males—where there are many young prisoners. Mental defect in relation to criminality in life. Scott, Vol. I., p. 276, c. 1.

"During the last nine years, during which I have been connected with the London Houses of Detention (both for males and females), I have had to pay special attention to the state of mind of the prisoners, in order to furnish reports to the magistrates and to give evidence at sessions, assizes, etc. In making the examination necessary for these purposes I have had to deal with many feeble-minded persons, who could not be certified as insane, but who could not fairly be held fully responsible for their misdeeds. These form a fairly large class, and are a cause of great trouble and anxiety to those who have to deal with them. Many of them, in their youth, have not been kept under any control by their parents. Frequently little attempt has been made to educate them, as they are undesirable in the ordinary schools and classes, and special schools or classes are comparatively few in number. When they come to the working age, their mental defect stands very much in the way of their getting employment. They are only fit for unskilled labour, and most of them are so wanting in the power of continued application that they soon leave of their own accord, if not previously dismissed for stupidity. They are greatly wanting in initiative, and are easily influenced by others. Their moral sense is very defective, and they have little self-control or power to resist temptation when it comes in their way. They are frequently in trouble for breaking the law, and it is difficult to know what to do with them. The Judicial Authorities do not like to treat them as fully responsible, or to punish them severely. If they are sent to prison, it is usually for short periods only, so they soon return to their mischievous ways again. They are not amenable to penal discipline, and require to be treated differently from the other prisoners. When they break the rules, they cannot be adequately punished. This is rather subversive of good discipline in a penal institution. Punishment has little effect upon them. Reforming influences also fail with them usually. As they have very little self-respect, and home ties, if they have any, do not weigh much with them, they do not fear coming to prison. Indeed, to many of them prison is rather a harbour of refuge, as they are spared the trouble of thinking how to get food and lodging.

"When they are at liberty, their friends do not usually welcome them, and they are quite unfit to compete with better endowed individuals in the struggle for existence. It is not at all uncommon for them to break windows, or commit a petty theft, in order to get back to prison again. They are thus a cause of great expense to the country, with little, if any, improvement to their moral natures, and without the public being adequately protected against their depredations. By their proneness to commit larceny, arson, indecent assaults on children, etc., they are a constant source of annoyance, expense and danger. Many of them are quite unfit, if left to themselves, to lead decent, inoffensive lives; they require care and discipline. It is also important to consider from the point of view of the improvement of the race, if any means can be taken to prevent these 'undesirables' from producing their like."

Mental defect in relation to criminality in life—*contd.*

370. In dealing with this part of our subject, we propose first to set out some of the evidence in favour of the detention or segregation of the mentally defective who are unable to take care of themselves and have no friend to take care of them and control them. We will then draw attention to the exceedingly unsatisfactory conditions under which feeble-minded children are remanded and discharged, and juvenile offenders who are feeble-minded are sentenced for short periods and discharged on the expiry of the period. We will point out how injurious the existing system is to adult prisoners, male and female, in the local prisons both in the Metropolis and throughout the country generally, and how, against the wishes of the Prison Commission, it leads to the discharge from convict prisons of persons who, on account of mental defect, are quite unfit for liberation. We will then describe the labour colony which the Prison Commission have established at Parkhurst for feeble-minded prisoners, and suggest the necessity of an extension of the law so as to include cases of mental defect, which do not now come within the terms of the Lunacy Act of 1890, and we will propose measures for an alteration in the methods of discharge and in the procedure for submitting to the courts information in regard to mentally defective persons who have been committed to local or convict prisons. Lastly, we would submit notes taken from the reports of the Medical Investigators in regard to members of the criminal feeble-minded class, as they have found them at large and in casual wards, shelters and elsewhere. We may thus present a view of this class, in relation to criminality, at different periods of life and in different parts of the country.

Segregation and detention in after-school life.

371. In favour of segregation or detention in a large number of cases of mental defect after the period of childhood, the evidence is unanimous. At present, on the commission of an offence recognised by the law, the mentally defective person may be committed and detained in prison. But this detention is usually for very short periods; and it is usually detention of the wrong kind, being neither preventive nor reformatory. It has relation to the fact that an offence has been committed. It has no relation to the fact that a mentally deficient person committed the offence; and detention for punishment and detention for mental defect are two procedures not merely different but in a large degree incompatible. For want of better means, we have, indeed, been using prison methods, much as we have been using Poor Law methods, for mentally defective persons. In the one case these persons commit offences, and though not normally responsible, are detained in prison. In the other case these persons fall into destitution, and though not normally responsible for their self-support, are maintained in workhouses.

The Argument for Segregation.

The general evidence in favour of segregation and detention in the case of the mentally defective.

372. First, then, we will indicate how very strong is the evidence for segregation or detention of the right kind, which substantiates and supports the summary of facts which Dr. Scott has submitted to us. This is, indeed, the main issue, on which depends not only the argument which we have to use in this chapter in regard to feeble-minded prisoners, but the general demand for the better care of the mentally defective as a class. We have seen the nature of this demand in the case of the mentally defective now maintained in connection with the Poor Law, and in the case of children educated in special schools and classes; and as the control of feeble-minded criminals is a matter of extreme importance, we have thought it well to resume the general evidence here as a kind of preface to the statements of detail that follow.

373. Miss Dendy, Honorary Secretary of the Lancashire and Cheshire Association for the Permanent Care of the Feeble-minded, referring to the bad results of leaving feeble-minded children at large after the age of sixteen, thus describes the transition from school days and school control to freedom and irresponsibility.

Dendy, Vol. I. 840.

"Everybody who has either been a medical man amongst the poor, who has been a Poor Law guardian, or who knows the poor in their own homes, knows how horribly disastrous the results are of leaving these poor souls at large. Anybody can make them do anything. For instance, you get a boy who in school is not doing anything very bad, his master can manage him, he is amenable to discipline. His father brings him to you and says: 'My boy is always getting me into trouble, he will steal anything.' This is only one case amongst very many; I had such a little chap brought to me and he was quite proud to tell me how he did the stealing. He stole toffee and stole a diamond ring; but never had any good of anything he had taken. He had only been the scapegoat, he had passed the stolen goods on at once. Undoubtedly as soon as he was big enough to be considered a man, he would be convicted for some theft like that. I have cut from the newspapers at different times cases in which we have found feeble-minded boys concerned in train-wrecking. In each case the feeble-minded boy has been used by the sane boys to do the actual mischief, and of course he has been the one caught and the one punished."

Mr. A. A. Allen, the Chairman of the Special Schools Committee of the London County Council, was asked the following question :— The general evidence in favour of segregation and detention in the case of the mentally defective—*contd.*

"Among the reasons why you have not made any considerable advance in providing residential schools for the feeble-minded, you stated that you did not know what course would be taken ultimately with regard to that; have you any suggestion to make with regard to that provision—what provision do you think ought to be made?"

He replied :—

"I think that probably the bulk of the children who would go to the custodial Homes—that is the worst class of mentally defective children—probably never ought to go out into the world at all; they ought on leaving the school to be drafted into colonies where they will live without going into the world at all. The custodial Homes would take the worst class of child with whom there is no real prospect of any great improvement, and who will always be a danger to themselves and the community if they are let out into the world." Allen, Vol. I., 7589.

This view is shared by managers of Voluntary Homes (*see* Chap. XXVI), and of Idiot Asylums (Chap. XXV) in regard to a large number of feeble-minded cases.

374. Dr. Mott, Director of the Pathological Laboratory of the London County Council Asylums, considering the question of detention from the point of view of the reception and discharge of patients at the London asylums, mentions the following among other cases as illustrative of the feeble-mindedness and criminality of young persons who are temporarily detained in asylums :— Mott, Vol. I, p. 458, c. 1.

"*Reg. No.* 14037. Age, 16. Admitted 11–3–04. Mania: Moral insanity. Defective. Criminal type. Third Standard Board School, left at thirteen. Father states he took a shovelful of live coal and asked the baby to pour paraffin on it. He has behaved indecently towards his little sister. Fits from eighteen months till twelve years of age, none since. He is one of fourteen children; eight having died of some brain trouble or another; three were still-born. No insanity in family. After leaving school he was a van boy, but was unable to keep the job, and, having no character, was prevented from getting another.

"*Reg. No.* 13958. Age, 15. Admitted 25–11–03. Labourer. Destructive—dirty—delusional and bad habits—a dull, aimless-looking youth. A brother aged eighteen has fits. Patient has had fits since an infant. Diagnosis, melancholia. Discharged May 6th, 1904. A letter was received from him, very illiterate, but complaining that he was *unable to get work* and that they *knocked him about at home.*

"*Reg. No.* 13975. Age, 14. Admitted 11–12–03. *Imbecile from birth, due to injury.* No heredity, no epilepsy, or paresis. Sent to asylum because he was violent and threatened to kill his little sister. Mother, thirteen children, all living except one, and all healthy except patient. Discharged to care of his father. 6–5–04.

Such persons will always be, as Mr. Allen states, "a danger to themselves and the community if they are let out into the world." Allen, Vol. I., 7589.

375. Dr. Ashby, Medical Officer of the Manchester Special Schools, thought that, without doubt, "this large, unguarded and unprotected class" of "idiot and imbecile children and older people for whom no supervision exists, and who are not under any kind of discipline or control," "tend to an increase of the criminal and immoral classes," "as well as, of course, of the pauper classes." Ashby, Vol. I., 10114, 10116.

And Dr. Whitwell, Medical Superintendent of Suffolk County Asylum, speaking of the feeble-minded, "who were capable of a considerable degree of education, both intellectual and moral," said that "they were usually retained at home, until after puberty at least; and the natural and physical evolution taking place at that time, but on a lower plane, in the absence of intellectual control, and accompanied by defective education, was apt to result in acts of theft, cruelty, incendiarism, homicide and various offences of a sexual or perverted sexual nature. Experience seemed to show that the degree of education possible in this class was an element that might, under proper care, be made use of as a factor worthy of consideration in providing for them on economical lines. But under existing conditions education, on the usual lines, amongst other children, and associated with them, was so entirely erroneous as to result in their spending their lives alternately in the prison, the workhouse, and the asylum—an outcast from each." Whitwell, Vol. II., p. 95, c. 1.

376. Referring similarly to the factors relating to the development of mental defect, Dr. Hubert Bond, the Medical Superintendent of the County of London Colony for Insane Epileptics, drew attention to :— Bond, Vol. I., p. 466, c. 1.

"(*a*) *Certain age periods* (notably puberty and adolescence) affecting the sexes equally, and in almost every person causing a recognised amount of disturbance, and (*b*) *Certain cataclysms* in a woman's normal life-history (pregnancy, child-bearing and suckling). All may be looked upon as examples of normal stress, which, encountered by a healthily constituted organism, will be successfully weathered, but, acting in the presence of the inherent factors already discussed or upon a brain congenitally defective, they are very frequently the means of precipitating insanity, epilepsy or other neuroses.

"Their special relation to the classes under inquiry is as follows :—

"(i.) A feeble-minded child having left school is launched on society, and is set the task of earning a living. Its mental and physical disabilities severely handicap it, and

The general evidence in favour of segregation and detention in the case of the mentally defective—*contd.*

make an equal competition with its more fortunate associates impossible, and when the further stress of the adolescent period supervenes, small wonder that a break-down occurs and that the youth is certified as insane. His admission to the asylum is not on account of his congenital feeble-mindedness, but for the added symptoms of—most commonly—an attack of adolescent acute mania. From the latter he recovers and, as the law stands, has to be discharged "as recovered"—recovered, that is, from the maniacal attack—and is returned to society, still a feeble-minded case; to break down again, and even a third time, before the adolescent period is complete; to subsequently marry and add to the number of the mentally defective or epileptic, and if a woman, to probably again visit the asylum under the stress of the cataclysms of pregnancy, child-bearing or suckling.

"(ii.) The relation of certain ages to the onset of epilepsy is very striking; eleven, twelve, thirteen and fourteen (corresponding to puberty) are ages at which the fits first appear in a large number of cases, or re-appear after being in abeyance since perhaps an isolated few in very early childhood. Again between eighteen and twenty-two (corresponding to the period during which adolescence presses most severely) there appears to be another special incidence, though in this case there are frequently other factors, *e.g.*, alcholic and sexual excesses, beginning to exert their influence. In these cases a history very commonly related is that shortly after the commencement of sexual indulgence or shortly after getting married the first fit appeared; as already indicated, in some cases the marriage is entered upon in the mischievous hope that it will bring about a cessation of fits. In the case of epilepsy which has made its appearance earlier in life, as described above, also in regard to feeble-mindedness, the stress of the adolescent period becomes doubly fateful when in conjunction with worry, chagrin and other mental stress, the result of the youth being unable, by reason of his fits, to retain any employment long. He finds himself tossed about from one employer or employment to another, and of necessity often out of work, roaming the streets or loitering at bars. That such ones become insane, drunken, or criminal cannot be wondered at."

Chance, Vol. II, 14017.

377. This view was confirmed by Sir Wm. Chance, speaking of the County of Surrey where special inquiry had been made. He thought that there was no doubt that the existence of the feeble-minded class caused a large increase of immorality and crime in the country. And Dr. Marriott Cooke, a Commissioner in Lunacy, described those who were discharged from asylums for the feeble-minded and idiots, and lost all the advantages of their training and sank by degrees to the workhouse. He said :—

Marriott Cooke, Vol. I., p. 349, col. 1.

"Those who have benefited most by the care and training they have received and who seem to be the most promising are those for whom this additional provision" of detention "is especially required. Their physical condition has, as a rule, been developed satisfactorily during their residence in the asylum; they not infrequently present a bright, intelligent appearance, and a certain number have become, while under supervision, to some extent self-supporting."

"Attempts, however, to place them out in the world generally meet with failure, and the alternative is usually residence in a workhouse, where they often deteriorate. Being still feeble-minded, they cannot, if placed on their own resources, take care of themselves, and are unable to earn their living. They get into trouble, and some of the women become the mothers of illegitimate children. Ultimately they gravitate to the workhouse, and the good they have derived from their training is, to a great extent, lost."

Bagenal, Vol. I., 2447. Vol. VI., p. 258

378. As to the recurrence of cases of feeble-minded women in the maternity wards of the workhouses in the country, Mr. Bagenal, a General Inspector of the Local Government Board, said :—"My inference is that when women in a rural district come in time after time with children by different fathers, they practically may be described as the prostitutes of the districts."

Clouston, Vol. III., p. 201, c. 1

Dr. Clouston, the Physician Superintendent of the Royal Edinburgh Asylum, from special investigation in regard to this class of feeble-minded women, gives a similar account. He says :—

"Of late years I have been devoting special attention to the previous history of the feeble-minded who have been sent to the asylum as certified patients, especially the young women. Through conversations with the patients themselves and through the enquiries by nurses and the information supplied by parents and relatives and from bodily indications where they have had children, I have come to the conclusion that such persons in a large city are subject to overwhelming temptations and pressure towards sexual immorality. I find, as a matter of fact, that it is an exception for any of them not to have been sexually tampered with among a certain class of society. Many of them have had illegitimate children, and this often at very early ages. One had seven such children. I look on this source of immorality as an extremely grave one in our social life. In a way, it is more disgusting and degrading than prostitution or sexual lapses through passion. When illegitimate children are borne by such young women, the chances are enormously in favour of their turning out to be either imbeciles, or degenerates, or criminals."

Legge, Vol. I., 1311.

Mr. Legge, then Inspector of Reformatory and Industrial Schools, when asked his opinion as to how far these feeble-minded people ought to be segregated with a view to prevent them reproducing themselves, said :—

"I think I said, and I hold to it, that I see no other alternative but when they reach a certain age to have every individual examined, and if they are certified as suffering from mental

deficiency which either renders them unable to protect themselves, or renders them not fully responsible for their actions, to have them segregated in colonies for an absolutely indeterminate period, and I do not think those colonies, properly worked, would be such a ruinous expense as people imagine. If the parents are decent and are willing to take charge of the individual then they should certainly do so, just as there are many idiots in the country in private houses. Many people would much rather keep a person than have it sent off to a colony. I think that is the only method." The general evidence in favour of segregation and detention in the case of the mentally defective—*contd.*

379. Dr. Savage, referring to records of cases compiled during ten years, said :— Savage, Vol. I., 6516.

"I think during the last ten years I have records of over 700 people who are not detained, and who require, for the good of themselves or society, to be detained; wasters, morally insane people; probably 100 a year I see whom I think ought to be detained and are not detained, and cannot be, according to the present law."

Finally, Sir Edward Fry sums up the matter in a few paragraphs :— Fry, 5578, Vol I., p. 312, c. 2.

"Everyone knows that a large number of the mothers of illegitimate children are of weak intellect; that their issue are frequently of the same type; that a large number of the habitual inmates of workhouses are of the same low standard of mind; that much of the petty crime of the country is committed by persons below the average in intellectual power."

"One of the Poor Law inspectors saw, in a workhouse in Somerset, an imbecile woman with an illegitimate imbecile daughter, who had her own illegitimate daughter in her arms. Precisely the same picture has been seen in the county of Cornwall, and these are but pictures in small of a fact which is to be seen in very many of our workhouses."

"But the ranks of the insane, as well as of the imbecile, are recruited from the children of the feeble-minded. The fearful increase of late years of insanity in this country has necessarily created alarm, and I cannot but believe that one of the sources of this fact is to be found in the imbecility of the parents."

"Sir James Crichton Browne entirely agrees in this view. He has written to me to the effect that a terrible increase of insanity is going on, and that it is undoubtedly not merely due to increased diligence or improved diagnosis, but in some measure to the cause named viz., propagation by the weak-minded, and 'I am confident,' he adds, 'that permanent provision for imbeciles of both sexes, but especially girls, however costly it might be in the first instance, would ultimately result in saving of the rates.'"

"In a word, imbecility, insanity, bastardy, and crime are now paid for by the ratepayer, and any method of diminishing these at a reasonable cost must be to his benefit."

"In the ruder state of society which has passed away little heed was taken of these unfortunate children, and many of them, no doubt, died comparatively early in the struggle for existence. But we have learned to think more tenderly of the inferior members of our race, and we seek to protect them from the calamities and sufferings to which they are naturally exposed, and to preserve their lives to the utmost. But in so doing, and so doing rightly, we incur, it appears to me, another responsibility, namely, that of preventing, so far as we reasonably can, the perpetuation of a low type of humanity, for otherwise the beneficence of one generation becomes the burthen and the injury of all succeeding ones. The past increase in the number of lunatics in the country, to which I have already alluded, demands our most serious consideration of every means which can legitimately be used to protect the race from physical and mental degeneration, and I regard the segregation of imbeciles, first in childhood and youth, and subsequently throughout life, as the one of such means which is mostly clearly open to us."

380. In connection with the workhouses we have pointed out how strong is the argument for the detention of the mentally defective in suitable institutions; and we have shown also that, except in cases in which the home fulfils the purpose, supervision and control should follow immediately on their leaving a special class or being found unsuitable for day school education. The evidence we have now quoted emphasises the necessity of segregation or detention on the widest grounds of public policy. It is very representative, and comes from the authorities of prisons, medical officers of special schools, superintendents of county asylums, members of county councils, Poor Law inspectors, medical experts on questions of insanity and disorder of the mind, and from men of general culture and large legal experience; and others, as we shall see, such as the managers of voluntary asylums and voluntary societies, support it. And we should add that this mass of evidence is absolutely consistent with our own experience and with the results of our personal investigations. Following this evidence then we have to recommend some reorganisation of criminal procedure and of detention in the case of the mentally defective on lines consistent with those which we have suggested in regard to the Poor Law and education. Part I., Chapter IV. Dendy, Vol. I., 858. Fleming, Vol. I., 2143–2145. Bagenal, Vol. , 2366. Caldecott, Vol. I., p. 596, c. 2. Hutchison, Vol. II., 11134–11135. Wilson, Vol. II., p. 23, cols. 1 and 2. Recommendations LXXXVII.–LXXXIX.

Mentally Defective Children in Remand Homes, and Juvenile Offenders.

381. We begin with children in the remand homes. We referred to them in our chapter on the feeble-minded population of London. In the three years, 1902 to 1904, 3,119 juvenile offenders passed through these homes. Of these, 100 boys were taken at hap-hazard and twenty-eight girls, and examined Mentally defective children in the remand homes. Part II., Chapter VII., para. 198–199.

Mentally defective children in the remand homes.—*contd.*

medically. Of the 100 boys thirty-seven were on examination graded between "backward, slightly mentally deficient, and mentally deficient"; and of the twenty-eight girls, sixteen. If these figures are fairly representative, it may be said that from year to year a very large number of juvenile offenders, in whom the connection between mental defect and criminality may be observed in its earliest stages, come before the magistrates. And further, if we may judge from the forty cases in which inquiry was made in regard to the children's homes, we find the home conditions in a manner account for the mental defect and illustrate the circumstances in which it arises. Yet no advantage is taken of this opportunity of dealing with the evil in its first manifestation. At present some of these offenders are committed under the Reformatory and Industrial Schools Acts, but committals to these schools account for only a small proportion of cases. The number discharged from them as insane, imbecile, or feeble-minded, in the years 1900 to 1904 was only fifty-nine out of an average annual school population of 21,000.

Part II., Chapter VII., para. 201.

Legge, Vol. I., 1192, 1193, 1197 and p. 651.

382. It may be said that this number represents probably "only those whom the schools have found it absolutely hopeless to deal with"; and that the actual number is much larger. But even if this be so, the proportion would be comparatively small, as it is well known that these schools do not, as a rule, receive children whose mental or physical defect would interfere with their industrial training. By far the larger number are probably remanded only and then discharged to their parents, nor are any other steps taken. It does not appear that there is any plan of reporting these cases to the Local Education Committee or ascertaining with any completeness from them or any other agency what the circumstances of the child may be; nor is there any continuous supervision of them on their discharge, except so far as the attendance officer may follow them up with a view to their attending school. "The Judicial Authorities do not like to deal with them as fully responsible, or to punish them severely. If they are sent to prison, it is usually for short periods only, so they soon return to their mischievous ways again." Thus at the time, when, as we have seen, discipline and training would have the greatest effect in preventing a lapse to yet greater feebleness of mind, these children in most instances are simply reprimanded and discharged. And, except in so far as they may make use of the industrial schools, the magistrates have no alternative. They may realise that the child requires special and continuous education and oversight but they can only return it to its parents or ask the aid of the police-court missionary to look after it. The existing law does not provide the powers which they should possess.

Scott, Vol. I., p. 276, c. 1.

Part III., Chapter XVI.

"Juvenile offenders, mentally defective, in local prisons in the Metropolis."

383. But we have to consider these juvenile offenders at subsequent stages of their career. At the first stage, as we have seen, out of 100 boys in the remand homes taken at random thirty-seven were classed as "backward, slightly mentally deficient and mentally deficient." At the House of Detention a large proportion of the prisoners are feeble-minded or lunatic. "Last year," Dr. Scott says, "we had nine found insane on arraignment; eleven found guilty but insane, certified before trial; another, judgment respited. In addition to that, I suppose there would be over 150 returned as insane to magistrates, those who are sent for the purpose of being detained, and a considerable number of weak-minded, whom with the present practice it would be of no use to certify, as they would not be detained. Of these 'weak-mindeds' a number are sent to prison. Some of them are simply bound over to come up again. Some are discharged on that account by magistrates as not being fully responsible. We cannot say that they are wholly responsible according to the legal sense; but many who are only partially responsible are punished, as practically there are no other institutions for them . . They could not be certified as insane in the present state of the law, and to a great extent, because, if they were sent to the present institutions, they would be sent out again." Also there is the difficulty of getting them into these institutions, for they may be *reported* as insane by the medical officer at the prison, and yet they may not pass the doctor or the magistrate at the workhouse to which they are sent on discharge, with a view to their being dealt with as insane. "This complicates the administration of justice. Unless there is something tangible it is no use my reporting them."

Scott, Vol. I., 4913–4918.

Scott, Vol. I., 4918.

384. This evidence represents the next stage. The weak-minded, unless certified as insane, cannot at present be detained. Some are sent to prison, some "bound over," some discharged; and even if they were treated as "insane," which they can hardly be under the present law, on discharge to the workhouse the Poor Law doctor and the magistrate at the workhouse may refuse certification and order of detention, taking a different view of the case from that of the prison doctor. And there is no intermediate institution between the prison and the lunatic asylum to which they can be admitted.

"Juvenile offenders, mentally defective, in local prisons in the Metropolis"—*contd.*

385. Of prisoners at the Pentonville prison similar statements are made. Dr. Parker Wilson said that in that prison "about 100 prisoners a year were so far mentally affected as to be quite unfit for prison discipline. They are the very extreme cases and mostly drift to asylums." Besides these there are not less than 20 per cent. of the prisoners who show signs of mental inefficiency. Special observations made during a month showed that the proportion of the feeble-minded among the prisoners worked out at about 18 per cent. The juvenile offenders had made but little use of their schooling. Of 389 admitted in the course of a year, 26 could neither read nor write; 328 only averaged the second standard; and 35 only could read and write well. As many as 40 per cent. of them are described as feeble-minded. From the feeble-minded juvenile offender comes the adult offender, who sometimes founds a family akin to himself in criminality. "The feeble-minded adult, who is generally an offshoot from the defective juvenile, becomes in nearly all cases the habitual criminal." "I am acquainted," Dr. Parker Wilson said, "with whole families of professional criminals, various members of which I have known as juveniles, and who were undoubtedly of very feeble-mental calibre when they commenced their downward career." And he mentioned several instances, of which one may be cited:—

"Juvenile offenders at Pentonville."

Parker Wilson, Vol. I., p. 255, c. 2.

Parker Wilson, Vol. I., p. 256, c. 1.

"A lad who does not now look more than fourteen years old has already served three terms of imprisonment at Pentonville prison, his father has been here twice, and his mother has been sentenced as a drunkard. Of his brothers, one has done two years at Maidstone, another one year at Wormwood Scrubbs, and the third is in a reformatory. The girls (his sisters) are mere children. The difficulty of benefiting this class of boy was particularly demonstrated in this case. I brought him specially to the notice of the chaplain, and he procured work for him on discharge which would have enabled him to earn 10s. a week, but the parents intervened and would not allow him to go, as it took him from home."

386. Notwithstanding the procedure described in Para. 391 and 400 *infra* it generally happens that offenders come before the magistrates without sufficient information as to their mental condition, and as matters stand they have to be discharged or imprisoned, and are discharged with little or no regard to ultimate results. When a juvenile offender leaves prison after a few days confinement it frequently happens that no report is made to any authority that he is mentally deficient, even if that be the case. No evidence is brought before the magistrate; and the magistrate may convict again and again, but he may have before him no information as to previously recorded convictions. Yet these are often very numerous. Of the juvenile prisoners admitted to Pentonville prison in the previous year, 513 in all, seventy-two had one; sixteen, two; eight, three; five, four previous convictions. One had five, one six; and one, nine. And the sentences almost all are short sentences, so that though special training and education is provided for these offenders in prison, little advantage can come of it. Thus seventeen weak-minded boys were sentenced to one month, twenty to six weeks, one to eight months, twenty-seven to two months, fifty to three months, three to four, and one to seven months. In this way, there is an endless duplication and reduplication of unproductive administrative work.

"Weak-minded juvenile offenders before the Magistrate."

Parker Wilson, Vol. I., 4460. 4472.

Melland, Vol. VI., pp. 166, 167.

Parker Wilson, Vol. I., 4482. 4470.

4494.

387. These offenders are frequently committed without information as to their mental condition or past convictions; they are committed for short sentences, which may be suitable in certain cases, but which in these instances have little or no relation to causes and are practically purposeless, and, naturally, committed to prison without forethought, they are committed frequently, and they appear and re-appear in prisons, workhouses, casual wards and elsewhere. Thus it comes about that 150 to 200 feeble-minded offenders pass through a single prison in the course of a year. On their discharge they are handed over to their parents as the proper people to look after them; and so the matter ends. If they were dealt with individually, under conditions likely to prevent their degradation, by education, employment, and segregation, the supply would gradually cease. They would be detained, if need be, and would not appear and reappear in a perpetual and useless iteration.

Mentally Defective Prisoners in Local and Convict Prisons.

Mentally defective in local prisons generally.

388. We have referred to local prisons in London only. But the same routine of maladministration, not to be avoided under present conditions, prevails elsewhere. Dr. Smalley, the medical inspector of the Prison Commission, submitted to us a return of prisoners in the various local prisons in England and Wales, who "although not certainly insane, were unfit for ordinary penal discipline by reason of mental deficiency, and are termed 'weak-minded.'" These prisoners numbered 345 during the year ended March 31st, 1904, 297 males, and forty-eight females, the rate per 1,000 being 1·75 of the male, ·88 of the female prisoners, or 1·54 of the total number. Yet they do not represent the total number of the mentally defective, but "only the worst, the most obvious." There are many mentally defective who *are* considered fit for penal discipline. If they were included in the count, at least 3 per cent. of the prison population would be returned as mentally defective. In the previous year, 1903, 333 were returned as "weak-minded." Of these an analysis by age has been made. Of the 333, the larger number, 200, were under forty; twenty-two were under twenty years of age; eighty-five between twenty and thirty. Thus "no age between late childhood and extreme old age is without examples, whilst 73 per cent. were in the procreative stage of life with its obvious corollary."

Smalley, Vol. I., p. 175.
Vol. I., p. 176, c. 1.
Vol. I., p. 176, c. 1.
Vol. I., p. 175, c. 1.
p. 176, c. 1.

389. There is in regard to the local prisons generally the same story of short sentences and frequent committals as in the London local prisons. Against 130 of the 333 weak-minded prisoners, who were unfit for ordinary penal discipline by reason of mental deficiency, no previous convictions had been recorded; but for this absence of record their nomadic habits might in part account. Against fifty-six one conviction had been recorded; and against twenty-eight, two; the remainder varied from four to 105 convictions. About half (fifty-one) had been convicted from five to ten times. And the offences were chiefly minor offences. Thus, if we omit from the list offences of which only a single instance was returned, we find that out of these 278 offences, 193 consisted of: begging (seventy-five); drunkenness (fifty-three); stealing (thirty-four); vagrancy (twenty); sleeping out (eleven). These offences, excepting drunkenness, are much the same as those which appear in the register of the remand homes. Yet "though," as Dr. Smalley said, "the less grave forms of crime predominate, there is a potentiality in the feeble-minded class for crimes of a more serious character. Many are eventually sent into penal servitude for rape, arson, carnally knowing, shooting with intent, manslaughter, and murder, who previously had short sentences for minor offences."

Smalley, Vol. I., p. 176, Table.
p. 175, c. 2.
p. 176, c. 1.

Feeble-minded women in local prisons. Holloway Prison.

390. The evil plight of feeble-minded women naturally excites the most general commiseration, but it will be noted that in the above return the larger number are men. Thus in the 333 cases of mental defect, 284 were men; forty-nine only were weak-minded women. On the other hand, if we compare the number of mentally defective female prisoners with the number of the normal female prisoners, we find that of 803 who were in Holloway prison on November 29th, 1904, forty-one were chronic inebriates, thirty-nine were feeble-minded, and three were insane; and of 1,297 convicted prisoners received during the month of November fifty-six were rated as feeble-minded. In the case of the thirty-nine who were noted as feeble-minded women the sentence in twenty-one instances was for one month or less. In the remaining instances it was for six weeks up to twelve months. Cases of sexual offence numbered twelve; cases of theft, ten; drink, begging, assault, and "false pretences" made up almost all the rest of the count.

Smalley, p. 175.
Griffiths, Vol. I., p. 199.

Regulations for local prison as to the mentally defective.

391. The Prison Commissioners, to whom all these facts have long been familiar, have already made regulations for dealing with the weak-minded in local prisons, so far as the accommodation in such prisons permits, with a view to preventing or mitigating these evils in such degree as their powers allow. These regulations provide for classification apart from other prisoners; for supervision by officers selected "by the governor after consultation with the medical officer, and preferably from the hospital staff"; for a dietary in each case as may seem fit to the medical officer; for "untasked" work, separately or in associations, as it may be allotted to them by the governor after consultation with the medical officer; for punishment only with the concurrence of the medical officer; and, finally for the transference of such prisoners on discharge

Smalley, Vol. I. p. 172, c. 1.
p. 172, c. 2.

"to the care of friends or to the workhouse authority." In general it may be said that the management of feeble-minded prisoners has become rather medical than penal. The medical officer acts virtually as an assessor with the governor. "A record of each case, and its special treatment and history, is kept," it should be added, "and sent to the Commissioners by the medical officer with his Annual Report." In fact, the record, registration, and the annual report, which we recommend generally are here already adopted. Smalley, Vol. I., p. 173., c. 1. Smalley, Vol. I p. 172, c. 2.

Moreover, the Commissioners have, with the approval of the Home Secretary, taken the highly commendable step of requiring that, whenever a feeble-minded prisoner is discharged, due notice thereof shall be sent to the police of the district to which he is to be discharged, so that if he again falls into crime the magistrate before whom he is brought may be made aware of his mental condition.

392. But these regulations, good as they are, do not suffice. The conditions of committal and discharge will have to be altered if remedial reforms are to be made. Accordingly it is suggested to us that on conviction mentally defective persons should be committed from the court direct to "feeble-minded homes or colonies"—"places where they could be compulsorily detained and employed; and where, if they are to be detained for any length of time, a certain amount of recreation and amusement could be allowed—a kind of half-way house between a prison and a lunatic asylum." It is suggested also that in these cases committals should be indeterminate, that is, "for a certain length of time in the first instance, and at the end of that time their case should be reconsidered and settled according to circumstances. In some cases the detention would be for life." Another suggestion is that "there is a possibility that some might be sorted out after a time and let out on a licence under the supervision of an appointed guardian, who should be responsible for them and to whom they should report themselves frequently. The guardian himself would also report periodically of the doings of the individual to the central authority, whoever that might be, who had jurisdiction of the feeble-minded homes and colonies." Suggestions of witnesses as to committals and discharge. Smalley, Vol. I., 3419-3421. Vol. I., 3421. Vol. I, 3428. Vol. I, 3360.

393. Hitherto we have referred only to local prisons; but in regard to those committed to the convict prisons the same evils obtain, so far as procedure and the administrative arrangements that depend upon it are concerned. But this does not apply to the internal management of the prisons, and the prison authorities have striven to utilise the accommodation within both local and convict prisons so as to minimise as much as possible the evil of treating mentally defective prisoners like ordinary prisoners. Reform is required in another direction. The courts do not possess sufficient discretionary powers to enable them to deal satisfactorily with the feeble-minded criminal in the earlier stages of his career. Sixteen per cent. of the patients at the State criminal lunatic asylum at Broadmoor were "cases of congenital or infantile mental deficiency—the proportion of both sexes being about the same," and the list of their offences is an illustration of Dr. Smalley's statement that: "There is a potentiality in the feeble-minded class for crime of a more serious character." Convict prisons Brayn, Vol. I., p. 105, c. 2. Smalley, Vol. I., p. 176, cols. 1 and 2.

The returns made in regard to weak-minded convicts at Parkhurst is a still further confirmation of this opinion. The Return is as follows:—

IV.—(*d*) Weak-minded Convicts in 1903–4.

The 111 weak-minded convicts in Parkhurst Prison at the close of the year ended March 31st, 1904, were classified as follows:—

(*a*) Congenital deficiency:—		
(1) With epilepsy - 5		
(2) Without epilepsy - 53		58
(*b*) Imperfectly developed stage of insanity		24
(*c*) Mental debility after attack of insanity		4
(*d*) Senility		8
(*e*) Alcoholic		—
(*f*) Undefined		17
Total		111

Convict Prisons —*contd.*

Their offences were as follows:—

Larceny	24
Burglary, housebreaking, etc.	18
Attempt to murder, wounding with intent, shooting with intent, etc.	13
Arson	11
Carnal knowledge of girl under thirteen years of age	10
Murder	9
Fraud, obtaining money by false pretences, forgery	6
Manslaughter	5
Rape	3
Receiving stolen goods	3
Unnatural offences	2
Horse stealing	2
Possession of explosives (treasonable offence)	1
Bigamy	1
Blackmailing	1
Robbery with violence	1
Killing a horse	1
Total	111

Their previous Convictions are thus returned:—

Treadwell, Vol. I., p. 248.

4382.

394. Indeed, the gravity of the question led the Prison Commission to reconsider the whole of their arrangements for this class of convicts, and to re-organise them. Now, accordingly, at the prison at Parkhurst weak-minded convicts are brought together and treated as if they were in a labour colony. But it has to be remembered that those who are here graded as "weak-minded" do not represent the whole number of that class. Here as elsewhere, "a considerable number not actually classed as 'weak-minded' are incapable of organising their own occupations, of withstanding the stress of competition and the evil influences of criminal associates, when free; and necessarily from this cause they relapse into crime." About 17 per cent. among the "star" class prisoners, and 25 per cent. among ordinary class prisoners are really feeble-minded in this minor degree. Of 100 weak-minded convicts only four, it is judged, "might be discharged to the care of relatives or unconditionally, with reasonable prospect of their leading an honest life." Again, previously recorded convictions are numerous. And further, the course of criminality commences early. In thirty-seven cases out of the 100, the first conviction took place under the age of twenty—in many instance at fourteen, fifteen, sixteen and seventeen years of age and even earlier. Indeed, as Dr. Treadwell said, the evil is "an evil of the very greatest magnitude."

Treadwell, Vol. I., 4387, 4309, 4349.

395. This department at Parkhurst, as we have said, is essentially a labour colony. To it weak-minded convicts are sent from the local prisons at the end of their period of separate confinement, and weak-minded prisoners from the other convict prisons, including the purely prison department of

Parkhurst itself. Urgent cases from other prisons are also received. These persons are placed under special regulations which ensure :— Parkhurst prison in part used as labour colony for mentally defective convicts —*contd.*

"(1) Separate location from other convicts."
"(2) Supervision by a specially selected staff of officers"
"(3) Special employment."
"(4) Dietary to meet special needs.
"(5) Special care and discrimination in dealing with any breach of rules, etc., and punishment thereof." Smalley, Vol. I., p. 172, c. 2.
"(6) More latitude in the way of talking at exercise and at work, etc."
"(7) Special supervision by the medical staff."

"Structural alterations have also been made by which one hall of the prison is almost entirely devoted to their occupation. They have a separate exercise yard of their own. They go to and from the prison by themselves. A portion of the chapel is set apart for their sole use to which there is an entrance separate from that used by the other convicts. They are under the supervision of a specially selected staff of officers, whose *sole duty is with these prisoners.* Part of the farm land has been set apart, on which the larger number are employed at garden work. Here they are doing most useful work, growing vegetables which are used in the ordinary prison dietary, for the patients in the hospital (Parkhurst is the invalid convict station, and there are usually some 100 patients or more in hospital), the surplus being sold to officers' families. Those weak-minded prisoners who are unfit to go to the garden are employed at various indoor work, sewing, etc. Rugmaking has been somewhat recently started, and we have a contract with a local tradesman who supplies the materials and pays so much for the manufactured article." p. 173 c. 1.

"In fact the weak-minded are in a separate prison of their own, as far as this can be practically done in one establishment."

396. Under this *régime* the weak-minded convicts have behaved much better than under the ordinary prison rules, and are more easy to manage. About half are capable of working on the land. But, generally speaking, about 26 per cent. only would be sufficiently tractable and obedient to be employed in an open colony. The rest would have to be managed more stringently. Some of them would be dangerous to others ; and for them a colony with a building attached to it like an annexe to a lunatic asylum would be necessary. Treadwell, 4354, etc. 4358. Treadwell, Vol. I., 4310–4312.

397. We conclude that if a continuous waste of judicial and official effort is to be avoided and much incipient criminality prevented, it is indispensable that juvenile offenders should be most carefully examined by medical officers, well informed as to the nature of mental disease, and should, if mentally defective, be dealt with by training, segregation, and otherwise ; that the procedure for the commitment of these offenders for short sentences should be radically reformed ; and that their committal, treatment and discharge should be organised on new lines. Recommendations LXXXVII-LXXXIX.

Discharge and After-Supervision in Relation to Local and Convict Prisons.

398. We will now consider remedies in detail. The provisions of the Lunacy Act should be remodelled, and embodied in an Act for the care and control of the mentally defective so as to provide for all mentally defective cases, that is, for many cases, for which segregation is urgently necessary, but for which the Lunacy Act offers no means of effectual treatment. Thus, besides the feeble-minded generally, some cases of prisoners of well-marked defectiveness of mind do not come under the Lunacy Act, and they are constantly discharged, and prove a terror and a danger to the community. In illustration of this, Dr. Parker Wilson mentions the following instance :— Recommendations II. IV. Parker Wilson, Vol. I., 4545–4547.

"A man met with an accident some time ago, and got concussion of the brain; this was followed by drunkenness; he got very intemperate, and he cut his own throat; he was taken to the hospital, cured, and directly he got out he got drunk again, and tried to murder his wife. For that he came to me for a term of imprisonment. I sent him out, and reported him to the police as being a weak-minded drunkard. He had not been out very long and he came in the other day. He had tried to murder his wife, and cut his own throat as well. These are the difficult cases I have to deal with. I cannot certify him, I can only keep on sending him out. There is nothing else for him, no place of safe detention for him for a lengthy period. When he goes out again he will either murder his wife or cut his throat. He is only one of a type."

On such a point as this it is clear that there should be an amendment, both of law and of procedure. These cases should be certified and determined on lines similar to those of the Lunacy Act of 1890. There should be no narrow and ineffectual definitions of mental defect by which they can be excluded from the care and protection of the law. Smalley, Vol. I., 3438–3444. Griffiths, Vol. I., 3582–3595.

Procedure on discharge of feeble-minded prisoners from local prisons. Griffiths, Vol. I., 3594–6.

399. Then as to the discharge of prisoners. We will state the procedure in regard to weak-minded prisoners, both in local and convict prisons, for in regard to these cases, there is at present a hopeless dislocation of administrative machinery, as between the prisons, and the police, and the magistracy. No doubt this is in great part due to the want of suitable accommodation, but, with the provision of this accommodation existing evils will continue unless there is a great change in procedure.

Smalley, Vol. I., p. 173, c. 1; p. 178.

400. In the case of local prisons, prior to discharge, the medical officer certifies to the governor that the prisoner is mentally deficient and is not, in his opinion, "a fit subject for ordinary penal discipline"; and he describes the prisoner's condition fully. This report and certification the governor sends to the superintendent of the police of the district, requesting him, if the person to whom the document refers is again brought before any court, to be good enough to submit it to the court, before the case is dealt with, in order that the magistrates may be made acquainted with the mental condition of the prisoner. The report itself is precise, and it should effectually prevent the mere repetition of a short sentence, if it were registered and indorsed by the police in such a way that it might be instantly forthcoming before the accused appeared in court. A daily search through a card index to ascertain whether against any of the cases with which the court had to deal, information of this kind was registered would ensure that so important a report was submitted beforehand to the magistrate. Yet it is stated in evidence that "the measure is not of much practical utility."

Smalley, Vol. I., p. 173, c. 1.

401. The persons who commit crimes are often brought before the court in another district than that in which they are known, the district to which they were discharged when they left prison. That district is in the jurisdiction of another body of the police. There is no organisation for the general transmission of information about prisoners, nor is there any centre for the accumulation and communication of such information on inquiry. Therefore the magistrate in the new district in which the mentally defective person commits his second offence may remain uninformed of the facts, and treat the accused as a first offender, and pass another short sentence on him.

Smalley, Vol. I., p. 173, c. 1.

402. The second reason why the medical officer's report is of "not much practical utility" is that the discharge is to no responsible person, or at least to no person or authority that is held to be responsible for the supervision of the prisoner in the future. It is difficult to find any friends willing to take such prisoners and, if they do, they take only a nominal charge of them. The discharge to friends is often thus, in fact, an unreal safeguard. The mentally defective person might equally well be discharged to the world at large. But the prisoner, when discharged, is destitute, and thus he has a claim on the Poor Law, and is discharged, therefore, to the workhouse of the union from which he came. "The workhouse authorities," however, "have no power of detention and are probably not anxious to retain such folk." The prisoner, indeed, is not really a destitute pauper in the ordinary sense—a person who has fallen out of the ranks of the self-supporting population. He is rather a weak-minded person who cannot be considered normally responsible for his own self-support, for he can never become actually responsible for it; and so, wherever he may be, he must remain in great part dependent, as the evidence shows, on someone—living usually at present either in vice, beggary and crime, or at some workhouse, casual ward, or refuge. The discharge to the workhouse authorities, like that to friends, cannot be overwise than ineffectual. Even if he could be detained there, a workhouse is not a suitable place for a weak-minded ex-prisoner likely to commit yet further offences.

p. 731, c. 1.

403. The third reason is that there is no superior body, primarily interested in the good administration of affairs relating to mentally defective persons of all classes, who can prevent "an unwise discharge" or take steps in anticipation of evils likely to arise from it. The question is not primarily a question of police any more than it is a question of Poor Law. The one authority is dealing with crime, the other with pauperism. Neither has any special interest in regulating the conditions under which mentally defective persons generally should be supervised and controlled. Nor can either authority ensure that

information in regard to mentally defective prisoners will reach magistrates before they adjudicate on charges against these persons, or that the discharge of a mentally defective prisoner will be to a responsible party, pledged, as far as possible, to provide for his continuous oversight. Now when the recommittal of such a prisoner takes place, a report of the circumstances is sent to the Prison Commissioners; "the case is investigated, and if it appears to be a flagrant travesty of justice and common sense, a report is made to the Secretary of State, who usually communicates with the chief constable of the district or the committing magistrates. The replies are sent to the Commissioners to see, but usual y little benefit appears to accrue to anyone, and this seems inevitable under the existing state of the law." Smalley, Vol. I., p. 173, c. 1.

404. We have argued this point in reference to local prisons and the prisoners in them. In the case of weak-minded convict prisoners it is of equal importance. Of his table of 111 of these prisoners at Parkhurst, Dr. Smalley says: "Their offences and the number of convictions speak for themselves of their terrible careers, and the mischief they must have wrought;" and that it may be the better understood what class of persons would be affected by a wiser administration in regard to discharge and control, we quote two reports on young men, which Dr. Treadwell, Medical Officer of His Majesty's Prison, Parkhurst, has handed in:— Convict Prisons: the question of discharge and after supervision, typical cases and procedure. Smalley, Vol. I., p. 177, c. 1. Treadwell, Vol. I., p. 250, c. 1.

"*G. C.*, aged 22. On conviction in 1903 for robbery with violence. Offence committed with aid of two other persons unknown. A brother and a sister had fits—no other history of insanity, epilepsy, alcohol, or crime obtained. Parents of labourer class; had a good home, but bad companions; educated at industrial school; education, Standard IV.; occupation, labourer; is a drunkard.

"Previous convictions:—1888, stealing (three strokes birch); 1890, stealing (six strokes birch); 1891, stealing (to industrial school); 1897, stealing; 1898, stealing; 1899, stealing; 1899, shopbreaking; 1900, loitering with intent; 1901, on enclosed premises with intent; 1901, on enclosed premises with intent; 1901, stealing; 1902, stealing. And sixteen times summarily, drunk, etc., 1895 to 1902. Prison conduct insubordinate (foul language, threatening, fighting, etc.)

"Palate high and narrow; head asymmetrical, and bears evidence of head injury when a child; facial expression dull and unintelligent. Moods variable, sometimes emotional and tearful, at other times morose and quarrelsome; of low intelligence and poor memory; little, if any, moral perception of the rights of others. Suffers from genuine epileptic fits and also feigns them. Easily led astray and not likely to keep from a career of crime. Unfit to take care of himself and requires control. Defect dates from childhood or is congenital."

"*J. M. G.* Aged 23. On conviction in 1903 for manslaughter. A very brutal murder of a woman by stamping upon her when wearing heavy boots—probably very drunk. Father said to have been insane, in an asylum. Mother a drunkard. Education, Standard III., but learning makes him feel queer in his head. Occupation, fireman. Vol. I., p. 250, c. 2.

"Previous convictions:—1895, drunk; 1895; 1898; 1899; 1901, wilful damage.

"Features, asymmetrical; facial expression of low type of intelligence. Intellect feeble; emotional; gets frightened at night unless he has a light burning. Memory poor. Very simple and stupid. Defect congenital and alcoholic. Incapable of education beyond simple rudiments. Quiet, tractable, and works under supervision, requires control."

These cases may be taken as typical cases of weak-minded convicts. We have to consider under what conditions they are discharged and have their liberty.

405. In the case of a weak-minded convict, the governor makes inquiries as to the ability and willingness of his friends to receive the convict, and the prospect or otherwise of his being able to earn his own living. He reports the result to the directors of the prison four months before his release on licence becomes due. With this report he submits reports from the chaplain as to the convict's general character, and "the probability or otherwise of his relapsing into crime, if released," and "from the medical officer, stating in detail the necessity or otherwise for special care after release." All this information is then collected in a further report which is sent to the visiting director of Parkhurst Prison, and if on release by licence, the prisoner is likely to be dangerous to himself or others the licence is withheld by the Secretary of State. This is the only check. But subsequently, when the sentence is complete, there is nothing for it but that the prisoner should leave the prison. If friends cannot receive him, he is referred to a Discharged Prisoners' Aid Society. But these societies are intended to aid prisoners temporarily, in order that they may have a better start on discharge: they have no means or machinery for controlling helpless convicts, or looking after them continuously. "Practically, therefore, all they can do is to take charge of the gratuity and give advice." If the convict, "by reason of infirmity of mind or Smalley, Vol. I., p. 173, c. 2. p. 173, c. 2.

Released Persons (Poor Law Relief, Act, 7 Edw. 7) c.14., Sec. 1 (1907).

body requires immediate Poor Law relief" under the Released Persons Act of 1907—which applies to released prisoners generally as well as to inmates of reformatory and industrial schools, and certified inebriate reformatories, he is removed by an order of a Justice to the workhouse of his settlement, or failing knowledge of that, to "the workhouse of the Poor Law union . . . in which he is deemed to be *prima facie* chargeable for the purposes of this section." In all cases the police of the district to which he is sent are apprised of his mental condition. These convicts, therefore, who are weak-minded and often dangerous, are discharged to no authority responsible for their after-supervision. Till they commit their next crime (and "many of them are hopeless recidivists") they live among the population. Except in the longer sentence and in the more prolonged control which the refusal of release on licence permits, the conditions of their discharge do not differ materially from those of the local prisoner; and the remedy appears to lie in the same direction.

General conclusions.

406. We may sum up. On general grounds many competent observers are of opinion that if the constantly recurring fatuous and irresponsible crimes and offences of mentally defective persons are to be prevented, long and continuous detention is necessary. The experience of the prison authorities fully confirms this opinion. From the earliest age, when they appear before the magistrates as children on remand or as juvenile offenders, until and throughout the adult period of their lives, the mentally defective, at first reprimanded and returned to their parents, then convicted and subjected to a short sentence and returned to their parents, and then later continually sentenced, and re-sentenced and returned to their parents or friends till, for crimes of greater gravity, they pass to the convict prisons, are treated, as this reiterated evidence shows, without hope and without purpose, and in such a way as to allow them to become habitual delinquents of the worst type and to propagate a feeble-minded progeny which may become criminal like themselves. This, as has been said, is an "evil of the very greatest magnitude." The absolute and urgent necessity of coping with it is undeniable. And, in our opinion, to do this, as in the case of the Poor Law and the Education Acts, very great changes, such as we have sketched, will have to be made both in law and in procedure. We believe that the scheme outlined in our General Recommendations as to the mentally defective (Part XI. below), will do much to remedy the existing evils. The particular points on which we rely to meet evils we have just been discussing are as follows:—

Recommendation I.

(1) That there would be one central authority responsible for the supervision of all cases of mental defect.

Recommendation XXVIII.

(2) That local authorities engaged in this department of work and co-operating with the central authority would be responsible for making provision for these cases, and that the criminal courts would be empowered to utilize such provision.

Recommendation LVI.
Recommendation XI.

(3) That there would be a statutory obligation imposed on the police and all prison authorities to report all these cases to the local authority of the county or county borough. These cases would also be registered at the office of the Board of Control.

Recommendation LXXXVII.

(4) That there would be a statutory obligation imposed on the police to apply to the central authority and the local authority, for information in regard to cases of mental defect or recurrent short sentences.

(5) That the medical officer of the local authority would be informed by the police in regard to these cases, so that he, or his representative, should be in court when the case was tried.

By these means, and by reason of the procedure detailed in Recommendation LXXXVII and LXXXIX, which, in effect, we quote below, we think the mentally defective prisoners will not be lost sight of on discharge, and, if they commit a new offence, they will not be brought before the Court without information in regard to their past career:—

Recommendation LXXXVII.

(1) That all Courts of Justice, including Courts of Summary Jurisdiction, should have power to order the detention of a convicted mentally defective person in a suitable institution instead of pronouncing a sentence of imprisonment.

(2) That all mentally defective persons ordered by the Court to be detained in an institution for the care and control of mentally defective persons, and all persons certified to be mentally defective, while under sentence or order of detention, shall be detained in institutions for the care and control of mentally defective persons until the approval of the Secretary of State of their discharge has been obtained. Recommendation LXXXIX.

407. We agree with Dr. Smalley, Medical Inspector of the Prison Commission, that under the existing state of the law the present unsatisfactory conditions are inevitable. They can, we think, be prevented only by some such changes as we recommend.

The Number of the Mentally Defective in Local Prisons, Casual Wards, Shelters, etc.

408. We now turn to the Reports of the medical investigators. These Reports contain indications of the lives of the mentally defective who are in the stage following discharge from prison, wandering, or to be found in the workhouse, casual ward, common lodging-house and refuge. They also contain notes on the inmates of several local prisons. The local prisons were usually visited by the medical investigators regularly for four or five weeks. The following table shows the number of prisoners whom they judged to be mentally defective. The percentage is considerably larger than the percentage of those returned as "weak-minded and unfit for prison discipline," and it is also much larger than the 3 per cent. which was estimated as the total number of mentally defective persons among the prison population. Report of Medical Investigators. Smalley, Vol. I., p. 176, c. 1.

Vol. VI., p. 42.

* This number is made up of 53 males, 14 females and 6 prisoners found at Derby, the sex of whom is not stated.

409. The actual numbers are much fewer in the country than in the town areas, but the general impression which the figures produce is that the proportion of prisoners of both sexes who are mentally defective is much larger than is generally supposed. "The higher grade aments," Dr. Potts, our Medical Investigator at Stoke and Birmingham, suggests, "are sometimes not recognised by the prison authorities; they are apt to think a man who works well and labours well in prison must be normal. In prison, however, everything goes like clockwork, and there is strict supervision; the work is of a simple character, and under such circumstances many defectives will create a favourable impression, though outside they would not be able to 'compete on equal terms with their normal fellows' or 'manage themselves or their affairs with ordinary prudence.'" Vol. VI., p. 99.

Urban Areas.

Reports of Medical Investigators. —*contd.*

Stoke-on-Trent. Vol. VI., p. 98.

Birmingham. Vol. VI., p. 128.

p 125.

410. At the Stafford gaol, which provides for the Stoke-on-Trent district, eleven male mentally defective persons were committed in the course of the month of visitation, or, making allowance for recurrent committals, about 100 in the course of the year; and on a similar estimate in the case of women, thirty in the year. At the Birmingham prison several mentally defective prisoners were noted, all plainly requiring detention, and in the casual ward were many mentally defective women. "Records were obtained of ninety-three children as the offspring of eighteen mothers who were defectives; fortunately most of the children are dead." At the night shelters for women were other wanderers; and in the common lodging-houses were found men of the same stamp as the mentally defectives who were found in the casual ward. Three of these cases were:—

p. 127.

"A bricklayer, who could not count the bricks he laid."

"A feeble-minded youth of nineteen who had only been discharged from a workhouse four months previously; another who had been discharged from the Birmingham workhouse the day before; both of these urgently required permanent care."

"One defective who had been educated in an industrial school. One feeble-minded man who had such a bad memory that he could not remember which was his bed, though he had occupied the same one for several weeks."

Manchester, Chorlton and Prestwich. Melland, Vol. VI, p. 166.

Vol. VI., p. 154.

Vol. VI., p. 154.

411. At Manchester Dr. Melland calculated that he saw about one-sixth of the prisoners who would pass through the Strangeways gaol from Manchester in the course of a year—1,048 in all. Amongst these he came across 139 who were mentally affected, equal to 13 per cent., or excluding alcoholic dements, 10·5 per cent.; and he thought that some 600 feeble-minded persons passed through the prison yearly. For the whole of the 139 prisoners whom he saw some permanent provision was, in his opinion, necessary. As to the casual wards: in these the number of casual poor was, at the time, in excess of the normal. He examined 3,809 tramps, and amongst these he found 133 mentally defective men and twenty-one women, including one girl of eight. He was struck by the fact that the ages of the feeble-minded men in the workhouse were markedly lower than the ages of such men in the casual wards and concluded "that the more marked cases and those from whom parental or friendly help and control were withdrawn early drifted into the workhouse, while the slighter cases and those who had had assistance up to a later age and are a little less helpless drifted into the tramp wards." This was even more marked in the case of the women. Excluding a defective girl of eight, there were in the tramp ward no women under twenty, only two under thirty, seven between thirty and forty, and two over fifty. "Many of them were of the most vicious and degraded type, spending their life between the common lodging-house, the prison cell, and the casual ward."

Melland, Vol. VI., p. 162. Stracey, Vol. VI., p. 304. Tredgold, Vol. VI., p. 223. Pearse, Vol. VI., p. 259.

In the shelters for men it was found that, although there was a large floating population of casual workers, practically the same as those seen in the tramp wards, the officials were seldom prepared to admit that there were any who appeared to be feeble-minded amongst them. "The general opinion seemed to be that their wits had been sharpened by hardship and experience." The same is said of men in the casual wards elsewhere.

Country Areas.

Somersetshire. Tredgold, Vol. VI., p. 236.

412. Turning to the country areas we find that in Somersetshire Dr. Tredgold enters thirty feeble-minded persons as having pronounced criminal propensities. Of this number, twenty, he says, are at present serving or have served terms of imprisonment. The feeble-minded among the tramps at casual wards are, he says, probably not more than 10 per cent. at the most.

Wiltshire. Pearse, Vol. VI., p. 259.

Dr. Pearse, writing of Wiltshire, says that "the number of feeble-minded among casuals is small: a man who lives on the road must live by his wits, and the feeble-minded are thereby barred from this method of livelihood."

Nottinghamshire. Gill, Vol. VI., p. 279.

Dr. Gill, reporting on unions in Nottinghamshire, examined twenty-two casuals, but of these "twelve had been in gaol from one to eight times, . . . one for theft, and one for attempted murder. In addition three of the twenty-two were feeble-minded (one also epileptic), and two of those had been in gaol—one eight times, and the other once, for refusing to do his allotted work at a casual ward."

413. The reports of the medical investigators contain notes of many individual cases, from which it appears that the relations are often quite unable to control or provide for the mentally defective prisoner who has been discharged to them. And they amply justify the contention on which we have already insisted that a considerable population of these persons is to be found wandering to and from prisons, workhouses, casual wards, and shelters. It may, no doubt, be pointed out that among the large number of tramps the feeble-minded are comparatively few. This is likely—but yet the 10 per cent. in the country districts, and the 4 per cent. of the joint casual ward, for the Manchester, Chorlton, and Prestwich Unions, and such an analysis as we have just quoted from Dr. Gill's Report—demonstrate that the feeble-minded who are scattered about among the institutional and wandering population of dependent persons throughout the country is large, while undoubtedly also the number of feeble-minded prisoners is much greater than was supposed.

Conclusion to be drawn from Medical Investigators' Reports.

414. To control this wandering population of mentally defective persons, who are many of them dangerous, morally and physically, and criminal in their characteristics, it seems to us that there should be systematic notification—identification, if necessary, by finger-prints, and some authoritative control, by which they could be detained and made to labour according to their ability.

CHAPTER XXI.

Mental Defect in Relation to Habitual Inebriates.

415. Experience has shown that many cases of habitual inebriety, as dealt with under the Inebriates Acts, are clearly associated with mental defect, and the development of the procedure for dealing with inebriety throws some light on the methods that may usefully be adopted for dealing with feeble-mindedness. Till recently the law dealt only with its criminal or disorderly manifestations, which were punished by short terms of imprisonment, and only very slowly has the inutility of short sentences come to be recognised, and the attempt made to replace them by a system of detention that would be more likely to have a reformatory influence. In 1879 voluntary detention in a Retreat was permitted under the Habitual Drunkards Act of that year; but it was never likely that many would, without pressure or constraint, have recourse to self-detention in an institution for a fixed period. "Many habitual inebriates are as incapable of estimating the gravity of their condition as are persons legally insane. Very few are willing to acknowledge themselves to be inebriates at all, fewer still agree that their habits are sufficiently serious to render remedial measures necessary, and still less a number are willing to seclude themselves from all opportunity of obtaining liquor." In this sense the Act of 1879 has proved a failure. "About twenty Retreats are now in regular working order; and about 500 persons annually submit to detention therein." But the Act, as an experiment, has been useful. It has not sheltered and reformed any very large number of inebriates, and it has admittedly failed in its secondary object of securing families from ruin and misery arising from the misconduct of the bread-winner, but it has shown the necessity of compulsion, at least in regard to the large number of persons who commit crimes or misdemeanours under the influence of drink; and this has led up to the Inebriates Act of 1898.

Experience gained from Habitual Drunkards Act of 1879.

Branthwaite, Vol. I., 428.

Branthwaite, Vol. I. 427. 461. 466.

416. The Act of 1898 enables a Court under certain circumstances to commit an "habitual" drunkard for any period not exceeding three years to an inebriate reformatory for special treatment or control. Two classes are thus dealt with: the first consists of habitual drunkards who are convicted on indictment of offences punishable with imprisonment or penal servitude, provided that the Court is "satisfied from evidence that the offence has been committed under

The Inebriates Act 1898, and the establishment of Reformatories.

The Inebriates Act 1898, and the establishment of Reformatories—*contd.*

the influence of drink, or that drunkenness was a contributing cause of the offence." The second class consists of habitual drunkards who have committed any of the numerous offences mentioned in the first schedule of the Act (*e.g.*, been drunk in a public place; drunk and disorderly, etc.); and who, within twelve months preceding the date of the commission of the offence, have been convicted summarily at least three times of any of the offences so mentioned. To receive these classes of offenders, institutions of two kinds have been established. For any member of the first or second classes, there are "Certified Inebriate Reformatories," established by local authorities or public-spirited associations or individuals, and, for members of the first class and for the incorrigible members of the second class, there are "State Inebriate Reformatories." Still further classification, however, is necessary, for it is impossible to deal beneficially with inebriates of very different types in the same institutions. Labour in association and a considerable and graduated measure of freedom are important factors in reformatory treatment, and these are privileges that are in practice found to be impossible in the case of many committed inebriates irrespectively of their mental condition.

Vol. I., 435.
Vol. I., 444.

Short sentences and detention.

417. In bringing the Act into operation difficulties have arisen from two causes. The first is the persistence of the feeling amongst some magistrates and police authorities that drunkenness should be dealt with merely punitively by short sentences; the other is the want of co-ordination between the action of the authorities who should supply the establishments required by the Act and the judicial authorities who have to try cases under the Act, and, if necessary, to commit to these establishments. In regard to the first question, in cases coming under Class I.—persons convicted on indictment of any offence which is punishable by imprisonment or penal servitude—it has to be shown that the offence was committed under the influence of drink, or that drunkenness wholly or partly caused the offence, and the prisoner must admit habitual drunkenness or be found by a jury to be an habitual drunkard. Comparatively few cases are dealt with in that way, only 237 out of 1,300 persons sent to reformatories.

Inebriates Act, 1898. Sec. I. (1).

Branthwaite, Vol. I 425, 438.

The other type of inebriate criminality, "Police Court recidivism," continues to be dealt with under the procedure of summary jurisdiction by short sentences. "Very many cases of attempted suicide, wounding, assault, malicious damage, and other similar offences, due entirely to drunkenness, are brought before Justices sitting in Summary Jurisdiction Courts and are dealt with by short terms of imprisonment, or are handed over to the care of friends. Reversion to drinking habits (and habitual drunkards nearly always revert after a short sentence of imprisonment) is almost invariably followed by a recurrence of the tendency to re-commital of the offence." Dr. Branthwaite, Inspector under the Inebriates Acts, said, "It seems to me more or less useless to treat such drink-caused crimes with punishment only, leaving the original cause as active as ever."

Vol. I., 439.

Vol. I., 439.

418. We have, then, this parallelism between the cases which we have been considering in relation to prisoners who are weak-minded and the cases of these habitual inebriate offenders. In both, the committals for an arbitrary period, be it for a short sentence of seven or fourteen days or for one, two or three years, are relatively inappropriate. Thus out of 1,012 cases only 510 were committed for the full three years' sentence. And the comment on this is :—

Report of the Inspector under the Inebriate Acts for the year 1903–1904. [Cd. 2285], p 22.

"There are possibly a few inmates who obtain benefit from one year in a reformatory; but in the large majority of instances so short a sentence means expense without adequate return. There are some who benefit fully from a two years' sentence, but not the majority, because the average period of actual detention in a Reformatory requires to be about that length of time, and a two years' sentence therefore leaves no margin for subsequent absence on licence. A three years' sentence affords the best chance of benefiting the largest number permanently."

But whether detention be ordered for one, two or three years, inebriates of the Police Court type who are confirmed recidivists and have been committed to Reformatories, have proved so little amenable to reformatory influence that it has seldom been found possible to allow them the privilege of release on probationary licence; in the bulk of these cases relapse is certain.

In other words, in the case of many inebriates detention at present has the undoubted advantage of saving society from the scandals and outrages that result from excessive drinking, but it does not lead to personal reformation. Short sentences and detention—*contd.*

419. The other difficulty, which is worthy of special consideration in relation to proposals for the care of the mentally defective, has been due to want of co-ordination between the authorities. Dr. Branthwaite said:— Want of co-operation between the Local Authorities and the Magistracy. Branthwaite, Vol. I. 440.

"In some parts of the country magistrates are fully alive to the advantage of substituting reformatory treatment for the useless fine and short sentence prison system which has failed so utterly to be either deterrent or curative. Some considerable difficulty has arisen owing to want of co-ordinate action between magistrates as the committing authority and county or borough councils, upon whom the duty rests of finding accommodation for the detention of committed cases. In some parts magistrates have desired to commit cases, but the local authority has declined to provide the necessary accommodation; in other places again where local authorities have made suitable arrangements, magistrates have failed to take full advantage of them. These difficulties, however, are of less prominence than they were at the start of the work."

420. We have thus had placed before us a system for the treatment of habitual inebriates which is in many ways analogous to that suggested for the care of mentally defective persons; and these points come to light. Where the aim is reformatory or curative, as well as in some measure penal, the short sentence is useless. Whether a term of years be fixed or not, the sentence, if good results are to follow, must be for such a period as will allow of the treatment proving itself effectual. Next, the system of voluntary detention has practically been set aside, so small is the number of those who take advantage of it—a matter of experience which appears largely to justify the adoption of a system of enforced segregation in the case of mentally defective persons, under which category many habitual inebriates admittedly come. Again, it appears that if any new organisation that may be proposed for the better care of the mentally defective is to work smoothly, it must be accompanied by much more efficient co-operation between the judicial and the administrative authorities. Any scheme for the care of the mentally defective must be so framed as to ensure unity of administration in the recognition and certification of cases on the one side and in the development of the provision required for them on the other. Suggestions for an improved method of dealing with mentally defective habitual inebriates.

421. These conclusions and comparisons are inevitable, when, as our evidence compels us to conclude, we consider that habitual drunkenness often indicates mental defect. One view which has been submitted to us, is that it lowers the vitality of the breed. "Alcoholism in one or both parents exerts its influence mainly by impairing the vitality of the children. . . . It has not any special tendency to beget a proclivity to drunkenness in the offspring, but in the manner indicated it has a distinct influence in the production of feeble-mindedness and epilepsy, and also by lowering the normal resistive power in the offspring, renders them liable to breakdown under various stresses later on in life and to become insane . . . As regards the insane generally in about 7 per cent., such a family history of alcoholism could be ascertained. . . . In cases of congenital mental defect, it was present in 12 per cent." Upon neuropathic persons alcohol acts quickly as a poison. "If a person possess a congenital mental defect or be already epileptic either he is unable to take it or, if he does take it, a moderate quantity is sufficient to precipitate insanity or greatly increase the number and severity of the fits; again, it incites ungovernable rage, followed by dangerous and criminal acts. The weak-minded, the epileptic, and every person with a faulty neuro-psychopathic family history should be taught to look upon alcohol as, to them, a poison." Thus many recidivists are detained in asylums not because they are "continuously and actively insane," but because it is proved that access to alcohol necessitates a quick return to the asylum. Dr. Carswell, formerly Chairman of the Inebriates Committee of the Glasgow Corporation, says: "Inebriety is more an incident of the mental life of the mentally defective than the cause of their mental condition"; and examining, out of many family histories, 150 cases of mental defect, in regard to which he was able to satisfy himself that he had collected historic data, Dr. Tredgold, Physician to the Littleton Home for Defective Children, found in 46·5 per cent. of the families a history of well-marked alcoholism; in 38·5 per cent. of the cases, combined with neuropathic inheritance; and only in 8 per cent. of the cases, irrespective of any neuropathic inheritance. Chapter XXI.
Mental Defect in Relation to Habitual Inebriates.

Relation of habitual inebriety to mental defect —*contd.*

Crichton-Browne, Vol. I., 6007.

422. But some go further and insist that habitual inebriety is itself a result of mental defect, and should always be so dealt with. Sir James Crichton-Browne, one of the Lord Chancellor's Visitors in Lunacy, defines a morally insane person as "one who, by reason of disease or disorder of the brain, has undergone a change of character manifested in a course of vicious or criminal conduct without obvious impairment of intellect," and quotes the dipsomaniac as an illustration: "A morally insane person, in whom the change of character is manifested in the drink craving, and in loss of control over it."

Quin Donald, Vol. III., p. 224, c. 1.

Dr. Quin Donald, Medical Superintendent of the Invernith Lodge Retreat, accepts this view. He believes that inebriates are mentally defective, "that is, they are not at times able to control themselves. It is a disease, in which a loss of mental balance takes place, and the fear of consequences does not deter; under its excitement, judgment and will-power are completely swept away, and natural affection is lost." But Dr. Clouston puts the case more definitely.

Clouston, Vol. III., p. 200, c. 1.

In relation to the question of the arrested and enfeebled mind, he has, he says, studied "the large number of other nervous conditions which are often seen along with it during the development of the human body, from birth to the age of twenty-five"; and after citing many of these diseases, "pathological cousins of congenital feeble-mindedness," which "are often mixed up with it in the same individual, and the same family," he says: "They have all in common as a chief predisposing cause bad brain heredity, or direct brain poisons in the parents, such as alcohol and syphilis. . . .

Clouston, Vol. III., p. 200, c. 1.

In idiots and in the worst forms of congenital imbecility, as in many of the pathological cousins which I have enumerated, quite marked and unmistakable changes in certain portions of the brain, as compared with its normal condition, are seen. Advances in modern microscopical science have enabled us to make out such changes." According to this view, alcoholism, the poisoning of the body by repeated doses of alcohol, affects the brain organically, and produces definite mental disease.

We are not called upon to decide between the various well-known opinions which are held regarding the causal relationship of alcoholism and mental defect, still less between conflicting views concerning the possibility of alcoholism in the parents having any direct action on the germ or the organism of the offspring, and thus affecting the well-being of the race. Many opinions on these points have been submitted to us: definite conclusions could only be justified if we had embarked upon a prolonged and highly technical enquiry which we regarded as mainly outside our reference and destined in all probability to be incomplete. It is sufficient to insist on the salient and incontrovertible facts that many inebriates are mentally defective; that many mentally defective persons are specially liable to suffer speedily, seriously and permanently from the effects of alcohol; and that in any case alcohol in the parent leads practically to many evils in the family by destroying the organisation of the home and bringing about neglect, ill-treatment, starvation and disease among the children. And, of course, prolonged alcoholism in an individual is, beyond controversy, a frequent cause of that individual's mental deterioration.

The proportion of the mentally defective among habitual inebriates.

423. Dr. Fleck, the superintendent of the Brentry Certified Reformatory reported to us that an examination of patients there showed that the physical peculiarities which have become recognised as being associated with mental defect, though not so evident amongst inebriates as they are amongst idiots and imbeciles, were, yet in a less degree, evident amongst the patients there,

Fleck, Appendix, Vol. V., p. 242.

while "the actual mental conditions of these cases confirmed these physical indications." Of 771 cases admitted to Brentry, of all of whom careful records had been kept, 30 per cent. only were "of fair mental capacity, and capable, but for their drunken habits, of earning their own living." With regard to the remaining 70 per cent. he says: "I cannot conceive the possibility of their ever acquiring sufficient self-control to be able to keep them from drunkenness and support themselves." A small percentage of them have been found "certifiably insane"; another small percentage are epileptics, and in the rest the actual defect is undoubted but it shows itself in many different ways in different individuals.

Gill, Appendix, Vol. V., p. 243

Dr. Gill, of the Langho Inebriate Reformatory, estimates the mentally defectives at 50 per cent. Dr. Winder, of the State Inebriate

Reformatory at Aylesbury, to which "the most violent and troublesome" of all the persons committed under the Inebriates Act of 1898 are sent, says that "the greatest difficulty is experienced in distinguishing between those patients who are violent and vicious as the result of mental instability, and those whose bad conduct is due to their own evil courses. . . . Certainly not more than 2 or 3 per cent. of our inmates are of absolutely sound mental capacity." Out of 167 patients received since 1901, ten have proved "certifiably insane"; and 25 per cent. of the whole number are "definitely and undoubtedly feeble-minded high grade imbeciles for the most part and lunatics in all but actual delusions."

The proportion of the mentally defective among habitual inebriates—*contd.* Winder, Appendix, Vol. V., p. 244.

He continues :—

"If, however, the term "feeble-minded" is to be extended over a broader basis, and made to include all those individuals who are abnormally excitable, subject to attacks of uncontrollable temper, perverted morally, inconsequent in ideas, of feeble reasoning powers, and unable to acquire knowledge beyond the most rudimentary principles, then nearly all might be classed as feeble-minded, but certainly over 70 per cent. should be so defined. They are so mentally unstable as to be incapable of earning their livelihood on equal terms with their normal fellows."

424. A return of the mental condition of habitual inebriates obtained from the records of cases of persons committed to reformatories under the Act of 1898, "where they are kept under conditions which afford perfect opportunity for close observation," confirms this general conclusion. It is as follows :—

Classification according to mental state.	Number in each Class.	Percentage to Total Number of Persons admitted to Reformatories.
(1.) Insane—Certified and sent to asylums	48	17·0
(2.) Very defective—Imbeciles, degenerates, epileptics	271	62·7
(3.) Defective—As above, but less marked, eccentric, silly, dull, senile, or subject to periodical paroxysms of ungovernable temper.	857	45·7
(4.) Of average mental capacity—On admission, or after six months' detention.	697	37·3
Total Admissions	1,873	—

Report of Inspector under the Inebriates Acts for the year 1905 [Od 3246], pp. 9-10.

425. The following paragraphs explain the table :—

Explanation of classification adopted.

Some of the forty-eight persons classified in the above table as insane were found to be suffering from delusions when admitted to reformatories, others were in an excited state which gradually developed into mania, a third section of these persons were obviously demented, a fourth melancholic and suicidal, a fifth epileptic with periodical attacks of mania and a sixth were the subjects of recurrent mania which developed and subsided, in some cases, two or three times during their period of detention as inebriates. All these insane persons were admitted to reformatories as "habitual inebriates" and would have continued to be treated as such had they not been subjected to the closer and continued observation possible in reformatories. All were eventually sent to asylums, and many are now permanently insane.

Report of Inspector under the Inebriates Acts, for the year 1905 [Cd. 3246], p 10.

The "very defective" and "defective" classes may reasonably be considered together; the characteristics of each are the same, the only difference being one of degree. "Defective," in the sense used here, includes every person admitted to reformatories who has been considered much below an average standard of mental capacity but insufficiently so (in the opinion of general medical practitioners and magistrates) to justify a certificate of insanity, or only now and then certifiably insane during short transient paroxysms. Nearly all the 1,128 cases included in these two defective sections have given evidence of possessing some of the peculiarities in cranial conformation, general physique, and conduct, which have long been recognised as evidence of congenital defect. The smaller number of persons, where signs of early defect are wanting, are probable instances of brain degeneration produced by persistent alcoholism, advancing nervous disease, senility, or other cause.

Application of the general scheme to cases of mentally defective inebriates.

426. We may conclude, then, that probably some 60 to 70 per cent. of the habitual inebriates who are dealt with under the Acts are mentally defective, and for these we have to consider what, if any, provision should be made other than that which now exists, and, as part of this question, whether the general system which we recommend for dealing with the mentally defective is applicable to this class of mentally defective inebriates. The legal definition of an inebriate in the Act of 1879 is :—

Sec. 3 (3) (*b*).

> "A person who, not being amenable to any jurisdiction in lunacy, is notwithstanding, by reason of habitual intemperate drinking of intoxicating liquor, at times dangerous to himself or herself or to others, or incapable of managing himself or herself and his or her affairs."

This definition some of our witnesses desire to alter by including in it the habitual and intemperate use of drugs. But that question apart—for it lies outside our reference—the definition, we note, distinguishes inebriates from lunatics, and yet it makes use of some of the defining words of the Lunacy Act of 1890, and regards inebriates as "incapable of managing themselves and their affairs." This is practically to classify them, at least in great part, as a sub-class of the mentally defective. And the evidence which we have taken supports alike this conclusion and the definition which we have drawn of habitual inebriates, so far as inebriety is associated with mental defect. That definition would exclude the 30 or 40 per cent., or whatever it be, of inebriates who are not mentally defective, but it would include all inebriates who are mentally defective, such as imbeciles, feeble-minded, moral imbeciles and others.

Lunacy Act, 1890, Secs. 90 and 116.

Recommendation IV.

The mental deficiency of many inebriates has become patent only recently and since large numbers of them have been in detention and under close and skilled observation for sufficiently long periods. When fines or short sentences of imprisonment were the only methods of dealing with repeated offences of drunkenness, opportunities did not exist for ascertaining and demonstrating the latent cause of their criminal manifestations, though the medical officers of prisons and workhouses and other experts, as well as many theorists, anticipated our present knowledge.

Now, obviously, if our recommendations are adopted, it will be necessary to amend the Inebriates Acts and to provide that the committees of the county and borough councils should be placed under the obligation of dealing with all mentally defective inebriates. Also, the words of the definition of the Act of 1879 "not being amenable to any jurisdiction in lunacy" would have to be modified; for, if an habitual drunkard was certified as mentally defective, he would be amenable to "a jurisdiction," if not, "in lunacy," yet in mental defect, should the amending Act which we recommend for the care and control of the mentally defective be passed.

Recommendation XCI.

Recommendation II.

The Provision made under the Inebriates Acts in relation to the proposed scheme.

427. This raises, no doubt, the question whether it is worth while to preserve the provisions of the Inebriates Acts and the elaborate system which has grown up under them for the smaller number of habitual inebriates who are not, apparently, mentally defective. As we have pointed out, the institutions for inebriates are of two kinds : the certified inebriate reformatories and the State inebriate reformatories. Both may be in part adapted to new requirements. The chief aim of the certified reformatories is the improvement of the physical, mental, and moral state of those admitted to them. For these purposes reasonable freedom in association with continuous and healthy work is essential. The function of the State inebriate reformatories, two of which have been established by the Government, is somewhat different. It is to provide under the closest superintendence for the detention of habitual inebriates, both men and women, who are troublesome, refractory, and violent, and who have been admitted to these institutions because they have been proved to be unfit for the conditions of life in the certified reformatories. The State reformatories are custodial institutions which approximate to the condition of prisons. The certified reformatories retain the characteristics of the reformatory system. Both classes of institutions might continue to be used for mentally defective inebriates, and they might be brought under the inspection of the Board of Control. In so far as they continue to deal with persons convicted under the Inebriates Act, 1898, they would be maintained largely by the Government as at present. In so far as they might deal with cases of mentally defective

inebriates under reception and other orders, apart from the Inebriates Act, those admitted to them would be paid for by the local authority, who would contract for their maintenance as in other cases for which it did not directly provide. At present a weekly grant of 16s. is made by the Treasury in respect of each case committed under Sec. 1 of the Act of 1898, viz., inebriates who have been convicted, on indictment, of crime attributable to drink; and a weekly payment varying from 7s. to 10s. 6d. is made according to circumstances in respect of cases under Sec. 2, viz., inebriates who have been frequently convicted at police courts for the offence of drunkenness. The higher sum which is paid for the first class of cases practically covers the whole necessary expense of maintenance; and it is granted, no doubt, on the theory that persons convicted under Sec. 1 are criminals who would otherwise be maintained at the expense of the Government in convict or local prisons; while the other cases, those under Sec. 2, are cases dealt with at what might be considered adult reformatories, and a Government grant is paid for them on that basis. We think, however, that this distinction is hardly real; and we would suggest that in all the cases of persons who are dealt with under the Act of 1898, or under an amending Act, and who are maintained in State or certified reformatories, the Government contribution should not fall below one-half of the necessary cost involved in the detention and licensing of inmates.

The Provision made under the Inebriates Acts in relation to the proposed scheme —*contd.*

428.—Our conclusions in regard to mentally defective inebriates are as follows:—

General conclusions as to mentally defective inebriates.

(1) That the powers and duties of the county committees and of the Board of Control should extend to mentally defective inebriates as well as to other classes of the mentally defective.

(2) That the licensing and inspection of institutions which are established for the reception of mentally defective inebriates, or in which mentally defective inebriates are received devolve on the Board of Control.

(3) That county and county borough councils be placed under a legal obligation to provide accommodation for mentally defective inebriates, or to contribute towards the provision of such accommodation, and to contribute to the maintenance of mentally defective inebriates, including any such inebriates as a criminal court may think proper to commit to an institution established for the care and control of this class.

(4) That the Inebriate Acts be amended so as to facilitate the committal to suitable institutions of persons who are shown to the satisfaction of a criminal court to be mentally defective inebriates.

(5) That the processes of Reception Orders and all other methods applicable to other forms of mental defect be extended to mentally defective inebriates.

(6) That the existing system of Treasury contributions payable to State and certified inebriate reformatories be continued.

CHAPTER XXII.

Reformatory and Industrial Schools in Relation to Mentally Defective Children and Young Persons.

429. One scheme which has been submitted to us by several witnesses is the expansion of the industrial school system in such a way as to meet the needs of the mentally defective. This proposal, when more completely stated, was the establishment of special schools or classes under the Elementary Education (Defective and Epileptic Children) Act, which was to be made compulsory; the institution of special homes or special industrial schools to which children should be sent on leaving the special schools; the committal of children and young persons to these special industrial schools, under the terms of the Industrial School Acts; and finally for adults, similar institutions not unlike the certified reformatories established under the Inebriates Act of 1898. In estimating the utility of such a scheme we have to consider the essential features of the industrial school system.

Chapter XXII.

Reformatory and Industrial Schools in Relation to Mentally Defective Children and Young Persons.

The industrial school system considered from the point of view of the provision necessary for the feeble-minded.

430. The industrial and reformatory schools may be looked upon as the senior and the junior schools for children and young persons who are in danger of falling into crime or who have committed certain crimes and offences for which, if they were adults, they would be punished by imprisonment; but, since they are minors, and by presumption, therefore, not of an age sufficient to judge of the nature of their wrong doing, and are brought under educational and reformatory influences, they are not treated as wholly responsible persons.

Legge, Vol. I., 1163, 1165.

Feeble-minded children or young persons may be considered non-responsible by reason of defect of brain: these are so considered by reason of immaturity of mind. It follows that instead of a short sentence they receive a sentence for a comparatively long period. Less stress is laid on punishment than on reform; and for the reform of juvenile offenders, it is admitted that a long sentence is necessary, combined with a period of licence, in order to bring the delinquent back to normal life, by degrees, and under supervision. Hence, in these schools detention has been increased from not less than three to not more than five years, a period which at any rate is deemed sufficient for reform.

Legge, Vol. I., 1167.

431. In the case, however, of children or young persons who are mentally defective, reform, in the sense of influencing and educating them in such a way that they become normal members of society, is in most instances impossible. They can only develop within the limits of their defective or retarded brain power. Hence for them not a definite time-limited sentence, but a supervision that may be extended for a long time, sometimes for life, may in many instances, be required.

Legge, Vol. I., 1180.

432. Lastly, the Industrial Schools Acts recognise chiefly two causes as predisposing to crime: the want of proper control and care on the part of parents and relations, and the falling of the child into bad company—that of thieves, prostitutes, etc. In the case of the feeble-minded there are the same evil surroundings to be dealt with, but the children, though withdrawn from their evil surroundings, cannot rally like normal children, "the very cream of the juvenile street population of the country." Yet to withdraw them from such surroundings is at least equally necessary; and for them equally are required the "extensive powers granted to managers to dispose of children without their parents' consent under the Act of 1891." Feeble-minded juvenile offenders should have at least as much protection as other juvenile offenders who are sent to industrial schools. At present they do not have this protection. Feeble-minded children are in general excluded from industrial schools, or, if they are admitted, are usually discharged. Yet probably there are in the schools from 1 to 4 per cent. of these children. Mr. Legge, then His Majesty's Inspector of Reformatory and Industrial Schools, stated that as a result of inquiry made in November, 1904, it was found that 1·25 of the 4,876 inmates in such schools were feeble-minded. Mr. Legge stated that if he were forming an estimate he would be inclined to nearly treble the figures.

Legge, Vol. I., 1167.

Raw, Vol. II., 18145.

Legge, Vol. I., 1192. 1197.

O'Farrell, Vol. III. 22121.

Medical Investigators' Reports, Vol. VI., p. 44.

The figures reported by our Medical Investigators in Manchester, Glasgow, Belfast and Dublin show percentages of 4·6, 1·5, 1·5, and 2·48 respectively. These numbers at least equal if they do not exceed the numbers of the mentally-defective children in ordinary elementary schools in urban districts. And the tendency is to clear the industrial schools of hopeless cases, as educational requirements have become more stringent. Hence either feeble-minded children are excluded or, if considered educationally hopeless, they are discharged from industrial schools; and in either case when they have to be discharged from the industrial schools, they "find their destination in the union," either as deficient or imbecile.

Legge, Vol. I., 1191. 1197. 1198. 1267. 1270.

For this result, the managers can hardly be blamed. They have to consider the discipline and industrial education of the larger number of the children whom it is their chief duty to train; and in existing circumstances it is only possible for them to reject or discharge those who cannot be properly taught in an industrial school, and who, if they remain, are a hindrance to the rest of the inmates.

433. In these circumstances, it is not surprising that many witnesses considered that the industrial school system would need much amendment, if it were to be made a suitable method for the care of mentally defective children. They desired what they called a special industrial school or an industrial home or colony, which would be, as Sir James Russell put it: "more of a medical institution than an industrial school." And institutions of this kind managed on the effectual and economical methods in force at many industrial schools we would strongly recommend.

The Industrial school system considered from the point of view of the provision necessary for the Feeble-minded—*contd.*
Legge, Vol. I., 1198.
Wilkinson, Vol. II., 12766.
Raw, Vol. II., 18190.
Grayson, Vol. II., p. 349, c. 1. 16957, 16967.
Russell, Vol. III., 23764.

434. But the unprotected and uncared-for state of mentally defective children and young persons in regard to which we have to make proposals require, we think, a more extensive and more specialised administration than the mere adaptation of the industrial school system to a new purpose would allow. It would not serve, we believe, as a sufficient centre for the grouping of the various institutional and other arrangements necessary for the care and control of the mentally defective. It could not form a sufficiently strong organisation for guiding, utilising and in some measure unifying the efforts and endeavours that should be made for their protection. A comprehensive central administration linked to active and well-supported local authorities is required for that object. Only in this way can the continuous treatment of mentally defective persons be ensured, and the disconnection between departments which deal with them at different periods of life, or in different circumstances be avoided—the disconnection between the special school which is under the educational authority, the workhouse under the Poor Law guardians, the special industrial school or home for adults, which some suggest should be certified by the Secretary of State, and the hospitals or asylums for the unsound in mind which are under the Lunacy authorities.

Motion, Vol. III. 21804.
Sutherland, Vol. III. p. 239, c. 1.
Urquhart, Vol. III., 24460.
Russell, Vol. III., 23762. 23764.
Rainsford, Vol. III., 22466–22469.

435. Yet as a precedent the Reformatory and Industrial Schools Acts are valuable. They recognise the right of the non-responsible offender to special disciplinary and educational treatment. They are based on the principle of long committals with a view to the fulfilment of their special purpose. They justify the enforcement of the care of a child by the disposal of it, when the circumstances of the family require such action, without the parents' consent, and even the enforcement of tutelage for an indeterminate period, a line of intervention adopted by the Poor Law Act, 1899, which, subject to various conditions, permits a board of guardians, by resolution to vest themselves with the rights and powers of the parents until the child is of the age of eighteen. They furnish an example of successful co-operation between the State and local authorities on one side, and voluntary help and agencies on the other, with the result that many institutions, large and small, become on economic lines useful adjuncts and assistants in public administration.

CHAPTER XXIII.

Mental Defect and Criminal Responsibility.

436. Repeatedly, in the evidence which we have received, reference has been made by witnesses to the difficult questions which arise in criminal procedure in regard to uncertified or uncertifiable cases of insanity or mental defect. Mr. Troup, now Permanent Under-Secretary of State to the Home Department, who has had much experience in the criminal department of the Home Office, says:—

"Uncertified" mental defect and responsibili y.

"There are cases where weak-minded persons commit crimes, and they are not certifiably insane. They cannot, strictly speaking, be found insane under the law as laid down in Macnaghten's case, or under the law as ordinarily administered, and yet they are from weakness of mind really not wholly responsible. You cannot say that they are insane, and yet the state of their mind is such that they ought not to be set at liberty and allowed to commit further crimes of the same sort."

Troup, Vol. I., 1322.

"Uncertified" mental defect and responsibility—*contd.*

Sir James Crichton-Browne, one of the Lord Chancellor's Visitors, in Lunacy says :—

Crichton-Browne, Vol. I., 5985.

"There are undoubtedly numbers of persons who are not idiots or lunatics, or at least who are not regarded as either—persons of weak mind who are socially dangerous. In the affluent classes, there are numbers of weak-minded lads. I have known murders perpetrated by lads of that character, who were not thought to be certifiable, but allowed to go about uncertified though obviously weak-minded. Among the poorer classes, there are, no doubt, great numbers of morally incapables who are not certified, and who are moving about and are socially dangerous."

And Mr. Shadwell, one of the Commissioners in Lunacy, states that the question whether a person is or is not a lunatic, though he may be feeble-minded, often arises. Information is received that persons are being detained as lunatics. Inquiry is made by a medical man in regard to the place where they are being kept; and the report is that some of them are certifiable and some are not. He adds :—

Shadwell, Vol. I., 1545.

"Then we find a great difficulty in proving that they are certifiable. . . . I remember a case in which we prosecuted, and the defendant pleaded guilty, and yet we could not get one of the patients whom he had been detaining certified. . . . If they are not lunatics, and if they are not under the Idiots Act, they are uncared for by the State."

1613.

437. We find therefore—and there is evidence in regard to it from all quarters—that, while there is a large class of mentally defective persons who are certified as lunatics, and can thus be detained and receive the protection of the State, there is also another larger class of persons who can often be hardly distinguished from the "certifiably insane," who are "morally incapable," "socially dangerous," and "obviously weak-minded," who are "not thought to be certifiable," and who "from weakness of mind are really not wholly responsible." "Lunatic," according to the Lunacy Act of 1890, "means an idiot, or person of unsound mind"; and a person found to be in that condition is legally recognised as irresponsible. Questions arise accordingly, whether the condition of being irresponsible should not also attach to other mentally defective persons besides certified lunatics.

Crichton-Browne, Vol. I., 5985. Troup, Vol. I., 1322.

The ascertainment of conditions of unsoundness of mind, or irresponsibility.

438. On these points, we have three precedents: (1) The procedure under the Lunacy Acts of 1890 and 1891; (2) the procedure under the Criminal Lunatics Acts, 1800 and 1858, and the Trial of Lunatics Act, 1883; and (3) the procedure under the Habitual Drunkards and Inebriates Acts, 1879 and 1898. These we would submit in turn, and then (4) we would discuss the question of procedure in relation to the mentally defective charged with crime at Assizes and Quarter Sessions and in courts of summary jurisdiction, and finally, some suggestions that have been made to us for dealing with mentally defective offenders by indeterminate sentences.

Conditions which Imply a State of Insanity and Irresponsibility.

(1) Procedure under the Lunacy Acts, 1890–1.

(*a*) *The Procedure by Reception Orders.*

Procedure under the Lunacy Act of 1890.

439. We have before us, then, two questions: what are the various conditions which, according to present law and procedure, constitute insanity, or "unsoundness of mind," with the irresponsibility which may attach thereto; and, if irresponsibility is suggested in relation to some criminal act, what is the procedure to be adopted, in order that the allegation of irresponsibility may have due weight both in regard to the conviction and sentence, and also in regard to the after treatment of the individual.

The procedure by private application on petition, and the principle it represents.

Lunacy Act, 1890, Sec. 4.

440. In the case of an alleged "lunatic," or an idiot, or a person of unsound mind, under the Lunacy Act of 1890, one form of procedure is a private application which is made on petition, and accompanied by two certificates of medical men, and, if the application be successful, an order for detention by a judicial authority follows. The petition is presented to the judicial authority by "the husband or wife or by a relative of the alleged lunatic," or, if not so presented, it must contain a statement of the reasons why the petition is not so presented and of the connection of the petitioner with the alleged lunatic, and the circumstances under which he presented the petition. A statement of particulars accompanies the petition, and, as much turns on the general use of some such document in connection with the care and control of the mentally

defective, we state the questions which it contains rather fully: Name, sex, and age; married, single or widowed; rank; profession or previous occupation (if any); religious persuasion; residence; whether first attack; age on first attack; when or where previously under care and treatment as a lunatic, idiot or person of unsound mind; duration of existing attack; supposed cause; whether subject to epilepsy; whether suicidal; whether dangerous to others and in what way; whether any near relative has been afflicted with insanity; names, Christian names and full postal addresses of one or more relatives of the patient; names, etc., of persons to whom notice of death should be sent, and of the usual medical attendant. By its form, the medical certificate requires each of the medical practitioners to vouch that "separately from any other practitioner he has personally examined the alleged lunatic and come to the conclusion that he is a (lunatic, an idiot, or a person of unsound mind), and a proper person to be taken charge of and detained under care and treatment"; and he has to state that he has "formed this conclusion on the following grounds, viz.: (*a*) Facts indicating insanity observed by himself at the time of examination; and (*b*) facts communicated by others." Lastly, the judicial authority, that is a justice appointed under the Lunacy Act, 1890, a judge of county courts or a stipendiary magistrate, or a magistrate appointed to act at any of the police courts of the Metropolis, authorises the medical superintendent of an asylum, hospital, etc., to receive the patient on the understanding that the petitioner will visit him or see that he is visited once at least in every six months.

The procedure by private application on petition, and the principle it represents—*contd*

441. Here the recognition of the condition of lunacy is a private matter, starting from the application, if possible, of some members of the family, and the application is set forth in a kind of historical record, that touches on "supposed causes" and suggests "heredity," but it is explicit on four critical points: the nature of the "attack"; whether the mental defect has shown itself in the past and is recurrent; whether it is suicidal; and whether it is dangerous to others. The principle then which underlies this method is: to ascertain the nature of the mental defect with especial reference to its being a cause of danger to the man himself or to others; and this defines the state of mind that involves detention or exclusion from society.

"Being a cause of danger to oneself or others."

442. The same principle runs through the other modes of procedure under the Lunacy Act, 1890. In the case of the urgency order, which authorises detention for seven days only, the requirements of the Act are similar, but one medical certificate is dispensed with, and urgency of detention is recognised, either on the ground of the welfare of a person (not a pauper) who is alleged to be a lunatic, or on the ground of the public safety. So, again, in the summary reception order. Under it, the public authority, "the constable, relieving officer and overseer," intervenes. It refers to a person who is "deemed to be a lunatic and is not under proper care and control, or is cruelly treated or neglected by any relative or other person having the care and charge of him." In this case detention is adopted out of regard to the public safety or the better personal care of the lunatic; and, here again, the public safety is the reason for detaining the alleged wandering lunatic as a "proper person to be detained."

The Urgency Order, and the Summary Reception Order. Lunacy Act, 1890, Secs. 11 and 13.

Secs. 15 and 16.

443. And the principle of detention once accepted, the reception order may mark the beginning of a protracted period of detention and supervision. It remains in force "for a year . . . and thereafter for two years, and thereafter for three years, and, after the end of such periods of one, two, and three years, for successive periods of five years, if at the end of each period . . . a special report of the medical officer of the institution or of the medical attendant . . . is sent to the Commissioners certifying that the patient is still of unsound mind and a proper person to be detained under care and treatment."

Principle of continuing and renewable detention under a Reception Order. Lunacy Act, 1890, Sec. 38.

444. We have, therefore, under the Act of 1890, simple methods of intervention for the detention of persons of unsound mind, lunatics or idiots, on private petition or public statement, on the ground of the ill-treatment or neglect of the patient himself, and on the ground of his being a danger to himself or a danger to others. For necessary information, we have the statement

Principle of continuing and renewable detention under a Reception Order.—*contd.*

of particulars, as record or dossier, and the evidence of the medical practitioner, based on facts observed at the time of examination and on facts reported to him. And, as agents necessary to the detention, are the private relative, the public authority, the medical practitioners, and the judicial authority. We have here, then, one series of precedents which have been accepted as sufficient to place an individual outside the circle of normal responsibility and to deprive him of rights which he would otherwise enjoy.

(b) Procedure by Inquisition.

Procedure by Inquisition. Inability to manage oneself and one's affairs.

Lunacy Act of 1890, Sec. 90. Sec. 91. Sec. 92.

445. The next form of procedure is that by inquisition. "The Judge in Lunacy may, upon application, by order, direct an inquisition whether a person is of unsound mind and incapable of managing himself and his affairs." The alleged lunatic may demand an inquiry before a jury, and the Judge has to allow it, "unless he is satisfied, by personal examination of the alleged lunatic, that he is not mentally competent to form and express a wish for an inquisition before a jury." And if the Judge does not direct the return of a jury, "the Masters in Lunacy shall, without a jury, personally examine the alleged lunatic, and take such evidence, upon oath or otherwise, and call for such information as they think fit or the Judge directs, in order to ascertain whether or not the alleged lunatic is of unsound mind, and shall certify their finding thereon." There follows a further direction :—

Lunacy Act, 1890, Sec. 98.

"(1) The inquisition shall be confined to the question whether or not the alleged lunatic is, at the time of the inquisition, of unsound mind and incapable of managing himself or his affairs, and no evidence as to anything said or done by him, or as to his demeanour or state of mind at any time, being more than two years before the time of the inquisition, shall be receivable in proof of insanity.

"(2) If, upon such inquisition, it appears that the alleged lunatic is of unsound mind, so as to be incapable of managing his affairs, but that he is capable of managing himself, and is not dangerous to himself and to others, it may be so specially found and certified."

Here, with a different procedure, comes a new distinction : incapacity to manage himself and his affairs, or capacity to manage himself (without being dangerous to himself or others) but not to manage his affairs.

Criteria of unsoundness of mind.

446. We have, then, outside our Criminal Courts, the different criteria of unsoundness of mind, viz., a danger to oneself or a danger to others ; an incapability of managing oneself and one's affairs ; an incapability of managing one's affairs combined with a capability of managing oneself—without being a danger either to oneself or to others ; and "when this special finding is come to by a jury, it is not necessary, unless in the discretion of the Judge it appears proper to do so, to make any order as to the custody or commitment of the person of the lunatic."

Fischer, Vol. I., p. 155, c. 1.

(c) Procedure as to Management and Administration of Property.

Management, and administration of property under Sec. 116 of the Lunacy Act, 1890.

447. Another method of procedure which has been much discussed by witnesses, is contained in Sec. 116 of the Lunacy Act, 1890, which refers to to management and administration of property. This section allows to persons found lunatic by inquisition, or to persons lawfully detained as lunatics, in the ways above mentioned, the benefit of the management and administration of their property, if any, by the Judge in Lunacy ; but it also extends these benefits to persons who are not so found and not so detained ; and thus, for purposes of administration, it creates a further class of mentally defective persons whom in this regard, it brings under the protection of the law. The new classes which it creates are defined in the two subsections following :—

Lunacy Act, 1890, Sec. 116 (*d*) and (*e*).

(*d*) Every person not so detained and not found a lunatic by inquisition, with regard to whom it is proved to the satisfaction of the Judge in Lunacy that such person is, through mental infirmity arising from disease or age, incapable of managing his affairs.

(*e*) Every person with regard to whom it is proved to the satisfaction of the Judge in Lunacy by the certificate of a Master, or by the report of the Commissioners, or by affidavit or otherwise, that such person is of unsound mind, and incapable of managing his affairs, and that his property does not exceed £2,000 in value, or that the income thereof does not exceed £100 per annum.

448. These subsections, as compared with the rest of the Act, open out quite new ground. A very simple procedure suffices. In a case under Subsection (d) a notice is issued by a solicitor to the person alleged to be mentally infirm, with a summons, stating that "orders may be made that you are through mental infirmity arising from disease [or age], incapable of managing your affairs for the purpose (state the purpose, *e.g.*, of rendering your property or the income thereof, available for the maintenance or benefit of yourself *or* of yourself and your family, or for carrying on your trade or business), and that if you intend to object to such orders being made, notice of such objection must be signed by you, and attested by a solicitor." Then if the Judge is satisfied, the orders are made. The other subsection (*e*) has an even wider range, but by it proof is required, though it be "by affidavit" only, or "otherwise," both of unsoundness of mind, and of incapacity to manage one's affairs, and it applies to all such persons whose property does not exceed £2,000 in value, or where the income thereof does not exceed £100 a year.

Management and administration of property under Sec. 116 of the Lunacy Act, 1890—*contd.*
Rules in Lunacy (1892), 48-56 inclusive. Form 10.

Lunacy Act, 1890, Sec. 116 (*e*).

449. A non-lunatic class is thus included in the Act,—those who are mentally infirm, and are, owing to age, incapable of managing their affairs, but who are not detained. The "senile dement" is therefore recognised as a separate class with the incapacity of managing his own affairs as the sole criterion of his incapacity or mental defect. Also all cases of similar incapacity owing to disease are included—another very large class indeed. The conditions are incapacity and consequent limits of control, and are thus extended—so far as it is a question of the management of affairs—to two large classes of the "uncertified"; and that, by a simpler procedure than in other cases, and in such a way as not to involve detention.

(2) Procedure under the Criminal Lunatics Acts, 1800 and 1838, and the Trial of Lunatics Act, 1883.

450. Our next point is to ascertain whether the principle of irresponsibility and the extension of State protection with detention is, in the Criminal Lunatics Acts, applied still further. The words of the preamble of the Act of 1800 (which has now been repealed) refer to persons charged with "high treason, murder or felony who may have been, or may be, of unsound mind at the time of committing the offence wherewith they may have been or shall be charged, and by reason of such insanity may have been, or may be, found not guilty of such offence; "and," the paragraph continues, "it may be dangerous to permit persons so acquitted to go at large." This state of unsoundness of mind indicates a state of irresponsibility, for, if the unsoundness prevailed at the time of the committal of an offence, the person cannot be considered guilty, and cannot therefore be subject to punishment; but, being dangerous, he ought to be confined. What, then, in these cases are the accepted criteria of criminal irresponsibility, and what is the procedure? Mr. Troup says :—

Responsibility for criminal offences in relation to unsoundness of mind.

"I propose to take first the treatment of insanity in criminal procedure. When there is a prosecution for any serious crime, the question of insanity does not arise before the magistrates, nor before the Grand Jury. If there is a *prima facie* case of a crime having been committed, then the magistrates are bound to commit for trial without regard to the question of the prisoner's sanity, and the Grand Jury have to find a True Bill. The question of insanity may arise first on arraignment, that is, when the prisoner is formally accused and required to plead guilty or not guilty. The question may then be put to the jury whether the prisoner is so insane as to be unable to plead. They have, in that case, to determine his mental state in reference to the proceedings; whether he is able to understand the proceedings. If they find that he is so insane as not to be able to plead, the Court makes an Order that he shall be detained during His Majesty's pleasure. If the prisoner is fit to plead, then the question of insanity may come up on the trial for the offence on its merits. Then the defence may be that the prisoner committed the offence while insane. This is a question which is to be decided in each case by the jury in accordance with the law as to criminal responsibility."*

Troup, Vol. I., 1318.

We may here state that in employing the words "criminal responsibility," we use them in the strict legal sense of "liability to punishment."

Cf. "Criminal Responsibility," (Mercier, Clarendon Press), for a full discussion on the subject.

* At common law, if a person was insane at the time of committing what would otherwise be an offence, he was entitled to be acquitted; and so, under the Criminal Lunatics Acts, 1800 and 1838, until the Trial of Lunatics Act, 1883.

Responsibility for criminal offences in relation to unsoundness of mind—*contd.*

451. Thus, in any serious case, the committal for trial is made without regard to the alleged insanity. If, in the opinion of the jury, the prisoner is so insane as to be unable to plead, he is detained during the King's pleasure—a kind of indeterminate sentence, dependent not on the committal or non-committal of the crime, but on the state of the prisoner's mind as insane. If that state of mind disappears, he is considered able to plead, and the question of his insanity has then to be considered anew by a jury. So far, one might sum up the position thus: the insanity on arraignment does not modify the guilt of the offence, if the offence were committed: it excludes for the moment the trial of the issue whether there be guilt or not: the prisoner cannot then and there be made responsible: in that state he cannot be found either guilty or not guilty. On the other hand, if he becomes sane, he becomes responsible, and in theory the prisoner may be put on his trial, but in practice this is very rare, and, indeed, generally impracticable.

Lunacy Act, 1890, Sec. 341.
Troup, 1319.
Answers of the Judges in the Macnaghten case.

452. What, then, from the point of view of criminal responsibility, is the touchstone of insanity, or in other words of being lunatic or "an idiot or person of unsound mind?" To establish a defence on the ground of insanity, it must be clearly proved that "at the time of committing the act the accused was labouring under such a defect of reason from disease of the mind as not to know the nature and quality of the act he was doing; and, if he did know this, that he did not know that he was doing what was wrong."

Troup, 1319.
The Trial of Lunatics Act, 1883, Sec. 2.
Troup, 1321.

453. From the criminal point of view, then, lunacy is a state of mind in which "the person does not know the nature and quality of the act he was doing"—for this ruling of the judges on the general reference to them in the Macnaghten case in 1843 is still generally accepted—or, the alternative assumption, "if he did know this, he did not know that he was doing what was wrong." And the verdict is then either "guilty but insane"—he committed the act, but was not responsible for it; or "guilty"—he committed the act and was responsible for it. The Trial of Lunatics Act, 1883, substituted for the verdict of acquittal on the ground of insanity this special verdict, on the assumption, it was stated by the Attorney-General (Sir Henry James, now Lord James of Hereford), that "people who were only partially mad at the time they formed a resolution to commit a crime would be deterred from so doing, if the verdict was one of guilty of committing the act charged." In fact, if this explanation be accepted, it may be argued that the Act of 1883 recognised partial responsibility, and, on that ground or presumption, required the offender, if he committed the offence, to be adjudged both guilty and insane. From which it would follow that "partial responsibility" necessitated partial punishment. But the question was not carried to that length.*

Trial of Lunatics Act, 1883, Sec. 2.

Hansard's Debates, 3rd Series, Vol. 283, p. 922.

(3) The Procedure under the Habitual Drunkards and Inebriates Acts, 1879 and 1898.

Procedure under the Habitual Drunkards' Act, 1879, and the Inebriates Act, 1898.

454. We pass to another precedent, the procedure under the Habitual Drunkards Act, 1879, and the Inebriates Act of 1898, for in these Acts states of mind bordering on that of "lunacy" or "unsoundness of mind" are the subject of legislation.

Habitual Drunkards' Act, 1879, Sec. 3.

455. The definition of an habitual drunkard is "a person who, not being amenable to any jurisdiction in lunacy, is, notwithstanding, by reason of habitual intemperate drinking of intoxicating liquor, at times dangerous to himself or herself or to others, or incapable of managing himself or herself and his or her affairs." The definition evidently connects itself with the definitions of the Lunacy Act of 1890; and the words "incapable of managing himself *or* his affairs" have a very wide application. In this regard, the words of the Judges' answers, mentioned

*We should state that in making these remarks, we do not wish it to be inferred that we desire that the criminal law in regard to the trial of the insane should be altered in any way.
(See letter from the Lord Chief Justice to the Secretary of State for the Home Department, Appendix Vol. V, page 256.)
We are desirous only of considering the principle of the Trial of Lunatics Act of 1883 in relation to other classes of the mentally defective.

above, might be read in thus: "At the time of committing the act, the habitual drunkard was labouring under such a mental defect as not to know the nature and quality of the act he was doing," though, possibly, he might know that he was doing wrong. In that case, the habitual drunkard, if, and in so far as, he is suffering from mental defect, whether he be considered in the light of a person who is a quasi-lunatic, and on that ground dangerous, etc., or in the light of a person who is a quasi-criminal, and on that ground possibly "guilty but insane," might be regarded as coming within the terms of the procedure adopted in the case of the unsound in mind, though actually he be a member of the large "uncertified" or "uncertifiable" class. The Habitual Drunkards Act of 1879, however, has no reference to criminal acts; its object is only to provide a means by which an habitual drunkard may enter a Retreat voluntarily, and having done so, be there detained for a period.

Habitual Drunkards Act, 1879, Sec. 3 —*contd.*
See Paragraph 440.

456. The Inebriates Act of 1898, however, carries the matter one step further, and suggests an alternative procedure. It provides that "where a person is convicted on indictment of an offence punishable by imprisonment or penal servitude, if the Court is satisfied that the offence was committed under the influence of drink or that drunkenness was a contributing cause of the offence, and the offender admits that he is, or is found by the jury to be, an habitual drunkard," the Court may order that he be detained in an inebriate reformatory. Thus the two points are separated: the committal of the offence and the question of being an habitual drunkard. The first point to be settled is, whether he is guilty or not guilty as to the fact; and then, if it has been settled in the affirmative, the second point is taken; and if the verdict be that the offender is an habitual drunkard, the committal is not to a prison but to a reformatory. He is detained for a period not exceeding three years in a State inebriate reformatory or a certified inebriate reformatory. There are, in fact, two findings: one disposes of the question of guilt respecting the committal of the offence; the other, on the ground of "habitual drink," modifies the criminal sentence or adds to the criminal sentence a period of curative or reformatory detention.

The Inebriates Act of 1898, Sec. 1 (i.)

We have thus, in the case of the "lunatics" and of the habitual inebriates, definitions which are applicable to unsoundness of mind, or, in the case of habitual drinking, applicable to a state of mind very similar to that of unsoundness; and, parallel to these, we have the conditions under which, in cases of felony or serious offences on indictment, the jury has to decide whether the person, as insane or as habitual drunkard, is or is not to be treated as relatively irresponsible.

457. We have now to consider the second question raised by us at the outset of this discussion (*see* page 142, Para. 439). If such irresponsibility is suggested in relation to some criminal act, what is the procedure to be adopted in order that the allegation of irresponsibility, when raised in the case of mentally defective persons other than lunatics may have due weight, both in regard to the conviction and sentence and also in regard to the after treatment of the individual?

Procedure in regard to "uncertified" or "uncertifiable" cases in criminal courts.

458. At present, if we omit the procedure adopted in the case of the insane and in that of the habitual drunkard, there is no form of procedure available for other classes of mental defect—other classes of the "uncertifiable." The insane, as we have seen, may be sent to asylums, or, as criminal insane, may be kept under detention as King's Pleasure lunatics or Secretary of State's lunatics; and the habitual drunkard may be sent to reformatories for any period not greater than three years; but for the imbecile or feeble-minded or the moral imbecile there is neither recognised procedure nor available institution.

Troup, Vol. I., 1323.
Troup, Vol. I., 1328.
1329.
1338.

In general terms it may be said that in the case of feeble-minded offenders "the proper verdict," Mr. Troup, now Permanent Under-Secretary of State to the Home Department, said, "would be something to the effect that the prisoner was guilty of the act, but, owing to mental weakness, was not fully responsible, and that he requires control and constraint." But Mr. Troup added that this was a question which could not very well be put to or adequately dealt with by a jury.

Inebriates Act, 1898, Sec. 1. (i.)
Troup, Vol. I., 1323.

Procedure in regard to "uncertified" or "uncertifiable" cases in criminal courts —*contd.*

Fry, Vol. I., 5839.

It is of course true, as emphasised by Sir Edward Fry, that a person must be either responsible or irresponsible; that in the matter of criminal procedure these two terms cover the whole ground, and that where the question is "guilty or not guilty" it would be impossible for the law to admit the existence of any doubtful territory between the two terms.

It is, however, equally true that in the judgment and sentence which follow the verdict the widest differences may, without inconsistency, be permissible in order to ensure that the adjudications of the courts are as far as possible in harmony both with the public sense of justice and with the requirements of reason in dealing with criminals of various degrees of mental defect. The very words "guilt" and "responsibility" denote that a man shall be held to "answer for" his deeds; and the "answer" to be demanded from a person of imperfect mental development must differ from the "answer" to be given by a sane man.

While admitting, therefore, the inexpediency of a verdict "guilty but feeble-minded," one may consistently advocate a radical alteration of the methods of our law with regard to feeble-minded persons found guilty of crime.

Letter from the Lord Chief Justice to the Secretary of State for the Home Department, Appendix, Vol. V., p. 256

The authoritative advice of the Judges in regard to judicial procedure in the case of feeble-minded offenders, is stated in the following sentences taken from a letter addressed by the Chief Justice to the Secretary of State for the Home Department:—

> "The Judges"—the reference is to a meeting of the Judges of the King's Bench Division—"are unanimously of opinion that it is not desirable that any question should be raised before juries respecting the class of people described as 'feeble-minded,' analogous to that which is raised under the Trial of Lunatics Act, 1883, or under the Inebriates Act, 1898.
>
> "They think that any question of mental condition other than that of lunacy, or habitual drunkenness, should be considered either by the Judge in determining the sentence which should be awarded, or by the Home Secretary under his general power for the control and disposal of prisoners. . ."

459. Our experience, as we have said, appears to justify this view entirely. For the reasons we mentioned before we are of opinion that the question of feeble-mindedness should not in criminal cases be put to a jury, as the question of insanity is or as the question of ability to manage oneself and one's affairs may be put to a jury in an inquisition under the Lunacy Act of 1890, or as the question of being an habitual drunkard may be put to a jury under the Inebriates Act, 1898. We think that the *data* upon which a judgment should be formed, could not be submitted to a jury without great uncertainty and difficulty. To ascertain the facts, the opinion of a medical man trained in the knowledge of mental disease is necessary; and, often, some period of observation is required, as well as, if possible, some record of the history of the case; but a jury, who may well deal with the question whether or not such and such an act was committed by the defendant, can hardly be expected to decide also the very much more complicated question, whether the act was a voluntary act done by a responsible agent. In cases of alleged insanity, there has been a grave distrust of verdicts on inquisitions; and it can hardly be argued that it is desirable to extend this procedure to other classes of mental defect.

Crichton-Browne, Vol. I., 5990, 6168–6171.

Fischer, Vol. I., p. 155, c. 1. and Vol. IV., 29986.

460. It is not, therefore, necessary or desirable that the precedents under the Trial of Lunatics Act, 1883, and under the Inebriates Acts, should be pushed further. Accordingly, in all cases of mental defect noted in Recommendation IV., other than unsoundness of mind, an alternative course may be adopted. The question of fact may go to the jury, and when that is settled, the question of mental defect may be settled by the court in modification of the sentence. And there is a third course, that, on the ascertainment of mental defect, the charge should lapse on the plea of irresponsibility, and the offender be dealt with not as a criminal but as a patient. In regard to the second and third courses we have to consider the procedure in indictable offences tried at assizes and at quarter sessions, and the procedure in offences tried in courts of summary jurisdiction.

461. We will take the latter first. Here there is no question of reference to a jury. The question of mental defect comes before the court and the court only; and if it should decide that the offender suffers from such mental defect as to make him irresponsible, it should be entitled, we think, to let the charge drop, to assume the position of a judicial authority under the Lunacy Acts, and to deal with the offender as a patient. This line is suggested by the Circular which was sent to Magistrates by the Secretary of State on 23rd November, 1889. The words of the Circular are: Courts of Summary Jurisdiction.

> "The Secretary of State must strongly urge on the Magistrates that it is their duty to obtain, in all doubtful cases, evidence as to the mental condition of prisoners. In cases of serious crime it may be necessary to commit for trial persons supposed to be insane, in order that the question of their sanity may be decided by the verdict of a Jury. But where the offence is less serious, it is almost always open to Justices to dismiss the charge, and to deal with the prisoner as an ordinary lunatic, either handing him over to the care of his friends, or sending him as a pauper lunatic to an asylum."

Further, this principle has already been adopted in a very wide sense in the Probation of Offenders Act, 1907. The words of the Act are:—"Where any person is charged before a court of summary jurisdiction with an offence punishable by such a court, and the court thinks that the charge is proved, but is of opinion that, having regard to the character, antecedents, age, health, or mental condition of the person charged, or to the trivial nature of the offence, or to the extenuating circumstances under which the offence was committed, it is inexpedient to inflict any punishment, or any other than a nominal punishment, or that it is expedient to release the offender on probation, the court may, without proceeding to conviction, make an order either:— VII. Edw. 7. ch. 17, 1 (i.).

(1) Dismissing the information or charge; or

(2) Discharging the offender conditionally on his entering into a recognisance, with or without sureties, to be of good behaviour and to appear for conviction and sentence when called on at any time during such period, not exceeding three years, as may be specified in the order."

This statute, we quote, rather because it is illustrative of the course which we are discussing, than because it is altogether apposite to the question of procedure in regard to offenders alleged to be mentally defective. On this principle, however, we have recommended in summary jurisdiction two alternative forms of procedure,—prior to conviction and apart from it— remand to a receiving house, or ward, or to other interim custody, for purposes of observation, or,—prior to conviction and apart from it—adjournment of the charge *sine die*, followed by a reception order, if the medical certificate justifies that course. After conviction we have also suggested three courses: either on the surety of any officer or representative of the Committee to bind over the mentally defective person to come up for judgment at some future time or when called upon; or to authorise the reception of the offender under a summary reception order in any institution the Committee may determine; or instead of sending the offender to prison, to accept recognisances from a surety or sureties on the offenders' behalf, on the condition that he remains under the control of the Committee until they discharge him. Recommendation LXXXVII.

462. We have now to consider the question in reference to procedure in offences tried on indictment. In these cases, the offender has usually been committed for trial by justices; and we have suggested an alteration of procedure in the case of prisoners committed for trial, when the justices are satisfied that the person charged is mentally defective. We have proposed that, in these cases, the justices should be enabled to accept recognisances for the prisoner's appearance at the trial from any officer or other representative of the Committee, and to order the accused to the custody of the Committee instead of to prison. Among the depositions which have been taken down would be the depositions which had satisfied the justices that the prisoner was mentally defective; and these would be transmitted to the court of assize or to the court of quarter sessions, as the case might be. Following the general line of the suggestions we have made in regard to cases of mentally defective offenders after conviction in the lower court, we think that, in cases of mentally defective persons convicted at Assizes or Quarter Sessions, a similar course might be adopted. Assizes and Quarter Sessions. Recommendation LXXXVII., I. (3), (4), (5).

Assizes and Quarter Sessions —*contd.*

The offender, after conviction, might be bound over to come up for judgment on the surety of any officer or representative of the Committee, or the court instead of sending the offender to prison might authorise his reception in an institution which was maintained and controlled by the Committee and which the Committee might select; or it might accept recognisances from sureties on his behalf on condition that he remained under the control of the Committee until they discharged him.

While prisoners are in gaol awaiting trial, their state of mind can be, and generally would be, satisfactorily observed. The modern practice, however, of allowing prisoners to be out on bail after committal has happily so much increased that less is officially known before trial of the mental capacity of prisoners than was formerly the case. It is, however, often obvious from the demeanour of the accused in Court, from circumstances disclosed on the depositions, or given in evidence, or otherwise communicated to the judge, that, irrespective of any question of mental condition as affecting the guilt or innocence of the accused, he is so mentally defective that, alike in the interests of himself and of the public, his future care should be considered. In the event of a conviction, there is no difficulty in providing for proper medical examination, as detention is in all cases possible.

Intervention after the verdict.

463. Thus, after the verdict on the fact, the judge, acting on the advice of the medical officers as before, might pass a sentence, the terms of which would be qualified, according as he deemed the sense of responsibility on the part of the offender to be greater or less in, for instance, the case of an idiot, or an imbecile, or a feeble-minded person or a moral imbecile, a feeble-minded inebriate or epileptic or a mentally infirm deaf mute or blind person. Subject then to the completion of his sentence, the offender would be handed over to the committee of the county or county borough and detained under certificates renewable from year to year, and revised, suspended, or withdrawn, as in the course of time might appear right. Of course, if it could be argued that no such mentally defective person could be in any degree responsible, the course here suggested could not be defended; but all the evidence goes to show that in these cases there is no fixed line in regard to the sense of responsibility any more than there is a fixed line in the nature and extent of mental defect. Where the defect of the brain is greater, the responsibility is less, till a point is reached where it is practically non-existent, as in the case of idiots and low-grade imbeciles. Also where the degradation or disease of the brain is very far developed, as in the extremer cases of senile dementia or "mental infirmity," or in cases of acute or persistent "unsoundness of mind," the responsibility entirely, or almost entirely, disappears. Recognising these variations, therefore, we suggest that the element of punishment should be retained, so far as it is valid, but that, subject to that condition, treatment—care and control—should follow with a detention or segregation, which should not be penal in any sense, but, as far as may be, educative or curative, or, possibly, simply custodial. This method, it will be seen, is not that of an indeterminate sentence, nor is it that of a "sentence to be detained" for a period of years, as under the Inebriates Act, 1898; it is the method of judicial sentence simply, with an entirely separate adjudication following upon it similar to that made on a reception order.

Smalley, Vol. II., 3419, and Chap. XX.

In the event of acquittal, a prisoner is entitled to his freedom, and it is, moreover, provided by 55 Geo. 3, c. 50, Sect. 4, amended by 8 and 9 Vict., c. 114, Sect. 1, that every prisoner charged with any felony, or any other crime, or as an accessory thereto, before any Court holding criminal jurisdiction within England and Wales, against whom no bill of indictment shall be found by the Grand Jury, or who on trial shall be acquitted, or who shall be discharged on proclamation for want of prosecution, shall be immediately set at large without payment of any fee to the sheriff or gaoler in respect of such discharge.

We think that, in cases in which a prisoner has been acquitted upon his trial, a judge will have had such an opportunity of forming an opinion as to the necessity for medical examination that it is not unreasonable for him to be able to defer the discharge of the accused until this has been effected. It may be thought that in cases where no bill has been found or in which no prosecutor has appeared, even though the prisoner is in custody, that the judge might not be expected to have sufficient materials before him justly to authorise his making this interference with liberty. We have therefore framed our recommendation so as to meet those cases where a person must have been arraigned and a verdict taken.

Recommendation LXXXVII. (iv.)

464. Another method has also been suggested to us which has many advocates—the indeterminate sentence. We have, we think, made it clear that in our opinion the question of the committal or non-committal of the offence and the question of responsibility or non-responsibility for that committal should be kept distinct and separately dealt with. There should, we urge, be no confusion between the two. If this confusion is avoided, it will greatly affect the nature of the indeterminate sentence as a sentence; and the lengthened care and control which may follow the sentence on the fact of the committal of the offence, will attach itself, not to the fact of committal, but to the decision which the court may adopt, acting as a "judicial authority" in relation to the detention or segregation of the offender under the medical certificates which have been submitted to it. In that case there would be, strictly speaking, no indeterminate sentence pronounced on the ground of the nature of the offence, as a kind of combined penal and protective or custodial sentence, or as a reformatory sentence passed in lieu of a penal sentence. What might in that case be regarded as an indeterminate sentence, would not be a sentence at all; it would be an authorisation similar to other judicial authorisations of a like kind, to detain or segregate, and it would follow a determinate sentence or, as is above suggested as an alternative, it might follow an adjournment *sine die*.

The indeterminate sentence.

Crichton-Browne, Vol. I., 6182. Brayn, Vol. I., p. 165, c. 1, 3150. Scott, Vol. I., 4900. Fry, Vol. I., 5789, 5797, 5855.

On the whole, then, we consider that the measures which we recommend provide in the case of the mentally defective all that could be expected from a system of indeterminate sentences.

Recommendation LXXXVII.

465. There is, however, a further question to be decided: What should be the test of responsibility? In the case of unsoundness of mind the test was formulated in the Judges' reply in the Macnaghten case: "That at the time of committing the act the accused was labouring under such a defect of reason from disease of mind as not to know the nature and quality of the act he was doing; or, if he did know this, that he did not know that he was doing wrong." In this opinion, as has been pointed out, stress is laid on *knowing* the nature and quality of the act, and that is made the critical and definitive word. But, generally speaking, in the case of mentally defective persons other than those "of unsound mind," it is a question whether mental defect should not be considered to mean defect in any of the faculties or qualities of mind and not be limited to those of knowledge and judgment. Criminal jurisprudence and psychology would thus be in accord. Dr. Mercier, who gave evidence on behalf of the Royal College of Physicians of London, has pointed out that in relation to insanity the question of certification has been made to turn almost wholly on the assumption that it is "a disorder of the intellect," so that "a person is not regarded as insane by reason of any peculiarity of temper or disposition, although he may exhibit peculiarities that incapacitate him from earning his own living, and that render him a burden and a nuisance to his family, and to those who come in contact with him. . . . The conception of insanity," he says, "as an intellectual disorder solely should be superseded by the understanding that it is inability, by reason of mental (not necessarily intellectual) defect and disorder to manage oneself and one's affairs."

The judicial test of irresponsibility in cases of mental defect other than "unsoundness of mind."

Mercier, Vol. I., p. 365, c. 1.

Cf. also "Criminal Responsibility," by Dr. Mercier, 1905. Clarendon Press.

466. If this be true in relation to insanity generally, or in relation to the Lunacy Act of 1890, in so far as in practice mentally defective persons of very various types may at times be certificated under it, it is still more true in regard to other classes of the mentally defective. The mental defect, indicated by facts observed and recorded, may reveal itself, for instance, in the misuse and misapplication of the senses, or in misdirection or instability of the will, quite as much as in an inability to judge or know the nature and quality of particular acts. In determining the nature of mental defect, therefore, it is necessary that the state of the mind should be considered as a whole, and in this more complete manner; and a particular and partial test such as that suggested in the Macnaghten case cannot but be set aside as insufficient. The "intellectual" test, indeed, no longer covers the ground. Other classes of mental defect, under the title of "feebleness

The judicial test of irresponsibility in cases of mental defect other than "unsoundness of mind."—*contd.*

of mind," imbecility, etc., have to come under consideration, and have, by their very nature, to be determined on broader lines. Hence, in these cases, *quâ* mental defect and any irresponsibility consequent upon it, there seems to be no alternative but to adopt a system of examination and certification such as we have suggested.

Holmes, Vol. II., p. 205, c. 1.

467. Practically what happens in the police courts, in the case of such mentally defective persons, is either that the criminal charge is dismissed and the offender handed over to relations or friends, or on the criminal charge a sentence of committal to prison for a short term is enforced. How useless and disastrous these methods usually are we have amply shown. We propose instead that in all cases of apparent mental defect or of recurrent short sentences for offences usually associated with defect the police should be under statutory obligation to apply to the Committee for the Care of the Mentally Defective and to the Board of Control for any information which they may have in regard to the offender, and to lay the same before the court. All cases of mental defect which are dealt with by any public authority or voluntary association should be notified to the committee for the area of the county or county borough. Next, the medical officer of the committee or his representative would be under obligation on notification from the court to attend it when the case was remanded. And, further, we suggest that, when it appears to the justices that the person charged is mentally defective, the justices should be asked by circular from the Secretary of State, or be required by statute, to remand the person charged or to adjourn the hearing of the case ; and then, after consultation with the medical officer of the Committee or his representative, either to commit the offender to prison or to discharge him to the Committee for the Care of the Mentally Defective in order that if it is desirable, they may, in conjunction with relations or friends, arrange, for such suitable care and control as the committee is under statute required to provide. Further action would then be taken on the lines of certification and continuing control which we have sketched above.

Recommendation LXXXVII. (v.)

Recommendation LVI.

New forms of criminal procedure recommended.

468. To sum up: We have in this chapter stated first that there is a large number of offenders who are not insane, in the meaning attached to that word in the ordinary administration of the Lunacy Act, 1890, and the criminal law, who, being mentally defective and not certifiable under that Act, are excluded from the care and protection of the State. We have described, as far as possible side by side, on the one hand the conditions which are attached to the state of personal irresponsibility in the Lunacy Act of 1890—being a danger to oneself or others, or being unable to manage oneself and one's affairs, or not being under proper care and control, or cruelly treated and neglected ; and, on the other hand, we have described the procedure which is now in force, in connection with the Lunacy Act, for satisfying the public authority that persons alleged to be of unsound mind are, or are not, actually in that state ; and we have also stated what, as represented by the answers of judges in the Magnaghten case, is the chief general test of responsibility in regard to criminal acts on which the plea of insanity is raised. We have also considered the procedure under the Habitual Drunkards Act, 1879, and the Inebriates Act, 1898, as indicating methods which are closely akin to the methods adopted in regard to offenders alleged to be insane. In these procedures, we have found precedents which, we have suggested, may, with considerable modifications, be applied to the cases of offenders who are mentally defective in other ways. We have endeavoured also to settle whether any test of the state of mental defect similar to that associated with the criterion laid down in the Macnaghten case could be applied in these cases of feeble-mindedness. We have concluded from these precedents in part, in part from other suggestions and considerations ;

Recommendations LXXXVII.–LXXXIX.

(1) That excepting in cases of alleged insanity dealt with under the Trial of Lunatics Act, 1883, or in cases of habitual drunkenness dealt with under the Inebriates Act, 1898, the principle should be

adopted of keeping the question as to the committal of the alleged offence separate from questions of the alleged mental defectiveness, the relative irresponsibility of the offender, and his appropriate treatment when charged with crime or convicted.

New forms of criminal procedure recommended—*contd.*

(2) That, on this principle, in a court of summary jurisdiction, prior to conviction and apart from it, the justices should remand the offenders to a receiving house or ward, or institution, or to other interim custody, or adjourn the case, and subsequently, if the medical certificates justify such a course, adjourn the case *sine die*, and order the reception of the offender in an institution considered suitable by the Committee for the Care of the Mentally Defective ;

(3) That, on the same principle, in a court of summary jurisdiction, after the conviction of the offender, he may be bound over to come up for judgment on the surety of any officer or other representative of the committee, or be dealt with by a reception order, or instead of sending the offender to prison, the court may accept recognisances from a surety or sureties on his behalf, on the condition that he remains under the control of the committee until they discharge him.

(4) That on the same principle, so far as it can be applied to the procedure of assizes and quarter sessions, the offender tried for an indictable offence may, after conviction, be bound over to come up for judgment on the surety of any officer or other representative of the committee, as has been suggested in the cases which are dealt with under summary jurisdiction, or dealt with under a reception order, or, on recognisances entered into by sureties not being representatives of the committee be kept under the control of the committee until he is discharged in due course of law.

Moreover, we recommend that in cases tried at assizes and quarter sessions, the court should be empowered to direct that the accused be submitted to examination, and, if necessary, certification, notwithstanding that he has been acquitted of the offence charged, if, in the opinion of the court, it is desirable that his mental condition should be ascertained with a view to provision being made for his care.

(5) That if any sentence be imposed by the court, it be not an indeterminate sentence, but that instead there be, as we have proposed, such a sentence as to the fact of the offence, as the court, on the verdict of the jury, may decide ; and thereafter, where necessary, a reception order be made which would be renewable from time to time, on the lines of Sec. 38 of the Lunacy Act of 1890 respecting "the duration of reception orders," and which would lead to such treatment and care as, from the point of view of mental defect, the committee, having regard to the mental state of the patient and the reports of their medical officer, might think necessary ;

(6) That neither the question suggested by the judges in the Macnaghten case nor the question of "guilty" or "guilty but insane" which the Act of 1883 requires the court to put to the jury in the case of prisoners alleged to be insane, should be applicable to classes of mental defect other than those to which they are now applied.

The purport of these conclusions will be found stated in the form of recommendations in Recommendations LXXXVII–LXXXIX.

Protection of the Mentally Defective in regard to sexual offences.

469. We cannot conclude this chapter without referring incidentally to a question that lies outside our main arguments. It will have been evident that the aberrations of mental defect and disorder often take the form of sexual offences and impropriety, and that feeble-minded women and girls are especially liable to be taken advantage of by the vicious. Considerable discussion has taken place before us as to whether the law as it stands provides due protection against such acts and attempts. It is not necessary here, we think, to state the existing law on the subject in any detail or to examine the evidence at any length. We recommend that the attention of the Lord Chancellor and the Secretary of State be called to this evidence and that they be invited to consider whether the existing law provides adequate protection for the persons referred to. PART V.

VOLUNTARY INSTITUTIONS AND CARE.

CHAPTER XXIV.

Asylums for Idiots.

470. The charitable institutions for the care of idiots and imbeciles and the homes and societies for the care of the feeble-minded represent two distinct movements. The one led to the establishment of the Earlswood Asylum (1847), the Eastern Counties Asylum for Idiots and Imbeciles at Colchester (1859), the Western Counties Idiot Asylum at Starcross, near Exeter (1864), the Royal Albert Asylum at Lancaster (1864), and the Midland Counties Asylum at Knowle (1868). The other movement commenced about the year 1887, when the first home for feeble-minded girls over fourteen was opened; and it is now represented by a group of institutions of different types, some of which are described below, by the National Association for Promoting the Welfare of the Feeble-minded (1895), and by the Lancashire and Cheshire Society for the Permanent Care of the Feeble-minded (1902).

Fletcher Beach, Vol. I., 6937, p. 377, c. 2.
Townsend and Jefferies, Vol. I., 3903, pp. 224, 225 3967.

471. This later movement has led to a more careful consideration of the education of defective and feeble-minded children during the past fifteen years, and to a better knowledge of the extent to which they are improvable. But the earlier movement, that which led to the establishment of the idiot asylums, was also to a large extent educational. The asylums were intended to be and, indeed, are, to a large extent, educational centres for improvable cases, aiming at results similar to those which the later movement for the care of the feeble-minded desired to accomplish. We propose to give some account of these institutions and to state what has been their experience in the maintenance and care of mentally defective persons during the last half century.

Bartholomew, Vol. II., 16430, p. 307, col. 1.

Locke, Vol I., p. 634, c. 1 & 2

The classification of cases of mental defect into "lunatics" and "idiots."

472. In dealing with the definitions of mental defect in Chap. XXIX., we propose to state in detail the difference between "unsoundness of mind" and idiocy and other classes of mental defect. Here it is sufficient to say that the words "lunatic" and "idiot" have in the past stood for two divisions of mentally defective persons, the one implying insanity, or "disorder of the mind" in a person who has been in possession of his faculties; the other a state of fatuity or mental incapacity which has been evident at birth or at an early age. As Master Fischer, one of the Masters in Lunacy, stated: the old definition was "that an idiot was a person who never had a mind; a lunatic a person who had had a mind and lost it." Thus "idiocy" meant generally any form of congenital defect, but probably without consideration of any but extreme cases—and these defects used to be regarded as incurable and unimprovable.

Fischer, Vol. I. 2947.

The identification of the classes "idiot," "imbecile" and "feeble-minded."

473. At the time when the Idiot Asylums were established, from the year 1847 and onwards, the word "idiot" had this wide connotation, and included vaguely all the grades of mental defect to which we now apply the words "idiot," "imbecile," and "feeble-minded;" but the passing of the Idiots Act in 1886 marked a change both in nomenclature and administration. The Act dealt with idiots as apart from lunatics; and by the use of the word "imbeciles" a yet further sub-class of the mentally defective was recognised by statute as indicating a lesser degree of defect than that of idiocy. Soon after a further sub-class was recognised. Owing in part to a widespread desire for the more specialised treatment of cases of lesser mental defect, and more particularly for the better protection of girls and young women, who were deficient in mind and self control, the word "feeble-minded" came into use as indicating a yet minor degree of defect than that implied by the words "idiot" or "imbecile."

Caldecott, Vol. I., p. 595, c. 1, and p. 596, c. 1.

Chapter XXIV.
Asylums for Idiots.

"Idiot" asylums admit all classes of congenital mental defect.

474. We have, thus, two forms of institutions. First, there are the idiot asylums, which are now, by a recent alteration of title, called also institutions for the feeble-minded, that is, for all the classes of congenital defect, which had originally been comprised under the word "idiot." These, therefore, actually or by inference deal, as they have always done, with all classes of mentally defective persons excepting the insane or persons of unsound mind and the "mentally infirm" or senile dement. And, next, there are the Homes for the feeble-minded. These have always used the word "feeble-minded" in its narrowest sense as representing a sub-class of the mentally defective in which the mental defect, though serious, is, by comparison with the idiot and imbecile, slighter and less obvious; and they have dealt with that single sub-class only, or with that and to some extent with the imbeciles. This is but one instance of the confusion of nomenclature that has prevailed. Here, then, in speaking of the idiot asylums, as they are generally called, we refer to institutions which, in most instances, admit applicants who are suffering from all kinds of congenital mental defect, and who by consequence refuse to admit any applicants who are unsound in mind or insane or "mentally infirm."

Definitions in the Idiots Act and the Lunacy Acts.

475. But in regard to the definitions in the Idiots Act, a word should be added. The Idiots Act (1886) defined "idiots" or "imbeciles" as "not including lunatics," and, *vice versa*, stated that "'lunatic' did not mean or include idiot or imbecile"; from which it might be inferred that the two classes "idiot or imbecile" and "lunatic" were to be considered and treated entirely separately, though both, in varying degree, were to continue to be under the supervision and control of the Lunacy Commission. The Lunacy Act (1890), however, in spite of this, repeats the definitions of previous Acts, namely, the Lunacy Act of 1845 and the Lunatic Asylums Act of 1853, and states that a "'lunatic' means an idiot or person of unsound mind." Hence, though the Idiots Act applies to idiots and imbeciles only, the Lunacy Act is applicable to "idiots" no less than to "persons of unsound mind," both of whom, by the definition, rank as sub-classes of "lunacy." Thus, as in the use of the words "training institution for the feeble-minded," recently introduced into the titles of asylums for idiots, and in the use of the words "feeble-minded," with a different meaning, in the title of homes for the feeble-minded, there is great confusion; so now there is equal confusion in the use of the word "idiot" in the Idiots Act and the Lunacy Acts with, in each Act, apparently a different relation to the word lunatic.

Lunacy Act, 1845, 8 & 9 Vict., c. 100, Sec. 114, and the Lunatic Asylums Act, 1853, 16 & 17 Vict., c. 97, Sec. 132. Lunacy Act, 1890. Sec. 341.

The Idiots Act and the changes introduced by it.

476. The Idiots Act, under which the idiot asylums have a recognised *status*, provides a very simple machinery for the admission of idiots and for their continuous care and control. It furnishes thus a precedent of great value in developing methods suitable for dealing with the mentally defective of the congenital type.

49 & 50 Vict. c. 25, Sec. 4.

Schedule to the Idiots Act, 1886.

"An idiot or imbecile from birth or from an early age may, if under age, be placed by his parents or guardians, or by any person undertaking and performing towards him the duties of a parent or guardian, . . . in any hospital, institution, or licensed house registered under this Act, . . . upon the certificate in writing of a duly qualified medical practitioner." The certificate is to the effect that the person "is an idiot [*or* has been imbecile from birth, *or* for years past, *or* from an early age], and is capable of receiving benefit from [the institution (describing it)]." And a statement, signed by the parent or guardian, accompanies the certificate, and gives particulars as to "when and where previously the person was under care and treatment"; whether "in any asylum or institution"; "whether subject to epilepsy"; and "whether dangerous to others." The person is on this certificate detained until he is of full age. If he has been so detained, with the consent of the Commissioners in Lunacy, he may be retained after he is of full age. If, on the other hand, he be of full age at the time of application, he may be admitted on the same certificate and statement. In all cases after admission a notice of reception has to be sent to the Commissioners in Lunacy. All institutions for the care of idiots have to be registered by the Commissioners in Lunacy, and are inspected by them.

Sec. 5

Sec. 9.

Sec. 12.

477. The Act is suggestive on several grounds. The method of certification is the simplest possible; the fact that the person is a congenital idiot or imbecile is the single and essential issue; the single condition as to admission is that admission will be beneficial. Next, there is the principle of continuity of control.

The person, once admitted as a minor, continues in the institution, with the consent of the Commissioners in Lunacy, without any new certificate being required. Again, the method of registration and inspection is made applicable to charitable or voluntary institutions. The definition of the Act as to "hospitals" and "institutions" is practically the same as that in the Lunacy Act: "Any hospital or institution or part of a hospital or institution (not being an asylum for lunatics) wherein idiots and imbeciles are received and supported wholly or partly by voluntary contributions, or by any charitable bequest or gift, or by applying the excess of payments of some patients for or towards the support, provision, or benefit of other patients." Hence there is scope under this method and this definition to bring a large group of useful voluntary institutions into co-operation with a central body and local bodies under reasonable guarantees for good and responsible administration. Both method and definition might, it is obvious, be applied, for instance, to the various homes for the care of the feeble-minded. Lastly, the idiots and the imbeciles, while broadly distinguished from lunatics, remain under the jurisdiction of the same central authority, though a separate system of administration for lunatics, as compared with that for idiots and imbeciles, is enforceable in certain important points.

The Idiots Act and the changes introduced by it—*contd.*

Idiots Act, 1886, Sec. 17.

Sec. 11.

478. Thus we have already in the Lunacy Commission a central organisation which at present deals under different conditions with what, in the past at least, have been recognised as the two main classes of the mentally defective—the insane by "disorder of the mind," and the idiot by want of intelligence or imbecility from birth. The large class of "feeble-minded" has also in some measure in connection with idiot asylums been dealt with by the same organisation, as coming under the title "idiot," used in its originally wider sense; though the voluntary homes for the feeble-minded have never been brought into systematic relations with this or any other central authority, unless, as in some instances, they have been certified by the Local Government Board as institutions suitable for the reception of applicants sent by the boards of guardians. The growth of thought then in this branch of work and the gradual increase of institutions may be said to point to the conclusion that what for the most part would be a new central authority should assume the duties of the Lunacy Commission, and with a very considerable change, both in the scope, method and character of their work, and with the adoption of a new title significant of larger and more extended social obligations, should promote measures for meeting in many ways, and according to the wants of different classes of defect, the administrative needs of the mentally defective as a whole.

Cf. "Law and Practice of Lunacy in Ireland," by G. W. Abraham, 1886, p. 26.

479. We have now to submit particulars regarding the idiot asylums themselves.* There are some four or five main characteristics to be noted in regard to them. They are both educational and custodial. They are, without exception, general institutions for all classes of congenital defect. They are voluntary institutions and are supported largely by payments for individual cases, so much so that in one instance, at least, these payments form almost the entire income. They are institutions which, though they admit applicants as a rule from all parts of England, are chiefly interested in meeting the needs of particular groups of counties, from which also they receive considerable voluntary support. They are managed with one exception on the method of admission of candidates by the votes of subscribers. Lastly, considered as institutions, within the limits of voluntary work and its obligations, they show not a little power of expansion and adaptation.

Characteristics of the "idiot" asylums.

These institutions are all managed by Boards or Committees of Management appointed by the subscribers. Their object is indicated by the following extracts from regulations: "That the design of this charity be, not merely to take the idiot and imbecile under its care, but especially, by the skilful and earnest application of the best means in his education, to improve his bodily powers, and prepare him, as far as possible, for the duties and enjoyments of life." This is the definition in the regulations of the Earlswood Asylum. The corresponding regulation of the Midland Counties Asylum at Knowle is almost word for word the same. So is the regulation of the Royal Albert Asylum for the Northern Counties at Lancaster, and the regulation of the Asylum for the Eastern Counties at Colchester. But the Western Counties Asylum at Starcross, unlike in this and some other matters, has as its object: "To provide care and intellectual,

Turner, Vol. I., p. 623, c. 1.
Locke, Vol. I., p. 633, c. 1.

* Besides the asylums for idiots mentioned in the text, there are the private asylums for idiots, that at Normansfield, and the Downside Lodge Asylum at Bath.

Characteristics of the "idiot" asylums—*contd.*

physical, or industrial training for idiots." In general we may say that the object of the asylums is primarily educational, and that, originally at least, they were the outcome of a belief that in many cases special education would prepare "for the duties and enjoyments of life" the children or young persons who gained admission to them.

Caldecott, Vol. I. p. 597, c. 2.

Both sexes are admitted. At Earlswood: "All ages and all types; but no case is entertained for the foundation until after five years of age, and the Board prefer all cases as far as possible to be under sixteen." At Knowle: "Cases are admitted at any age." At Colchester: "Election cases are admitted from five years of age upwards," while there and probably elsewhere: "Payment cases are admitted at any age." So at Lancaster. At Starcross: "Preference is given to children; pupils are admitted from six years old and upwards." At all these institutions there is a constant entry of children and young persons, and the system should admit of that very early treatment which, as we have seen, is greatly needed in some cases.

Williams, Vol. I., 10520, p. 607, c. 1.
Turner, Vol. I., 10787, p. 623, c. 1.
Douglas, Vol. II., 14425, p. 195, c. 1.
Locke, Vol. I., 10966, p. 633, c. 1.

Average age of inmates.

480. The ages of the inmates indicate the state of the population in the institutions. At Earlswood the annual average number of inmates during the last ten years, male and female is: Under sixteen, eighty males and forty-five females, in all 125; over sixteen, 277 males and 135 females, in all 412. In 1905 there were in residence 109 patients maintained for the remainder of their lives, of whom fifty had been in residence forty years; and, except at Starcross, where all the inmates are counted as children and "retained until their training is completed, or until there is no probability of further improvement being effected in their condition," there must be a constant increase of the elderly inmates, if they are not gleaned out otherwise.

Reports: Earlswood Asylum, 1906, p. 23; 1905, p. 24.

Locke, Vol. I., p. 633, c. 2.

Admission and discharge.

481. Admission to the asylums is usually obtained in three ways.

Some are admitted on payment by relatives and friends; and some on election; and some on payment from public or voluntary bodies. Where relatives or friends pay, "the discharge is authorised by the relatives"; otherwise they "remain until they die." So in the case of those elected for life. But the other elected inmates, unless re-elected, leave at the end of seven years; and they cannot, as a rule, stand for re-election "unless there are distinct prospects of further improvement." So it is at Knowle, with the exception that the term of years is five. So at Colchester—where the term for elected cases is now seven years—for in not more than twelve cases are the elections made for life. So at Lancaster. There is thus a more or less constant discharge of election cases every five or seven years, while the inmates who are paid for stay on. This must act sometimes rather sweepingly. At Lancaster, for instance, out of 702 residents only 235 were twenty years of age and upwards. And the question naturally rises—what is the result of the method? Do those admitted as children, at or after the five or seven years of age or even after a second term of re-elected life, prove themselves able to take part in the duties and enjoyments of life in the world outside, or are they, when they leave, so carefully supervised and controlled that they do not lose the good results of the seven years' education? In the main, the answer is in the negative.

Caldecott Vol. I., p. 598, c. 1.

Williams, Vol. I., p. 607, c. 2.
Turner, Vol. I., p. 623, c. 2.
Douglas, Vol. II., p. 199, c. 1.
Report Royal Albert Institution, 1906, p. 86

Results of training: Earlswood.

482. Dr. Caldecott, the Medical Superintendent of Earlswood, says: "Roughly speaking, I should reckon two-fifths of our patients are idiots, two-fifths low grade imbeciles, and one-fifth high grade or trainable imbeciles." In reply to a circular to the parents of patients discharged during the last fifteen years, 341 answers were received; of which the following is a summary:—45 died; 89 gone to county asylums; 111 gone away with no address; 6 gone to other imbecile institutions; 11 at work for wages; 13 at home, very useful; 26 at home, useful; 40 at home, no use.

Caldecott, Vol. I., 10378.

Vol. I., 10379, 10488, 10490, 10492.

Thus, "3·25 per cent. were earning wages," Dr. Caldecott said: "3·81 were at home very useful; 7·5 at home, useful. The rest no good." Some, when they leave, go to their homes—the bulk of them in the first instance—and are of no use, some go to the county asylums, and some (26 per cent.) go to the unions. "They should be taken care of for life."

Colchester.

Speaking of the Eastern Counties Asylum at Colchester, Mr. Turner, the Superintendent, said in regard to cases sent away after seven years:—

Turner, Vol. I., 10836, 10905.

"In some cases they go out and earn their own living under a certain amount of supervision. I have amongst my old cases three who have been married, one who has brought up a family,

and others (I cannot give you the exact percentage now, but there are several) who are earning their own living either as tailors or shoemakers, or doing odd work on farms." Results of training—*contd.*

To avoid discharges of hopeless cases, "we allow a system of re-election"; and thus "cases have been re-elected again and again. We have tried to meet that difficulty." On the other hand, he stated: "I think we get a larger proportion of helpless cases" than other asylums. A good many "could not by any possibility earn their own living or do anything of use in an asylum." Turner, Vol. I., 10837. 10890. 10889.

At the Royal Albert Asylum, Lancaster, a circular issued to 367 patients discharged in the last twelve years produced these results: thirty-three (or 9·0 per cent.) are earning wages or the equivalent; 123 (or 33·5 per cent.) are living at home with parents or relations, of whom forty-two are very useful and thirty-two useful; one is in a public school; and 148 (or 40·3 per cent.) are in workhouses, lunatic asylums, etc. It is not a very satisfactory result, and comparable with that at Earlswood mentioned above. A circular was also issued in regard to sixty-seven patients who had much improved; information was received as to fifty-one. Of these sixteen were earning wages, five were useful in workhouses; seventeen were useful at home, six were either not useful or nothing was said of them; four were in lunatic asylums; and three were dead. This was a census of cases in which there had been great improvement; and it shows that a small number can receive considerable benefit from the teaching and discipline of the asylum. Dr. Douglas, the Resident Medical Officer of the Royal Albert Asylum, said: These people revisit the institution at holiday times and on such occasions "I have been pleased with their tidy appearance and self-respecting bearing. Intercourse with the world has improved them." However, he adds: "One thing I frequently observe is, that boys who have learned a trade do not continue it, but generally turn to common forms of labour. . . . They need judicious supervision and an ordinary master or foreman will not be troubled with them while the labour of perfectly sane workmen can be had cheaply. Sometimes their friends . . . let them idly loaf about the streets, and who can wonder if they get into mischief?" Lancaster. Douglas, Vol. II., p. 202, c. 1. Vol. II., p. 199, c. 2. Vol. II., p. 195, c. 2.

As at Earlswood it must be borne in mind that a large proportion of the inmates can only be to a very small extent improvable by reason of the extent of the mental defect from which they suffer. Thus at Lancaster, out of an institutional population of 626, eighty-five are idiots, 308 imbeciles, and only 233, or some 37 per cent., high grade imbeciles or "feeble-minded." Vol. II., p. 199, c. 1.

At Starcross the custodial element in the institution is very small. "The admissions are now restricted to improvable cases only, as it has become recognised that beyond a slight improvement in habits and intelligence, little can be effected by training in the lowest grades of congenitally-defective persons. The institution was moreover founded essentially as a *training*, and not simply as a custodial, establishment." Accordingly an analysis of the institutional population of 270—180 males and ninety females—gives the following figures:—Idiot, twenty-six, or 9 per cent.; low grade imbeciles, ninety-three, or 34 per cent.; high grade imbeciles, ninety-three, or 34 per cent.; and feeble-minded, fifty-eight, or 21 per cent. On this method the results are stated thus: "I think that during the last ten years about forty children have been placed out in the world. I have information from about twenty of them; several of those are earning their own living independently, but they were brilliant exceptions, the others were living at home and making themselves of use, going out to work for instance in gardens or doing needlework at home, and so on." But, it is added, those who are discharged, properly speaking, "ought not to go out into the world, any of them, never mind how competent they are to work." Starcross. Locke, Vol. I., p. 633, c. 1. Locke, Vol. I., p. 634. Vol I., 11016. Vol. I., 11017.

483. This view is held by all our witnesses in regard to this branch of work. Already the institutions are, with the exception of Starcross, to the extent of at least two-thirds of the cases, custodial, that is, cases of idiocy or low grade imbecility; and even for those who leave the educational departments as improved there is need of after custody or after supervision. The experience of the managers of voluntary homes, as we shall see, coincides with this opinion. Necessity for continued detention or supervision.

484. Of the well known and elaborate educational system at these establishments we need say but little. It is admitted that it should be more and more manual and industrial. In the different institutions there is a careful classification. That at Earlswood may be mentioned. There there are "six or seven different classes according to social and mental standard, the best and worst not associating with the general run of patients on each—the male or the female—side. According to the general rule of the institution all patients who are Classification of inmates. Douglas, Vol. II., p. 195, c. 1. Turner, Vol. I., p. 624, c. 2. Williams, Vol. I., p. 608, c. 1. Caldecott, Vol. I., p. 598, c. 2.

Classification of Inmates—*contd.*
Williams, Vol. I., p. 607, c. 1.
Turner, Vol. I., p. 624, c. 1.
Locke, Vol. I., p. 633, c. 2.
Caldecott, Vol. I., p. 597.

in any way capable of doing anything are expected to attend either the schools, the workshops, or housework during the working hours of the day." Sometimes the classification is by degree of defectiveness as at Knowle, or by age and mental capacity as at Colchester and Starcross; at Starcross "the classes are numbered as in an ordinary school." And it appears from the visits which we have paid to the asylums and from their evidence and annual reports that great attention is paid to the educational and especially the industrial side of their work, including labour on farms or gardens. This is, perhaps, especially noteworthy in the case of Starcross.

Williams, Vol. I., p. 6

Locke, Vol. I., p. 635, 10977.
Douglas, Vol. II., p. 200.

485. The financial statements as they are submitted to us are inevitably somewhat misleading. The cost of the two-thirds of the inmates who are in the asylum chiefly for custodial purposes must in the worst cases be very considerable owing to the constant care and nursing which they require. For different reasons those who are indicated as being improvable, a large number, have to be provided for at a relatively large cost. They can only be taught in small classes, and require close supervision, though in some instances the industrial trainers are old inmates of exceptional ability. On the other hand, for the economy of the institution the best work is done by the high grade imbeciles and feeble-minded, but these do not remain in the asylums continuously. If they do, their work is the most productive. The "trainables" do their best work from the age of twenty-five to fifty. "If we simply took the higher grades," Mr. Turner, the Superintendent of the Eastern Counties Asylum at Colchester, said, "we could undoubtedly reduce the cost." As institutions are homes for all kinds of congenital defect, they may be compared generally one with another; but they cannot be compared with institutions for any single or special class, except, again, possibly in the case of Starcross. And there is yet another consideration. Many of the patients are paid for by relations and friends, and the charges incurred on their behalf are on a scale commensurate with their payments. Thus at Earlswood, "Of the higher payments there are five of 250 guineas or more, ten of 120 guineas and upwards, twenty of 65 guineas and upwards, and 103 paying cases up to 65 guineas." And so in a lesser, but always considerable, degree elsewhere. Including administrative and maintenance charges only—that is, excluding all charges for purchase of land erection of buildings, and, generally speaking, all capital expenditure—the figures stand as follows :—

	Average number of patients.	Average weekly cost.
		s. d.
Earlswood	485	19 6¼
Colchester	253	14 3½
Knowle	95	14 1½
Lancaster	610	13 10
Starcross	271	10 7¾
Total	1,714	14 6

Maintenance payments for individual cases.

Earlswood Annual Reports, 1905, 1906, Financial Report.
Colchester Annual Report, 1906, p. 52.
Lancaster: Annual Report, 1906, p. 60.
Western Counties Asylum, Starcross: Annual Report, 1905, p. 38.
Turner, Vol. I., 10794, 10791, 10820.
Williams, Vol. I., 10535.
Douglas, Vol. II., 14437.
Caldecott, Vol. I., 10506.

486. The financial position thus depends largely on the extent to which patients are received on payment—often it is the chief asset. At Earlswood, for instance (1904), there was received for "pupils and part payment cases" a sum of £13,249, as against £7,030 received from other sources, including legacies £1,926; in 1905 the corresponding figures were £12,547 and £11,428, including £5,013 legacies, and so it is more or less elsewhere. At Starcross the receipts for "maintenance of patients" were £8,699 out of a total income of about £9,258; and there is everywhere a large demand for accommodation, both on the part of private persons and of public authorities. Except Earlswood, all the asylums receive cases from boards of guardians. Outside the group of eastern counties guardians pay to the Eastern Counties Asylum at Colchester 15s. a week, within the group 12s.; £1,500 to £2,000 a year is thus received, but it is also said that "the payments from boards of guardians do not in any way recoup us for expenditure applied to bringing the institution up to date"; "they do not pay anything beyond the actual cost, do not pay initial charges." At the Midland Counties Asylum at Knowle, there are thirty-four cases from Poor Law Unions, who pay for them £34 and £35. At the Northern Counties Asylum at Lancaster the guardians pay £35 a year for each case, and provide for some 100 cases. It is clear from this, and from the accounts of the institutions generally, that the payment for individual cases is the largest and most stable element in their finances. Except for the voting system it might, as at Starcross, become almost the sole source of income.

The voting system.

487. On the defects of the voting system we need not dwell. The management committees of the asylums endeavour to neutralise the effect of it by extending the re-election of inmates after their seven years' stay in the asylums or, as at the Royal Albert Asylum, where it is arranged that anyone once placed on the list should be sooner or later admitted. It is believed that without the votes which they have at the election of candidates donors would lose their interest and the contributions of donors would fall off, and as long as there is apprehension on this score it is not likely to be abolished. It is, however, a system for which it is difficult to find a place in the general organisation of institutions for the care of the mentally defective, and it has hampered negotiations with public authorities. To these negotiations we will now turn.

Schemes for co-operation between local authorities and the idiot asylums.

488. Of recent years—and especially since the passing of the Elementary Education (Defective and Epileptic Children) Act 1899—there has been a general desire to increase the provision for mentally defective persons, and if possible to utilise and extend the "idiot" asylums. A statement of the difficulties in carrying out this policy may serve as a guide as to what should be done or avoided in this relation now. At Earlswood, Dr. Caldecott suggested to the Chairman of the School Committee of the Education Committee of the Surrey County Council that "if they chose to select what they called mentally defective cases, cases for which they proposed to make special classes," they might be taken on a reduced payment scale, coming from the county of Surrey, such as 45 guineas a year. But the matter, so far as we know, has gone no further. To the Committee of the Eastern Counties Asylum the Visiting Committee of the Essex County Asylum made the proposal that they should take and train some fifty or sixty idiot children who are at the Brentwood Asylum; and the Eastern Counties Committee reluctantly concluded that "it would not be possible to assimilate the two systems. Ours," we were told, "is really an election charity, and theirs for cases passed on by boards of guardians or in other ways. The difficulty was to work the two systems." At the Western Counties Asylum, there was a proposal from the Devonshire County Council that the asylum should undertake the education of their defective children. "My Committee," Mr. Locke, the Superintendent, said, "were willing to undertake the charge, and to build separate dormitory accommodation for these children, so that they could come and be educated in the same classes with our children in the workshops and schools, but with separate dormitories, but it was found we could not take them unless they were certified as imbeciles; therefore the scheme had to be dropped." It should be pointed out that although certified as imbeciles there is in reality no difference between the inmates of Starcross and most of the children who are educated in special schools.

Caldecott, Vol. I., 10500.

Turner, Vol. I., 10824.

Locke, Vol. I., 10996.

In these two instances, for in the first the question did not go further than an offer, proposals for the extension of the asylums were made by public authorities, and, if adopted, they would have been of great service to the community. They would have brought children of the same class which the institutions were already helping and maintaining under the care of bodies who were specially fitted to train them. They would have given important local authorities a large stake and a special interest in the asylums, which would probably have of itself tended to efficiency. The Committee of Management would have provided the buildings; the public authorities would have paid for the maintenance and education of the inmates admitted on their behalf. In great part the financial difficulty would have been removed.

Conclusions as to co-operation between local authorities and idiot asylums.

489. We think that there should be powers to use such institutions in some definite and recognised manner; and we believe that this may be done by a local authority, charged with this branch of work, and empowered to pay for cases at these institutions according to the cost of maintenance and training, or, indeed, so as to cover some part of the expense of buildings. This would add an inducement to co-operate, and would be fair, inasmuch as only in view of the cases to be sent by the authority would the new buildings be undertaken. It would also, we think, lead to negotiations, by which the voting system, if it were continued, would be confined to yet smaller proportions than at present; and in any case the arrangements undertaken at the request of the county authority, and in conjunction with it would be of a special character, and the asylum would account to the local authority separately in regard to them. A better system of definition and certification would remove the difficulty which prevented co-operation between the Devonshire County Council and the asylum at Starcross.

Conclusions as to co-operation between local authorities and idiot asylums—*contd.*

We should add that the asylum authorities, if changes were made to create new local arrangements for the supply of accommodation or for supervision, would prefer to be connected with the county councils rather than with the boards of guardians, and they are of opinion that the visits and supervision of the Lunacy Commission have been of great service to them. There seems, therefore, to be no difficulty in placing these and other voluntary institutions under official inspection. Further conclusions and recommendations we will defer until after we have considered the want of institutions for the feeble-minded.

Idiot Asylums as centres for scientific research.

490. The reports bear witness to the expansion and progressive management of these asylums ; and the point is important in its bearing on the utility of these bodies as parties to a contract with county authorities. At the same time we are bound to say that it seems to us that the idiot asylums, like the lunatic asylums, should be of much greater service to the community than they are, as affording centres for a close and scientific record of facts and for research. And we think that the authorities should encourage ingenuity and versatility of experiment to a much larger extent than they now do in stimulating the activity of defective persons, and training them. Everything should be done to keep up what may be called the hospital side of the work, and to prevent asylums becoming asylums merely. In inspection special attention should be paid to these and other points which indicate zeal and thought on the part of the authorities and of the staff.

CHAPTER XXV.

Voluntary Homes for the Feeble-minded.

491. The homes for the feeble-minded which form the second group of voluntary institutions may be conveniently classed as homes for improvable cases, boys and girls ; homes for the permanent care of children, working women and girls ; and homes (one institution only) for women and their infants from maternity wards of Metropolitan workhouses.

1. Homes for Improvable Cases, Boys and Girls.

Townsend and Jefferies, Vol. I., 3903, p. 227.

492. This class includes two homes connected with the National Association for the Welfare of the Feeble-minded, one for boys at Upshire Bury, in Essex, and one for girls at Alexander House, Hammersmith; and six other institutions for girls, a training home at Clapton; another at Knotty Ash, Liverpool; the Scott Home at Hitchin, which receives cases sent by Metropolitan Poor Law guardians ; the Handford Home at Ipswich, which receives in preference East Anglian cases ; and the Laundry and Home of Industry at Morpeth, which takes girls from the Northern counties. Another home for girls of this class is the Elizabeth Barclay Home of Industry at Bodmin.

These homes represent a variety of experiments, the conditions and results of which it may be well to state. Their aim has been to fit those admitted to the homes to become, as far as possible, self-supporting. Their work throws light on the extent to which this is possible ; it shows also how far in individual cases there may be improvement within the home, but not improvement sufficient for self-maintenance outside it.

Upshire Bury Home for boys. Townsend and Jefferies, Vol. I., 3903, p. 231, c. 2. Beach, Vol. I., 6937, p. 383, col. 1.

493. The Upshire Bury Home stands by itself as an experiment in the training of defective boys with a view to enabling them to earn a living wholly or in part under certain safeguards. The home was established in 1897. Since then seventy-two boys have been admitted at from fourteen to sixteen years of age. They are taught gardening and farm work in the summer, carpentering or shoe-making in the winter. There is accommodation for twenty boys, two masters, and a matron. In the summer the lads get work in the neighbouring farms, and there is no difficulty in their getting employment up to the extent of their capacity. They would soon fail, however, if they were not looked

Townsend and Jefferies, Vol. I., 3994.

after by members of the committee or by the master, who help them to spend and save their wages. And when they leave they are still looked after. Of those who have left the home, fifty-two in all, ten or twelve are wage-earners, earning on an average 10s. weekly. One or two, however, earn 14s. to 17s. a week, which is a very fair agricultural wage. Two act as assistant postmen, "going long rounds with absolute fidelity and regularity." Thirty per cent. of the boys who leave are stated to be able to earn a living and provide for themselves. Besides the boys accommodated in the home, there are out-boys, boarded with cottagers near their work, under the supervision of the master. The cost of the home has been small. The house is rented at £55. The cost of furnishing it was £50, together with considerable gifts of furniture. The cost of maintenance per head per annum, inclusive of service, but exclusive of rent, is £23 10s., with gross earnings amounting to £118 a year.

Upshire Bury Home for boys —*contd.* Townsend and Jefferies, Vol. I., 3994-3997. 3989. p 231, c. 2. Vol. I., p. 228.

Most of the boys are sent by boards of guardians, who usually pay 10s. a week for them, as against 11s. the average cost, including rent. The difference is made up by the boys' earnings.

Vol. I., p. 231. 4083-4085.

The experiment is considered successful, but the boys should be received earlier. "The difficulties with which the home has to contend arise from the late age at which the boys' training begins, when bad and vicious habits are often ineradicably formed."

Vol. I., p. 231, c. 2.

494. The institutions for improvable girls tend to become in part homes for girls who, after training, are able to provide in some degree for themselves, in part permanent homes. Two or three may be noted in some detail as typical.

The Clapton Homes for Girls.

The Training Homes for Feeble-minded Girls at Clapton were opened in 1892 for the purpose of training for domestic service young girls in dangerous circumstances morally. It was occasionally found that girls who proved very troublesome were actually deficient in ordinary mental power, and in 1897 it was decided to receive only little girls of school age who were mentally deficient. A teacher was engaged and the children taught in the home, and the home was certified for twenty children by the Local Government Board. There was, and is, no limitation as to the age of admission. It soon became evident, however, that only a small percentage of the children could earn their own living; and therefore a second house was taken for permanent girls. There are thus two homes, one with twenty children, three matrons, and a daily teacher, and one for elder girls, with two matrons and a laundress.

Bartholomew, Vol. II., 16430, p. 306, c. 2 and p. 307, c. 1. Townsend and Jefferies, Vol. I., 3903, p. 226.

As to results. Of ninety-one girls received into the homes between September, 1897 and September, 1905, fifty-five have been dismissed. Of these forty-five come under the following headings: imbecile, eighteen; moral imbecile six; uncontrollable, eight; insane, six; sick, five; and epileptic, two. Of the remainder there were sent to other homes, three; boarded out, one; returned to friends, four; and sent to service, two.

Bartholomew, Vol. II., 16430, p. 307. col. 1.

As an instance in which the treatment at the home had a remarkable effect, the case is mentioned of a:—

> "Girl sent at six years old to the Hants County Asylum. . . . She was in the asylum for five years, and was found there by a lady guardian of Basingstoke Union, amongst idiots of so low a type that they could not feed themselves. . . . She was removed to the Union, thence to our little girls' house in September, 1899. She has now apparently lost every trace of mental weakness. She lives for the present in my private house, and goes for some hours daily to the school at the little girls' house. . . . She has rather more common sense than most girls of sixteen. . . ."

p. 307, cols. 1 and 2.

The average cost of maintenance at the little girls' home is £26 per annum per child; at the elder girls' home it is £20 6s., less £3 10s., the average contribution of each girl by laundry work. The girls are paid for by boards of guardians; cases eligible for admission to the homes of the Metropolitan Asylums Board are not received.

Vol. II., p. 308, c. 1. Vol. II., p. 307, c. 1.

495. Another typical home of this class is the Scott Home at Hitchin. It was opened in 1892 in connection with the Metropolitan Association for Befriending Young Servants, and certified by the Local Government Board for twenty-four inmates. It is a training and laundry home and receives almost entirely girls who have been brought up in Poor Law schools and are chargeable to Metropolitan boards of guardians. It tends to become a permanent home. Miss Poole, the Secretary of the Association, said:—

The Scott Home. Poole, Vol. II., 13545. p. 147, col. 2. p. 148, col. 1.

> "We keep the girls in the home for a good many years. There is practically no limit [of age]. . . . We have girls over twenty there now. We place out all we can

Poole, Vol. II., 13571, 13572.

The Scott Home —*contd.*

> safely trust in service, and at present we do place some as to whom we have anything but a certainty of their doing well, simply because they can earn a living; their manual power is sufficient and we do not think it right to make them chargeable on the Poor Law, and indeed we want the vacancies in the homes."

Poole, Vol. II., 13545, p. 147, c. 2. 13580.

The results stated in figures were as follows:—114 girls have been admitted to the Home. Of these forty-seven have been placed in service; of them twenty-eight were doing, most of them, well, some fairly; and many had been in service for long periods—for four to as many as ten years; thirteen had fallen, several of them after doing well for two, three, four, and five years; six had gone to friends or been lost sight of. Of the remainder fourteen had been returned to friends, twenty-five to the Poor Law, and two to other homes, and two had died. In the home twenty-four still remained.

Vol. II., 13571; 13593-13594.

The home is maintained by a payment of 6s. a week for each case sent by the boards of guardians, *plus* the profits on the laundry and private contributions.

The Alexandra House: The Handford Home.

496. The Alexander House at Hammersmith, and the Handford Home at Ipswich, further illustrate the position.

Townsend and Jefferies, Vol. I., 3903, p. 231, col. 2.

The Alexander House accommodates eighteen girls and three matrons. The greater number of the girls are sent by the Metropolitan boards of guardians, who pay 10s. a week, as against the weekly cost, which is 11s. The girls are taught sewing, house and laundry work, but no profits are made on the laundry; the balance is made up by subscription. Since 1897 sixty-nine girls have been admitted to the home, fifty-one have left; and of these "seventeen have been sent to service, out of whom nine are still under supervision, earning on an average 2s. 9d. weekly and their board." Admission to the home is from the age of fourteen. The home is certified by the Local Government Board.

p. 232, col. 1.

The Handford Home, also certified, receives girls from the age of eight to eighteen at a weekly charge of 6s. The cost is 7s. and the difference is made good by subscriptions and laundry earnings. The girls are taught house work, laundry work, and sewing, besides rug-making, basket work, etc. The younger children receive regular school teaching. In 1898 the home was enlarged, and in 1902 an "overflow home" was added. There is now accommodation for thirty girls. The girls' ages vary from seven to twenty-seven; three are over twenty, thirteen between sixteen and twenty, nine between twelve and fourteen, five are under twelve. Of the thirty girls, twenty-three were sent by guardians, five by friends, and two by parents. As to results. Fifty-four girls have left the home; and of these fourteen have been sent to service, twenty returned to friends, eight to Poor Law guardians, eight to other homes, three to asylums, and one has died.

The Morpeth Home.

497. Notes in regard to the Laundry and Home of Industry at Morpeth and the Elizabeth Barclay Home of Industry at Bodmin will further define this group of homes and its limitations.

Pease, Vol. II., 15060, p. 232, col. 1.

Townsend and Jefferies, Vol. I., 3903, p. 227.

The Morpeth Home was established with the aim of saving the young girls who were too old to stay on in the workhouse schools from drifting into the able-bodied wards of the Newcastle workhouse. It is certified by the Local Government Board, and receives girls from twelve years of age at a charge of 6s. a week. It has accommodation for fifteen girls.

Pease, Vol. II., p. 237, footnote to col. 1.

As to the cost. "The gross cost of each of the fifteen girls is £31 12s. per annum, or 12s. a week." The profit on the laundry is £246. This, credited to the girls, makes the net cost £15 4s. per annum, or 5s. 10d. a week. If credit is taken for everything, including guardians' payments and subscriptions, the result shows a surplus per girl of £8 4s. per annum, or 3s. 2d. a week. At present this credit balance is being used to pay off a mortgage on the building, which is being largely reduced year by year.

Pease, Vol. II., p. 232, col. 1 and 2.

Miss Pease, who was one of the founders of the Morpeth Home, says:—

> "The home has proved a great and growing success. I do not think that any girl who is really feeble-minded ever is cured; yet they become happy and useful—very different to the miserable, dull, pathetic creatures they were formerly. Most of these girls can be kept in homes without compulsion, for the tendency to escape is not great; but there are a few for whom forcible control is necessary. We have had thirty-four inmates; five have been in from the beginning, seven have been returned to the workhouses because they have been too violent, or had fits, or been too depraved; three have died; two are in asylums; three are in service with kind mistresses who look after them; and we have two younger girls who in two or three years will probably be able to go out; only one girl has been entirely lost sight of."

"I believe that in a home like ours where we are supposed to take improvable cases, there will be a small percentage of girls, who, under careful and kind supervision, can earn their own living outside a home, but it is most anxious work placing out these girls, and I should much prefer keeping them under care and letting them go out for the day and return at night to the home. We have done this with great success in two or three cases. Sometimes a girl who has been steadily improving in the home when she goes to service slowly deteriorates. The girls notice this themselves. At a treat we had last summer I asked a mistress to allow an old girl to come for the day, and her young sister who is at the home said to me, 'Our Lizzie is not as bright as she used to be.' Good food, regular work, and living a good deal in the open air, does improve the girls in a wonderful way, mentally as well as physically, but our experience goes to prove that for the majority permanent care is needed, either in homes such as ours where the girls will stay voluntarily, or in colonies or in custodial homes where there is compulsory detention. The Morpeth Home—*contd.* Pease, Vol. II., p. 232, co's. 1 and 2.

Five of our girls have been taken away against the strong wish of the committee. Guardians and relations come to the home and see the girls apparently new creatures, doing their work well and perfectly happy; they consider that they are cured, and are capable of going out in the world, and of earning their own living, or of being useful at home. No one can judge the mental capabilities of a girl from an afternoon's visit; they may be perfectly good and almost normal for three or four months, and then suddenly lapse, have violent attacks of temper, when they are a danger to themselves and the other girls; or they have fits of sullenness, when nothing can be done with them; sometimes they become almost imbecile. When the girls are seen at their best the guardians or relations insist that they shall go to service; they are taken away, and the work of years is undone, for sooner or later the majority of those taken away drift into crime, or find their way into the maternity wards of the workhouse, and in the end are a much heavier burden on the community than if they were allowed to stay on in the homes at the moderate charge to the rates of 6s. a week. One of our girls whose father insisted on taking her out two years ago, had a baby last spring. We need powers to protect our girls from relations such as these. It is miserable to think of the ruin of this girl; she was an innocent and happy child two years ago and now there is no end to the sin and misery before her. If we can keep and safeguard these girls we shall at least relieve the rates from the keeping of illegitimate children. I am quite certain that the majority of them are happier as well as safer under control. . . . Laundry work is especially suitable for feeble-minded girls; they enjoy it and do it well, and live contented, happy lives, instead of being a source of misery both to themselves and to the world at large. It is always a pleasure to me to visit the home, and to feel that there are fifteen girls living simple useful lives in safety. They ought to be protected from the misery and temptations which they fall into when they have the power of asking for their discharge in the workhouse.

I am connected with a training home for ordinary girls, and there are a number of feeble-minded girls who come into these homes. Several have been passed on to us at Morpeth. One girl had been in two different training homes, and had been a great source of trouble and annoyance in the homes, and when she went to service the secretary at last wrote to me saying that the doctor felt she was feeble-minded, and not responsible for her actions. I suggested that she should come to Morpeth, and it certainly has proved the right step; she had been a total failure in service, but with us she has been good and happy, and works well, but I do not think that she will ever be fit to earn her own living outside the home."

498. The Barclay Home of Industry was established to provide for feeble-minded girls who could not be certified as imbecile, and who might otherwise "come into the workhouse over and over again in trouble." They were to be admitted "from the age of fourteen, cared for, and if possible trained for service, or, at all events, trained to some useful work." Since 1903 the home has been certified by the Local Government Board for twenty girls. The Barclay Home. Sterling, Vol. II., 14377, p. 190, col. 2.

As to cost and charges. The charge for girls from Cornwall and Devon is 5s., 7s. from other counties; but in several cases the payment asked of the Poor Law guardians has been reduced from 5s. to 4s., 3s., and 2s., in view of the increased earnings of the girls for whom they pay. The cost of maintaining the children is about 14s. a week, all told, and in some cases 3s. is earned by the child, reducing the cost to 11s. For the laundry work £344 was taken, as against laundry wage and expenses £150. The site of the home was given by friends, and the present house was built by trustees out of a sum of £2,000 left in part by Miss Barclay for charitable purposes. Sterling, 14377, p. 192, c. 1. 14384. 14385. Vol. II. p. 192. col. 1. Vol. II. p. 191, cols. 1 and 2. rling, Vol. p. 190, c. 1.

The general results are summed up in the following paragraphs:—

"Our experience shows us that very few of those sent to us can ever be able to earn their own bread. We made the mistake at first of sending them out too freely, though never without selecting their places as carefully as we could. We find that many can be trained to do good work in the home under constant supervision (our principal industry is laundry work); that they fall back and probably get into trouble after being sent out into any kind of service."

The Barclay Home—*contd.*
Sterling, Vol. II., p. 191, cols. 1 and 2.

"Of those that have passed through our hands I may mention that four have had to be moved on to the asylum, thirteen have been failures, six are doing fairly well in places, and nineteen or twenty remain in the home. . . Dr. Francis Warner, who came down to Bodmin on purpose to advise us, points out that unless we keep on teaching and waking them up, all our girls are liable to slip back. The lessons in such simple matters as the time of the clock, the value of coins, the writing of a short letter and so on, have to be repeated over and over again. Indeed the chief need we have in all the members of our staff is cheerful patience.

We have tried as industries rugmaking, knitting, etc., but in the long run we find laundry work the most satisfactory, as there are different parts in it suited to differing capacities, and under our three laundry matrons we can get the girls supervised and helped on gradually; moreover, there is a constant demand for the work, and the need of care, promptness, and punctuality means a continual discipline and education. We are this year making the experiment of engaging a trained teacher of the Swedish physical exercises, as we desire to test what they can do for the development of mind and body among these backward girls.

We try to select the most improvable cases from among the numerous applications sent us, although we are fully aware of the crying need of such institutions as exist in the United States for what they call 'custodial cases.' But in such a small home as ours, carried on as far as possible on the lines of a family, we are bound to concentrate on a particular class and to do our best to keep raising their level. We admit no girls who have lost their character, and we try to select those who have passed some school standard as evidence of their teachableness. As a rule the girls improve distinctly in health and brightness under regular management and with good food and healthy conditions, but the disappointment comes when they slip back into bad habits, which is sure to happen unless constant pressure and discipline are maintained."

Conclusions in regard to Homes for Improvable cases.

499. The experience of the managers and promoters of these homes for feeble-minded children shows that it is of the utmost importance that training should commence early, and that in permanent homes or otherwise a sufficient outlet should be provided for persons who have been trained at training homes.

Early training of children necessary.

500. At most of these homes children are admitted at fourteen or after school age; but it is very important that their training should begin much earlier. Thus of the Upshire Bury Home for boys it is said: "The difficulties it has to contend with arise from the late age at which the boys' training begins."

Townsend and Jefferies, Vol. I., 3903, p. 231, col. 2.

And Miss Poole, the Secretary of the Metropolitan Association for Befriending Young Servants, says:—

"All children noted as feeble-minded should, at the earliest possible time be put in the way of receiving special education suitable to their mental capacity. It only makes a dull child duller to leave it in the infants' room long after the proper age. As early as possible the children should be moved from school to an industrial home or school, there to be taught the trade or employment by which they are most likely to prove self-supporting. Habits of industry cannot be inculcated too early. It tries their feeble brains less to work with their hands than to learn lessons."

Poole, Vol. II., 13456, p. 148, col. 1.

Experience of the Clapton Home led to girls being admitted at any age, and Miss Bartholomew, the Honorary Secretary, says:—

Bartholomew, Vol. II., 16430, p. 307, c. 2, and p. 308, c. 1.

"As regards the moral imbecile, I believe that if the defect were recognised early in life and the child brought up in a small home, not containing more than sixteen to eighteen inmates, it is possible that a conscience might be at least partially developed, and the years of training would certainly form habits of order and industry."

In speaking of the homes of the National Association for the Welfare of the Feeble-minded and of the Handford Home, Miss Townsend and Miss Jefferies say that:—

Townsend and Jefferies, Vol. I., 3950.

"The bulk of the girls would not be able to take care of themselves, would not be able to go without supervision, unless the training is begun very much earlier. I think a very great deal depends upon that. . . . . There has not been time to tell with the younger children at present," Miss Jefferies adds, "with the older ones certainly it is so."

Miss Pease, one of the founders of the Morpeth Home and a Poor Law guardian, says:—

Pease, Vol. II., p. 233, cols. 1 and 2.

"I think that it is necessary to have boarding schools as well as day schools, because in them there is more hold on the children, attendance is longer and more regular, and the teaching and supervision far superior. It is important to take the children from bad homes; their attendance sometimes is most irregular, especially when the day school is far from the child's home. A woman came to see me the other day whose daughter had been attending the special class, and she had entirely disappeared for eight days; on the ninth night the police found her and she was remanded to the workhouse for a week. She had slept on door-steps or in open spaces all this time. She is a nice looking tall girl of eleven; if this sort of life continues she will be ruined, and as she is a naughty, wilful girl, when she does occasionally attend the day classes she has a very bad influence over the other children. She would be a different creature in a boarding school away from a bad mother and street life. The sooner the training begins the better. Our school has only so lately started that we cannot yet tell the results of systematic early training; some of the children only came when they were over fourteen."

501. Next an outlet is necessary for the homes for improvable cases if they are to do their proper work. These homes are for the most part filled by girls who, though able to earn enough by their work for their maintenance, cannot safely be placed out because of their absolute inability to protect themselves, and often because they are morally as well as mentally deficient. The girls have received all the benefit they are capable of receiving from the training given in such homes and now should be passed into some permanent home or colony in which they could remain for life and where, under favourable circumstances, they should be self-supporting.

Outlet necessary for improved stationary cases. Poole, Vol. II., 13546, p. 148, col. 1. Poole, Vol. II., 13572.

"The stationary class," the National Association for the Welfare of the Feeble-minded state, "is by far the most numerous, and may indeed be said to form the bulk of the inmates of the homes for older boys and girls and for adults. It consists of those who improve up to a certain point but then remain stationary or even go very slowly backward. . . They must be under permanent supervision, and it would be well that institutions should be established where they would earn their own living as far as they were able, and enjoy such a measure of personal liberty as was compatible with their condition."

Townsend, Vol. I., 3903, p. 230, col. 1.

Miss Sterling, Honorary Secretary of the Elizabeth Barclay Home, says :—

"We could do much more in training girls, if we could hand on those who are unimprovable. . . I am sure philanthropic effort would not reach custodial cases : they all go for the improvable cases, and want to see results."

Sterling, Vol. II., 14390, 14396.

Miss Townsend, who gave evidence on behalf of the National Association for promoting the welfare of the feeble-minded, says :—

"The girls in the homes are happy and contented, and rarely wish to leave, except that all cherish the hope of 'going to service,' some day. One girl has been in the home six and a half years, another six years, most of the present inmates between two and three years."

Townsend and Jefferies, Vol. I., 3903, p. 231, col. 2.

502. There is thus, apart even from the general insufficiency of accommodation, a great block of cases in homes in which the inmates were admitted as improvable, in the hope that, to a certain extent, they would be able to earn their own living in the world. But owing to this block not only are the homes full of inmates whom it would be desired to move into custodial homes, but girls have to be sent from the homes when there is often a very doubtful prospect of their doing well outside.

Block of cases in homes for the improvable.

Miss Poole, the Secretary of the Metropolitan Association for Befriending Young Servants, says :—

Poole, Vol. II., 13572.

"In regard to the Scott Home, we are always overwhelmed with applications so we place out those who we know can be self-supporting, though we feel they would be safer under continual supervision in some home. What we should like would be a kind of continuation home. The girls in our home are all looking forward very much to being self- supporting and going out to service, and we try to make them have a spirit of anxiety to support themselves. We should like to say to those who cannot be trusted out in the world by reason of their feeble-minded condition : 'We are going to send you to a nice laundry home, where you will be able to earn wages.' We should like to be able to take a house, have it certified by the Local Government Board inspector, and have it subsidised to a certain extent for the more feeble ones."

Miss Sterling said :—

Sterling, Vol. II., 14406,

"If there were custodial homes, it would be very much better, because your workhouse officials do not understand them—weak-minded girls—and have not time for careful supervision."

"After five or six years in a home a girl who comes in at fifteen and is then twenty or twenty-one, wants a change, she wants to go to another home. It is not advisable for her to remain in the same home for ten or twenty years. Our girls range from seven to twenty-one. It is most awkward to deal with them."

Jefferies, Vol. I., 4047.

Thus the block in the homes tends to promote the discharge of girls, who should still be under the supervision of a home, to spoil the utility of the homes as small centres for well classified cases, and to prevent changes in the home population, which are necessary for the mental and physical health of the inmates.

503. The homes serve chiefly as institutions auxiliary to boards of guardians who at a comparatively small charge obtain the advantage of a system which, if it were extended, would promote the care and classification of a large number of inmates quite unsuitable for maintenance in workhouses or as recipients of outdoor relief. The charges paid by boards of guardians in these homes are : Upshire, 10s. ; Alexander House, 10s. ; Handford House, 6s. ; the Barclay Home, 5s. to 7s., or less if the girls can earn part; the Morpeth Home, 5s. or 6s. ; the Clapton Homes, 8s. 6d. ; the Guildford Home for Boys, 12s.

The Homes are usually auxiliary to Boards of Guardians. Townsend, Vol. I., 3903, pp. 226, 227. 4218. Sterling, Vol. II., 14384. Pease, Vol. II., 15060, p. 232, col. 2. Townsend, Vol. I., p. 226.

Custodial homes and voluntary effort.
Townsend, Vol. I., 4069.

504. There is a general feeling that custodial homes could not be established by voluntary effort. "The number of homes has been stationary for the last three or four years." Miss Townsend said :—

> "I see no special reason why they (homes for the permanent protection and maintenance of the feeble-minded) should not be supported by the rates entirely, if they are at all. It is very difficult to carry on these homes without payment being made in full by the guardians. The public sympathy is not at all keen on the subject. It is very difficult to get voluntary subscriptions and donations."

4077, 4078.

Poole, Vol. II., 13545, p. 148, col. 2.

Miss Poole said :—

> If the home were an institution based on the rates, it would not be conducted so cheaply. "If such homes could be placed under efficient voluntary management apart from the Poor Law it would be much better for the inmates and less expensive to the community. The difficulty would be to find volunteers willing to organise and carry on such places. It would be very suitable work for sisterhoods and far more hopeful and interesting than penitentiary work. The homes should of course be certified and inspected by the Local Government Board, both to safeguard the inmates and to enable the board of guardians to contribute towards the maintenance of those who cannot be wholly self-supporting."

Sterling, Vol. II., 14396, 14415. Cf. McKee, Vol. II., 16144, and Grayson, Vol. II., 16948.

Miss Sterling said :—

> "I feel sure philanthropic effort would not meet custodial cases. I am inclined to think that the State should intervene in the case of the custodial institutions and that charity might bear the burthen of the more improvable cases."

Pease, Vol. II., 15076, 15082.

Miss Pease said :—

> "It would be very difficult indeed to raise the money for homes of this kind—that is at Morpeth. People do not notice the need in the country at all. . . I think the need is so great that voluntary effort cannot cope with it."

Bartholomew, Vol. II., 16430, p. 308, col. 1.

Miss Bartholomew said :—

> "It is not easy to establish voluntary homes, chiefly because of the difficulty in obtaining money for initial expenses. Charitable people do not, as a rule, take a keen interest in the question, and they do not readily understand, that although boards of guardians have power to pay for maintenance of feeble-minded persons over sixteen years of age in homes, they do not establish such homes themselves."

Possible use of voluntary work or resources in connection with public provision for the feeble-minded.

505. On the possibility of connecting the establishment of new homes or "colonies" more or less closely to charitable or voluntary work and resources, the following suggestions are made by persons connected with homes for the feeble-minded. Miss Dendy, Honorary Secretary of the Lancashire and Cheshire Association for the Permanent Care of the Feeble-minded, said :—

Dendy, Vol. I., 861.

> "It would be economically a very great saving, and I should like to point out to the Commission that we have large quantities of land in England that are going out of cultivation for want of labour. This land could be acquired probably at a very reasonable rate, and powers of detention would be all that would be necessary to enable charitable people or other people to care for these children in suitable ways. We have been trying in a small way to solve the problem at Sandlebridge, but anybody who knows what it means to have to collect £10,000 and then to keep a place of that kind going can see how enormously legislation would help, and how impossible it is for charitable effort to cope with the whole trouble."

Grayson, Vol. II., 17003.

Miss Grayson, Honorary Secretary of the Liverpool Ladies Association for the Care and Training of Girls, suggested that "if the State or the local authority and the Board of Education took it up, they could form committees with voluntary outside help, who might obtain subscriptions towards the maintenance, so that it would not be thrown wholly on the State." Mrs. Bramwell Booth, who gave evidence on behalf of the Salvation Army, proposed that the capital for building or suitable buildings should be provided, and the rent, rates and taxes met from public sources, that the institutions should be subject to State inspection, but that they should be Salvation Army institutions in which the Army should receive cases on payment of 1s. a day. Miss McKee, President of St. Marylebone Workhouse Girls Aid Committee, speaking of London, thought that homes for feeble-minded girls from the maternity wards of workhouses should be established by the Asylums Boards, or some body of that kind, as part of the general administration of Poor Law relief. But Miss Townsend, agreeing to the suggestion that the guardians or some local authority might make a grant towards the capital expenditure thought that this should be conditional on there being "a good body of managers who were not guardians."

Booth, Vol. II., 14117, 14118.

McKee, Vol. II., 16145.

Townsend, Vol. I., 4113, 4114.

II.—Homes for the Permanent Care of Children, Working Women and Girls.

506. Of the permanent homes six, perhaps, may be mentioned as of special interest from the point of view of the light they throw on the problem of the care of the feeble-minded. They are Miss Stacey's Homes near Birmingham, and Miss Grayson's at Parkgate, near Liverpool; the Coningham Road Home, and Miss Wemyss' Home at Painswick; and lastly the Sandlebridge Boarding School set on foot chiefly by the efforts of Miss Dendy, and the Institution at Sandwell Hall, West Bromwich, founded by the Rev. H. N. Burden and Mrs. Burden, where the principle of permanent care has been most absolutely and adequately accepted. Townsend, Vol. I., pp. 226–227.

507. The Laundry and Home of Industry near Birmingham have been established for girls over fifteen years of age. One contains accommodation for twenty inmates, "pure-minded and innocent young women needing a permanent home;" the other contains accommodation for twenty-five "young women who have had a first fall, and though not depraved, need a permanent home." The homes are approved by the Local Government Board and the charge is 6s. a week. The Birmingham Homes. Vol. I., 3903, p. 226.

As to results :—

> In twelve years, 101 cases have left the homes. Of these only *two or three* are reported to be doing well, so that the work of these homes if regarded as "Training," can hardly be said to be satisfactory, and neither is it satisfactory as permanent care, for only four of the original inmates admitted to those homes are now inmates. . . . With the exception of the two or three above mentioned *none* of the 101 girls who for one or other reason have left or been discharged were really fit to return to ordinary life, but they should all have been kept under restraint and supervision. Pinsent, Vol. II., 19148, p. 466, col. 2., p. 467.

The average weekly cost per inmate is at the one home 9s. 4½d., at the other 8s. 2½d. The earnings of the girls in the industrial departments—the laundry and the rug-making produce a nett profit of 1s. 11¾d. in the one case, and 2s. 4¾d. in the other. The actual cost of the inmates is thus 7s. 4½d. in the one, and 5s. 9½d. in the other home. These figures include rent and all other expenses.

508. At Liverpool, experience connected with a preventive home for girls over fifteen years of age showed that "the majority" of those admitted were "failures," sinking, more or less, rapidly into the lowest *stratum* of society; and it appeared that the fault "lay not in the home but in the girls themselves—they were feeble-minded"—that is, they were "so far of weak mind as not to be able to look after themselves"; they were lacking in "will power." As in the case of the Clapton and other homes, it was hoped at first that the girls after two or three years' training might be trusted out in the world, if placed in carefully selected places. It was found, however, that permanent care was absolutely necessary. There are two homes now, one for the permanent care of higher-grade defectives, admitted over fifteen years of age; one for the permanent care of lower-grade defectives of fourteen years of age. At each, there is accommodation for twenty cases; at both, there is laundry work. The Liverpool Homes. Grayson, Vol. II., 16933, p. 343, cols. 1 and 2. p. 343, col. 2.

In the "higher-grade" home, it appears that out of seventy-five inmates that have been admitted between the year 1892 and the end of 1904 twenty are still in the home, and have been there, many of them, for long periods. Of the rest, eleven have been placed out in service, of whom six are doing well; six have been sent to other homes, two as paid girls; twenty-four have been sent away as insane, fallen, or too feeble; eight have been taken away to relatives; one ran away; and four died of consumption. p. 346.

In the "lower-grade" home, established in 1898, the results in regard to those who have left or been discharged are still less satisfactory. p. 348.

In 1904 the average weekly cost per inmate at the higher-grade home was 12s. 6d., including rent, sinking fund for mortgage and all expenses. The laundry earnings amounted to £540; and by these earnings and individual payment for individual cases, *plus* about £21, the home is supported. The guardians pay about 6s. for cases. The inmates in the lower-grade home cost 13s. 9d. weekly, and the laundry earnings amount to £387; but about £100 has to be raised by private subscription to meet the annual deficiency. p. 347. p. 346. 16939. p. 348. 16944

509. Miss McKee, the President of the Marylebone Workhouse Girls Aid Committee, gives the following account of the Coningham Road Home for women and their infants, admitted chiefly from the maternity wards of Metropolitan workhouses. The Coningham Road Home. McKee, Vol. II., 16051, p. 292, cols. 1 and 2.

> "The Coningham Road Home was started in 1902. Eighteen girls have been admitted in three and a half years, the majority being from Metropolitan workhouses. Ten are still in the home, which is full. Two of these have been there from the commencement; six had had two children, and one, four or five. Five were under twenty-one

The Coningham Road Home—*contd.*

McKee, Vol. II, p. 292, cols. 1 and 2.

years of age, the others respectively twenty-eight and twenty-nine. Of the remaining eleven, three were very young, seventeen were of the age of seventeen and eighteen. Two of the girls had suffered from syphilis, and their two babies died from this cause. One girl only has been removed by the parent. The others had to be discharged for various reasons: one showed marked symptoms of insanity, and after being under supervision in a workhouse was sent to Colney Hatch. Several of the others were very unmanageable and as the demands on the home were greater than could be met undesirable cases were sent away to make room for more suitable ones. Two girls only have run away from the home; one returned of her own accord in a few hours, and the other took refuge in a workhouse and got so tired of scrubbing that she was only too glad to get back. The babies of both these girls were dead. Most of the girls in the home have come from very poor surroundings and are of a low type. Their parents are, as a rule, unsatisfactory. Two girls are reported to us as having been brought up in workhouse schools, and one only as of illegitimate birth. The children (eight) all under four years of age, have improved wonderfully with care, attention and proper feeding; two are considered by medical experts to be fairly normal, the others have neurotic and other unfavourable tendencies. We have been able to glean little information, if any, about the putative fathers of the children—the girls seldom know their names, they are, as a rule, 'loafers' who easily disappear, and the guardians do not follow them up for affiliation purposes, presumably because there is not sufficient evidence of paternity. The prevailing characteristics of these girls are—obstinacy, sullenness, untruthfulness, want of self-control, mental and physical, and laziness. It is, however, surprising what improvement *judicious* training (of which previously they have had little or none), regular hours, plenty of sleep, good wholesome food eaten at stated times, constant and varied employment, but not excessive work, makes in the girls; but I fully realise that this improvement is not sufficient to keep them safe from temptation if they were out in the world. I am convinced that if all our girls had to try and earn their own living and support their babies they would soon succumb again. Their work is not good; they are slow, clumsy, and careless; they require constant supervision, more than they could or would get in service; few mistresses of the better sort would put up with them as servants. One reason I assign for the little trouble we have had in keeping the girls is that we have not taken in laundry work, as is so usual in homes, and that, therefore, they have not been kept at the wash-tub and ironing-board from Monday morning till Saturday night. 'Feeble-minded' and morally weak as these girls are, they are sharp and cunning enough, most of them, to know when they are earning money; they are not keen in working for other people with no money for themselves, but are content to go on quietly doing the domestic work of the house—washing for the household, needlework, etc."

Vol. II., 16108.

Vol. II., 16101, 16152.

The experiment which the home represents is considered to have proved that, in the case of feeble-minded women leaving the maternity wards of workhouses, it is best for both mother and child that they should keep together; that the mothers can be employed, and will improve in small homes under strong personal influence, and that the children should attend the regular elementary school in the neighbourhood while the mother continues in the permanent home.

Townsend, Vol. I., 4023.

Another view is that there should be:—"A probationary home from which the women and babies should be drafted into the country—bringing up the children apart from their mothers, but to be in some touch with them until they are of an age when it could be definitely tested whether they are feeble-minded or not—at six or seven years old. Then they could be dealt with by the guardians."

Vol. II., 16081–16088.

The cost of maintenance is 10s. a week for the girls and 5s. for the babies: it is provided almost entirely by the payments from Boards of Guardians. The home is approved by the Local Government Board.

St. Mary's Home, Painswick.

510. Of St. Mary's Home at Painswick, a "permanent home for women and girls," Miss Wemyss says:—

Wemyss, Vol. II., 18505, p. 430, col. 1.

"The home began (1890) in a very humble way with only one inmate; at present it contains from thirty-three to thirty-six, of all grades of capability. The work done includes laundry, chair-caning, knitting rubbers, dressing dolls, besides the ordinary household work, and cooking. All are busy, from the skilled laundress to the poor defective who can only turn a washing machine and peel potatoes or knit rubbers; each gives the best of her service, and each one earns a wage in proportion to the value of her labour. By this method even the feeblest worker feels that she is of some use, and has the gratification of buying her own clothes, and contributing to her own little charities and pleasures, whilst the skilled, well paid laundresses have the joy of knowing that their work is helping to provide these great blessings in life, a good and peaceful home, and happy and useful employment not only for themselves but also for their weaker sisters.

Vol. II., 18538.

"The house is an ordinary one; two or three thrown into one. It is not very convenient, but it is the best we can have, and it answers its purpose. They do not live in an expensive way. They all live in the same way, and the amount spent on them is not great, yet I know it is sufficient, for nobody has ever complained.

Vol. II., 18528, 18529.

"The staff consists of a superintendent and an assistant matron in the house, and a cook matron and a workroom matron; and in the laundry a superintendent and six experienced laundry maids; and for outside work two men. The feeble-minded do a great deal, because they do the whole of the housework; they help in the cooking, so that they leave the laundresses absolutely free to do the whole of their work, so that it

Vol. II., 18543.

nyss, II., 3, 18526.

gives them a great advantage. Thus the inmates themselves earn very little indeed. The whole earning of the home, added to guardians payments, comes to 16s. or 17s. a head." St. Mary's Home, Painswick—*contd.*

Taking the series of years from October, 1896, to October, 1904, the receipts on the industrial work were £7,541, the expenditure was £7,538, so that the home in these years just paid its way. It is "maintained by its own industry, except the payment from the guardians." "It is about two-thirds maintained by having experienced workers in the home, working with the inmates." Nearly all the cases are workhouse cases. Wemyss, Vol. II., 18532, 18513.

This home is distinctive in several ways. It is supported by the recognised association of strong and capable women, who are paid wages, with the feeble-minded, who also earn wages in proportion to the value of their labour, on the understanding that the net profits of the common work should maintain the feeble. It has also been from the first a permanent home.

511. The boarding homes for boys and girls at Sandlebridge represent the most complete experiment for providing permanently for the feeble-minded. The aim of the homes is to deal with both boys and girls permanently. The Sandlebridge Homes.

Miss Dendy, Honorary Secretary of the Lancashire and Cheshire Association for the Permanent Care of the Feeble-minded, said :—

"Dr. Ashby, being physician to the Children's Hospital, has acquaintance in other ways with a great number of the poor mothers. I attend all his examinations of defective children, and in one way or another, we do arrive at a large number of family histories. We find the trouble quite as often handed down through the father or the father's side, of the family as through the mother or the mother's side of the family. Apart from that, we have this question; we generally know quite definitely who we have the children to deal with who are the children of feeble-minded mothers, but we very often do not know when we get the children of feeble-minded men. They do not come under notice in the same way as a woman—at every crisis of life the woman comes under notice but the man does not. As criminals and as paupers and as parents I consider that men are quite as dangerous as the women and very nearly, if not quite, as suffering. Dendy, Vol. I., 815.

The following is Miss Dendy's description of the establishment of these Homes :— Vol. I., 822.

"Perhaps you will allow me to go back a little way again to 1897. When I had seen these children and seen many of their parents I became quite convinced that to treat them only in day schools was, to a very great extent, a waste of time and money. I approached a few influential gentlemen in Manchester and put my case before them, and asked them if they would form a preliminary committee to enable me to take action. They were very good about it, and they did, and we formed a society which is known as The Lancashire and Cheshire Society for the Permanent Care of the Feeble-Minded, with the intention of getting hold of a certain number of children, and trying to prove that those children, in proper conditions, could be kept happily throughout their lives without hardship or forcible detention; though we should be very glad indeed to have powers of forcible detention. This society has about 500 subscribers and 300 members in Cheshire. It owns twenty acres of land, and we have built two schools, one for twenty-five girls, and one for twenty-five boys. We have accommodation there now for fifty children. We have great insufficiency of accommodation. We are about to build another school for fifty children, and the Cheshire County Council has entered into an agreement with us to take their defectives, and they are making us a grant towards our building expenses. We have, further, just arranged to rent a farm which is abutting on our premises, and which will, for some years to come, serve us as an overflow to put the boys in as they arrive at the age of sixteen or seventeen.

"We do not take in anyone over the age of thirteen. If we had powers of forcible detention we would take them in at any school age; but we find if we want to form their habits we must take them in young, so we take them in as young as we can get them, and we teach them that that is to be their home. The principle upon which we have gone is to hold it out to them as a reward that they may stay there if they are good and if they are naughty the chances are that they may get sent away.

"Our boys are now arriving at the age of sixteen, and they have never slept a night off the place since they have been there. Neither boys nor girls show the least restlessness. They are orderly and good. It is rather sad, in a way; you can manage them with a word; they are great big fellows now, working in the garden, some of them.

"We have two gardeners, two matrons, two deputy matrons, two teachers who teach the boys and girls in common in a little school which we have built outside both houses, and two servants. Besides that, we get a certain amount of voluntary help and this winter we shall have voluntary help from one of the Manual Instructors from the Manchester Education Committee, who, feeling that nothing could possibly be so good for defective boys as his own work (woodwork), volunteered to come down on Saturday afternoons, and teach these children all through the winter if we liked to accept his services. We shall have them at the benches all through the winter when the more delicate of them would not be able to be at work in the garden.

The Sandlebridge Homes—*contd.*

> "The results of putting these children into boarding schools are simply wonderful Boys who could not button their own clothes, and could not feed themselves decently when they came down, behave now quite absolutely nicely; they not only button their own clothes, but when the buttons come off, they go to their mother, as they call her, to fetch needles and cotton to put the buttons on. They knit their own stockings and knit all their own vests; they do a great deal of garden work and a great deal of cooking; they are making their own night shirts and, in fact, doing everything that girls usually do. As far as possible we are getting girls to do what boys usually do, so as to afford as much variety of occupation as we can. We have a little more difficulty with the girls, but not on the point of restlessness; simply they are rather more imbecile, taking them all round, than the boys. I have my meals with the children when I go down to stay the night, and they behave at table quite like little ladies or gentlemen. It is quite enough for the matron to say that she will 'tell Miss Dendy.' It is the utmost punishment really that is necessary, even for the big ones. They are as easily guided as little children, and their delight in the place is delightful to witness. We have pigs, poultry, cows, and sheep, and we have had corn and so forth this year. All those who are able put a hand to everything that goes on on the little farm; and every fresh event makes a fresh desire to stay.

Dendy, Vol. I., 971.

The boarding schools were built privately by the Lancashire and Cheshire Society for the Permanent Care of the Feeble-minded, but the society works in conjunction with the education authority, not only of Manchester but of Salford. The Cheshire County Council entered into an agreement with the society to supply twenty-five beds for Cheshire children on the receipt of a loan for £2,000 granted on the understanding that, in the event of the homes at Sandlebridge being closed, the loan should be repaid subject to certain deductions. "The society undertakes to give the council the first choice of so many beds, but does not pledge itself to keep them vacant." The Manchester and Salford school authorities and those at Bolton and Blackburn contributed towards the furnishing of the schools.

99.

1140.
1118.
1122.
1129.
1126.
1119.

The children at Sandlebridge cost £20 a head per annum, exclusive of charges for land and buildings. The £20 includes clothing, teaching, everything. The staff consists of two matrons, two teachers, two assistant matrons, two servants and two gardeners. There are fifty children. The buildings last erected, which are of an excellent class, cost £112 a bed; the next being semi-detached were estimated to cost £80 a bed. "The cost of food is 3s. 8d. a week. We feed them largely on what they grow themselves in the place. They get a little meat, but not a great deal."

Dendy, Vol. I., 824.

1140.
1131-1135.
1108.

Up to sixteen years of age, the education authorities pay for the children —contributing authorities £20, non-contributing authorities £25. The guardians pay £25 a year. Of children who have left at sixteen, Miss Dendy says:—

> "In Manchester at present we have only had five leave us at the age of sixteen There were two girls, and in each case I got the Union (in one case the Manchester Union, and in the other case the Chorlton Union) to have those girls and send them straight to Miss Grayson's Home for feeble-minded girls in Liverpool. In one case the girl has remained there—it is over a year—in the other case the mother, a bad woman and feeble-minded woman, at the end of six months removed the girl, and she is now at large in Manchester. The other three cases were boys, all epileptic. One is working with his father, who is a joiner. As the poor man says, 'he will be all right as long as I live, but I should like to know what will become of him after.' In the other cases the boys are at large. One is suffering very much. He beseeched me himself to take him to Sandlebridge, but he was too big and dangerous."

Sandwell Hall, West Bromwich.

512. Sandwell Hall, West Bromwich, an institution for the training and permanent care of the mentally defective was opened on April 23rd, 1907. The warden undertakes the organisation and management and is assisted by a Council and Visiting Committee.

The objects of the Institution are:—

(1) To provide training for certain mentally defective children who are unable to benefit by day school education and require custodial care. These children may be shortly classified as follows:—

(*a*) Mentally defective children living in very bad homes.

(*b*) Mentally defective children whose regular attendance it is not possible to secure at a day school owing to confirmed truant habits, or to the fact that their parents are periodically moving from house to house.

(*c*) Mentally defective children known as moral defectives.

(2) To provide a permanent home for mentally defective persons who can never become capable of earning their own living or of leading an independent life

It is hoped that the inmates will remain in the Institution during the whole of their lives, and, with this object, simple industries have been provided for them, including market gardening, farming, boot-making, tailoring, carpentering, laundry-work, weaving, etc. After long and careful training it is expected that most of the inmates will eventually be able to earn something towards their own support. Sandwell Hall, West Bromwich. —*contd.*

Children are maintained at the Institution (1) By friends or parents (2) By education committees; (3) By boards of guardians.

The fees are as follows:—for children under sixteen years of age, £24 per annum; for those over sixteen years of age, £27 10s. per annum. The reason for the increase of charge for over sixteen cases is that the Institution receives no grant from the Board of Education for cases over sixteen years of age.

The Institution is certified by the Board of Education for 200 children and during the last six months more applications have been made than the Committee could deal with. Before the Institution had been opened a year, the number of admissions exceeded 150. The Institution was also certified on December 28th, 1907, by the Home Office as an industrial school for mentally defective children, since which date several cases have been received under the Industrial Schools Acts.

513. To pass from description to conclusions. The notes that follow supplement the conclusions that were drawn in regard to the Homes for Improvable Cases (paragraphs 500-505). They show how far the inmates of these homes continue to be able to maintain themselves in them, and they throw light both on the greatness of the demand for accommodation, combined with suitable supervision, and on the character of the relations between the feeble-minded and their parents—evidence on which proposals and suggestions that we make are largely based, though often without specific reference to these pages. Conclusions in regard to Homes for permanent care.

514. First of all a summary statement may be submitted. The general results, in the case of the Homes for Feeble-minded Girls, Miss Townsend reported as follows:— General Results. Townsend, Vol. I., p. 232, col. 1 and 2.

> "One of these homes was started in 1890, three in 1892, five in 1897, and one in 1903.
>
> "Six hundred and ninety-seven girls have been received into the homes, 422 girls have left. Of these: 102 were sent to service, 145 returned to friends and relatives, 124 returned to unions, thirty-two were placed in other homes, eleven in asylums, eight died.
>
> "The after history of these girls to October 1st, 1904, shows that only seventy-one are now wage-earners, average 2s. weekly. Seven have been sent to workhouses, ten have been sent to homes, thirteen to asylums, five have married, twenty-one have illegitimate children, thirteen have died."

It appears from this:—

(*a*) That of the girls who have left the homes, in regard to whom there are notes, namely 371, about 27 per cent. went into service, with what result does not appear. The evidence which is given above shows, however, that possibly about two-thirds of those placed in service do well or fairly well under supervision. Townsend, Vol. I., p. 232, c. 2.

(*b*) That about 39 per cent. returned to friends and relatives. This result must be read in connection with the evidence above—and probably in the main it cannot be considered satisfactory.

(*c*) That about 33 per cent. had to fall back on some form of custodial treatment.

(*d*) That the notes given in regard to 140 girls respecting whom there is an after history show that the girls (seventy-one) in service earn about £5 a year and their board and lodging, probably about as much as should be expected in the circumstances; and that of the remainder (fifty-six), excluding thirteen who have died, more than half had had illegitimate children.

515. Next, the demand for accommodation is very great, and that which is available is quite insufficient. Thus Miss Dendy says:— Demand for accommodation. Dendy, Vol. I., 843.

> "At Sandlebridge we have a long waiting list. . . I do not know of places to which to send children. I am constantly asked: 'Will you tell me where to send my child, I can pay so much and so much.' There is nothing but the asylum. If they are not bad cases you can get them into an asylum for a period of years. If they are bad cases the asylum will not look at them, even if they can pay, unless they pay very heavily."

Demand for Accommodation —*contd.*
Pinsent, Vol. II., 19148, p. 466, col. 1.
Grayson, Vol. II., 16935.
Poole, Vol. II., 13572.
Pease, Vol. II., 15087.
Wemyss, Vol. II. 18558.

The National Association for the Welfare of the Feeble-minded report that in six years they received 2,686 applications; and that of these, 217—ninety-one men and boys, and 126 women and girls—were received into their homes. Two hundred and thirty-eight were referred to other homes and agencies; 281 were over age; forty-four under age; 338 were written off "no vacancy," and for the rest—except thirty, "not in need of charity," and 555 "applications withdrawn or not carried further"—no provision could be made. Townsend, Vol. I., 3903, p. 229. Bartholomew, Vol. II., 16430, p. 308, col. 1.

Others give similar testimony—alike in regard to the need of accommodation for residential training Homes for the higher grade cases, where the inmates will remain for long periods or permanently, and for cases of a lower grade in regard to which a permanent home is, properly speaking, indispensable.

Charges for accommodation.

516. Next, as in the first group of homes, those for the more improvable cases, the payments which public authorities are asked to make for those admitted to the more permanent homes are very moderate. The smaller charges are made in homes where there is additional income from subscriptions or other sources and where the inmates, either owing to being adults or to their better mental condition, can contribute by their earnings to a more material extent towards the cost of their maintenance. Thus: Birmingham, for women, 6s.; Liverpool, for women, 6s.; Painswick, 5s. to 7s.; Sandlebridge, children and young persons, about 10s. per week; Sandwell Hall, from 9s. 3d. to 10s. 7d. per week. The cost would appear to be a little in excess of what guardians would pay to maintain the feeble-minded in the workhouse.

Townsend, Vol. I., 3903, 226.

Need of speedier decision by the authorities as to admissions to Homes.
Townsend, Vol. I., 4008, 4009, 4011.

517. In the case of women with infants admitted to the Coningham Road Home from the maternity wards of workhouses, it is stated that:—

> "Probably the larger number of the applications that have not been admitted were those who refused to come at the last moment or had left the workhouse. One great difficulty is that it takes so long to have them admitted, owing to the delays of the Local Government Board and the guardians, that they very often take their discharge before it is settled. Each case separately has to be referred from the guardians to the Local Government Board and the consent of the Board to be obtained in each individual case. The delay is often fatal."

Relation of the feeble-minded to parents.
Townsend, Vol. I., 4025.

518. In regard to the relation of the feeble-minded to their parents some experiences may be noted. At the Coningham Road Home for the feeble-minded mothers from workhouse maternity wards it is said:—

> "The affection of the mothers for their children has all to be manufactured by us, practically. In very few cases of feeble-minded mothers is there any real maternal feeling."

As to payment, Miss Dendy, asked whether parents could pay, said:—

Dendy, Vol. I., 1001.

> "Yes, I do think so. I hold very strong opinions about that. I judge rather from the fact that money is always forthcoming, if the parents want to have it forthcoming. For instance, I had a child sent down to Sandlebridge and the officer who collects the money for the Educational Authority, found great difficulty in getting something for that particular case, but the relations found no difficulty in coming down seven strong, and paying 1s. 11d. fare each to see the child. . We have children at Sandlebridge whose parents pay sixpence. . . We have one whose father is paying £25 a year—that is as much as we ask—and we have another who is paying 5s. a week and finding his boy in clothes. It is mostly from sixpence to a shilling a week that is asked. The officers tell me that they are fairly successful in getting it. . . . If pains are taken the money can generally be got."

Vol. I., 1003.

Vol. I., 1008.

As to relations with the parents when the child is trained, we quote the views of some of our witnesses.

Miss Townsend:—

Townsend, Vol. I., 4264.

> "If we put the elementary school children into boarding schools, the parents will be very quiet as long as it saves them the trouble of the child, but when you have improved the child and he arrives at the age of sixteen, I think the probability is that the parents will take him away for what he can do for them."

Miss Bartholomew:—

Bartholomew, Vol. II., p. 307, col. 2.

> "The great difficulty with which we have to contend is the absence of any legal control over the girls when they reach the age of sixteen years."

Miss Grayson:—

Grayson, Vol. II., 16953.

> "To go back to their homes is very bad both for the girls and the home."

Miss Sterling:—

Sterling, Vol. II., 14377, p. 191, col. 2.

> "Naturally the parents, being responsible, have been pressed to contribute to the payment for the girls at the home. The result we find is that after some months they get tired of paying and begin to think the time is come for the girls to earn. Of course, *as the law now stands* there is no power to keep the girls under care, and so we have to let them go when the parents insist; and almost invariably they are sent to service, where they break down and return in trouble to their parents or to the workhouse."

519. On the financial side, it may be noted that apart from the payment by local authorities for individual cases, the Cheshire County Council have led the way towards the subsidy of voluntary homes by its conditional loan of £2,000 to the boarding Homes at Sandlebridge.

Financial aid for voluntary homes from local authorities.
Dendy, Vol. I., 999.

520. The question of detention has already been dealt with. The managers of the voluntary homes, it may be said, are unanimously in favour of the power to detain being vested in some authority or otherwise made enforceable.

Necessity for powers of detention.

521. Some general statistics based on the work of voluntary homes may perhaps be usefully appended. Miss Poole states that out of 1,500 girls dealt with by the Metropolitan Association for Befriending Young Servants in three years, 120 were, according to a practical working analysis, considered feeble-minded.

Some general statistics.
M.A.B.Y.S.
Poole, Vol. II., 13599, 13600.

522. During the three years—1902 to 1904—inquiries were made of all the Magdalen Homes in England—numbering 284; answers were received from 100 homes or groups of homes. From them it appeared :—

Magdalen Homes.
Townsend, Vol. I., p. 232, col. 2.

> "That 14,725 inmates had passed through the homes in that period, and that of these 2,521, or about 16 per cent., were returned as feeble-minded. Of this number 588, or 25 per cent., had one illegitimate child, and 198 (or 8 per cent.) were known to have had more than one, making a total of 786 (or 33 per cent.) mothers of illegitimate children, among the feeble-minded inmates. . . Tested in local groups or by comparison of separate homes the proportion of the feeble-minded was shown almost invariably to be 15 or 16 per cent."

In regard to this general count it has, however, to be noted (1) that no direct medical evidence as to the mental condition of the inmates was obtainable; (2) that some allowance should be made for girls who drift from home to home; (3) that some have criticised the figures as below the actual number.

Of the Magdalen Home at Birmingham, Dr. Potts states that :—

Potts, Vol. II., p. 470, col. 1.

> "Of 100 consecutive cases admitted twenty-six were feeble-minded, seven were cases of moral insanity, one was epileptic, one was lunatic, and one was deaf and dumb;"

and he gives statistics generally confirmatory of this percentage from other homes for defective girls.

523. Speaking on behalf of the Church Penitentiary Association, Mrs. Ruspini said :—

Penitentiary and Rescue Homes.
Ruspini, Vol. II., 12693, 12699, 12701.

> "In the home I have we take about 100 girls each year and pass them through my hands. I say quite half are feeble-minded and feeble-willed—quite fifty per cent. in my experience of eighteen years. I find they go down as soon as they get out from the care of a home. They want keeping for life, many of them."

And Her Grace Adeline Duchess of Bedford, Vice-President of the Pimlico Ladies' Association, referring to a Rescue Home said that :—

Bedford, Vol. II., p. 327, col. 2. p. 328, c. 1.

> "In four years twenty-seven out of 106 cases that had been received were found to be decidedly deficient in moral responsibility and will-power—ten being deficient to a marked degree in mental capacity. A few may be trained for service, but, as a rule, they are quite unfit to be trusted without supervision. We usually refuse such cases.
>
> "Thirty-one cases out of an average of sixty-seven inmates might be classified as feeble-minded. Many drift, after two years of the utmost care, to asylums, the union or their old life."

Mrs. Bramwell Booth stated that out of 5,518 new cases admitted to rescue homes of the Salvation Army in the United Kingdom, it was found that 573 were feeble-minded. Of these 115 had had one illegitimate child, twenty-six more than one.

Booth, Vol. II., 14053, p. 174, col. 1.

524. Inquiries were made by the National Association for the Welfare of the Feeble-minded of 222 reformatories, industrial schools and voluntary homes for boys, and 288 for girls, in regard to the number of the feeble-minded. In the case of the boys, eighty-nine institutions replied; fifty-two saying that they had no such boys; thirty-seven that 126 such boys had passed through the homes. Of fifty-six of these notes are given: thirty-eight are said to be wage-earners; ten have been sent to workhouses, six to asylums, and two to prisons. In the case of the girls, forty institutions stated that they had no feeble-

Reformatory and Industrial Schools.
Townsend, Vol. I., p. 233, col. 1.

Reformatory and Industrial Schools—*contd.*

minded girls, forty-seven that 216 such girls had passed through the homes. Notes of 102 of these are given: fifty-three are said to be wage-earners; thirty have been sent to workhouses, three to asylums, three to prisons, and thirteen are known to have had illegitimate children.

Homes for waifs and strays.

Rudolph, Vol. II., 13018, 13020, 13022.

525. Rev. E. de M. Rudolf says that of children who have passed through the institutions of the Church of England Homes for Waifs and Strays, 10 per cent. are feeble-minded. This amounts to 1,100 defective children in twenty-four years.

> "Of these some drift into infirmaries—I am afraid a great many. Some come to grief altogether, possibly drift lower and lower until they drift out of life altogether."

CHAPTER XXVI.

Conclusions and Recommendations.

526. This survey of the two main groups of voluntary institutions for the care of the mentally defective, apart from cases of unsound mind, suggests several conclusions.

Need of new definitions of classes of mental defect.

Recommendation IV., below.

527. First, that there is a great need for a better definition and classification of cases of congenital defect. We have had placed before us evidence of a change in the use of the word "idiot." Once it meant the whole class of congenital cases. Now it has come to mean the lowest degree of congenital defect, of which the higher degrees are indicated by the words "imbecile" and "feeble-minded." In Recommendation IV. we have adopted these words and given them, as far as possible, a definite meaning.

Need of a single statute for the care and control of the mentally defective.

Recommendation II.

528. Next, it appears to us that the confusion which we have shown to exist between the terminology of the Idiots Act and that of the Lunacy Acts of 1890 and 1891 should be removed, and that it should be made clear what provisions are applicable to idiots and to institutions for idiots—or rather applicable to the congenitally defective and the institutions for them—and what to those of unsound mind, or, as they are now called, to lunatics; and we recommend that the Idiots Act, and the Lunacy Acts be remodelled and drafted in the form of a single statute, which should contain all regulations for procedure, certification and the supervision of institutions which it may be necessary to insert in an Act for the care and control of the mentally defective. Such an Act should contain provisions materially extending the powers of the central authority over institutions of all kinds for the mentally defective, and especially that adequate provisions respecting ill-treatment, or neglect, carnal knowledge additions to or alterations of buildings, rules and regulations, and mechanical restraint should be made applicable to all classes of mental defectives.

Necessity for asylums for "idiots" to specialise.

Turner, Vol. I., 10825.

529. Next, we are of opinion that idiot asylums which now receive all types of congenital mental defect should in some way modify their policy. The tendency of progress is towards the better analysis and more varied treatment of these cases. As this takes place, the function of the institutions in which they are cared for must in some measure be specialised. The same staff for supervision and control is not required for the two-thirds of their patients, who are probably for the most part unimprovable, as for the one-third who are improvable. It cannot be any great advantage, therefore, that they should be all housed under one roof. If the one-third may best be cared for in the colony, or (as several of the superintendents of the asylums prefer, an institution to a colony) in the farm and industrial sections of the institution, they should form practically a separate establishment. Separately, in all probability, they would be able to provide for themselves to a much greater extent. A less expensive staff also should suffice for them, and it probably would have to be a different kind of staff. What the precise form of their specialisation should be may possibly be different in different institutions. It was, for instance, suggested that the county council or some such authority

should take over the worst cases. This would lead to the better or the more improvable cases being received and retained at the present asylums. But where, as at Earlswood, there is a large *clientèle* of paying patients the institution might assume that function as its chief purpose. And at Starcross, which has already specialised as an industrial school for the improvable, the work might be organised still further on that basis. In any event, however, it is clear that specialisation on the part of the asylums is almost inevitable, if the differences of the several classes of the mental defective are more and more clearly appreciated and if it becomes usual to provide for them in different ways. This applies also to Homes for the feeble-minded; but they already represent an endeavour to deal with a particular class, the class that is not imbecile but "feeble-minded."

Necessity for asylums for "idiots" to specialise—*contd.*

530. Another conclusion the facts suggest. The change of title which the committees of management of the asylums have already introduced should we think, be continued and even pushed further. The word "asylum," as now used, appears to us misleading. It savours of the mere detention of extreme cases whether of lunacy or idiocy. If the institution be in effect a hospital, it would be better so to call it. If it be a training home, it would better that it should bear that name. Probably, indeed, the reorganisation of the functions of the present asylums and homes for the feeble-minded will involve a change in the nomenclature of these institutions. We think that this would be a great advantage, not only for the reasons we have given, but because it would coincide with changes in public sentiment, an important factor in the success or failure of dealing with the mentally defective.

The disuse of the word "asylum" in the title of the institutions suggested. Recommendation III.

531. Next, the suggestions of the Idiots Act, with other evidence, lead us to propose that the section under which only one medical certificate is required in the case of persons under the age of twenty-one, for whom parents or guardians desire to obtain admission to any hospital or institution or licensed house, registered for the care, education, training and control of idiots and imbeciles, should be extended. We recommend that this procedure should be applicable to idiots, imbeciles, feeble-minded persons, moral imbeciles, and to inebriates, epileptics, or deaf and dumb persons who are also mentally defective. We, also, recommend that the Committee should have similar power to that of a parent or guardian in such cases. And after twenty-one, we recommend that supervision and control may, with the consent of the Board of Control, be continued in the same manner.

Adoption of the system of the single certificate.

Recommendations IV. and LII.

Recommendations XXVIII. and XLII.

532. Thus, as we have elsewhere explained, we suggest the adoption of a local authority, connected with county or county borough councils on the one hand, and on the other with the central authority, the Board of Control.

Suggestions for the utilisation of the asylums and the homes for the feeble-minded as part of a common system.

On this local authority would be placed, according to our suggestions, the statutory duty of making, directly or indirectly, "suitable and sufficient provision for the care and control of the mentally defective in the county or county borough." And besides powers of building, purchasing, etc., subject to approval, they may use grants from the Exchequer "in any way they may think best for the well-being of the mentally defective, and may contract with any . . . public or voluntary agency or private person . . . . for the care, education, training, or maintenance of any mentally defective person." We suggest, therefore, a plan which will impose on the local authority the statutory obligation to make provision for this class, and which will place at its disposal funds for making contracts with voluntary and other institutions for the purpose. The method, on which voluntary institutions are chiefly financed at the present time—payment for individual cases—may thus become established and regularised, without the least administrative difficulty, and arrangements may also be made for its extension. It is admitted generally that voluntary institutions are economically managed, and that it is of great service to have at the disposal of the authorities and the community that personal work, endeavour and influence which is characteristic of it. We hope that, subject to the imposition of certain conditions, a large amount of help may in this way be forthcoming under the encouragement of the committees for the care of the mentally defective, and the Board of Control.

Recommendation XLII.

Conditions to be required of voluntary institutions.

Recommendations LIX-LXIII

533. If, where necessary, there is to be continuity of training and control—and that we accept as a fixed and inevitable principle—on the part of all voluntary homes, certain safeguards must be afforded. We propose that every institution should be registered and inspected, and should be required to appoint a medical officer, honorary or paid. This, useful in many ways, would greatly facilitate the transfer of persons from one institution to another, and their discharge.

Arrangements to avoid the clogging of special institutions by unimprovable cases.

534. Lastly, it is clear that all the institutions are clogged with cases of unimprovable mental defect, for which other and special provision should be made, unless they send their patients out, on expiry of their election term, as in the case of the asylums, or as in the case of the Homes, when they realise that further training is of no use. The result is either that the institution fails to be educational or that it becomes the passing abode of persons who leave it often only very partially improved, and who, when they return to the world, are quite unable to compete fairly with others or to take care of themselves. To meet this difficulty, of which the last two chapters afford ample evidence, we propose that there should be one authority in the county or county borough, which should have supervision of all institutions for the mentally defective, and be able, through its medical officers and by its annual survey of all cases, to ensure that the institutions should, as far as possible, be used each for its several purposes, and that those persons who require custodial treatment should be passed on to institutions fitted for them.

PART VI.

CAUSATION OF MENTAL DEFECT; DEFINITIONS OF CLASSES OF DEFECT; AND INVESTIGATION OF THE NUMBERS OF MENTALLY DEFECTIVE PERSONS.

CHAPTER XXVII.

The Causation of Mental Defect.

Reasons for, and extent of, investigation as to "causation."

535. In the reference upon which it is our duty to report, we are instructed "to consider the existing methods of dealing with idiots and epileptics and with imbeciles, feeble-minded or defective persons not certified under the Lunacy Laws," and "in view of the hardship or danger resulting to such persons and the community from insufficient provision for their care, training and control" we have "to report as to amendments in the law or other measures" that may be adopted to meet these evils. The widespread conviction which had been expressed by public bodies, charitable associations, and private persons conversant with the subject, that, under the existing laws, they were unable to provide the care, training and control that these persons required, was indeed a principal ground for the appointment of the Commission.

536. But perhaps the most important of our duties has been to consider the condition and circumstances of the class of "persons not certified under the Lunacy Laws." This class we provisionally defined as consisting of persons who were acknowledged to be suffering from mental defect, but whom, in practice, medical men were usually unwilling to certify under any of the existing forms of legal procedure; and inquiry has made it clear that the larger number of these persons are popularly described and known as "imbeciles" or "feeble-minded."

537. We endeavoured next to ascertain whether the exclusion of these persons from the operation of the existing laws was as unavoidable as it seems to be under the present practice of medical men; and after hearing a mass of evidence, which was submitted to us by many authorities of eminence and experience, we came to the conclusion that this was actually the case, and that it was necessary to make considerable changes in the law, if "imbecile" and "feeble-minded" persons were to be properly treated and controlled. This was illustrated especially by the present system of certification. Detention is usually a necessary part of "care" and "control"; but, before it can be enforced, certificates have to be furnished to prove that the case is one in which detention would be justified. This certification, it was amply shown in evidence, was, under the present procedure, applied to hardly any persons but those who were "lunatics" in the popular sense, that is, subjects of "acquired insanity"; or to those who were "idiots" in the popular sense, that is, persons in the lowest grades of mental defect. Certification was thus working so as to lead to the detention only of persons who, in accordance with popular phraseology, might be termed "lunatics" and "idiots," and to the exclusion of all other classes of mental defect from the benefits of segregation or detention in homes or colonies which might be of real service to themselves and to the community at large.

538. In the course of our inquiry we were satisfied that in this way a considerable number of persons for whom "proper provision for care, training and control" was necessary, were excluded from the operation of the law; and it followed that on this head we should make it our main object to recommend means (1) for providing appropriate care and training, and, wherever possible, individual improvement, and (2) for bringing under effective and suitable control persons of feeble mental powers who, left at large and without supervision, would be a danger and a heavy burden to the community and themselves.

539. While we were collecting information on these matters, we found it practically impossible, and deemed it undesirable, to exclude from consideration the great mass of evidence which was tendered to us in reference to the conditions and antecedents of mental defect, especially in the very large class of cases in which the evil dated from birth or from early life. Inquiries regarding the proper care and treatment of any disorder naturally involve the consideration of questions of causation and prevention; and, on these points, many of our

Reasons for, and extent of, investigation as to "causation" —*contd.*

witnesses held strong opinions. Accordingly, so far as it may be said to fall within the terms of our reference, we propose to deal with this branch of our subject in the present chapter.

540. An exhaustive investigation of the causation of mental defect is not within our province. We are not, as a body, specially constituted to undertake such a task, and perhaps the time has hardly yet come for a final pronouncement. We may fairly deal with the question, however, so far as to show the nature of the evidence that is forthcoming, its insufficiency as the basis of an absolutely final dictum on the subject, and its sufficiency as a general guide in practical administration.

541. In much of the evidence on causation terms were used without fixed meaning, in different senses by different witnesses, or in more than one sense by a single witness. This confusion has been no less noticeable in the medical than in the general evidence given on the important question of "Heredity," both before this Commission and at other inquiries of a cognate kind; and it seems to us to be desirable that this subject which forms an important part of physiology should be more specially emphasised than it now is in the medical curriculum. It is to this question of heredity that we now chiefly confine ourselves.

The relationship of "heredity" to mental defect.

542. Several witnesses dealt with the causation of all forms of mental abnormality collectively, including both insanity, commonly so-called, and mental defect dating from birth or early life; and, on this principle, without differentiation of terms, they ascribed a certain proportion of the whole sum of mental defects to "heredity." Others included in their purview of "mental defect," cases of mere "backwardness" in children, due to causes confessedly removable and attributed to heredity a corresponding percentage of "mental defect." Some used the word "inherited" in its strict sense and applied it only to transmissible traits which are innate and are of a like nature with ancestral traits, and not due to injury or disease acquired during gestation or after birth; while others attributed to the causal category of "heredity" all cases in which there was a history of any marked mental abnormality, or of nervous disorder of any kind among the more immediate ancestors. Others, again, whose experience or impressions led them to conclude that cases of mental defect occurred more frequently among the children of "tubercular" or "inebriate" parents than among the average population were apt to class under the "heredity" category those cases in which mentally defective children were the offspring of consumptive or drunken parents.

543. Apart from this loose and equivocal use of the terms "mental defect" and "heredity," another great difficulty has been the absence of any considerable body of statistics, showing, for instance, what number of mentally defective children are born in cases in which one or both of the parents are mentally defective, and, on the other hand, what number of normal children are born in these circumstances. Or again, where the parent or parents are normal what number of mentally defective children are born to them. In no country are there statistics available as to the number of children born with mental defect; and, to make a conclusive inquiry, it would be necessary to extend it beyond the immediate parentage of the persons adjudged to be mentally defective. This, under present conditions of administration and treatment, is practically impossible. It will thus be seen that, owing to the absence of necessary statistics, an absolutely conclusive reply, based on facts alone, cannot be given to the question whether a parent or parents who are mentally defective from birth are much more likely to have mentally defective children than are mentally normal parents. But though no such final reply may be given we may reasonably seek an approximate solution of our question in the detailed experience of qualified observers and in the contributory evidence of science.

Mercier, Vol. I., 6604, p. 363, c. 1 and 2.

See Chap. III.

544. There is a well-nigh universal agreement among witnesses, who appreciate and accept the term "feeble-mindedness" as indicating one of several degrees of mental defect, of which gross idiocy represents the lowest, that the greater number of these "feeble-minded" persons are mentally deficient from birth, though often the fact that mental defect exists is not discovered until later. And, further, it is agreed that, although by training some of these mentally defective persons may improve in a greater or lesser degree, most of them will remain unable to take their place in the world and to earn their own living without supervision or some external driving power. It is to the evidence offered to us respecting this class of case, rather than to that submitted to us in reference

Sherlock, Vol. I., 8905–8932.

to gross and very obvious forms of mental defect, that our comments on the lack of co-ordinated data as to causation are intended to apply. For undoubtedly, most of those who have great experience in the care and supervision of persons suffering from mental defect in these forms, such as "idiots" or "imbeciles," as described in Chapter XXVIII., state that in a very large proportion these persons are the offspring of mentally defective parents or are members of families in which other nearly related members are mentally defective.

The relationship of "heredity" to mental defect —*contd.*
Mercier, Vol. I., 6604, p. 364, col. 1.
Beresford, Vol. I., 5534–5546.

545. The evidence, however, reveals a marked difference of opinion in regard to the relative importance to be assigned to "heredity" as against what may be termed the influence of environment. Hence in respect to the causation of the large class of cases which in our Report we have designated as "feeble-minded" two opposing doctrines have been submitted to us. (1) According to the one, mental defect is spontaneous in its beginnings, and has a great tendency to recur in descendants, and thus is truly inborn and transmissible by inheritance. (2) According to the other, the evil influences of the environment are far more important than the innate and spontaneous defect of mental capacity; for, it is argued, they affect both parent and child, and include many adverse conditions incidental to intra-uterine existence. In the opinion of this second class of witnesses, therefore, mental defect tends not to be inherited, although some of them expressed a belief that not only is mental defect caused by external influences, but also that defect so caused tends to be inherited. The first of these doctrines is held, it should be said, by the large majority of witnesses.

Pinsent, Vol. II., pp. 463, 464, 465
Parr, Vol. II., p. 137, c. 1 and 2, 13,347, 13,348, 13,345.

546. Avoiding, as far as possible minute discussion as to the strictly biological aspects of the modes of hereditary transmission of mental capacity, and taking the word "hereditary" in this context as implying mainly the universal tendency of like to produce like, it would seem that this question is of practical importance to our inquiry in so far as any conclusions that can be drawn therefrom may support Recommendations made on other grounds for the indeterminate or permanent control of certain of the "Feeble-minded." There can be no doubt that feeble-minded parents do not and cannot bring up their children to be satisfactory members of the community. To this, those who are familiar with the home conditions of families where one, or both, parents are mentally defective, bear ample witness. Their children are often familiar from infancy with drink, crime, and all forms of sexual vice. Neglect and ill-treatment often render them physically infirm, and eventually, either as criminals or paupers, they have to be supported by the community. These reasons for permanent control are entirely apart from the question of direct transmission of mental defect, but in proportion as the probability be great of feeble-minded persons having similar offspring, the above-mentioned reasons for controlling them, in the interests of the community, would be strongly corroborated.

547. Among thirty-five witnesses (besides many others who have merely touched on the subject) who have expressed opinions on the part played by heredity in the production of mentally defective individuals, twenty-five attach supreme importance to the fact that in a very large proportion of cases of mental defect there is a history of mental defect in the parents or near ancestors. It is true that some of these witnesses include among cases of mental defect cases of acquired insanity, as well as cases in which, on the part of the parents, development of the brain has been defective from birth, and thus find support for their argument in a group of cases—cases of acquired defect or insanity—that lie outside it; and that others attribute mental defect in varying degrees to causes that lie altogether outside heredity, as we have defined it, as, for instance, to alcoholism or tuberculosis. Most of them, however, explicitly state their conviction that congenital mental defect is largely transmitted from parent to child; and many give large numbers of detailed and striking instances in support of this conviction.

Professor Sir T. Clifford Allbutt, K.C.B., Regius Professor of Physic in the University of Cambridge, says:—

Allbutt, Vol. I., 9156–9161, p. 533, c. 2.

> "I regard feeble-mindedness (if not accidental) as always hereditary, or in other words, it is a ratio of variation. I have never met with a case of manufactured feeble-mindedness apart from some accident either at birth or afterwards. . . . In a stationary population the prevalence of feeble-mindedness would be a calculable quantity; but in towns which have not stationary populations I should expect some diminution of it by mixture of strains." I do not believe in the existence of any transition between physical deterioration and feeble-mindedness. All arrested development is apt to run in families. I attach great weight to inheritance. Its influence is obvious to physicians in private practice; these know the difficulty of getting family histories which are worth anything. Feeble-minded persons are prolific; the thing can only be bred out.

The relationship of "heredity" to mental defect —*contd.*

Ashby, Vol. I., 9995, p. 580, c. 1, also 10058–10063.

Dr. Ashby, Medical Officer to Special Schools at Manchester, speaking from a very large and special experience, and using the term "amentia" as covering all grades of mental defect found in early life, says that :—

> "In at least 75 per cent. of the children with amentia that I have examined there was a strong probability that the amentia was hereditary and primary" (*i.e.*, spontaneous—not due to external influences.) He further says that he has observed no special tendency in the children of alcoholics or of women who suffer privation during pregnancy, or in those children who live in unfavourable conditions subsequent to birth, to develop "amentia."

Bedford Pierce, Vol. I., 10577, p. 611, col. 2.

Dr. Bedford Pierce, Medical Superintendent of the Retreat, York, stated from special experience that he considered heredity to be "by far the most important factor, and relatively more important in mental enfeeblement than in insanity."

Bevan Lewis, Vol. II., 11178–11181, p. 18.

Dr. Bevan Lewis, Medical Director of the West Riding Asylum, Wakefield, regards heredity in the strict sense as playing a very large part in the causation of feeble-mindedness :—

> "There is not the least doubt of it in my mind. I look upon feeble-mindedness as a germinal variation just as all 'variations' are."

Tredgold, Vol. I., 7281, p. 396, c. 1, 7343, 7345, 7351. Mott, Vol. I., 8015, p. 453, c. 2 and p. 454, c. 1, 8348. Bond, Vol. I., 8126, p. 465, c. 1. Kerr, Vol. I., p. 436, c. 1. Beach, Vol. I., 6937; p 383. c. 2, 7042–7043. Crichton-Browne, Vol. I., 5983, p. 329, c. 1. Beresford, Vol. I., 5530–5547. Scott, Vol. I., 4869. Parker Wilson, Vol. I., 4489. Sherlock, Vol. I., 8830, p. 514, c. 1. Smalley, Vol. I., 3542.

Dr. Tredgold, Physician to the Littleton Home for Defective Children, from an extensive study of the antecedents of mental defectiveness, states that over 80 per cent. of cases are connected with neuropathic inheritance, the remainder being due, in his opinion, to causes such as alcoholism or tuberculosis incident on the parents ; or to other influences affecting the children themselves. He has never seen a normal child born of two feeble-minded persons.

Similar evidence, with numerous cases adduced, was given by Dr. Mott, Director of the Pathological Laboratory of the London County Council ; Dr. Hubert Bond, Medical Superintendent of the County of London Colony for Insane Epileptics ; Dr. James Kerr, Medical Officer (Education) to the London County Council ; Dr. Fletcher Beach, who gave evidence on behalf of the Royal College of Physicians ; Sir James Crichton-Browne, one of the Lord Chancellor's Visitors in Lunacy ; Dr. Beresford, Medical Superintendent of Tooting Bec Asylum ; Dr. Scott, Medical Officer, His Majesty's Prison, Brixton ; Dr. Parker Wilson, Medical Officer, His Majesty's Prison, Pentonville ; Dr. Sherlock, Medical Officer of Belmont Asylum ; Dr. Smalley, Medical Inspector of the Prison Commission ; and several others.

Vol. II., p. 569.

Lastly we may quote the evidence of Mr. Frederic Wilkinson, Director of Education, Bolton Education Committee, to the effect that in almost every case when parents of mentally defective children appeared before the committee or before magistrates, it was found that the parents themselves were similarly afflicted. He gives an interesting list of cases medically noted in support of this statement.

548. The ten witnesses remaining out of the thirty-five mentioned in Paragraph 547 either relegate hereditary transmission of defective brain development (*i.e.*, of congenitally defective mental capacity) to a low place in their list of the causes of mental defect or, in some few instances, practically give it no place at all. Most of these witnesses consider that the conditions of the environment which affect the individuals and also the "physical deterioration" which enfeebles the parents are far more important causal factors. But few of the witnesses who hold these last-named views have had the experience, like most of those whose evidence is quoted in Paragraph 547, of large numbers of congenitally defective persons in institutions, or of seeing for themselves many of the parents of children under their care. Their opinions are, therefore, to a great extent, based on the theories which they hold concerning the nature of hereditary transmission of characters, and, in some instances, are due, in part, to the fact that they include within the category of mental defect, certain cases of mental dulness which are in all probability the result of neglect or other incidental causes, and are curable by proper care and training.

Of these witnesses, at least half merely express opinions which tend to minimise the importance of the factor of hereditary transmission, though they do not quote cases in support of their views ; while two of them express doubts of its importance, but state that their experience is not sufficient to come to a decision. Accordingly we quote from the evidence of three witnesses who have maintained these opinions most strongly and have cited certain statistics in support of them.

Eichholz, Vol. I., 3614, p. 205, c. 2

Dr. Eichholz, H.M. Inspector of Special Schools under the Board of Education, stated that feeble-mindedness was largely bound up with "general physical degeneracy" and was mainly congenital; but that there was no proof that heredity had any part in the production of 70 per cent. of all cases. He was of

opinion that a history of direct nervous heredity was to be obtained in only 5 per cent. of all cases; and that drink, phthisis, and depravity of living on the part of parents are much more frequently associated with feeble-mindedness in the child than either direct or indirect heredity. He further laid stress on the theory of a "law of healthy birth," and alleged that there was a marked diminution in the fertility of the feeble-minded and a great mortality among the infants of so-called feeble-minded families. In the course of his evidence he further stated that, according to his observations, from 40 to 50 per cent. of the cases which he classed as "feeble-minded" recovered under care and training.

The relationship of "heredity" to mental defect —*contd.*

3614, pp. 209 and 210.

In so far as Dr. Eichholz's evidence is based on facts, it appears to rest mainly on histories of school children taken for him by the teachers. His statements regarding the greater prevalence of feeble-mindedness in connection with physical degeneracy and in urban areas will be considered below with reference to the reports of the medical investigators; as, also, his allegation of the non-fertility of the feeble-minded. Among the cases which he quotes, many instances of backwardness, due to the absence of proper training, are apparently included.

Dr. Robert Hutchison, Assistant Physician to the Hospital for Sick Children, Great Ormond Street, bases his evidence wholly on 100 cases of mentally defective children observed by him in the course of ordinary medical practice. From these he deduces the conclusion that neither hereditary transmission nor any of the other factors which have been alleged as productive of mental defect play any part in its causation. He concludes, accordingly, that feeble-minded persons are not more likely to produce feeble-minded children than are persons of normal mental capacity, and that bad conditions in the environment are not to be credited with any causal influence. He considers the occurrence of feeble-mindedness to be a "pure accident," apparently not attributing it to any organic defect of the brain. At the same time, he admits the influence of heredity in the production of "lunacy." This evidence tells against the views of all other witnesses and authorities alike, and on the ground that the data on which it is founded are quite inadequate, we may disregard it. Moreover, it is difficult to conceive what can be meant by a "pure accident" which is neither a spontaneous variation nor an injury occurring before or after birth.

Hutchison, Vol. II., 11127 to 11133, pp. 9 and 10.

Inadequacy of data is, indeed, a difficulty which militates at present against any absolutely final statement. Thus Dr. Mercier, who gave evidence on behalf of the Royal College of Physicians, the third witness on this side whom we quote, holds that the paramount influence of heredity in the production of feeble-mindedness is not proved by statistical evidence. He uses the word "feeble-mindedness" in the definite sense detailed in Chapter XXVIII. of this Report; and thus differentiates it from idiocy and imbecility. He admits that idiocy and imbecility are probably due, in the main, to an inherent and transmitted vice of organisation, and that there is a much greater chance of feeble-minded than of normally-minded parents producing feeble-minded children; but the minor defect of feeble-mindedness may result, he considers, from incidental forces alone, apart from hereditary transmission. Accordingly, in the absence of any sufficient statistics, he is of opinion that injurious conditions of environment may so affect the development of the brain in childhood that they may account for a large number of cases of "feeble-mindedness" which may be congenital only in appearance, and may not be necessarily due to any innate brain defect. Dr. Mercier's evidence is clear and consecutive, and amounts to the conclusion that not only is the frequent transmission of feeble-mindedness by inheritance not proved, but, also, that the organic defect of brain which underlies feeble-mindedness may be often the result of external influences which during childhood affect the growth of the brain injuriously.

Mercier, 6604. Vol. I., p. 363.

549. We have now to consider briefly whether the balance of evidence is in favour of hereditary transmission of mental incapacity as an important factor in the causation of "feeble-mindedness"; or, in other words, whether it is in favour of the probability that mentally defective children will be born of mentally defective parents to a much greater extent than of normal parents.

In support of the importance of heredity, there is such evidence as this:—

(*a*) A large majority of experienced witnesses who hold this view and cite, many of them, a large number of weighty instances in support of it. This evidence of itself establishes a strong *prima facie* case, and the evidence which may traverse it is still to seek.

(*b*) The wide prevalence of this view among numerous observant individuals, other than medical, who visit the homes of the feeble-

The relationship of "heredity" to mental defect —*contd.*

Reid, App. Vol. V., p. 247.

minded. The value of this kind of evidence, based on simple enumeration unchecked by negative instances, cannot be precisely estimated; but its importance can scarcely be called in question.

(*c*) The almost overwhelming probability, from the biological standpoint, of this view being true. Against this position, shortly set forth below, there has been adduced practically but one argument, viz., the operation of the so-called "law of healthy birth," or, in other words, of the tendency of comparatively rare peculiarities, such as feeble-mindedness, to be swamped in the course of generations by blending or cross-breeding, *i.e.*, by the influence of normal parents. This argument, however sound, is clearly of little practical weight unless it be denied that feeble-mindedness is such a heritable peculiarity subject to such eventual swamping. Dr. Eichholz, however, who adduces this argument, does not deny this; for he enunciates the hypothesis that a "feeble-minded family is on the racial down grade, subject, in a few generations, to extinction." In this connection the probable nature of the swamping is of some importance. Speaking generally, the trend of the evidence indicates that the offspring and descendants of feeble-minded persons are either apparently normal or distinctly feeble-minded. In the same family occur both types, the same person may have both normal and feeble-minded offspring and descendants; the defect may skip one or more generations and appear later. It would appear, therefore, that the swamping may be due not so much to a gradual obliteration of the defect by a blending with normality, as to its becoming latent or overlaid by the latter. It would seem also that the probability of its re-appearance amongst descendants is in some degree proportionate to the frequency with which it has occurred amongst ancestors.

In corroboration of the belief widely held, as we have seen, by expert observers and very explicitly expressed (especially by Professor Sir T. Clifford Allbutt, K.C.B., Dr. Ashby and others) in the transmissibility and very frequent transmission of mental defect from parent to child, we would call attention to two memoranda submitted to us by Professor Sir E. Ray Lankester, K.C.B., and Dr. Archdall Reid respectively.

App. Vol. V., pp. 246–249.

Professor Sir E. Ray Lankester holds that congenital feeble-mindedness, or mental defect dating from birth or observed at a very early age, is spontaneous originally, and truly hereditary subsequently. It is a reversion to a more primitive condition of brain, and is certainly transmitted. It is not brought about by starvation or other such conditions; but, more probably, it is the result of easy conditions of life, which involve the absence of such selective destruction as obtains in nature and among more primitive men. The notion that causes such as "innutrition," wasting disease, improper period of parentage, or alcoholism, have anything to do with the form of "amentia" called feeble-mindedness is devoid of all proof. The teaching of biology is opposed to the possibility of such a connection.

App. Vol. V., p. 247, c. 2.

Dr. Archdall Reid is of the same opinion as Professor Sir E. Ray Lankester. Like most of the witnesses, he considers that the great majority of the cases of feeble-mindedness are innate, and that feeble-mindedness implies a brain defect, which is a reversion—a true variation—and must tend to be inherited. He also adduces several arguments and instances which traverse the theory of the environmental causation of feeble-mindedness.

550. The view that injurious conditions in the environment which affect the parent or the child *in utero* or after birth are of importance in the production of feeble-mindedness needs some further practical comment. The Memoranda quoted in the preceding paragraph (549) contain strong arguments against any likelihood of such factors being in any way operative as causes. Many races have been exposed to one or other of all the ill conditions which have been alleged as causes of filial deterioration. In every case the only apparent effect has been to render these races capable of dwelling comparatively unharmed under such conditions. It is not to be conceived that a race which deteriorates in every generation can emerge from the struggle not weakened, but strengthened. Moreover, almost conclusive disproof of this hypothesis is furnished by the facts submitted to us by the medical investigators. These observers show that feeble-mindedness is practically as common in rural as in urban districts, and probably no less prevalent among the well-to-do than among the poor. It is clear that if the contentions of those witnesses who place predominant stress

Vol. VI., pp. 234, 235, 236.

on adverse environmental influences as a cause of feeble-mindedness were just, there would be an unquestionable prevalence of this affliction among the urban poor :—the chief victims of poverty and disease.

The relationship of "heredity" to mental defect —*contd.*

551. With regard to the allegation of the small fertility of mentally deficient persons the reports of some of our medical investigators and other witnesses, both medical and otherwise, tend to show that although, as might be expected for several reasons, there is great mortality among the children of these persons, there is also a very marked degree of fertility and survival to adult age, especially among those of the higher grades who are termed feeble-minded. Miss Dendy, Honorary Secretary of the Lancashire and Cheshire Association for the Permanent Care of the Feeble-minded, a very experienced witness, has stated elsewhere that from her personal knowledge she can show that the higher grades of feeble-minded persons (who are the most numerous and dangerous) tend to have very large families ; and that she can prove this from the detailed records of 1,000 cases.

See Chapter XXIX.

552. It is not necessary here to dwell upon some other causes of mental defect, such as disease or accident in early life, or even before or at birth, operating through injury to the brain. Cases of this kind are recognised by all ; and do not complicate the present question. They occur in comparatively few instances.

553. In conclusion, we may fairly sum up the general effect of the evidence as follows :—

(1) That both on the grounds of fact and of theory there is the highest degree of probability that "feeble-mindedness" is usually spontaneous in origin—that is not due to influences acting on the parent—and tends strongly to be inherited.

(2) That, especially in view of the evidence concerning fertility, the prevention of mentally defective persons from becoming parents would tend largely to diminish the number of such persons in the population.

(3) That the evidence for these conclusions strongly supports measures, which on other grounds are of pressing importance, for placing mentally defective persons, men and women, who are living at large and uncontrolled, in institutions where they will be employed and detained ; and in this, and in other ways, kept under effectual supervision so long as may be necessary.

In our opinion, the general feeling of the people would at present rightly condemn any legislation directed chiefly or exclusively to the prevention of hereditary transmission of mental defect by surgical or other artificial measures. The possibility of adopting such measures was referred to by twenty-one of the witnesses, but only three of them expressed opinions in favour of the practicability of such a course.

The question naturally rises whether it is desirable and practicable that any steps should be taken to place obstacles in the way of the marriage of persons ascertained to be mentally defective over and above the restrictions on marriage and procreation which ensue from the detention in institutions of mentally defective persons in whose case such procedure is deemed necessary ; and, if there be a disposition to answer the question in the affirmative, the problem must be faced, to which of the classes of the mentally defective should such additional restrictions be applied.

Such legislation would not be an absolute novelty in English speaking communities ; but there is little or no reliable information as to the practical results of the tentative efforts in this direction which have been made in New Jersey and elsewhere ; and it is clear that such legislation however carefully restricted would in effect operate less by imposing an easily enforceable legal prohibition than by guiding and directing the advisory functions of medical and other authorities and in other ways, educating public opinion to the proper consideration of a very serious evil.

We are of opinion that it would be unwise to attempt to modify or supplement the existing law with respect to the marriage of "persons of unsound mind." It is perhaps unnecessary to refer to other objections to any such proposal ; it is clear that the limited and often temporary nature of this particular mental disability renders it impossible either to prohibit permanently the marriage of such persons or to set out in practically useful legislative proposals the conditions under which such marriages might take place.

No such obstacle, however, presents itself in the case of those persons who exhibit the congenital and incurable forms of mental defect, and we believe that a legislative prohibition affecting these classes would have useful direct and indirect effects.

CHAPTER XXVIII.

The Definition of Classes of Mental Defect.

The nomenclature of mental defect considered from the point of view of administration.

554. In our last chapter we discussed, especially, the causes of mental defect in early life; and concluded that, in the main it was attributable to primary defect of the brain, *i.e.*, not due to external causes; that it was truly transmissible by inheritance; and that its subjects were only within certain limits improvable. We have now to define and classify its variations. Mental defect represents several distinct variations from the normal, between which there are many grades that pass almost imperceptibly from the characteristics of one group to those of another. Our object, however, is to distinguish classes of defect for purposes of administration, rather than to note, identify, and compare grades of defect, from the point of view of science. Still we desire to adopt a system of classification which is in harmony with the best scientific opinion that we can obtain, for on it, if our proposals are adopted, will depend the system which we recommend, of registration and record, of certification, and of provision, institutional and other.

The selection of terms in place of the word "Lunatic."

555. We have considered the desirability of employing some one general term to indicate the whole class of mental defectives for purposes of certification and record, ignoring all subdivisions. This would be simplicity itself and much could be urged in favour of it. But we have adopted in preference the plan of definition and classification; because it is common practice to degrade words suggestive of objectionable conditions which people are unwilling to believe to be applicable to themselves or their relations. Hence the word "lunacy" has become more and more repellent until the use of it is indeed a hindrance in administration. The same sentiment in a degree affects the use of the words "idiot" or "imbecile," and even the later word "feeble-minded." But this feeling would be aggravated if the single word, whatever it might be, suggested for use as representing all classes of defects, became, like the word "lunatic," a word which, in the general estimation, represented only or almost entirely the extreme and more repulsive forms of mental defect. An endeavour would then everywhere be made to avoid both the use of the word and the use of the organisation for the care and protection of the several classes for which the State had made provision, but which would be inacceptable on account of associations connected with the name. The administration of the Lunacy Act, 1890, itself affords some evidence on this point. More and more it would seem that "receivership cases," dealt with under Section 116 (*d*) of that Act as cases of mental infirmity, owing to disease or age, in such a way as to control the property of the person only, are increasing in number; for "in the great majority of cases of alleged lunacy it is not necessary to obtain a greater amount of control over the person of an alleged lunatic than is indirectly obtained by the power of the purse." On the other hand "inquisition cases," cases in which the question of lunacy is settled by the Masters in Lunacy or by a jury, tend to become fewer. The method of inquisition brings the question of lunacy into prominence in relation both to person and property; the method of receivership minimises it and affords a private control over the mentally infirm person through the control of his property. The one therefore is acceptable and popular, the other deterrent and unattractive; and in matters which are at the option of the applicant, the greater or less considerateness of the procedure is always a chief question.

The relation of nomenclature to administration.

Recommendation III.

556. For such reasons as these we have recommended the use of the words "mentally defective" as a general term indicative of all classes of mental disorders, thus displacing the word lunacy from that position; for in certification at the present time there is hardly a question but that the word "lunacy" stands for the whole class, and that, as lunatics, many mentally defective persons besides those who would strictly be called "lunatics" and "idiots," are admitted to asylums. Thus, at Darenth, the children admitted to the institutions of the Metropolitan Asylums Board, though neither lunatics nor idiots, as these words are generally understood, are certified as such. So, in lunatic asylums of the county council, there are many imbeciles as well as idiots, "700 idiots and imbeciles, out of a total population of a little over 14,000, or roughly about 5 per cent." So also in such cases as that mentioned by Mr.

Rotherham, Vol. I., 8759.
Tredgold, Vol. I., p. 399, c. 1.
Troup, Vol. I., 1353.

Troup, in which "the Lunacy Commissioners were consulted and said that no idiot asylum would take the lad in question; they did not think he was certifiably insane." Yet finally he had to be left in the county asylum, which "certainly did not seem a very appropriate place for an imbecile of that class." Accordingly we would displace the word "lunatic" as representing the whole class of mentally defective. But we would go further and would displace it also as a word signifying the more extreme forms of mental defect due to mental disorder or derangement. Instead of it, in that sense, we would use the words "person of unsound mind." The change is not merely pedantic. We desire to promote the establishment of such institutions as are necessary for the classes which the different words of our classification represent; and we would prevent the sending of patients who, though differing in the extent of their defectiveness, are called by one name, to institutions unsuitable for them, as much as we would avoid the sending of such patients to suitable institutions under quite unsuitable names, as when feeble-minded children are sent to Darenth as certified lunatics or idiots. Thus, the utility of a satisfactory nomenclature is largely administrative. By its use, also, another advantage may to some extent be gained. The expenditure on some classes of mental defectives, as we saw in the case of some classes in the idiot asylums, and amongst other instances in the case of the senile dements at Tooting Bec, is much greater than on others. Difference in nomenclature should tend to prevent this, carrying into it a difference in certification, and by sequence a difference in the selection of the institution suitable for patients certified. Instead, therefore, of imbeciles, for instance, being treated in expensive establishments, they would be provided for economically as requiring little beyond employment, maintenance, shelter and control. And, in consequence of changes of this kind, consistent alike with a better nomenclature and more exact certification, institutions and homes might to a larger extent be specialised; and asylums might become hospitals to a much greater extent than they are at present, thereby fulfilling an infinitely greater service to science and to administration. Thus the names which we desire to introduce imply differences of treatment, and suggest discrimination, both in the selection and admission of cases and in the use of means.

The relation of nomenclature to administration —*contd.*

Pelby, Vol. I., 5293.

Dendy, Vol. I., 986.
Lawrence, Vol. I., 7679.
Caldecott, Vol. I., 10385.
Tredgold, Vol. I., p. 399.

557. From very early days, not the word "lunatic" only, but also the words "of unsound mind," or "*non compos mentis*," have been in use as representing the class which we generally term "insane," as distinguished from the class "idiot" or "natural fool." And the Statutes ring the changes on the words "lunatic," "insane," "of unsound mind" as representing a mental condition which the judges in 1843, in their answer regarding the Macnaghten case, defined as "defect of reason from disease of the mind." Of these words, we have chosen "of unsound mind" as the most suitable to supersede the word "lunatic;" and our definition of it is a "person who requires care and control owing to disorder of the mind and is consequently incapable of managing himself or his affairs."

The use of the words of "unsound mind."

The Law and practice of Lunacy; G. W. Abraham, p. 25.

Cf. Criminal Lunacy Act, 1800, Criminal Lunacy Act, 1838. Lunatics Removal (India) Act, 1851. Trial of Lunatics Act, 1883. Recommendation IV.

558. This definition requires further consideration in reference to the terms now used in the Lunacy Act of 1890.

The classes dealt with under the Lunacy Act of 1890.

We propose that future procedure in regard to cases of alleged unsoundness of mind should be founded as closely as possible on the procedure of the Lunacy Act of 1890. It is the more necessary, therefore, to consider the terminology of the Act in relation to the classes which it mentions. The first part of the Act, that on "Reception of Lunatics," as the forms of certificates show, refers to "a lunatic [or idiot or person of unsound mind]." We desire, as we have said, to omit the word "lunatic," and to use the words "person of unsound mind" as the sole words applicable to the class above defined. The use of the word "idiot" in connection with this class would thus be set aside absolutely; it would have the special meaning now generally ascribed to it, as defined below.

The other phrase in the Lunacy Act which defines a lunatic is found in Part III., "Judicial inquisition as to Lunacy." A person found lunatic on inquisition (Sec. 90) is adjudged to be "a person of unsound mind and incapable of managing himself and his affairs," or "himself *or* his affairs." (Sec. 94 and 95.)

The classes dealt with under the Lunacy Act of 1890—*contd.*

A third class provided for by the Lunacy Act is the "mentally infirm." This class is not a "lunatic" class. By Sec. 116 (*d*) the benefit of the Act as to the management of property is extended to "persons not detained as lunatics and not found lunatic by inquisition with regard to whom it is proved to the satisfaction of the Judge in Lunacy that such persons are through mental infirmity arising from disease or age incapable of managing their affairs." Hence these persons are included in the Act in order that their property may be protected and cared for, when they are themselves unable to care for it owing to mental infirmity. They are not technically "unsound in mind."

Recommendation X.

The advantages of this clause, for the management and administration of property, we propose to extend to all classes of the mentally defective. We consider it here, therefore, merely as representing a class of the mentally defective, and we retain the term "mentally infirm" as the name of a class of persons who "through mental infirmity, arising from age or from the decay of their faculties, are incapable of managing themselves or their affairs." The proviso "arising from disease" we omit. It is unnecessary, as the definition of "persons of unsound mind," in which the mental defect is referred to as due to "disorder to the mind," already provides for such cases.

Recommendation IV. (1).

Definitions of classes of mentally defective persons.

559. The distinctive phrase of the Lunacy Act "unable to manage themselves or their affairs" we have taken as the determining words in these and other definitions, and in view of the definitions in the Act we have in the first place recommended these two, as representing classes of persons who should come under the supervision of the Board of Control:—

Recommendation IV.

(1) "Persons of unsound mind," *i.e.*, persons who require care and control owing to disorder of the mind and are consequently incapable of managing themselves or their affairs, and are not included in Classes (2), (3), (4), (5), (6), (7), (8), and (9) below.

Recommendation IV.

(2) "Persons mentally infirm," *i.e.* persons who, through mental infirmity, arising from age or from the decay of their faculties, are incapable of managing themselves or their affairs.

Savage, Vol. I., p. 357, c. 2. Crichton-Browne, Vol. I., 6006. Mercier, Vol. I., 6687.

For the definitions that follow we are chiefly indebted to the Royal College of Physicians of London. It would have been possible for us to adopt the usage of defining the next three groups of mentally defective persons as "higher grade" or "lower grade" idiots or imbeciles, whichever word might have been then selected as distinctive: but we have thought it best to use words already known and generally used and, in a manner, waiting for definition. The definitions are:—

Recommendation IV.

(3) "Idiots," *i.e.*, persons so deeply defective in mind from birth or from an early age that they are unable to guard themselves from common physical dangers, such as, in the case of young children, would prevent their parents from leaving them alone.

(4) "Imbeciles," *i.e.*, persons who are capable of guarding themselves against common physical dangers, but who are incapable of earning their own living by reason of mental defect existing from birth or from an early age.

(5) "Feeble-minded," *i.e.*, persons who may be capable of earning a living under favourable circumstances, but are incapable from mental defect existing from birth or from an early age (*a*): of competing on equal terms with their normal fellows; or (*b*) of managing themselves and their affairs with ordinary prudence.

(6) "Moral imbeciles," *i.e.*, persons who from an early age display some mental defect coupled with strong vicious or criminal propensities on which punishment has little or no deterrent effect.

(7) "Epileptics," *i.e.*, persons who, being epileptic, are also mentally defective,

(8) "Inebriates," *i.e.*, persons who, being inebriates, are also mentally defective.

(9) "Deaf and dumb" or "blind" *i.e.*, persons who being deaf and dumb or blind are also mentally defective.

560. We will consider these definitions in some detail. First it might be said that the words "incapable of earning a living under favourable circumstances" suggest a test which, though it may be applicable to children of twelve, is hardly applicable to children of a lesser age. The question was put to Dr. Tredgold. His answer was: "I think it is quite possible to say, even at the age of seven, with a certain degree of probability, whether a child would be able to earn his living or whether he would not (you could not be absolutely certain until you tried him) just as it is possible to differentiate between idiocy and the normal condition at a much earlier age than seven years."

The use of the words "incapable of earning a living," as applied to children.

Tredgold, Vol. I., 7450, 7452.

And we have adhered to the definition, as suggested by the Royal College of Physicians for, as our evidence shows, being able to earn a living is often, on the social side at least, the critical question in regard to feeble-minded children. All these definitions, applied to quite young children, must be in some degree presumptive. The very good definitions submitted to us by Sir James Crichton-Browne, of the "imbecile" and the "feeble-minded" do not turn on the "capacity of earning a living, but they have in some measure to define the child by anticipation, by standards applicable to a later time of life than early childhood, such as prudence, independence, and self-control" or "taking care of himself in the common affairs of life." These definitions are:—"An imbecile is a person who by reason of arrested development or disease of the brain dating from birth or early years has the use of his observing and reasoning faculties so restricted as to incapacitate him for education in the ordinary sense or for taking care of himself in the common affairs of life, and who in his appearance and manner generally evinces his mental shortcomings."

Crichton-Browne, Vol. I., 6006–6008.

6007.

"A feeble-minded person is one who by reason of arrested development or disease of the brain dating from birth or from some age short of maturity has his observing and reasoning faculties partially weakened, so that he is slow or unsteady in his mental operations, and falls short of ordinary standards of prudence, independence and self-control."

6006.

561. To take another point. In the definition of "feeble-minded" which we have adopted, we assume, as the Royal College of Physicians do likewise, that "the prodigal and the facile" are included. Much evidence in regard to this has been submitted to us. Sir James Crichton-Browne and Dr. Savage emphasised the need of including these cases among the mentally defective; and Mr. C. M. Barker, President of the Incorporated Law Society, and Mr. J. W. Budd, who also appeared on behalf of that society, stated:—

"The prodigal and the facile."

Crichton-Browne, Vol. I., 5985. Savage, Vol. I., 6532. Mercier, Vol. I., 6680. Budd, Vol. II., p. 363, c. 1, 17365–17371. Barker, Vol. II., 17073. Rawle, Vol. II., 17426.

> "That it would be desirable to give the Court of Chancery on the application of any relation, power to appoint a receiver of the property of any spendthrift or other feeble-minded person not coming under the provision of the Lunatic or Idiots Act, and to give directions to the receiver as to how the money, whether capital or income, is to be applied for the benefit of the feeble-minded person, and to prevent such person from having power to deal with his property or contract obligations of any kind without the assent of the receiver or the approval of the Court, leaving it, of course, open to the person against whom such an order might be obtained to apply to discharge it or modify it on good cause shown."

We have assented to these suggestions, and under the above definition of "feeble-minded," cases like those which these witnesses mentioned could be dealt with under a new Sec. 116 (*d*) of the Lunacy Acts, enlarged and revised.

Budd, Vol. II., 17267. Barker, Vol. II., 17161.

562. The next class is the "moral imbecile." Again, Sir James Crichton-Browne has furnished us with an admirable definition. It is as follows:—

The moral imbecile.

> "The moral imbecile is a person who by reason of arrested development or disease of the brain dating from birth or early years displays at an early age vicious or criminal propensities which are of an incorrigible or unusual nature, and are generally associated with some slight limitation of intellect."

Crichton-Browne, Vol. I., 6007.

If this definition be adopted, or the definition which we have recommended, it will be possible to bring persons of this class under control, and, if need be, detention, if they are found to be mentally defective within the terms suggested. Several witnesses cited cases of the kind, one or two of which we think it well to mention.

Recommendation IV.

Dr. Mercier, when asked to state the reasons why feeble-minded people who are "socially dangerous," who "have an unimprovable degree of feeble-mindedness," are not certified, mentioned one instance. He said:—

> "I think the reason for non-certification undoubtedly is the prevalent opinion that insanity is necessarily a disorder of intelligence, that it means delusion, or it means intellectual disorder or intellectual defect, and that it is recognised by a comparatively

Mercier, Vol. I., 6806.

The moral imbecile—*contd.*

small number of medical men and by a still smaller number of magistrates, that insanity may be manifest in conduct alone, and that a person may be free from delusion and may be intellectually extremely acute and clever, and yet insane, on account of conduct alone.

"I may give an instance or two. I was consulted a short time ago about a gentleman who went about and bought things. He bought a large number of clocks and gave them away to people with whom he had scarcely any acquaintance at all. His total income was only about £200 a year, yet he bought £10 or £15 worth of clocks, and gave them away to people with whom he was scarcely even on nodding acquaintance. He jumped off the pier, with all his clothes on, into the sea—as he said—to cool himself. He did various other acts quite as insane as that, but he was exceedingly acute; he was a man who could argue, as they say, 'the hind legs off a dog;' it was impossible to catch him tripping; he had plausible reasons for everything he did. I certified him on account of his conduct, rapidly running through his money, spending it recklessly on all kinds of foolish things, of which the clocks are one instance out of many. I certified him as being insane, but no magistrate would make an order on that certificate, and I had to go down to Oxford myself and personally persuade the magistrate that it was a case that ought to be certified, and the justice of his detention was proved within a few months by his becoming distinctly insane and cutting his throat."

This reply indicates the change which the definition, if adopted, would entail. The existence of mental defect would not be considered settled by the answer to the question, whether the offender "knew the nature and quality of the act he had done; and if not, whether he had done wrong," but by a decision on the issue whether the facts interpreted by the evidence of vicious or criminal propensities and incorrigibility proved that the will and judgment were so abnormal as to amount to mental defect.

Savage, Vol. I., 6559.

Dr. Savage, who, like Dr. Mercier, gave evidence on behalf of the Royal College of Physicians, also mentioned some typical cases. He said:—

"There are certain persons who seem to have no sense of the rights of property; they steal—the so-called kleptomaniacs. One saw a good many of these cases, but beyond the fact of stealing they showed no intellectual defect. Very often they were brilliant people. The contention of the College of Physicians up to a recent time has been that such people should not be treated except as criminals. There are certain individuals, sometimes intellectually quite brilliant, but no experience teaches them they should not steal; they steal in the most open and stupid manner. Take an example; a boy is told that there is a thief about, they are going to put down some postal orders to catch him; the boy, the first time he comes into the room takes up the postal orders and goes off and cashes them. In other respects that boy was rather a brilliant boy intellectually, with the exception of his not appreciating the rights of property."

"In the same way one sees individuals who are immoral. Take an example; it hardly falls within your ground, because I stretched the line and signed the certificate, though I should hardly like to be cross-examined on it—a girl at ten years of age who was a thief and a liar to an extraordinary degree. When she came to about seventeen, lust developed to such an extent that there was no controlling her. Her parents, who belonged to the good middle class, were refined, nice people. She slipped away from her home and led the life of a prostitute for a night or two. She is brought back, and on the first opportunity she again slips away from home. When I see her she says, 'Oh, yes;' she admits she has done this, that, and the other. 'Are you not sorry?' 'No.' 'Suppose we let you go into the country, what will you do?' 'Come back to town and do the same thing again.' There is an individual who began by being morally insane in relation to property, with a complete disregard of truth, and when she becomes adolescent, becomes morally insane so far as lust is concerned."

Savage, 6560.
Bund, Vol. II., 19499.
Clepham, Vol. II., 18469.
Raw, Vol. II., p. 399, c. 2.
Bartholomew, Vol. II., p. 307, c. 2.

And the evidence shows that there are many such cases.

The morally insane.

563. Of another class also—the morally insane—definitions were suggested to us. The definition of the Royal College of Physicians was as follows:—

Savage, Vol. I., p. 357, c. 1.

"'*Morally insane person*' means a person who, after many years of reputable life, all at once unaccountably exhibits vicious propensities, or takes to criminal courses."

Sir James Crichton-Browne's definition is—

Crichton-Browne, Vol. I., 6007.

"A morally insane person is one who, by reason of disease or disorder of the brain, has undergone a change of character manifested in a course of vicious or criminal conduct without obvious impairment of intellect."

These definitions connect themselves not with the retardation of the brain which manifests itself at birth or in the early years of life, but with disorder of the mind at a later date, or "acquired." The morally insane are thus included in the definition of "Persons of Unsound Mind" in Recommendation IV. And we do not consider it scientifically correct to constitute them into a separate category.

The use of the definitions.
Mercier, Vol. I. 6687, 6691.

564. On the definitions generally we have now to add a few words. The Royal College of Physicians, in framing the definitions of idiot, imbecile and feeble-minded persons, desired "to emphasise the fact that those were three degrees of a single defect; and, as the terms had never been demarcated from one another, to put forward useful lines of distinction between them, showing where the one may be considered to begin and the other to end." They drew up

the definitions "for purely practical purposes." We have, therefore, adopted these definitions as they stand, for practical purposes only. It is to be clearly understood that the scientific question of the causation of feeble-mindedness, whether, for instance, it be mainly "inherited" or "acquired," has no bearing on the use of these definitions. The complete set of definitions given in Recommendation IV. are to be regarded, in our opinion, as covering all cases of mental defect to which those who are interested in the care, training, and control of such persons have called attention.

The use of the definitions—*contd.*

565. There is one other class to which we have to refer—the persons who are discharged from lunatic asylums, though they are "unrecovered." At present a person who has been admitted to an asylum under the usual procedure of the Lunacy Act, 1890, and who, under the intra-mural conditions of asylum life, appears to have recovered, is absolutely released or sent out on a month's trial; and "many of them," we are informed, "are brought back within the month." Dr. Mott, thinks there is "a considerable amount of untreated lunacy in the country resulting from premature discharge of this kind." This prematurity of discharge, it is stated, is in part due to want of accommodation, and in part to the absence of "a better history of the patients as to the cause of insanity." It has also been alleged that it is often attributable to a feeling on the part of medical superintendents that they cannot in such cases sign such a continuing certificate as will satisfy the scrutiny of the Lunacy Commissioners. The patient has, in the guarded life of the asylum, become rational and tranquil; the medical officer feels at a loss, therefore, in attempting to set out "facts observed by himself" to support a certificate of insanity. We are satisfied that no real ground exists for this apprehension, and that the Lunacy Commissioners or the Board of Control as they would be in the future, would not in any case insist on the discharge of a patient whose speedy relapse might reasonably be anticipated. Both of these defects should, we think, be met by our recommendations. A good system of recording, such as we propose, coupled with a series of clear definitions, under which patients requiring treatment may be certified and dealt with, not all alike as "lunatics," but individually as persons requiring special treatment, should prevent these evils. Persons whose mental attacks may for a time have passed over, but who remain subject to quick relapse when they face the stress or the temptations of the outer world, should in this way be retained and controlled until, if it be possible, they recover completely and satisfactorily. These and other advantages, we hope, may follow from the use of the nomenclature which we recommend, and the methods of certification and provision which depend on it. It can be argued that the Lunacy Act of 1890 covers, or should cover, the whole ground of mental defect which may be included in the terms "lunatic," "idiot" and "unsound mind," if to the last of these words a very wide meaning indeed be attached. But in fact, except casually and arbitrarily, all mentally defective persons but "lunatics" and "idiots" have come to be excluded from the operation of the Act. We hope, therefore, that with the aid of a remodelled Statute and by the adoption of the nomenclature which we recommend, many persons who are not "lunatics" or "idiots," and who require very different treatment from either, may receive the protection which they greatly need, but which is altogether denied them at present.

The definitions considered in relation to "unrecovered" cases.

Mott, Vol. I., 8040, 8042, 8084, 8085, 8097.

Mercier, Vol. I., 6698.

CHAPTER XXIX.

General Statistics and the Reports of the Medical Investigators.

566. In Part II. of the "Reports of the Medical Investigators with Memorandum thereon (Volume VI.)" a summary of the results of the investigation made by the Medical Investigators is given; and in Part III. follow tables compiled from the figures which they collected; and, lastly, in Part IV., come their reports. In dealing with different branches of our subject, we have already quoted figures and statements from these reports. Accordingly, here we propose to deal only with three questions: the general statistical results of their inquiry; the evidence in regard to the number of the mentally defective as furnished by the last census; and, finally, the natality and mortality of mentally defective persons.

Reports of the medical investigators with memorandum thereon. Vol. VI.

I. General Statistical Results of Inquiry by our Medical Investigators.

Reports of the medical investigators with memorandum thereon—*contd.*

567. The classification of mental defect which was adopted for use in the investigation was in the main the same as that which in the recommendations we made in the last chapter, Chapter XXVIII., we suggested as suitable for purposes of certification and administration. The inquiry was made in the years 1905 and 1906.

Vol. VI., Part II.

The areas investigated were selected as fairly typical. As urban areas were chosen Stoke-upon-Trent, Birmingham, Manchester with Chorlton and Prestwich, and Hull with Sculcoates. As a mining district, otherwise rural, the area of the unions of Chester-le-Street, Easington and Sedgefield in the county of Durham were selected. As rural areas, were taken six unions in Somerset—Bridgwater, Taunton, Chard, Wincanton, Langport, Yeovil; ten unions in Wiltshire—Bradford-on-Avon, Pewsey, Chippenham, Salisbury, Swindon, Devizes, Tisbury, Trowbridge, Marlborough and Wilton; in Nottinghamshire four unions, partly rural, partly mining and industrial—Mansfield, Southwell, Newark and Bingham; in Lincolnshire six unions—Glanford Brigg, Caistor, Louth, Spilsby, Horncastle and Bourne. Lastly, in Wales: in Carmarthenshire four rural unions were chosen—Carmarthen, Llanelly Union, Llandilo Fawr, and Llandovery Union; and in Carnarvonshire four unions—Carnarvon, Bangor, Pwllheli and Conway. In all cases union areas were selected, and in all the rural areas of investigation there was a fairly equivalent population of 130,000 to about 150,000 persons. The population of all the areas taken together is 2,362,222. London, it will be seen, is not included. There was, as our report shows, much information in regard to London, and the difficulties of making a complete census there without incurring very large expenditure were practically insurmountable. Yet, on the whole, the population of the two millions and a third, composed of urban, mining, and rural elements, may be accepted as fairly representative.

Tabular statement of results in the population of the combined areas selected.

568. In this population, if we omit all certified lunatics, whether paupers or not, we find that there were 10,925 mentally defective persons, or ·46 per cent. of the population. None of these figures are estimated: they are the figures as enumerated by the medical investigators. The results may be tabulated thus:—

Totals, less certified lunatics, of Mentally Defective Persons in the selected areas, England and Wales, in relation to local and other authorities and institutions for Education, Poor Relief, Crime and Lunacy, etc. Population, 2,362,222.

See Vol. VI., pp. 7, 8, 9, Part I, and Tables III., IV., and V., pp. 58–62, Part III.

Authorities.	Total population dealt with by the several authorities.	Total number of persons other than certified lunatics reported as mentally defective.	Percentage of Col. 3 on Col 2.	Total number of mentally defective persons reported as "needing provision."[1]	Percentage of Col. 5 on Col. 3.

[1] The object of this column is to supply an estimate of the number of persons at the present time urgently in need of provision, either: (1) in their own interest; or (2) for the public safety. It is recognised that there may be many others for whom the present accommodation is not ideal; these are not here included, but only such cases as were in the opinion of the investigator, unproperly, unsuitably, or unkindly cared for; or who, by reason of particular habits and characteristics, are a source of danger to the community in which they live.

[2] Less insane (excluding lunatics in county and borough asylums, registered hospitals and licensed houses). Pauperism, England and Wales, Half-Yearly Statement, July 1st, 1905, pp. 17, 21, 23, 25, 27, 33, 35, 37 and 39.

[3] There were 1,414 persons found to be lunatic or insane and *not* certified. They are included chiefly in Groups II. and IV.

[4] This figure represents the number of prisoners seen in the local prisons. No mentally defective persons in convict prisons are included.

[5] This is the general population other than that included in institutions, etc., as above.

569. But from the table one or two points stand out. By the adoption of our proposals a very considerable obligation would be taken off the education authorities. The percentage of mentally defective school children (Col. 4) is ·79. In towns and urban centres, however, the percentage is higher, *e.g.*, 1.12 in Birmingham and 1.24 in Manchester, Chorlton and Prestwich. Also in some rural areas it is higher. Thus in the Lincolnshire area it is 1·10. The obligation, financial and general, which these figures represent would be taken off the education authorities. A great charge on the Poor Law would also be removed—amounting on indoor relief alone to 18·19 per cent., and on outdoor relief to 2·31 per cent. of the paupers. So again, 10 per cent. of the prisoners in the local prisons would come under the proposed new authority. But in addition to these, from "persons mostly under no public authority" there would be a number of mentally defective persons who are not in any of the ranks above mentioned, but for very many of whom provision would have to be made in some of the many ways that are applicable in individual cases.

Tabular statement of results in the population of the combined areas selected—*contd.*

Vol. VI., pp. 19, 26 and 31

Vol. VI., pp. 61 and 63.

570. These results we may by proportion adjust to the population of the whole country in order to obtain a rough general estimate. The following table indicates the conclusions.

Estimated number of mentally defective persons in England and Wales.

ESTIMATED NUMBER of Mentally Defective Persons, excluding Certified Lunatics, in the general population of England and Wales in relation to local and other authorities and institutions for Education, Poor Relief, Crime, Lunacy, etc. Population (1901) 32,527,843.

[1] In explanation of "needing provision" see Note 1 to the table on previous page.

[2] Less insane (excluding lunatics in county and borough asylums, registered hospitals and licensed houses). These are included in III., col. 2. *See* Pauperism, England and Wales Half-Yearly Statement, July 1st, 1905, pp. 3 and 4, cols. 4–11, and 27, cols. 16–22.

[3] Sixtieth Report of Lunacy Commission, p. 2.

[4] As in the previous table the uncertified lunatics have not been counted in here, as they represent persons already enumerated in II. or VII. It has been thought well, however, to enter them separately, and, as they are not counted in, they are placed in square brackets.

[5] Information supplied by the Prison Commission as to population in prisons on July 3rd, 1906. This was an approximate date to that on which the Medical Investigators' visits were paid to local prisons in their areas. On this information the estimated number of mentally defective persons in local prisons throughout England and Wales is based.

[6] These are mentally defective persons "weak-minded," not certified lunatics. From figures obtained from the Prison Commission, March 24th, 1908, it appeared that, at that time, the total population of the convict prisons was, 3,025, and the total number of "weak-minded" persons in Parkhurst Convict Prison was 120, and in Aylesbury Convict Prison (women) 8. In the State Criminal Lunatic Asylum at Parkhurst there were 47 inmates on 24th March, 1908. At the time referred to in Note 5 there was no State Criminal Lunatic Asylum at Parkhurst. The 47 inmates would be included in the figure for 1908 corresponding to that in III., Col. 2 (121,979)

[7] "Nearly 800." Troup, Vol. I., 1331. These are already included with certified lunatics in III. col. 2. It has been thought well to enter them separately, however. As they are not counted in, they are placed in square brackets.

[8] See Report of Inspectors under Inebriates Act, for 1905, p. 5, "Cases under detention at end of the year." The inmates classified as mentally defective (other than certified insane) equal 60% of the total number (*see* same report p. 9).

[9] This is the general population other than that included in institutions, etc., as above.

Estimated number of mentally defective persons in England and Wales—*contd.*

It is hardly necessary to restate in detail the conclusions of this table, but we may call attention to the fact that the number of mentally defective persons, inclusive of the certified lunatics, 121,979 (*see* p. 193, Table III. (1), col. 2) would equal 271,607, or ·83 of the population of England and Wales.

II. The Census Returns of the Feeble-minded.

The substitution of the word "feeble-minded" for "idiot" in the census papers of 1901.

Tatham, Vol. I., p. 268, c. 1, 4740, 4743, 4846.

571. Dr. Tatham, Superintendent of Statistics, Somerset House, submitted to us the results of the enumeration of the "insane" in the last Census (1901), and expressed the opinion that the returns were unreliable. We have, however, thought it well to submit them to analysis, and we believe that they throw some light on our problem.

In the paper of inquiries to be filled up by the householder for the census officer was entered in 1871 the question, "If deaf and dumb, or blind, or imbecile, or idiot or lunatic?" In the census for 1901 the word "feeble-minded" was substituted for the word "idiot." Before 1901 the three words "imbecile" or "idiot" or "lunatic" had been treated as equivalent to the word "insane" and the figures collected under these words had been added together and published in the census as representing the number of the "insane" so ascertained. When the word "feeble-minded" was substituted for "idiot" it was found that the return of the insane was greatly increased. The total number of the insane enumerated at the censuses in 1871, 1881, and 1891 were successively 69,019, 84,503, and 97,383; but the number in the year 1901 amounted to 132,654. The increase in the proportion of the enumerated insane to 1,000,000 of the population was 7 per cent. between 1871–1881, and fell to 3·2 per cent. between 1881 and 1891. Between 1891 and 1901, however, under the changed nomenclature the increase in the proportion to population was equal to 21·4 per cent. The introduction of the word "feeble-minded" had, it was surmised, caused the increase.

Tatham, Vol. I., p. 269, c. 1.

The Insanity Rate, in proportion to population, in Intercensal periods.

572. The figures in the following table show clearly that, while during the twenty years 1871–91 the proportion of the enumerated insane at all ages continued to increase, the increase was relatively smaller in 1881–91 than it had been in 1871–81. Between 1881 and 1891, for instance, there was a decrease at each of the age periods up to 15, 15 to 25, 25 to 45; though at the age period 45 to 65 there was an increase of 8·69 per cent., and at 65 years and upwards, when the increase was 7·65 per cent. But between 1891 and 1901 at every age there was a large increase. Thus:—

Increase or Decrease per cent., in proportion to population, of the Insanity Rate in the Intercensal Periods.

	1871–81.	1881–1891.	1891–1901.
All ages	+ 7·04	+ 3·23	+ 21·44
Under 15 years	− 0·34	− 12·39	+ 23·58
15–25	− 5·96	− 7·36	+ 19·28
25–45	+ 6·47	− 0·69	+ 10·66
45–65	+ 17·00	+ 8·69	+ 16·04
65 years and upwards	+ 15·09	+ 7·65	+ 38·43

573. The actual figures are not stated in Dr. Tatham's evidence, but he has kindly forwarded them to us, and they are printed in the table in the footnote below.* The increases in the figures for childhood (+23·58) and that for the

65 & upwards	3,026	4,444	7,470	3,720	5,789	9,509	4,510	7,311	11,821	6,970	11,124	18,094

earlier adult life, fifteen to twenty-five, namely, +19·28, are very large. Probably owing to the Elementary Education (Defective and Epileptic Children) Act, 1899, and the movement leading up to it, in the age period "under fifteen years," many returns of "feeble-minded" children have been made for the first time. The next age period, fifteen to twenty-five, is that during which many "feeble-minded" young persons and adults are in homes of various kinds from which in former censuses no such returns would have been made, for, in common estimation, the "feeble-minded" are neither "imbecile," nor "idiot," nor "insane"; and so probably, neither under that nor any other category, would most of them have been returned in any previous census. In fact, once the word "feeble-minded" had been inserted in the census paper it would have been read by most people not as a substitute for "idiot," the word which it displaced, nor as in any sense an equivalent to that word, but as a word standing for a new and different class. Hence, in regard to the large number entered as "feeble-minded," it may be said that to a large extent persons so enumerated are probably "feeble-minded" in the sense in which we have defined the words, and that the figures represent their general recognition for the first time as a distinct class of mentally defective persons.

The Insanity Rate, in proportion to population, in Intercensal periods.

574. The increase in the census "insanity" rate of the later age-periods must, we think, be interpreted differently. The increase has been persistent at every census since 1871. Thus :—

Tatham, Vol. I., p. 269.

Ages.	"Insanity" Rate per thousand living at Age Groups.				Increase or decrease per cent. of "Insanity" Rate.		
	1871	1881	1891.	1901.	1871–81.	1881–91.	1891–1901.
45–65	6·158	7·205	7·831	9·087	+17·00	+8·69	+16.04
65 upwards	6·950	8·000	8·612	11·922	+15·09	+7·65	+38·43

575. With these figures, we may compare the return of insane persons in England and Wales who were chargeable to Poor Law unions on January 1st, 1882, and subsequent years to 1906. The figures of this return stand thus :—

Insane paupers, from 1882 onwards.

Local Government Board, Annual Report, 1905–1906, p. 561.

Number Chargeable to Poor Law Unions.

Year 1882–1906.	In County or Borough Lunatic Asylums.	In Registered Hospitals or Licensed Houses.	In Workhouses and Metropolitan District Asylums.	Residing with Relatives or in Lodgings or Boarded out.	Total.	Number chargeable to Counties and Boroughs.	Total.
1.	2.	3.	4.	5.	6.	7.	8.
1882	40,501	1,729	16,976	6,113	65,319	1,770	67,089
1890	50,241	1,568	17,825	5,811	75,445	1,581	77,026
1903	78,352	1,145	17,104	5,519	102,120	1,585	103,705
1906	84,896	1,094	17,742	5,618	109,350	1,729	111,079

576. Here we find that in the twenty-four years, 1882 to 1906, the insane persons chargeable to the Poor Law "in County or Borough Lunatic Asylums" (col. 2) have more than doubled, while all the other classes of insane persons so chargeable have decreased, or increased but slightly. And, whatever the causes of this, the figures of the intervening years show that they have been affecting the figures steadily every year since 1882. There is hardly a question that one predominant cause in the great increase of lunatics in the county and borough lunatic asylums, is the grant of 4s. a week payable towards the maintenance of lunatics when they are maintained in asylums. This grant (*see* Chapter XL.) which is paid from the Exchequer into the account of the County and Borough Councils, facilitates the sending of lunatics to the county and borough asylums, for only on the patients being sent to the asylums is it payable to the board of guardians. However, there would appear to be another cause also. In the case of the aged, as we have seen, the workhouses are, for many reasons, cleared

Causes of increase of insane paupers.

Davy, Vol. IV., 33859.
Stracey: Vol. VI., p. 302.

Causes of increase of insane paupers —*contd.*

of persons who can be certified as insane, who, being senile dements, would in previous years have been kept in the workhouse or workhouse infirmary (col. 4). The increase in these asylum cases (col. 2) represents thus, probably in a large degree, not new individuals found to be lunatic, but a transfer of persons from Poor Law administration to lunacy administration. Under the Poor Law, they were "paupers"; transferred to the asylums, they have become "pauper lunatics." There is the more reason for this state of things because the pressure on workhouse accommodation in many places is very great. Thus from a special return of persons in receipt of relief it appears that "paupers sixty-five years of age and upwards" in receipt of indoor relief, excluding "lunatics in asylums, licensed houses and registered hospitals, and vagrants," but not "other lunatics," and "excluding also persons in receipt of relief constructively by reason of relief given to wives or children," numbered on August 2st, 1890, 54,752, and on September 1st, 1903—a sufficiently comparable date—75,214, an increase of 20,462, or 37 per cent. This indicates a pressure on the indoor accommodation of the Poor Law to the extent of that percentage—37 per cent., in spite of the removal of an increasing number of the certified insane from the workhouses. Of the effect of this removal, the above return is evidence. We may compare these figures of August, 1890, and September, 1903, with those in the above table for the same period, 1890–1903. Between 1890 and 1903 the certified insane (col. 4) in the workhouses keep at a low level—actually decreasing by 721; but the pauper lunatics in county and borough asylums (col. 2) increase by 28,111, or 56 per cent. There is thus (1) an entry of the aged into the workhouses to the number of 20,462 additional persons, being an increase of 37 per cent.; and (2) a passing of lunatics to asylums, largely from workhouses, to the extent of 28,111, being an increase of 56 per cent.

Returns Boards of Guardians (Persons in receipt of relief) 28 March, 1904, p. v. 113, H. of C.

577. Accordingly we may say that to a great extent the increase in pauper lunatics in asylums is the outcome of the increase of the aged paupers in workhouses. The accommodation required for the latter has had to be provided at the expense of the former; and under this pressure the Poor Law, for all practical purposes, is being deprived of its lunacy work. It maintains comparatively few certified lunatics in its institutions. For most of them it is simply the agent for paying for their maintenance. In fact, these figures show that a change, such as that which we suggest, is already taking place. We propose that there should be a central body who should assume the protection and supervision of all mentally defective persons. Already to the only central body that is now in existence and is able to deal with the mentally defective, and to institutions which are under its supervision—namely, to the Lunacy Commission, and the asylums which it inspects—each year a larger and larger number of mentally defective persons are passed on by the Poor Law authorities.

578. We have thus a double process in operation. There is a large increase in the number of children and young persons who are returned as "feeble-minded"—for "feeble-minded" children and young persons are now being recognised as "feeble-minded"—and there is a large increase in the number of aged persons who are certified as lunatics, but who are rather, as we should define them, "mentally infirm" and who as "lunatics" or persons of "unsound mind" are removed from the workhouses and come under the supervision of the present Lunacy Commission.

Uncertified mentally defective persons.

579. On a third point, there is also evidence. The census has always revealed that there are many "imbecile" or "idiot" or "lunatic" persons who are not certified and placed under the charge of the Lunacy Commission, but whom the householders who fill up Census papers enter under one or other of those terms. Thus, by the Census of 1901 there were 132,654 "insane" returned, that is, insane including imbecile and feeble-minded. Of these the sub-division is as follows:—

Tatham, Vol I., 270

Where enumerated.	Number of "Insane." Census of 1891.	Census of 1901.	Increase or decrease per cent.
TOTAL - -	97,383	132,654	+36·2
Public Lunatic Asylums -	64,881	86,797	+33·8
Private Lunatic Asylums -	4,595	3,689	−19·7
Workhouses - - -	10,592	14,972	+41·4
Elsewhere - - - -	17,315	27,196	+57·1

Uncertified mentally defective persons—*contd.*

580. The large increase in the first entry consists of persons certified as lunatic or idiot under the Lunacy Act of 1890 and the Idiots Act of 1888. It contains very few "feeble-minded" or none: at least, it is probable that, the methods and conditions of admission to the asylums remaining the same, the same classes of persons have been admitted to them. But the figures suggest that in the workhouses a larger number of non-certified or certifiable inmates have been recognised as such—apart from the certified who are either in the asylums, as we have seen, or who, being certified as suitable under the Lunacy Act of 1890, Sec. 26, for detention in the workhouse, there remain. And this number of new uncertified persons would appear to amount to about 3,583. For the number of the certified lunatics in workhouses on January 1st, 1901, was 11,389; and the number of persons returned very shortly afterwards at the census of 1901 as "insane" (*i.e.*, "imbecile" or "feeble-minded" or "lunatic") resident in workhouses was 14,972; and the difference between the two (14,972–11,389) must represent new persons, mentally defective in some way, and uncertified. Tatham, Vol. I., p. 270.

Further, under the entry "elsewhere" that is, elsewhere than in public or private asylums or workhouses, were 17,315 "insane" numerated by the census in 1891 and 27,196 by the census in 1901. Hence, apart from 3,583, the new uncertified mentally defective persons, there is a further increase of 9.861 (27,176–17,315) persons returned as belonging to one or other of these classes by the householders who knew them.

Lastly, we may say that the total number of the mentally defective persons recognised as such by the masters of workhouses and by householders at the census, but not certified (or to a very small extent certified) as private patients in private homes possibly amounts to (3,583 + 27,196) 30,779. Tatham, Vol. I. Table I., p. 270.

Accumulation of mentally defective persons in institutions.

581. There is one other factor for consideration. As we have seen, there is at all asylums, and even in homes, an accumulation of cases. In the voluntary homes the inmates received with a view to training stay on, because apart from the Poor Law institutions there is no place to which they can be sent. It is the same at the asylums for the insane. If they do not recover they must remain, and under the healthy and quiet conditions of life which they there enjoy it is said that they live longer than they would outside. There is thus, apart from all other elements in the question, one cause for apparent increase in the numbers. Protection leads to longer life, and this, from the point of view of the provision of accommodation, represents an added difficulty. Not only is there the recognition of a larger number of mentally defective persons as such, and the transmission of more patients from workhouses to county and borough asylums, and more pressure on workhouse accommodation, but there is also the fact that the larger the number of the mentally defective who have to be dealt with, the greater the stagnation, if one may so call it, unless the asylums in their turn extend, or some arrangements are made for providing, otherwise than in asylums and hospitals for those, or many of those, who do not require active treatment and control.

Confusion caused by designation "feeble-minded" in Census, 1901.

582. On the question of the utility of entering the word "feeble-minded" in the Schedule of the census, we are in agreement with Dr. Tatham, the Superintendent of Statistics, Somerset House. We do not think that the word can be understood with any precision by those who have to fill up the paper, and we think that like the word "imbecile," which is also entered on the present schedule, used vaguely it can only lead to confusion. Whether it is of any service to include even the word "lunatic" is doubtful.

Conclusions as to Census returns.

583. We conclude that the general effect of the census figures submitted to us by Dr. Tatham, the returns of the Lunacy Commission, and the return of insane persons chargeable to the Poor Law, is to show—

(1) That under the title "feeble-mindedness" at the last census a large number of mentally defective persons were probably for the first time recognised and returned.

(2) That the number so returned is conspicuous in the earlier age periods of life, "up to fifteen" and "from fifteen to twenty-five," and in each of these age periods between the census of 1891 and 1901, the increase amounts to 1,455 and 4,001.

Conclusions as to Census Returns —*contd.*

(3) That probably under the title "feeble-minded" at the later age periods "forty-five to sixty-five," and "sixty-five and upwards" were also returned in increasing number senile dements or mentally infirm people.*

(4) That these people represent to a large extent persons dependent on the Poor Law who have been transferred to the supervision of the asylum authorities, rather than persons who have become "feeble-minded" and have for the first time been a charge on the country.

(5) That owing to the 4s. grant and the desire, especially in recent years, to remove the "mentally infirm" from the workhouses, there has been gradually at work a division of labour between the Poor Law —dealing with destitution, and the Lunacy Commission dealing with the mentally defective.

(6) That, if we compare the Census of 1901 with that of 1891, we find that in the workhouses a large number of persons, not certified as lunatics under the Lunacy Act of 1890, are recognised as "imbecile" or "feeble-minded," or, probably in very small proportion, "lunatic," and that the number thus recognised at the time of the last Census probably amounted to some 3,500 to 3,600 persons.

Tatham, Vol. I., Table I., page 270.

(7) That generally in the population the census shows that in the last decade, outside asylums and workhouses, some 9,000 to 10,000 more persons have become, or more probably have been recognised as being, "feeble-minded" or "imbecile," or, probably in very small proportion, "lunatic."

Unsuitability of Census as agency for ascertainment of facts *re* mental defect.

584. For our own part we desire to have the word "lunatic" withdrawn from administrative and scientific usage, and to substitute for it the words "of unsound mind." But, however that be, the census, it appears to us, is not an agency suitable for the ascertainment and classification of facts the nature of which in very many instances can only be learned by the personal observation of men and women whose judgment has been trained and well practised in a special branch of medical work. Both for administrative and scientific purposes it would be better, we think, to ascertain the facts by special investigation such as that which has been made by our medical investigators, or by means of the cumulative records which we hope may be compiled as confidential documents, as soon as the importance of the subject is recognised. In this view we have made recommendations for the registration of cases of mental defect, for their notification under certain limits, and for an inquiry as to the number of these cases on behalf of the committees for the care of the mentally defective in their areas.

Recommendations XI., LV.–LXIII.

III. The Natality and Mortality of Mentally Defective Persons.

Eichholz. Vol. I., 3885, 3890. Mercier, Vol. I., p. 364. Tredgold, Vol. I., p. 399, c. 1, 7313. 7491. Gill, Vol. VI., p. 286.

585. It appears to be generally asserted that the number of children born to mentally defective parents is abnormally high. Many witnesses have quoted instances of very large families the offspring of mentally defective mothers. But, with one or two exceptions, sifted and precise statements on the subject are wanting. With this question of birth rate, that of the age of feeble-minded men and women who are in workhouses and are able to go in and out at will is closely connected.

586. It is, we feel, a matter of serious regret that more scientific evidence on the birth and death rates of the mentally defective is not forthcoming. A greater scientific interest in the study of insanity and mental defect generally would, we think, have produced a far larger mass of evidence which would have been of the utmost value. We hope that in the future much closer attention will be paid by superintendents of institutions and others who have very considerable material at their disposal, to investigate questions of this kind, and we recommend that it shall be the duty of the Board of Control to encourage, direct and supervise such investigations, and, in their Annual Reports, to comment on the results obtained.

Recommendation XXIII.

* The increase amounted to 11,501 at the age "45 to 65," and 6,273 at the age 65 and upwards.

587. Dr. Tredgold submitted to us a table "showing the condition of 150 aments with their brothers and sisters." This we reprint. Tredgold, Vol. I., p. 399, c. 1. 7493.

TABLE SHOWING THE CONDITION OF 150 AMENTS WITH THEIR BROTHERS AND SISTERS.

In the 150 Families there were 1,269 children born.

Unsatisfactory.			Satisfactory.	
A.	Born dead	170		
B.	Since died			
	Under 1 year	138		
	„ 3 „	107		
	„ 10 „	37	315	Said by parents to be mentally and bodily healthy 456
	„ 20 „	8		
	Over 20 „	25		
C.	Mentally affected	245		
D.	Diseased, paupers, or criminals	83		
	Total	813	Total	456

Total, 1,269

588. Dr. Tredgold pointed out that:—"The average number of children born in a family is four, whereas in these degenerate families we find an average of 7·3 to each, and if the still-born children are included, the disproportion is even more striking, as the average number of children born in each family is brought up to 8·4," and he added:—"Out of this total only a little more than *one-third*—'456 out of a total of 1,269 children'—can be considered profitable members of the community, and this, be it remembered, at the parents' valuation." Birth rate and survival of mentally defective persons.

A third point is the number of mentally defective children who survived. Dr. Tredgold states:—"Out of the total number of 526 mentally affected persons in the 150 families, there are 245 in the present generation"—a large survival. Tredgold, Vol. I., p. 399, c. 1.

589. A further reference suggests the same conclusion. Dr. Eichholz had pointed out that in sixteen "picked families about 60 per cent. of the total children died while young. Out of 173 children born within these physically degenerate families 101 died young—over 58 per cent." And he argued that on these terms the degenerate families will die out. But, as Dr. Mercier showed, the 173 children in sixteen families made an average of nearly eleven children to a family—"a number far in excess of the normal." Hence in spite of the large mortality there remained to each family an average of four and a half children, "an average still in excess of the normal average." Birth and survival among physically degenerate families. Eichholz, Vol. I., 3890. Mercier, Vol. I., p. 364, c. 1.

Dr. Potts noted at Stoke-upon-Trent that of the feeble-minded women in the workhouse, sixteen had together produced 116 children; in one family of fourteen only four had been able to work. Vol. VI., p. 95.

These figures and statements cannot, of course, be taken as a sufficient basis for generalisation, but, so far as they go, they support the opinion that during the years of procreation and child-bearing, there should be control or supervision in the case of mentally defective men and women.

590. Dr. Francis Warner touched on a kindred question. He said:—

> "I should like to point out the connection between infant mortality and feeble-mindedness. Many congenitally defective children die in the first twelve months. That probably is why infant mortality is so heavy upon the males; it is the male children that are so largely found with defective brains, and a large proportion of them die in infancy. Those who survive become those whom we are considering in social life." Warner, Vol. II. 11115.

Survival of mentally defective males and number in mid-life as compared with females.

But it is to be noted that in spite of this large mortality among male children, the males at the earlier ages outnumber the females. Thus, in the combined areas of investigation the mentally defective males in public elementary schools numbered 2,013, the females only 1,424. Later in life, taking the inmates of the workhouse and the recipients of outdoor relief together, the proportions change: the males number 1,782, the females 2,079. From this, therefore, it would seem that the conditions of the mentally defective life are similar to those of the normal life on this point. More males are born than females, but fewer survive to a late period of life.

Vol. VI., p. 59 15 and 16; and p. 61, col. p. 63, col. 14.

Birth rate amongst mentally defective "paupers."

Tredgold, Vol. VI., p. 235.

591. On the birth rate of the mentally defective, and on the ages of those who are in workhouses and able to go in and out, the reports of the medical investigators throw light. Referring to cases which he noted during his investigation in Somersetshire Dr. Tredgold submitted to us a table respecting the propagation of children by women who are actually feeble-minded. The groups in the table refer, B. to the inmates of the workhouses; C. to those in receipt of outdoor relief; F. to persons relieved by medical charities; G. to persons in miscellaneous institutions, such as charitable institutions, common lodging-houses, training homes, etc.; H. to persons known to "other sources." The table is as follows:—

Group.	Total Number of Feeble-minded Women in Group.	Number of these women who have borne Children.	
		Legitimate.	Illegitimate.
B	44	—	17
C	39	6	3
F	16	—	2
G	6	—	3
H	60	13	17
	165	19	42
		61	

This table carries with it the following comment:—

"The nineteen mothers have had in all eighty children. Of these sixteen died in infancy, nineteen are imbecile or feeble-minded and are included in my returns, twenty are either physically delicate to a pronounced degree or are mentally dull and backward, and eight are too young to make a satisfactory examination. There are only seventeen out of the total eighty who to all appearances come up to the average standard of mental and bodily health.

"With regard to the *illegitimate children*. The forty-two mothers have given birth to seventy-eight children. Of these twenty-four died in infancy, five are imbecile or feeble-minded and included in my returns, two are decidedly dull and backward, two appear to be normal, and of the remaining forty-five no information can be obtained. I think, however, that although details are lacking of such a large number one may justifiably conclude that children of feeble-minded women born *out* of wedlock are not likely to possess any advantages over those born of married women. Further comment upon this question is needless."

Ages of mentally defective in workhouses.

Melland, Vol. VI., p. 151.
Cf. also,
Potts, Vol. VI., pp. 94, 122.
Tredgold, Vol. VI., p. 221.
Pearce, Vol. VI., p. 257.
Gill, Vol. VI., pp. 278, 279.
Stracey, Vol. VI., p. 303.
Graham, Vol. VI., p. 460.

592. In regard to the ages of mentally defective persons in workhouses, it will suffice to quote two instances.

At the workhouses for Manchester, Chorlton and Prestwich there were 105 feeble-minded males. Of these—

Eighteen were below twenty years of age.—Of these, five suffered also from epilepsy, three were paralysed, and four others were physically crippled. One was a boy of eighteen "who is still at school."

"*Twenty-six were between twenty and thirty years.*—This is a common age for the feeble-minded to drift into the workhouse."

Nineteen were between the ages of thirty and forty.—Several of these had already been in the workhouse a number of years.

Eleven were between forty and fifty.

Twenty were between the age of fifty and sixty.—Several of these had been in the workhouse for long periods. One, a man of fifty-two, described himself as having been in and out of the workhouse for forty years, and another of the same age had been in the house many years, he could not say how long.

Eleven were over sixty.

Melland, Vol. VI., p. 151.

There were 167 feeble-minded women. Of these:—

Sixteen were below the age of twenty.—Several had been obliged to come into the workhouse owing to the severity of the mental weakness, or owing to its complication with other defects, such as epilepsy or paralysis. In four cases—two were seen in the maternity ward, another in the Lock Ward, and another had recently had an illegitimate child. One girl of nineteen was still at school.

Ages of mentally defective persons in workhouses—*contd.*

Fifty-eight were between the ages of twenty and thirty. Of these sixteen were seen in the maternity wards, all, with one exception, being unmarried, whilst in addition nine others had had illegitimate children—some two and some three. As amongst the men, but to an even greater degree, this is the commonest decade for feeble-minded women to find their way to the workhouse. Melland, Vol. VI., p. 152.

Thirty-eight were between the ages of thirty and forty. Of these one was seen in the maternity ward, but unlike the other cases there was a married woman. One case between these ages I came upon in the lock ward. Three others had had illegitimate children, though they were not in the lying-in ward when I saw them.

Twenty-seven were between the ages of forty and fifty.

Twenty-one were between the ages of fifty and sixty. One of fifty-four had been born in the workhouse and had lived in it all her life. From several others I got a very common history of their only having been in the workhouse a short time, having been cared for at home until, on the death of their parents, they had been left to look after themselves. For this they were absolutely unfitted, and so they had been forced to come into the workhouse.

Seven were sixty and upwards, the oldest being seventy-four.

Maternity Cases.—"Over the three months that I had them under observation saw ninety-four women in the lying-in wards at the three workhouse infirmaries. Of these, I found nineteen to be feeble-minded; in all but two cases the children were illegitimate, and in one of these a few questions brought to light the fact that she had had an illegitimate child four years before she was married. Of the remaining seventeen, two were below the age of twenty, and eight more were below the age of twenty-five, and of the other seven, whose ages lay between twenty-five and twenty-nine, four had had several children, the first one in each case before they had reached the age of twenty-five." Melland, Vol. VI., p. 152.

593. Dr. Stracey's report supplies these notes on the Lincolnshire unions. The total feeble-minded in the workhouses is 39 (fourteen males and twenty-five females). "Three of the feeble-minded women have become insane, and confined in an asylum, two were very troublesome and violent at times, and four had given birth to illegitimate children. Two males and seven females were subject to epileptic fits." Stracey, Vol. VI., p. 303.

"Classifying the cases according to age:—

Below 20 years	2
From 20–30 years	5
„ 20–40 „	5
„ 40–50 „	13
„ 50–60 „	7
„ 60–70 „	3
Over 70 years	4
Total	39

It will be seen from the above table that the largest number of cases are between the ages of forty to fifty. It is worth noticing that Dr. Tredgold, in Somersetshire, also found the largest number between the same ages." Cf. Tredgold, Vol. VI., p. 222.

594. Judging from this evidence, in the towns it would seem that a large number of feeble-minded men and women drift into the workhouse before they are thirty: for Dr. Potts' evidence as to Stoke-on-Trent supports Dr. Melland's as to Manchester. "Considerably more than half the feeble-minded women enter the workhouse," he says, "before they are forty-five, and 33 per cent. drift in before they are thirty. In the country the larger number enter between the ages of forty and fifty." Potts, Vol. VI., p. 95. Melland, Vol. VI., pp. 151–152.

CHAPTER XXX.

Conclusions and Recommendations.

595. Our general conclusions are that in dealing with the classes "idiot," "imbecile" and "feeble-minded" and with the moral imbecile, we are dealing with conditions chiefly inherited, and subject, therefore, to amelioration only to the extent to which the mental and physical force available in the individual approaches to the normal. But this conclusion does not preclude a considerable advance in knowledge and self-command among the higher grades of the defective—so far at least that they may be trained so as to contribute materially to their self-support.

Conclusions and Recommendations—*contd.* Recommendation IV.

596. For the better identification and treatment of different types and degrees of mental defect we have suggested definitions, the adoption of which should lead, we think, to the removal of prejudice in the use of words bearing on the condition of these classes and should promote uniform and consistent certification.

Recommendations I. and XXVIII.

597. We have found that, however it be dealt with, the problem of the care and control of the mentally defective assumes a new aspect and larger proportions as it is more accurately and completely studied. It affects very largely education, Poor Law, and prison administration, and the treatment of it by one authority would greatly reduce the charges and simplify the obligations of other authorities dealing with these branches of public work. The extent to which this would affect them has been stated by us numerically, as far as our *data* permit. All told it would seem that the purview of a central body for the care and control of the mentally defective would extend to 271,607 persons, or about ·83 of the population.

Para. 570.

Recommendations LV.–LVIII.

598. For the ascertainment of cases of mental defect and for their record and notification, we have made definite recommendations. By the means which we have there suggested we think that sufficient and trustworthy statistical data will in future be available. We do not think that, except as a kind of recount of persons certified as being of unsound mind in various establishments and places of abode, the census can serve the purpose of ascertaining with any accuracy the number or classes of mentally defective persons.

599. Lastly, we have called attention to two statistical questions which add to the gravity of the subject with which we have to deal. Evidence has been submitted to us to the effect that probably, in the case of the feeble-minded, there is a larger birth rate than the normal, combined with a death rate, which, though large, allows of a considerable survival of mentally defective persons.

PART VII.

MENTALLY DEFECTIVE PERSONS AND THE LUNACY COMMISSION.

CHAPTER XXXI.

I.—Constitution and Procedure of the Lunacy Commission of England and Wales and the General Board of Lunacy in Scotland.

600. The reference to the Commission as extended by the Royal Warrant of the 2nd November, 1906, imposes upon us the duty of enquiring into the constitution, jurisdiction and working of the Lunacy Commissioners and of other lunacy authorities in England and Wales, and into the expediency of amending the same or adopting some other system of supervising the care of lunatics and mental defectives and to report as to any desirable amendment of the law.

601. The earliest statute—the Statute of Prerogatives (17 Edw. II cs. 9 and 10)—defines two classes of mental defectives, the "fatuus naturalis" or born fool, and the "non compos mentis, sicut quidam sunt per lucida intervalla" or person unsound in mind with certain intervals of understanding, a distinction which, broadly speaking, holds good still. "In cases of idiocy the property of the idiot or 'fool natural' vested in the Crown, subject to a provision for the maintenance of the patient and of his establishment, during the life of the person so affected, because no possibility of recovery was to be presumed. The property, on the other hand, of the lunatic not so born, vested in the Sovereign during the continuance only of the lunacy, and without profit to the Crown, upon the administration of the trust." The statute was declared by Coke to be declaratory of the Common Law. Since the abolition in 1660 of the Court of Wards and Liveries the Crown has, by sign manual, delegated its powers and authority to some high officer or officers of Justice or State. The practice has been to entrust the Lord Chancellor with the exercise of the Royal prerogative in respect of the case of the persons and property of lunatics. Neither the forms, nor the expense of the proceedings which they necessitated, were suitable for "unpropertied" persons, and these, if they were idiot or of unsound mind, were left to the care of their friends and relatives, or to a very small extent provided for by the religious charities. As, in the sixteenth century and later, poorhouses came to be built, they were to be found there, and in the common gaols, maintained as destitute or as dangerous. With the change of sentiment in the eighteenth century, they were first dealt with specifically on the ground of their being a danger to the community, and the police and the Poor Law authorities of the parish were required to apprehend and confine them on the authority of the Justices of the Peace.

The development of lunacy control in England and Wales.

The law and practice of lunacy. J. W. Abraham, 1886, pp. 7 and 8.

602. Mr. Trevor, then Secretary to the Commissioners in Lunacy, states :—

> "The first Act which deals expressly with pauper lunatics is 17 Geo. II., c. 5, which is really a Vagrants' Act. Section 20 ('Lunatics—how to be disposed of'), after reciting that 'there are sometimes persons who by lunacy or otherwise are furiously mad, or are so far disordered in their senses that they may be dangerous to be permitted to go abroad . . .' provides that 'it shall be lawful for any two or more justices of the peace, where such lunatic or mad person shall be found, by warrant under their hands and seals directed to the constables, churchwardens, overseers of the poor of the parish, town or place, or some of them to cause such person to be apprehended and kept safely locked up in some secure place . . . and, if such justices find it necessary, to be there chained.'
>
> "The section further provided that the goods and estates of lunatics should be seized to pay the charge of their maintenance."

Trevor, Vol. IV., p. 1, c. 1. 1743 A.D.

603. During the eighteenth century, a certain number of private asylums appear to have come into existence, in which patients were received for whose maintenance some payment could be made. But neither these private asylums, nor the penitentiaries and other places in which pauper lunatics were detained, were under official inspection or regulation.

604. In 1774, a step in this direction was taken. In that year a statute, 14 Geo. III., c. 49, entitled "An Act for regulating madhouses," was passed, the preamble of which states :— 1774 A.D.

> "That many great and dangerous abuses frequently arise from the present state of houses kept for the custody of lunatics for want of regulations with respect to the persons keeping such houses, the admission of patients into them, and the visitation . . .

Trevor, Vol. IV., p. 2, c. 1.

The development of lunacy control in England and Wales—*contd.*

by proper persons of the said houses and patients, and that the law as it now stands is insufficient for preventing or discovering such abuses."

"The statute provided that from and after November 20th, 1774, any person who concealed more than one lunatic without a licence should forfeit a sum of £500 (Section I). "Section 2 provided that in order that proper persons should be appointed for visiting such houses as should be licensed and kept for the reception of lunatics within the cities of London and Westminster, and within seven miles of the same, and within the county of Middlesex, the Royal College of Physicians in London may elect five Fellows to act as Commissioners for granting licences, to visit and inspect licensed houses and to examine the persons confined as lunatics therein (Section 14), such visits to be without notice to the keeper of the house (Section 5). "Outside the Metropolitan area similar powers were conferred on the justices of the peace at quarter sessions.

"This Act, which was to remain in force for five years, was continued for seven years by 19 Geo. III., c. 15, and made perpetual by 26 Geo. III., c. 91."

1808 A.D. Trevor, Vol. IV., p. 1, c. 2.

605. The next Act marks a still further advance. It had become recognised that lunatics should not be confined in gaols, houses of correction, poorhouses and houses of industry, but should be provided for in special institutions and in asylums. The statute 48 Geo. III., c. 96 (1808)—Mr. Wynne's Act—which was the outcome of the Report of a Select Committee appointed in 1807 to inquire into the state of lunatics, repealed 17 Geo. II., c. 5, s. 20, and, after reciting that the practice of confining such lunatics and other insane persons as are chargeable to their respective parishes in gaols, houses of correction, poorhouses and houses of industry, was highly dangerous and inconvenient, enabled justices in quarter sessions to provide for the erection of lunatic asylums, and to unite with other counties for the purpose, and conferred on them powers to contract, to appoint visiting committees, and to mortgage the rates for the expenses incurred. This statute was permissive, not compulsory.

1828 A.D. Trevor, Vol. IV., p. 2, c. 1.

606. In 1828, two changes of importance were made. The business of lunacy, on the side of administrative control, was brought under the oversight of the Home Secretary. This change was made by the Statute, 9 Geo. IV., c. 41, which was entitled "An Act to regulate the care and treatment of insane persons in England." It recited that the laws then existing for regulating houses for the reception of insane persons were ineffectual, and that it was expedient that some other provision should be made for licensing and regulating such houses, and for improving the treatment of insane persons, and it proceeded to repeal the previous Acts, and substituted further and better provisions in their place. Next, Section 2 provided for the appointment by the Secretary of State for the Home Department of fifteen Commissioners within the cities of London and Westminster, and seven miles thereof, and the county of Middlesex, for licensing and visiting all houses within that district for the reception of two or more insane persons. Of these Commissioners, who were appointed for a year, five at least were to be physicians and were entitled to charge for their services at the rate of £1 an hour; the rest were unpaid. In all other parts of England, similar powers were conferred on the justices of the peace assembled in quarter sessions within their own jurisdiction. Of the visitors appointed by the justices, three or more were to be justices themselves, and one or more, a physician, a surgeon, or an apothecary. The Commissioners appointed under this Act styled themselves "Metropolitan Commissioners in Lunacy." The Act was amended in certain particulars by 10 Geo. IV., c. 18.

1832 A.D. Trevor, Vol. IV., p. 2, c. 1.

607. Finally, the appointment of the Metropolitan Commissioners was transferred from the Home Office to the Lord Chancellor, and barristers as well as physicians were appointed members.

"In 1832 was passed the Statute 2 and 3 William IV., c. 107, to regulate for the period of three years the care and treatment of the insane."

"Under this Act the Commissioners were called 'The Metropolitan Commissioners in Lunacy.' Their appointment was placed in the hands of the Lord Chancellor; not less than four nor more than five were to be physicians and two were to be barristers. All the Commissioners were allowed their travelling expenses, but only the physicians were to be paid for their services."

Hansard 3rd Series. Vol. VI., p. 448; Vol. VII., p. 633, 877.

The transfer of the appointment of the Commissioners from the Home Secretary to the Lord Chancellor appears to have been carried out by the Lord Chancellor of the day for reasons which do not sufficiently appear in the Parliamentary reports. It was resisted in the House of Commons when the Bill was first introduced, but passed *sub silentio* shortly afterwards.

608. In 1842, the powers of visitation of the Metropolitan Commissioners were, by the 5 and 6 Vict. c. 87, extended to asylums and licensed houses in the whole country, but the management of asylums and the licensing of houses remained with the justices. The development of lunacy control in England and Wales.—*contd.*

1842 A.D. Trevor, Vol. IV., p. 2, c. 1.

> "The temporary Statute 2 and 3, William IV., c. 107 (1832), was from time to time amended and continued up to 1842, when, by the Statute 5 and 6 Vict., c. 87, the powers of visitation possessed by the Metropolitan Commissioners in Lunacy were extended to asylums and licensed houses all over England and Wales.
> "By Section 2 provision was made for the addition as Commissioners of two more physicians or surgeons and two more barristers, and by Sections 40–41 in addition to their travelling expenses medical and legal Commissioners alike were to be allowed and paid £1 an hour while visiting in the Metropolitan district and five guineas a day while engaged in visiting in the country. By Section 30 the duty was imposed on the Commissioners of visiting county asylums, and, by Section 31, of reporting in writing whether the provisions of the law had been carried out as to the construction of every such asylum and as to its visitation and management, the regularity of the admissions and liberations of patients therein and therefrom. They were also to report on such other matters as (*a*) any system of non-coercion practised; (*b*) classification of patients; (*c*) indoor and outdoor amusements and occupations and their effect; (*d*) the condition of pauper patients when received into the asylum, and dietary; and (*e*) generally. They were also required to visit and report on the military and naval hospitals."

609. In the year 1844, the Metropolitan Commissioners presented a Report to the Lord Chancellor on the various matters entrusted to their care. At the commencement of the Report, the Commissioners stated that, as their duties had been materially increased by the provisions of 5 and 6 Vict. c. 87 (already referred to), which had enabled them to inspect the condition of the various public and private asylums throughout England and Wales beyond, as well as within, the Metropolitan area, they thought it right to report to the Lord Chancellor the result of their experience in a more minute and specific way than they had heretofore been accustomed to do; and they issued a very valuable document, the source of many suggestions which were incorporated in subsequent statutes. Report of Metropolitan Commissioners in Lunacy, 1844. Trevor, Vol. IV., p. 2, c. 2.

This Report led up to the legislation of the year 1845, which was due to the initiative and energy of the late Earl of Shaftesbury, then Lord Ashley. In that year were passed, two Acts of Parliament, the one 8 and 9 Vict., c. 100, to regulate the care and treatment of lunatics, by, amongst other measures, the establishment of the present Lunacy Commission; and the other, 8 and 9 Vict., c. 126, to make provision for the establishment of lunatic asylums in counties and boroughs, and for the maintenance and care of pauper lunatics in them.

II.—Present Constitution and Work of the Lunacy Commission in England and Wales.

610. The Lunacy Commission, as then and at present constituted, consists of six paid Commissioners, three of whom must be medical practitioners, not necessarily physicians, and three practising barristers of not less than five years' standing. In addition, there may be five unpaid Commissioners not requiring professional qualification, legal or medical. Of the latter class, there are at present only two. There is a permanent chairman of the Commission, who is to be selected by the Commissioners from the unpaid class. In his absence, a chairman for the particular meeting is chosen by the Commissioners present. We are informed that, in fact, the permanent chairman, by reason of other calls upon his time, rarely attends the meetings of the Commissioners, and it has been suggested that, in consequence, continuity of practice is less likely to obtain than if the regular attendance of the permanent chairman could be secured. Constitution of Lunacy Commission. Lunacy Act, 1890, Sec. 153 (2). Dorington, Vol. IV., 25416–25419, 25401–25404, 25457–25458, 25466–25469. Trevor, Vol. IV., 25083, 25077–25078 Cooke, Vol. IV., 25777–25778. Giffard, Vol. IV., 27125, 27144, 27291–27294.

611. The salaries of the paid Commissioners, and the expenses of the Commission to the amount sanctioned by the Treasury, are paid out of moneys provided by Parliament. A paid Commissioner receives £1,500 a year and travelling allowances. He may not accept, or hold, or carry on any other office or situation or any profession or employment from which any profit is derived. The appointment is made by the Lord Chancellor, and is held during good behaviour. There is no compulsory retirement at the age of sixty-five. The Commissioners are only civil servants for the purpose of pension. A person is not qualified for appointment as Commissioner, secretary, or clerk of the Commissioners if he is, or within one year previous to his appointment has been, interested in a licensed house. Lunacy Act, 1890 Sec. 150 (2). Lunacy Act, 1890, Sec. 150 (3). Trevor, Vol. IV., 25271.

The secretary must be a barrister of not less than seven years' standing. He is appointed by the Commissioners with the approval of the Lord Chancellor. Trevor, Vol. IV., p. 7, c. 2.

Constitution of Lunacy Commission—*contd.* Trevor, Vol. IV., p. 8, c. 1. 25284. Cooke, Vol. IV., 25792. Trevor, Vol. IV., 25382.

His salary is fixed by the Treasury, with the concurrence of the Lord Chancellor. The present amount is £800 a year, rising by annual increments of £50 to £1,000. He is removable from office by the Lord Chancellor on the application of the Commissioners. The clerical staff is appointed, in the same way as in any other Government office, by negotiation with the Treasury. At present, the staff consists of fourteen clerks of various grades, two shorthand writers and one abstractor.

The total cost of the Commission, as appearing from the Appropriation Account for 1904-5, was £14,752 9s. 4d.*

Visitation. Trevor, Vol. IV., p. 6.

612. In 1845, when the Lunacy Commission was established and its paid members were, as now, six in number, they had to visit about 25,000 lunatics. On January 1st, 1906, the number of lunatics to be visited had risen to 116,361.* Modern methods of locomotion have made possible what would have been impracticable in 1845.

60th Report of the Commissioners in Lunacy 1906 p. 2.

These lunatics are detained in :—(*a*) County and borough asylums ; (*b*) Registered hospitals receiving lunatics ; (*c*) Idiot asylums ; (*d*) Metropolitan and provincial licensed houses ; (*e*) State institutions, viz. : Broadmoor State Criminal Asylum, Parkhurst State Criminal Asylum,† the Royal Military Hospital, Netley, and the Royal Naval Hospital, Great Yarmouth ; (*f*) Workhouses in which there are any lunatics or imbeciles. There are, also, many single patients in houses scattered over the country.

613. From information received from the Lunacy Commissioners, it appeared that in December, 1907, there were seventy-one county and district asylums ; twenty-three county borough asylums (including the City of London) ; fourteen hospitals ; eight hospitals and institutions registered under the Idiots Act, 1886 ; two naval and military hospitals ; two criminal asylums ; twenty-two metropolitan licensed houses (one being also registered under the Idiots Act, 1886) ; forty-four provincial licensed houses.

All the county and borough asylums, the State Institutions and idiot asylums, are visited once a year. Many of the asylums are of great size, containing from 1,800 to 2,700 patients, and involve from two to three days' visitation, every patient being seen and afforded full opportunity of speech and complaint, of which many avail themselves.

Trevor, Vol. IV. p, 6, c. 1.

The hospitals and provincial licensed houses not licensed by the Commissioners are visited by them twice a year, the metropolitan licensed houses always six, and generally eight times a year, and, at each statutory visit to all these institutions, the Commissioners see every patient and carefully satisfy themselves that detention is justifiable and necessary, and that the treatment is such as to promote comfort and recovery.

The single patients are invariably visited once, and frequently twice, in every year. The Commissioners, also, annually visit the five asylums of the Metropolitan Asylums Board, and one-third at least of all the workhouses in which there are any lunatics or imbeciles. The workhouses thus visited annually average about 250 and the inmates seen about 14,000.

The visits to all classes of institutions, except workhouses, are prescribed by statute to be paid by two Commissioners, one of them with medical and the other with legal qualification.

Trevor, Vol. IV., p. 6, c. 2.

614. For the purpose of visitation, England and Wales are divided up into six circuits. Each circuit is allocated to a pair of Commissioners. Every Commissioner goes on two circuits in each half year, so that he visits every institution in England and Wales in the course of three years. Single patients outside the metropolitan area are visited by one or other of the Commissioners of the circuit in which such patients reside. The metropolitan houses, and single patients in the metropolitan district, are visited by the Commissioners in turn. Every visit involves a report by the visitor or an entry in the books of the place visited. These reports and entries are brought before the board for consideration.

Work in Office Trevor, Vol. IV., p. 6, c. 2.

615. Whenever a patient is admitted to an institution for lunatics, or as a single patient, copies of the reception order, medical certificates, medical statements, etc., are sent to the office of the Lunacy Commission for examination, with the object of seeing whether they justify the detention of the patient and whether, if they are defective in form, they are capable of amendment under Section 34 of the Lunacy Act, 1890, all of them being examined by the Commissioners personally. The Commissioners, also, see and examine personally the reports on the condition of private patients sent at the end of a month after

* From information supplied by the Lunacy Commission it appears that on January 1st, 1908, there were 120,551 patients to be visited. The cost of the Commission 1906–1907 was (net) £15,618 8s. 11d. (Appropriation Accounts.)

† This has been established since January 1st, 1906.

admission) Section 39, Lunacy Act, 1890), and any further reports in regard to any patients for which they think it necessary to call, whether as the result of a visit or otherwise. Work in Office—*contd.* Trevor, Vol. IV., p. 6, c. 2.

A new class of reports and certificates was introduced by Section 38 of the Lunacy Act, 1890, which are sent in at the end of the first and second years after the admission of every patient, and afterwards at longer intervals, while he remains under detention. All these are examined by the Commissioners personally.

Notice of the death of every certified patient and of every serious casualty is given to the Commissioners. The medical Commissioner on duty takes charge of these matters, calling for any information he may require, reports of medical officers, case-book entries, post-mortem notes, statements of witnesses, coroner's depositions, etc., and himself drafting any letters which require technical medical knowledge.

616. The Commissioners are required to examine and report to the Secretary of State upon all plans, contracts, and estimates for the construction of asylums, and with regard to hospitals and licensed houses to determine themselves as to the propriety and fitness of the erection, additions to, and alteration of these buildings. The examination and consideration of plans by the Commissioners themselves is rendered necessary by the special nature of the work, which has to be dealt with by experts who are familiar with the requirements of patients both in health and as mental and physical invalids, and with the special construction and appliances which experience has shown to be necessary for their safety and treatment. Plans, Contracts, and Estimates. Trevor, Vol. IV., p. 6, c. 2.

The duty of considering plans and contracts for the purchase of land, or of erection of buildings for the purpose of asylum accommodation, was imposed on the Commissioners by Section 45 of the Lunatic Asylums Act, 1853. This section, also, provides that estimates of the cost and expense of carrying such plans into execution are to be submitted direct to the Secretary of State. Under Section 5 of the Lunacy Acts Amendment Act, 1862, such estimates were also to be submitted to the Commissioners. These two sections are embodied in Section 272 of the Lunacy Act, 1890. In the case of hospitals and licensed houses, the Commissioners merely approve the plans; they are not concerned with the question of cost.

At present, plans, contracts, and estimates, in addition to being examined by the Commissioners, have to be submitted to the Home Office for the approval of the Secretary of State, and they have, in practice, also to be submitted to the Local Government Board, whose consent is necessary, under Section 274 of the Lunacy Act, 1890, before a local authority can borrow money upon the security of the county or borough funds for the execution of the proposed works. The opinion of the Lunacy Commissioners is that one thorough examination would be more effective than the three now in force.

617. To assist them in this branch of their business, the Commissioners employ an architect of experience in asylum construction who is consulted on all plans and estimates of importance. The architect so employed is engaged in private practice and is not an officer of the Commission. He is paid by fees which apparently average about five guineas for each set of plans submitted to him. He does not examine the specifications, nor are all plans necessarily referred to him. Hine, Vol. IV., 32608–32615. 32832–32836. Trevor, Vol. IV., 25305–25312. Dorington, Vol. IV., pp. 19–21. Cooke, Vol. IV., 26314–26319. Urmson, Vol. IV., 26767–26779. Giffard, Vol. IV., 27196–27198. Cunynghame, Vol. IV., p. 322. Crowther, Vol. IV., 30600–30612. Vickers-Edwards, Vol. IV., p. 217. Brooks, Vol. IV., 31117–31119. White, Vol. IV., p. 231, c. 1.

It has been strongly represented to us by the witnesses on behalf of the Commission and others, that this system is not sufficient to enable them to prevent unnecessary expenditure nor to obtain as full a criticism and amendment of plans and specifications as is desirable. They say that what is required is an experienced salaried architect to the office, to devote the whole of his time to the work. Further than this, they should, in their opinion, be empowered to take the opinion of sanitary, electrical, and other experts, if necessary, upon particular occasions. However the consulting authority be constituted, we recommend that an independent and salaried architect, not engaged in private practice, should be employed. Recommendations XXVII. and XLIII.

618. In addition to the above-mentioned work which is done in the office, the Commissioners are concerned to consider and discuss matters of importance in connection with the policy of the board, and to deal with matters for which an order of the board is required, such as dispensations in regard to medical visits,

Trevor, Vol. IV., p. 5, c. 2.

orders to visit, changes of holders or petitioners' permissions to receive more than one single patient, property reports to the Lord Chancellor, prosecutions, the reception of deputations and interviewers, and any other matter upon which the secretary may from time to time think it expedient to obtain a direction.

619. In Paragraphs 610–618, we have described very shortly the present work of the Commissioners, that it may be presented as a whole in connection with the historical notes which precede it. To several of the questions, which are incidentally raised in this statement we will refer again in discussing proposals for changes which have been submitted to us.

III.—Local Authorities and Asylums.

Asylums and Asylum Committees.
Shadwell, Vol. I., p. 81, c. 1.

620. To the local administration for the care of lunatics, outside the Lunacy Commission, we have not yet referred in any detail.

The unit for local administration is, with some exceptions, the council of the county or county borough. This authority is bound to provide asylum accommodation for its paupers and lunatics, and may provide it for lunatics of the private class. It is required to exercise its powers through a visiting or asylums committee. The management of the asylums rests with this committee; it makes general rules and regulations for that purpose, appoints and dismisses the officers and fixes their salaries and pensions; and its members are individually described as visitors. The visiting committee is concerned only with the county or borough asylum. It has no relation either to the accommodation provided in hospitals for lunacy, or to that provided in workhouses, or to patients in licensed houses.

Lunacy Act, 1890., Sec. 254.

Sec. 243.

Sec. 254.

Sec. 266 (1).

The visiting committee may provide accommodation by the erection or acquisition of an asylum separately, or in conjunction with other counties or boroughs; or the council may contract for the reception of lunatics with the visiting committee of another county or borough, or the managers of a licensed house, or, in certain circumstances, a hospital. They may direct which of the modes of providing asylum accommodation shall be adopted. Plans, estimates and contracts approved by them have to be submitted to the local authority for approval; but they have power to spend, of their own authority, on necessary and proper additions, alterations, and improvements, up to £400 in the year, still subject however to the approval of the Secretary of State, but without special reference to the local authority. Reception contracts require the approval of a Secretary of State, as, also, do plans and estimates.

Expenses, and default, of local authority.
Shadwell, Vol. I., p. 81, c. 2.

621. The expenses to be paid or contributed by a local authority for the purposes of the Act are to be paid out of the county or borough fund to the treasurer of the asylum. Borrowing powers are subject to the consent of the Local Government Board. The approval of the Secretary of State is obtained under the terms of the following clause of the Lunacy Act, by which the Commissioners intervene as his advisers:— Lunacy Act, 1890, Sec. 274.

Lunacy Act, 1890, Sec. 272.

> "For the purpose of procuring the approval of a Secretary of State to any agreement, contract, or plan requiring approval under this Act, the agreement, contract, or plan, with an estimate of the probable cost of carrying it into effect, shall be submitted to the Commissioners, and to the Secretary of State, and the Commissioners shall make such inquiries as they think fit, and shall report thereon to the Secretary of State, who may approve the agreement, contract, or plan, with or without modification, or may refuse his approval."

Sec. 247.

If the local authority is in default in providing the necessary accommodation, the Secretary of State may require the authority to provide it in such manner as he may direct.

Hospitals.
Shadwell, Vol. I., p. 82, c. 1.
Lunacy Act, Sec. 341.

622. Hospital is defined as "any hospital or part of a hospital or institution (not being an asylum) wherein lunatics are received and supported wholly or partly by voluntary contributions, or by any charitable bequest or gift, or by applying the excess of payments of some patients for or towards the support, provision or benefit of other patients."

This definition fully explains the nature of these institutions. Bethlehem and St. Luke's Hospitals in London are old foundations of the kind. Hospitals receive only private patients; those that can afford it are charged rates that leave a profit, while those who are poor are received at low rates or gratuitously.

Secs. 230-237.

Regulations as to hospitals are contained in Sections 230–237, providing for their registration by the Commissioners; the framing of regulations, which

require the approval of the Secretary of State; the fixing of the number of patients to be received; the furnishing to the Commissioners of plans of buildings to be used for patients; and other matters. The Commissioners, if they think the regulations are not properly carried out, may report to the Secretary of State to that effect, and he may order the hospital reported on to be closed.

Licensed Houses.

623. Licensed houses are institutions carried on for private profit. No new licences for such houses are now issued. They are renewable from year to year, and a licence once allowed to expire cannot be revived. In the "immediate jurisdiction" of the Commission, the Commission are the licensing authority; outside that jurisdiction, the justices of every county and quarter sessions borough. Thus in this branch of work, the old division between the Metropolitan district and the rest of England, between the work of the Commissioners and that of the justices, still remains; and the authority of the Lord Chancellor continues. The Lord Chancellor has power to revoke a licence or direct that it shall not be renewed.

Shadwell, Vol. I., p. 82, c. 1.

Lunacy Act, 1890. Sec. 221.

> "Before a house is substituted for one previously visited by justices it must be visited and reported upon by one or more of the Commissioners; and no additions or alterations may be made to a licensed house without the previous consent in writing of the Commissioners, and, if the house is licensed by justices, of two visitors also.
>
> "The Commissioners, with the sanction of a Secretary of State, may make regulations for the government of any licensed house."

Shadwell, Vol. VI., p. 82, c. 1.

Workhouses.

624. Certified lunatics who are "chronic lunatics not being dangerous" may be provided for in workhouses; and visiting committees may, "with the consent of the Local Government Board and the Commissioners, and subject to such regulations as they respectively prescribe," arrange with guardians to receive them. The accommodation provided comes under the ordinary management of the guardians, subject to inspection by the Local Government Board inspectors. The Lunacy Commissioners "visit annually the large asylums of the Metropolitan Asylums Board," which are technically workhouses, "and a third at least of all workhouses in which are any lunatics or imbeciles," and, in addition, make a large number of so-called "annual" visits.

Lunacy Act, 1890, Sec. 26, 1.

Needham, Vol. IV., p. 73, c. 2.

Lunacy Procedure in England and Scotland compared.

625. Omitting here any mention of the duties of the Lunacy Commission in England in regard to their supervision of individual cases, we think it will be useful to submit a statement in regard to Scotland similar to that which we have just made in regard to England, and to point out some of the differences between the two systems. For, many witnesses have referred to the constitution of the Lunacy Board in Scotland, and have suggested the adoption of some features of its constitution and some characteristics of its procedure in England and Wales.

IV.—Present Constitution and Work of the General Board of Lunacy in Scotland.

The General Board.

626. In Scotland, there is a General Board of Commissioners in Lunacy, consisting of a chairman, who is unpaid, two legal Commissioners, who are unpaid, and two medical Commissioners, who are paid. The unpaid members attend all ordinary meetings of the Board, and take part in all its general administrative work. The paid members, who are the medical members, "have the special duties of visiting twice a year and reporting to the Board on establishments for the insane and on the care and condition of patients. Such half-yearly visitation is carried out by one medical Commissioner, the other being meanwhile in daily attendance at the office of the Board. There are two Deputy-Commissioners, not members of the Board, whose duties consist mainly in visiting and reporting on all persons of unsound mind under private care, who come for any reason under the jurisdiction of the Board."

Spence, Vol. III., p. 8, c. 2.

District Boards and their Asylums.

627. The country is divided into districts in each of which is a district board. Each district consists of counties, groups of counties, or parts of counties. Where there is a considerable population represented by a parish council, the parish council is constituted the district board of lunacy, and, in that capacity, fulfils functions entirely separate from its functions in regard to poor relief. In other areas, district lunacy boards are formed by the local authorities, county councils and magistrates of burghs within the area.

The duties of district boards of lunacy are confined to the purchase of sites and the erection or acquisition, maintenance and management of district

Spence, Vol. III., p. 8, c. 2.

District Boards and their Asylums—*contd.*

Spence, Vol. III., p. 8, c. 2.

asylums; or when the erection of a district asylum is not necessary, to contracting with existing asylums for the reception and maintenance of the pauper lunatics of the district. They have no concern with Royal asylums or parochial asylums, or with lunatic wards in poor houses or pauper lunatics in private dwellings. They have power to borrow money for the erection, enlargement, and maintenance of asylums, upon security of assessments levied under the Act for the purpose, which assessments are apportioned by the General Board upon heritable property in counties and burghs within the district. They have to furnish the General Board with abstract accounts of receipts and expenditure and with loan accounts.

The district asylums are those erected, or acquired and managed, by the District Boards of Lunacy. The sanction of the General Board is required as to sites, plans and specifications and estimates for the erection and alteration of asylums, but no other sanction is necessary. The Board has power to draw up rules for the management of these asylums which require the approval of the Secretary for Scotland. But these asylums require no licence from the Board.

Royal Asylums. Spence, Vol. III., p. 9, c. 1.

628. In the case of Royal asylums—which correspond to the "Hospitals" in England—the General Board have the right, as in the case of other asylums, "to visit, inspect and report and to inquire into all particulars in relation to the keeping and management of the asylum and the care of lunatics in it." They have no power to make rules for their management, except as to books, minutes and returns. Nor have they any power in regard to plans and specifications, though in fact they may be consulted about them.

Private Asylums. Tuke, Vol. IV., 28717.

629. Private asylums, of which there are only one or two, are like licensed houses in England; they are licensed by the Board, who can make rules in regard to their management.

Parochial Asylums.

630. Parochial asylums are institutions intermediate between district asylums and licensed poorhouse lunatic wards. They resemble district asylums in that all classes of insane including curable and dangerous cases may be admitted, but, unlike district asylums, they are under the management of parish councils.

Wards in Poor-houses. Spence, Vol. III., p. 10, c. 2.

631. Besides these, there are lunatic wards in poor-houses. These, too, are licensed by the Board for the reception of pauper lunatics who are not dangerous and do not require curative treatment. In regard to them, certain conditions have to be fulfilled. The accommodation must be entirely separate and with separate grounds, and stipulations are made as to attendance, dietary, and other matters. If these stipulations are not enforced, the licence may be withdrawn. The wards are under the management of the Poor House Committee, and the governor of the poor-house is in the position of superintendent. The Board do not require a resident medical officer unless the number for which the wards are licensed exceeds 100.

Boarding-out. Clouston, Vol. III., p. 201, c. 2.

632. The boarding-out in families of the chronic insane who require no special treatment is a conspicuous part of the Scottish system, and to it we will refer later. It cannot be said that boarding-out, strictly so called, has any place in the English system, unless the outdoor relief given by Poor Law Guardians to the families of persons who are mentally defective may be considered a kind of unacknowledged boarding-out.

V.—Differences between English and Scottish Methods.

633. If, then, we omit questions respecting the supervision and inspection of individual cases, we may sum up the differences between the English and the Scottish system as follows:—

(*a*) *Payment of Commissioners.*

In Scotland, the legal members of the Commission are unpaid, and take a great part in its general work, but not in the visitation of asylums. In England, the legal members of the Commission are paid, and they take part in the work of visitation, which in Scotland is wholly done by the paid medical members.

(*b*) *Visitation.*

In Scotland, two visits a year are paid to all institutions. In England, there is precise statutory provision for more frequent visits to some institutions and houses, and less frequent visits to others.

In England, in the case of asylums and some other institutions, two Commissioners together have to visit and report. In Scotland, one only is required to do so.

Differences between English and Scotch methods—*contd.* Chap. XXXIII.

The details on these two points we will submit in a subsequent chapter, when we consider the question of visitation.

(*c*) *Local Authorities.*

In England, the local authorities are county and borough councils. In Scotland, district boards of lunacy are the local authorities; they consist, in some urban areas, of parish councillors, but elsewhere, of representatives from county councils and from burgh magistrates. In some instances, when the asylums are parochial asylums, parish councils act as local authorities.

(*d*) *Rules and Regulations.*

In the case of district asylums—the asylums of district boards—in Scotland, the board has the power of framing rules and regulations. In England, the Commission has no such power. They approve the rules only. If new rules are wanted, the Visiting Committee of the county or borough council must take the initiative. The Commission cannot do so.

(*e*) *Sites, Plans, &c.*

In the case of the purchase of sites, plans, etc., the approval of the board in Scotland is final. In England, the approval rests with the Secretary of State, but where money has to be borrowed the consent of the Local Government Board is also required. The Commission intervene only with their advice.

Lunacy Act, 1890, Sec. 272.

(*f*) *Accounts.*

In England, the accounts of asylums are sent under statute to the Local Government Board and to the Commission. In Scotland, they are sent to the Board of Lunacy only.

Sec. 278.

(*g*) *Loans.*

In England, if the local authority desires to borrow, an application must be made by it to the Local Government Board. In Scotland, the district board has power to borrow, but the Lunacy Commission apportion the assessments for repayment within the district.

Sec. 274.

(*h*) *Insane in "Poorhouses" or "Workhouses."*

In Scotland, wards used in poor houses for certified insane are licensed by the Commission subject to conditions, and, like all other institutions for the care of lunatics, are inspected by them twice a year. In England, though a certain number of workhouses—some sixty-two—are visited annually by the Commission, the responsibility of the care of lunatics in workhouses rests chiefly with the Poor Law authorities. The wards in which they live are not licensed, nor are any conditions required. Excepting in the case of asylums of the Metropolitan Asylums Board, they are usually visited by the Commissioners only once in three years.

(*i*) *Boarding-out.*

In Scotland, there is an organised system of boarding-out; in England, there is none.

CHAPTER XXXII.

Suggestions for the Re-organisation of the Lunacy Commission.

634. The Lunacy Commission is primarily an advisory body armed with powers of inspection and report. It forms no part of any State Department. Its members are appointed by the Lord Chancellor and it reports annually to him. In its administrative duties, it is connected with a Secretary of State—with the Home Office. In both branches of work its action is chiefly indirect. It interviews and advises. The duty of carrying out its recommendations rests with the local authorities, the Visiting Committees of the county and borough councils, or the managers of hospitals, or the licencees of licensed houses. In the event of misconduct in regard to a licensed house, the licence, on the recommendation

The advisory nature of the Lunacy Commissioners' work.

The advisory nature of the Lunacy Commissioners' work —*contd.*

of the Commissioners or of the Licensing Justices, may be revoked by the Lord Chancellor. If a local authority fail to provide the accommodation required by the Act and the Commissioners (§ 247). report to the Secretary of State, "the Secretary of State may require the local authority to provide such accommodation in such manner as he may decide, and the local authority shall forthwith carry the regulation into effect." And on the comparatively rare occasions on which appeal is made to the power of compulsion, action is taken by *mandamus*. So in other matters. The Commissioners inquire (§ 272) in regard to plans, estimates, and contracts for the purchase of land and erection of buildings proposed by a local authority, and report to the Secretary of State, "who may approve the agreement, contract or plan with or without modification, or may refuse his approval." So in the case of contracts for the reception of pauper lunatics of one district into the asylum of another, and in the case of rules for asylums, hospitals and licensed houses. The rules of asylums are prepared by the Visiting Committee and approved by the Secretary of State; the rules of hospitals are drafted by the Managing Committee of the hospital and approved by the Secretary of State. In both cases the Commissioners advise the Home Secretary, and their only control lies in that. In the case of licensed houses, with the sanction of the Secretary of State, the Commissioners may make the regulations. The Commissioners are thus in the main an intervening advisory body without executive functions. They advise and report on the one hand to the local authorities or agencies, on the other hand to the Secretary of State or to the Lord Chancellor. The acceptance or the enforcement of their advice rests with other authorities.

Lunacy Act, 1890, Sec. 226.

Suggestions for increasing the direct authority of the Commission.

635. The question is raised whether this advisory position should be altered and whether powers should not be conferred on the Commission to draw up rules and regulations in all cases and enforce their observation. One of the Commissioners, Mr. Urmson, said: "We want further powers, to make rules and to insist on their being complied with." So Dr. Needham, a Commissioner in Lunacy:—

> I think the Lunacy Commissioners ought to have power to call for a revision of the rules and regulations in both hospitals and asylums. . . The state of the asylum alters, or a variety of circumstances occur to make the state of things different; subject to a certain amount of discretion to local authorities, you want a revision to meet the new state of things and you have no power to call for it; once passed these rules can be kept on until the end of time.

Urmson, Vol. IV., 26545, 26546.
Needham, Vol. IV., 26948.
Needham, Vol. IV., 26951.
Mercier, Vol. IV., 29942.
Whitwell, Vol. IV., p. 202, c. 1.

So as to the future: if the jurisdiction of the Commission is extended to mentally defective persons as defined in Recommendation IV., the Commissioners, it is thought, should have power to regulate the establishments for them. So Dr. Mercier, who gave evidence on behalf of the Royal College of Physicians, suggests that they should have power to make rules in regard to the treatment of lunatics in workhouses. And Dr. Whitwell, the Medical Superintendent of the Suffolk County Asylum, proposes that they should be empowered to make compulsory orders in structural matters: for example to say, "Such and such buildings are not to be used and such and such buildings must be put up."

Clouston, Vol. IV., 30996, 30997.

Dr. Clouston, the Superintendent of the Royal Asylum, Edinburgh, supports these views. He says: "The powers of the Commissioners should be absolute in regard to size of asylums and in regard to plans of asylums." They should also have "greater powers in certain matters of internal administration, such as breaches of discipline on the part of the officers of institutions" and "some power over the higher officers, if they found a bad state of affairs existed,"—"as would lead to dismissal"—"such power that it would not be a mere personal recommendation, but that they would be performing a statutory duty in making such recommendation." At present a return is made by the asylum when an attendant or nurse is dismissed. The Commissioners have power to prosecute, and if the dismissal is due to misconduct affecting the patients they make inquiry, and, if necessary, prosecute. They have no power over the staff itself.

Urmson, Vol. IV., 26471, 26472.
Hodgson, Vol. IV., p. 261, c. 1 and 2.

Dr. Hodgson, the Chairman of the County Asylum at Chester, who expressed, like some other witnesses, his dissatisfaction in regard to the delay in passing plans, made also some general suggestions with a view to increasing the influence of the Commission. He thought that the Commissioners should occasionally meet the Asylums Committee in conference, an arrangement which would, he thought, be advantageous to both parties. "The Commissioners, though they had practical authority as to what was required for buildings, had little or no authority

in the ordinary administration of public asylums." The Annual Reports "came to the Committee having little authority behind them and not often as much influence as is desirable for all concerned." As to the treatment of lunacy as a disease, the visits of the Commissioners to Asylums Committees could be utilised "if only for the information they could give of the best things being done to advantage in other asylums." "The State had a right to exercise more influence in lunacy administration, not authoritative interference by the Commissioners, but the exercise of legitimate influence which well-informed, experienced, and tactful officials can always use to advantage." The change here insisted upon is the wider extension of personal and official influence, rather than the enlargement of the direct authority of the Commission. But Dr. Savage, who gave evidence on behalf of the Parliamentary Committee of the Medico-Psychological Association, would give them an altogether stronger position of control :—

Suggestions for increasing the direct authority of the Commission—*contd.*

Hodgson, Vol. IV., p. 261, c. 2.

Savage, Vol. IV., 29015.

> "'It seems to me,' he said, 'that here is the head of a great body; they are recognised as a head, and ought, as a head, to have a directing, observing and supervising power.'"

In these counsels, however, usually all that is definitely and immediately urged is, that two or more additional Commissioners should be appointed, in order to enable the Commission to meet the great increase of work that has sprung up in connection with certified lunacy. But as the influence of the Commission rests chiefly on advice and comment, the acceptability of which depends very much on the status of the advisors, it is argued, especially by medical witnesses, that no assistant Commissioners or inspectors should be appointed for the service of the Commission. Only Commissioners of full rank, who have large experience and special knowledge will have, it is said, weight sufficient to control and guide administrative opinion.

Other critics, accepting this view on the whole, have suggested that the English Lunacy Commission and administration might be re-organised on Scottish lines.

636. On the other hand, by some a policy of reconstruction is proposed which would practically abolish the Commission. This policy is based on several different theories and allegations. Some desire a Board of Health in which the Commission would be merged, some think its visitation of asylums unnecessary, and some blame it for misguidance and excessive expenditure in connection with the building of asylums.

Suggestions for minimising the authority of the Commission or abolishing it.

637. To take the first point. The British Medical Association desire that there should be "one central department charged with the supervision of matters which from the medical standpoint, whatever differences there may be in degree, are in nature homogeneous." They wish the Local Government Board "to be the Department of State dealing with all questions of health, . . . 'practically' the Department of the Minister of Health," and they would include in it the oversight of all cases of mental disease.

Smith Whitaker, Vol. IV., p. 237, c. 1.

Vol. IV., 31371.

Vol. IV., 31379.

Dr. Claye Shaw, formerly Medical Superintendent of the Banstead Asylum, wishes "to increase the powers of the Lunacy Commissioners so as to enable them to enforce systems of management of asylums which they approve; to arrange the proper and adequate accommodation for patients, to acquire sites, and to order the size and form of buildings," and "to make the Local Government Board the supreme reference in lunacy matters affecting lunatic hospitals, private and county asylums and lunacy matters generally." The argument put forward in support of this view was that the Local Government Board already "had a very great deal to do with insane people," and that it was "an anomalous thing that the Lunacy Commissioners should have to examine the workhouses that are under the control of the Local Government Board," and further that the architects, sanitary inspectors, engineers and others now attached to the Local Government Board should be available for building and other purposes in connection with asylums.

Claye Shaw, Vol. IV., p. 197, c. 1 and 2.

Vol. IV., 30377.

30378.

30377.

638. Mr. Crowther, Chairman of the Asylums Committee of the West Riding, objected chiefly to the action and policy of the Commission in relation to buildings. To that we will refer later; but his general suggestion was that "the visitation of asylums by the visiting committee of the local authorities was so complete and vigilant, that inspection by a central Government body was practically not required." "One Government inspector to visit annually would be quite sufficient"—"one inspector visiting one asylum continually." "In the present system there is a want of continuity of policy, in our opinion, which goes against efficiency and is very irritating sometimes." The Commissioners should not be responsible in any way for the medical and physical condition

Crowther, Vol. IV., p. 206, c. 1.

30393.

30549.

30588.

Suggestions for minimising the authority of the Commission or abolishing it. —*contd.*

of the patient. There should be separate county management, and the services of a permanent Government architect. Practically he would "eliminate the Lunacy Commission." Crowther, Vol. IV., 30532. 30535. 30531.

639. Mr. Brooks, Chairman of the Surrey County Asylums Committee, made criticisms and suggestions which may be summarised as follows:—

> "The Commissioners in this country, with its large number of lunatics and asylums, cannot know what is being done in any detail. They are not sufficiently strong to do the work. One or two Commissioners intimately acquainted with what is being done in one district or community would be better—something more on the lines of county medical inspection. There might be county inspectors over lunatic asylums—one county or more under one inspector according to the population. They would be in constant touch with the asylums and the medical staff. They would visit at uncertain times once in every three months and report to the Central Authority. They would have power to serve notices on committees and proprietors or managers to remedy deficiencies and provide necessary requirements. One visit a year like that of the Lunacy Commissioners is utterly useless. It is merely a visit to collect statistics on the off chance of your seeing something as you walk downstairs or pass through a ward. There is no time for these gentlemen to give to it, once in twelve months."

Brooks, Vol. IV., 31147, 31148.

On this scheme, the Commissioners' functions would be "limited to those matters which are more particularly concerned with the medical, domestic, and hygienic conditions under which lunatic patients are detained in public asylums." All proposed erections, alterations or extensions of buildings would be submitted to the Home Office direct, and the contracts made by local authorities for the temporary accommodation of patients would be settled also subject to the direct approval of the Home Office. The Lunacy Board should be a special department of the Home Office, consisting of a medical chief and his medical deputy and two or three other qualified members with an efficient office staff as required, and probably a legal member.

Vol. IV., p. 225, c. 2.

640. Mr. Davis, Chairman of the Birmingham Asylums Committee, took a similar view of inspection, but he desired that the Commission should be remodelled so as to include "a number of medical men (most of whom should have had lengthened experience in the care and treatment of the insane), lawyers, Members of Parliament and representatives of county councils, cities and boroughs."

Davis, Vol. IV., p. 276, c. 1.

641. Mr. Cooper, who was a member of the London County Council from 1889 to 1906, and who had taken an active part in the Council's asylum administration, spoke strongly against the work and policy of the Commission. On the question of its constitution, he said that they were "virtually a perfectly independent board —their only obligation being to report every six months the number of visits that they had made and the number of patients that they had seen"—and to lay their annual report to the Lord Chancellor before Parliament. Plans and estimates had to be sanctioned by the Home Secretary; "but the Home Secretary had disclaimed any responsibility for, or control over, the action of the board." The authorities were now elected, and the care of lunatics detained in asylums had been transferred to committees of county councils. Hence, it was a question "whether the special reason for the existence of the Board of Lunacy Commission had not passed away, and that the board be abolished, and any power and duty of theirs which is worth retaining, be given either to the Home Office or the Local Government Board." This might include "very large powers," probably enough to enable them to discard a proposal or scheme of the local authority, while leaving it a large discretion as to the kind and character of the asylums it should be allowed to build.

34480.
34482–34483.

Summary of suggestions for minimising or abolishing the powers of the Lunacy Commission.

642. These suggestions are very various: to make the Commission part of the Local Government Board, transformed into a Board of Health; to increase the power and authority of the Commission in the management of asylums, etc.; to eliminate it, and to provide annual inspection, and an architect who should be at the disposal of the local authorities; to enlarge the Commission so that it may be a somewhat representative consultative council; to abolish the Commission and to give more power to the asylum committees under the direct control of the Home Office or Local Government Board. And, except in the first two instances, these suggestions are the outcome of allegations of mismanagement, especially in reference to visitation, and the dispatch of business in connection with plans for

new buildings. These and some other points we will take in turn. And another plan, also, may be mentioned here; namely, that the Lunacy Commission should continue to carry on its work in regard to the certified as at present, but that a new body should be formed to deal with the "feeble-minded."

643. Our conclusions on this variety of suggestions we will submit later on. We begin our discussion of the subject by drawing attention to the fact that it is admitted that the work of the Commission at the present time is beyond their powers. At present, both the inspectorial and the advisory work is :— Vol. IV., 25877.

Pressure of work on the Lunacy Commission. Marriott Cooke, Vol. IV., 25879, 25880.

> "Done at a most undue pressure. Some of us are often obliged to be absent from Board meetings when there are important matters of policy to be discussed, and occasionally matters arise in institutions, such as suspected ill-treatment of patients, which we are not always able, owing to the shortness of our numbers, to investigate on the spot as we should like."

Asked why the approval and settlement of plans for an epileptic colony to be established by the London County Council took two years, Dr. Marriott Cooke, a Commissioner in Lunacy, answered :—

> "I may say that all these plans take a long time, they involve enormous expenditure of money, and it is most important in the interests of the ratepayers that these plans should not be hurried through. We think that where there is an expenditure of perhaps nearly £500,000 incurred in the erection of these asylums, every point should be looked into as carefully as it possibly can be, and there is no doubt that it does take a long time. I should also like to point out that some of the delay which may occasionally arise no doubt due to the Commissioners being over-taxed with work. Very often plans are delayed from our being obliged to go away on circuit, with the result that they must stand over until our return. That is one way in which the over-work of the Commissioners is manifested. Plans might be got through more quickly if more time could be given to them, and if they were not hung up for other work which the Commissioners must perform without delay." 26164.

Dr. Needham, a Commissioner in Lunacy, after describing the duties of the Commission and submitting a list of hours of work during twenty-two days of visiting asylums, says :— Needham, Vol. IV., p. 74, c. 2

> "The absorption of time in the several ways and to the extent specified above leaves practically none for consultation between members of the Board, and deliberation as to matters of principle, policy, and law, which are so necessary to secure sound, consistent, and united action. Parliament has laid upon the Commissioners duties and obligations, the efficient discharge of which is essential to the welfare of the insane, and the preservation of the liberty of the subject, and they are convinced that any neglect of many of them, or their perfunctory or incomplete discharge, would be followed, sooner or later, by reversion to the conditions which prevailed before, and for some time after, the creation of the Lunacy Commission, an account of which is to be found in the Parliamentary papers of that time.
>
> "The Commissioners are satisfied that they can no longer continue to discharge those duties in as complete a manner as they have hitherto endeavoured to discharge them unless they are strengthened by an addition to their number, and they have no doubt whatever that it would be quite impossible for them to undertake such extra work as it was proposed to lay upon them in relation to the Incipient Insanity Clauses of the last Lunacy Bill. As it is, their duties have to be discharged so hurriedly as to be good for neither the work nor the workers."

644. There is thus on the one side, on the part of the present Commissioners, an ample admission of their inability to cope with the work of the Commission as it now stands; and on the other side, there are the complaints which underlie the proposals for change which are mentioned above.

CHAPTER XXXIII.

Visitation and Discharge.

645. The number of Commissioners available for statutory visitation is very small—three Legal Commissioners and three Medical Commissioners. Five Honorary Commissioners may be appointed. Actually there are two only, one of whom is required to be chairman. By the honorary members at the present time but little responsible work is done; hence the brunt of it falls on the six Commissioners, and the Secretary and his staff of clerks. In 1845 there were, as at present, six paid members of the Commission, and there were also for many years afterwards, several honorary members, the late Earl of Shaftesbury, Sir Charles Bagot and others who placed much of their time at its service. Dorington, Vol. IV., p. 19, c. 1. Trevor, Vol. IV., 25077. 25082. Tuke, Vol. IV., p. 124, c. 1. Trevor, Vol. IV., p. 6, c. 1 and 2. Urmson, Vol. IV., 26735. Giffard, Vol. IV., 27148.

Chapter XXXIII.
Visitation and Discharge.

Growth of work of the Lunacy Commission. Needham, Vol. IV., p. 73, c. 2. 61st Report of Commissioners in Lunacy, p. 1.

646. But the work as indicated alike by the number of certified lunatics and by the larger size of the institutions to be visited has increased very much indeed. In 1845 the number of lunatics was 25,000; in 1883 it was 77,000; in 1907, 123,988. The number of county and borough asylums in 1883 was sixty-two; there are now, in December, 1907, ninety-four (*see* Par. 653 *post*) and the asylums are larger. In February, 1883, there were only thirteen asylums with an insane population exceeding 1,000; in 1904 there were nineteen in which the patients exceeded 1,000. Trevor, Vol. IV., p. 6, c. 1.

The aggregation of lunatics in large institutions, and modern facilities for travel, are facts which bar the conclusion that the work of the Commission, as a whole, has increased in the ratio of the increase in the number of lunatics; but to the remarkable increase in that number due weight must be given.

Visitation of Asylums.

647. The visitation of institutions in England and Wales by the Commissioners is arranged in six circuits; and the Lunacy Act of 1890 lays down precise instructions as to the number of visits to be paid annually to different kinds of institutions. Each asylum has to be visited by two or more Commissioners once at least in each year and inquiry made on the following points :— Trevor, Vol. IV., p. 6, c. 2.

Lunacy Act, 1890, Sec. 187, etc.

> "187.—(1.) Two or more Commissioners, of whom one shall be a medical practitioner and one a barrister, shall once at least in each year visit every asylum and shall inquire :—
>
> (*a.*) Whether the provisions of the law have been carried out;
> (i.) As to the construction of the building;
> (ii.) As to visitation;
> (iii.) As to management;
> (iv.) As to the regularity of the admission and discharge of patients;
>
> (*b.*) Whether Divine service is performed;
> (*c.*) Whether any system of coercion is practised, and its result;
> (*d.*) As to the classification of patients and the number of attendants on each class;
> (*e.*) As to the occupations and amusements of the patients, and their effects;
> (*f.*) As to the bodily and mental condition of the pauper patients when first admitted;
> (*g.*) As to the dietary of pauper patients;
> (*h.*) As to such other matters as to the visiting Commissioners seem fit.
>
> (2.) Any one or more of the Commissioners may at any time visit any asylum with the like powers as are by this section given to two or more Commissioners."

Of course the visitation of the Commissioners is not, nowadays, the sole means available for the maintenance of a high standard of efficiency in asylums. In addition to their inspection, asylums are subject to the much more frequent and detailed scrutiny of the representatives of the local authorities. There are visits of at least two members of the asylums committee of the council or borough council made together "once at least in every two months" "to inspect every part of the asylum and see every patient therein, so as to give every one, as far as possible, full opportunity of complaint, and examine the order and certificate or certificates for the admission of every lunatic. . . . ."

Lunacy Act, 1890, Sec. 188.

Lunacy Act, 1890, Sec. 189.

Further, where the asylum receives inmates sent by other asylum committees, a visit is paid once in six months by two members of the Visiting Committee who have placed the patients in the asylum.

Visitation of Hospitals and Licensed Houses.

648. Besides the asylums, the Commissioners have to visit hospitals and licensed houses (Sec. 191). The licensed houses "within the immediate jurisdiction of the Commissioners" are those (Sec. 206 and third schedule of the Act) in the cities of London and Westminster, the counties of London and Middlesex, and parts of Surrey and Essex in the outskirts of London, and "also every other place, if any, within the distance of seven miles from any part of the cities of London or Westminster, or of the borough of Southwark." These have to be visited six times a year, four times (Sec. 191 (2)) by not less than two Commissioners, "of whom one shall be a medical practitioner and one a barrister, and twice by one or more of the Commissioners."

The licensed houses outside this jurisdiction (Sec. 191 (3)) the Commissioners have to visit twice a year—a medical and a legal member together; and every hospital (Sec. 191 (4)) in the same way, not less than two Commissioners have to visit once a year, one being a medical practitioner and one a barrister. All these visits are made "without previous notice" (Sec. 191 (5)). There is,

Visitation of Hospitals and Licensed Houses —*contd.*

however, a proviso (Sec. 191 (7)) by which on a representation by the Commissioners the Lord Chancellor for a specified period need not require a house licensed by justices to be visited more than once a year, or a house licensed by the Commissioners and not receiving pauper patients more than twice a year by two Commissioners.

In the case of the houses licensed "within the jurisdiction of visitors appointed by justices" (Sec. 193 (2)), also, the visits of the Commissioners are supplemented. These houses are visited by two of the visitors appointed by justices, one of them being a medical practitioner, four times a year; and, besides other visits, by one or more of these visitors twice a year.

Visitation of Unlicensed Houses and Single Patients.

649. In addition to this (Sec. 198) there are visits to unlicensed houses, that is, to houses in which a single patient is detained as a lunatic. These houses have to be visited at least once a year by one or more Commissioners. Further (Sec. 199), there are visits made by any one Commissioner, on the direction of the Commissioners or any two of them, to a single patient, with a view to a report to the Commissioners or the Lord Chancellor on the treatment and state of health, both bodily and mental, of the patient and as to the moneys paid on his account. And, besides other visitation (Sec. 199 (2)), there are (Sec. 201 (1)) visits made to pauper lunatics, in individual cases, by medical practitioners appointed by boards of guardians.

"Special visits."

650. Also, in cases requiring immediate investigation, "special visits" are made (Sec. 204) by the Commissioners; and (Sec. 205) "in the case of a lunatic so found by inquisition," the Lord Chancellor may direct "the Commissioners, or any of them, or any other person, "to visit and examine the lunatic; or the Lord Chancellor, or the Secretary of State, may direct such an inquiry in regard to a lunatic not so found, or an alleged lunatic.

Metropolitan Asylums Board Asylums, and Workhouses.

651. Finally, the asylums for imbeciles under the Metropolitan Asylums Board, and workhouses with special lunatic wards, are visited once a year by a single member of the Commission; and other workhouses in which (Sec. 203) there is or is alleged to be any lunatic "any one or more of the Commissioners, as the Commissioners by any resolution may direct," may visit, and "shall inquire whether the provisions of the law have been carried out, and also as to the dietary, accommodation and treatment of lunatics"; and (Sec. 204 (1)) in cases of any lunatic or alleged lunatic requiring immediate investigation in any institution for lunatics, or workhouse, they may order any competent person or persons to visit and report.

In the case of lunatics detained in workhouses, there is also a supplemental system of visiting. Apart from the medical officer of the workhouse and the Poor Law guardians, the inspectors of the Local Government Board visit the workhouses periodically.

Effect of Lunacy Act, 1890, as to Visitations.

652. Thus the law, it will be seen, imposes a very elaborate system of duplicate visitation where there is a local authority concerned, as in asylums and workhouses, but in the case of licensed houses which are in the immediate jurisdiction of the Commission—in the metropolitan district defined in the third Schedule of the Act—and which are subject to the control of no local authority, the Commissioners have to visit practically every two months.

653. The institutions to be visited lie apart. In December, 1907, from information supplied by the Lunacy Commission, it appears that the numbers were as follows: ninety-four are county or borough asylums; fourteen are registered hospitals; eight are hospitals or institutions registered under the Idiots Act, 1886; four are State institutions; twenty-two are Metropolitan, and forty-four are provincial licensed houses: and in houses scattered over the country, many of them remote and inaccessible, are 398 single patients. And, as we have seen, many institutions have to be visited by two members of the Commission together.

System of Visitation.

654. Dr. Needham thus describes the visit to an asylum. He says:—

> "It is always a surprise visit. We go into the asylum and we see the superintendent and we hand in a schedule of particulars which we ask to have filled up with reference to the admission of patients and changes that have taken place amongst the patients since

Needham, Vol. IV., 26895.

Chapter XXXIII.
Visitation and Discharge.

System of Visitation—*contd.*

Needham, Vol. IV., 26897, 26898.

the last visit, the number of deaths, causes of death and matters of that kind, mechanical restraint, seclusion, and a number of particulars. That has to be done by the clerk and by the medical officers while we are inspecting; we also inquire as to the number of attendants who have left and a number of matters of that kind. Needham, Vol. IV., 26896.

"Then we go round the wards. We go into each ward, and as we go in we see the charge nurse. We are accompanied by the medical superintendent and the assistant medical officers and by the matron or by the head attendant. We take down in each ward the number of patients, the number of attendants, the number of patients who are epileptic, and the number of patients who are suicidal, and the number of patients who are in bed. Then we proceed to count all the patients in the ward so as to make the numbers tally with the number given to us. Then we go round each ward, walking slowly from patient to patient and giving every patient the opportunity of speaking to us, many of the patients availing themselves of that opportunity. If a complaint is made to us we investigate the complaint. For instance, the other day, at an asylum we were going round, a patient complained of being ill-used. We made careful inquiry into the complaint and in the result we advised the superintendent that the nurse should be discharged.

26899. 26901. 26902. 26903. 26904. In investigations like that we take evidence on the spot from the nurses and from any other patients who are competent to give evidence. Of course if a serious complaint were made we should investigate it separately and upon oath. Of these investigations there are comparatively not many, but a good many altogether. It is a matter with which the visiting committees are constantly concerned. . . . If a complaint were made to us at our visitation we should inquire ourselves. We should not disclaim responsibility and say, 'This must come before the committee'; we should make investigations on the spot.

"Then after we have seen the whole of the patients and the whole of the establishment, the kitchen and the store-rooms, and tasted the stores as far as possible, and seen the entertainment-room—in fact, all parts of the premises—we go into the committee-room and write our report."

655. Asked whether the Commission gave any attention at all to the individual treatment of the patients, their medical and scientific treatment, Dr. Needham said:—

Needham, Vol. IV., 26905–26906.

"Yes, as far as we can. I think we have always held that interference with the medical treatment would be an encroachment upon the duties of the medical superintendent, would limit his responsibility and be rather undesirable. In the medical profession it is not customary for one man to criticise very closely the dealings of another, even if he is in a consultant capacity, unless he has reason to think that the treatment is unsatisfactory. It has happened to me that I have gone to an asylum where I thought the medical treatment, from complaints which were made, was not quite satisfactory. I remember remonstrating very much indeed with the superintendent and insisting upon a variation being made . . . This was the treatment of one or more patients. I found that he used a certain kind of treatment with reference to several patients which I thought was more of the nature of punishment than medical treatment."

Needham, Vol. IV., 26910.

"We are asked for advice on all manner of subjects, and we are always very ready to give the benefit of our wide experience. Superintendents know, and we occasionally point out to them, that we have the advantage which they have not, of going from one place to another and comparing one mode of treatment with another, and we give them the benefit of any experience we have."

Clare, Vol. IV., 33746–33747, 33750.

656. All the reports which are given by the Commissioners are read at a Board meeting at which the members are present, and the extracts of the report which appear subsequently in the Commission's Annual Report convey the opinion of the Board as a whole.

657. The system of visitation, though criticised in some details, received cordial approval from the greater number of the witnesses who spoke on the question.

Crichton Browne, Vol. IV. p. 163, c. 2.

Sir James Crichton Browne, one of the Lord Chancellor's Visitors in Lunacy, said that "by vigilant supervision and steady pressure the Commissioners had succeeded in abolishing the flagrant abuses which existed in asylums, and the gross cruelties to which the insane were subjected at the time when the Commission was created under Lord Shaftesbury in 1845. They had been mainly instrumental in transforming the English asylums from mere houses of detention and safe custody into hospitals and sanatoria for the treatment of mental disease. . . . They had undoubtedly contributed to raise the standard of domestic comfort, of nursing, and of discipline, in asylums of all classes throughout the country. They had given valuable assistance to local authorities in connection with the building and enlargement of asylums, and had endeavoured to exercise a check upon extravagant expenditure. They had insisted on modern sanitation, on modifications of dietary and clothing, on precautions against fire, and on many other measures calculated to enhance the health and safety of asylum inmates. They had promoted the scientific investigation of insanity and the clinical teaching of medical psychology."

Dr. Mercier expressed similar views. Speaking of their statutory functions, their inspectorial and advisory functions, he said :— System of Visitation—*contd.*

> "I do not think it possible that those functions could be better done than they are done by the Commissioners at the present time, but there are other functions which the Commissioners, it seems to me, cannot help exercising more or less, and which might be more efficiently exercised, if the Commissioners were in the first place more numerous, so that they had more time to give to the matter, and in the second place, if the Commissioners were a preponderatingly medical body. As the chief authority in lunacy in this country, the Commissioners must, whether they like it or not, set the tone of treatment. They must set the tone of the custodians of lunacy towards the lunatics whom they have in care. They have done so, and their influence in this direction has been very beneficial. The lunatics are now treated throughout the country with kindliness, consideration, and courtesy, and the whole administrative body takes its tone from the manner in which they see the Commissioners deal with lunatics; but I think that their influence might be extended very much further, if the Commissioners had the time, and if they were a preponderatingly medical body."

Mercier, Vol. IV., 29893. Cf. Clouston, Vol. IV., 30937.

658. On the other hand there is a demand for more thorough visitation. Dr. Savage said :— Arrangements to enable the Commissioners to give more time to visitation.

> "The inspection of the Lunacy Commissioners in great detail is necessary. . . . . Every new case should be inspected; every patient who has been admitted since the last visit should be brought before the medical Commissioner for him to form his judgment, as if it were a new case."

Savage, Vol. IV., 28992, 28954, 29024.

And when challenged as to the physical possibility of doing this he said :—

> "It is a physical impossibility for the Commissioner to see all the new patients who are admitted into a large asylum, but it seems to me it would be very much more useful if the Commissioners were in one of the rooms at the end of the gallery and the superintendent was there with the case book and went through it and said : 'A. B. has been here now three months' and what his condition on admission was; then the medical Commissioner could examine for himself. It would not take so very long in the majority of cases. He would give the patient an assurance that things were all right, and I think that is a great thing."

29025.

Like many other witnesses, Dr. Savage thought that the Commission required enlargement. It was not now constituted in the best way to carry out its functions :—

> "I may say the visitation by Commissioners, when they talk of being able to see 800 patients in a day, although a large proportion are weak-minded, must mean very imperfect visitation; periodically I go to a lot of these private asylums and hospitals, and if one sees thirty or forty in a day and really takes any interest or notice of their progress, it is as much as one can do. As for seeing 600 or 800 patients no one can do that in justice to them, it seems to me."

Savage, Vol. IV., 28882, 28883.

The Commissioners ought he thought to be relieved as much as possible of the purely mechanical work, which is outside both their medical and legal province: and he suggested, with a view to lightening the "extremely heavy work" of visiting, that a clerk from the Commission should verify the cases of the patients and should ask them if they wish to make any complaint, and that the Commissioners should then see these patients apart or out of the wards altogether. The patients complained that they could not speak to them when there were half-a-dozen people round them at the same time.

29023. 29046. 28949.

659. Sir John Batty Tuke, M.P., M.D., Visiting Physician to Saughton Hall Private Asylum, criticised the constitution and methods of the Commission very severely. There are, as has been stated, three medical and three legal members of the Commission, and the latter take their part in the visiting of asylums and other institutions. But Sir John Batty Tuke thought that the legal Commissioners "were useless for inspection purposes, were an anachronism." And, by him and others, the question of the utility of the services of legal Commissioners was much discussed. In Scotland, where they were honorary members, they "confined themselves to the board room," and took part only in the legal and general work of the Commission. This course should be adopted in England, he thought. Dr. Coupland, a Commissioner in Lunacy, and others opposed this view. "Our primary duty," he said, "is towards the patients, and we have to satisfy ourselves that they are properly detained. . . . Those patients who do complain most of their detention and feel it as a great hardship are just those insane people who will not admit that they are ill. . . . Over and over again a patient has come up to me . . . and said 'I don't want to see you . . . I want to see the lawyer.' The reason why he wants to see the lawyer is to assure

Question of the utility of barrister members of Commission in visiting Asylums.

Tuke Vol. IV., p. 125, c. 1; p. 124, c. 1, 28706. Coupland, Vol. IV., 26890. Savage, Vol. IV., 29066.

28886–7.

himself that the deprivation of his liberty has been done legally, and to have it explained to him that this is because he has come under the law." And this opinion was held by Dr. Savage. "I think," Dr. Savage said, "the superintendents feel greater confidence in being also supported by members of another profession than by being supported by members of their own profession only. I always felt that the legal Commissioners were a very great strength." His personal view was that the barrister members of the Commission should chiefly assist in its legal business at the office, but should take such part in visiting as would enable them to be thoroughly conversant with its methods and requirements—a view with which we generally agree, though as explained above by Dr. Coupland, the non-medical members can exercise a useful function in investigating complaints as to the impropriety of the detention or treatment of individual cases and in reassuring and tranquillising the patients.

The desirability of continuing the number of statutory visits required by the Lunacy Act of 1890.
Tuke, Vol. IV., 28595–28599.
Tuke, Vol. IV., 28600–28604.
Cf. also Clouston, Vol. IV., 30976, 30957. 30971. 30968.
Urmson, Vol. IV., 26445, 26525. 26535
Mercier, Vol. IV., 29953. 29964.
Clouston, Vol. IV. 30965.

660. The statutory requirements of the Lunacy Act in regard to visitation were also criticised by Sir John Batty Tuke, and, in some measure, by Dr. Clouston Superintendent of the Royal Asylum, Edinburgh. Sir John Batty Tuke, judging from his experience in Scotland, thought two annual visits to an asylum—complete inspections—necessary for proper supervision, not the one visit now required by statute. The "constant visitation of private asylums," he thought, "was quite unnecessary when you take into account the high character of the men who look after them." Twice a year would suffice in their case, instead of the six visits now paid to them; and so in the case of hospitals; and lunatics in workhouses might be visited once or twice a year. Dr. Clouston said, "A man does a very good day's work if he inspects thoroughly 400 patients a day." "Of private patients of a somewhat educated class he would put down something like 200 in one day as being really all that one man could inspect of that class." He favoured the visitation of asylums twice a year, as "for the sake of the insane it forms a more efficient protection." The lunatics in workhouses, he thought, ought probably to be inspected more than those in institutions. "The spirit of a workhouse is not quite a medical one, therefore the lunatic in the workhouse is more apt to be neglected." Once in three years was insufficient. Generally, for all institutions "twice a year would be a reasonable amount of inspection and visitation."

Conclusion that, though frequent visitation is essential, the present conditions should be changed.
Mercier, Vol. IV., 29975, 29976.
Cooper, Vol. IV., p. 204, c. 2.
Crowther, Vol. IV., p. 37[illegible], c. 2.
Para. 648
Savage, Vol. IV., 29023, 28949, 29046.

661. On this point, we are of opinion that frequent periodic visitation is essential, if the standard of administration which has been slowly reached in the last sixty years is to be maintained and gradually raised still higher. And we are quite unable to agree with the views of Mr. Cooper, M.P., and Mr. Crowther, that the system should be relaxed. But it is plain that, with so large an increase in the number of certified insane, some change in administration is necessary. The inspection of the insane is unlike much other inspection, as it is necessarily liable at any moment to involve a minute and expert investigation of the cases of individuals. It must, therefore, be very laborious and exacting. Partly for that reason alone, it is inevitable that there should be a large delegation of detailed work to others than the Commissioners themselves, perhaps on the lines suggested by Dr. Savage; and certainly, the terms of the Lunacy Act in regard to visitation should be reconsidered. Its rigid requirements may well, we think, be modified, so that time may be reserved not only for careful and discriminating visitation, but also for new work, connected with the mentally defective, which may prove a very heavy task even for an enlarged and reconstituted Commission. The clauses of the Act which require the joint visitation of asylums by two or more Commissioners, should, we think, be annulled. The vexed question of the position of the "barrister member" we have left to be settled, as it can only be satisfactorily, by organisation within the office of the Commission itself. We have recommended only that "a certain proportion of the number be legal members, being barristers-at-law qualified to deal with particular cases and points of law, including such questions as may arise out of the new conditions which the plan proposed by us must necessarily entail."

Recommendation XXII.

Recommendation VI.

Visiting of mentally defective persons in workhouses or in receipt of outdoor relief.

662. In regard to institutions, such as workhouses, where insane persons are to be found mixed up with persons who are mentally defective in other ways, or who are not mentally defective at all, we are of opinion that visitation by the expert members of the Board is as essential as in the case of asylums, and that increased provision should be made for it. We cannot but have regard to the

unyngham
rown.
ol 1. 8983.

fact that in such institutions the inspection of the Commissioners is not, as a rule, supplemented by the daily supervision of a large and expert staff and the frequent visits of representatives of local authorities. But there are other suggestions and criticisms. The fact that the mentally defective persons who are in receipt of outdoor relief are not inspected by the Commissioners has been prominently dealt with in the evidence. The Commissioners have expressed a strong wish that they should be visited, an opinion supported by the reports of our medical investigators and by our personal experiences. They number 5,595, and their visitation would be one of the additional duties of the reorganised Commission.

Visiting of mentally defective persons in workhouses or in receipt of outdoor relief—*contd.*
Needham, 26942.
Potts, Vol. VI., pp. 101 and 102.
Lunacy Commissioners Sixty-first Report, p. 2.

663. Another question is that of discharges in relation to visitation. There are persons who while they are retained in asylums are quiet and controlled, though they have a bad record of recurrent insanity coupled with drink or crime. To discharge these persons is often to pave the way for further indiscipline and insanity. Should not the Commissioners have power to prevent the discharge of such persons, who, while in an asylum, are temporarily sane ? Such a duty would add to the time and labour of visitation. It raises the whole question of discharge and renewal certificates. The statutory rules are these :—

Discharges in relation to visitation.
Coupland, Vol. IV., 26783.

> "A private patient detained in an institution for lunatics or under care as a single patient is discharged if the person on whose petition the reception order was made by writing under his hand so directs. . . . If there is no person qualified so to discharge or able or willing to act, the Commissioners may order the discharge. The authority liable for the maintenance of a pauper lunatic detained in a hospital or licensed house may make an order for the discharge of the lunatic."

Lunacy Act, 1890, Sec. 72 (1) and (3).
Sec. 73.

But the absoluteness of these two powers of discharge is qualified by the condition that the discharge cannot take place if the medical officer or medical attendant, as the case may be, "certifies in writing that the patient is dangerous and unfit to be at large."

Sec. 74.

In the case of detention "without sufficient cause" the Commissioners, a medical and a legal, can discharge after inquiry a patient in a hospital or licensed house, or a single patient.

Lunacy Act, 1890, Sec. 75.

664. In asylums the Visitors discharge, no doubt after consultation with the medical superintendent. "Any three Visitors of an asylum may order the discharge of any person detained therein whether he is recovered or not." And "any two such Visitors, with the advice in writing of the medical officer, may order the discharge of any person detained in the asylum."

Sec. 77 (1).
Sec. 77 (2).

In the case of licensed houses licensed by justices—that is, not in the immediate jurisdiction of the Lunacy Commission—two Visitors, one being a medical practitioner, after two visits paid by them "at an interval of not less than seven days," if it appears to them that any patient is detained without sufficient cause, may, subject to certain stipulations, make "such order as they think fit for his discharge."

Sec. 78 (1) and (3).

A patient is also discharged to a relative or friend by any two members of the Visiting Committee, "if they think fit," upon the undertaking of the relative or friend that he "shall no longer be chargeable to any union, county, or borough, and shall be properly taken care of and prevented from doing injury to himself or others."

Sec. 79.

As to pauper lunatics, the Visiting Committee of an asylum may notify to a relieving officer or the clerk of the local authority liable for his maintenance their intention to discharge, while the guardians of the union to which a workhouse belongs may make an order of discharge of any lunatic detained therein.

Sec. 80.
Sec. 81.

665. The policy of these sections of the Act would seem to be that the patient should be returnable at the request of the person or authority which placed him under detention, unless, as is definitely required in the case of single patients and in the case of pauper lunatics in licensed houses or hospitals, he is on medical certification found to be "dangerous and unfit to be at large." But, in the case of county asylums or workhouses, there is no such express proviso. In the asylum the discharge is made "with the advice in writing of the medical officer," or in a house licensed by justices, subject to the opinion of the medical officer, "respecting the fitness of the patient to be discharged, if he tenders him-

Policy and suggestions as to discharge.
Lunacy Act, 1890, Sec. 74.
Lunacy Act, 1890, Sec. 78 (1) and (5).

Policy and suggestions as to discharge—*contd.*

self for examination " on that point. Further, the policy of the sections referred to is to throw on the local managers—the visitors of asylums and of houses licensed by justices—the duty of discharge, and not upon the Commissioners, whose duty rather it is to deal with cases " detained without sufficient cause," and not with discharge. Indeed, whereas formerly there was apprehension lest persons should be detained who ought not to be detained at all, now there is apprehension lest those who are detained should be discharged, when on public and personal grounds they ought somewhere and in some way to be retained under control and supervision.

Question of discharge in " unrecovered " cases.

666. The suggestion made to us is that the Commissioners should have power to prevent discharge in these cases. The pressure on the asylums is great, and, as we have shown in a previous chapter, the dilemma is serious. The " unrecovered " patient ought, no doubt, to be retained, and yet there is no sufficient accommodation for his retention.

Coupland, Vol. IV., 26783–26789.

Dr. Coupland, a Commissioner in Lunacy, said, referring to extreme cases :—

> " I think it would be well for the Commissioners to have power to retain such notorious people as that. The power would have to be carefully exercised on sufficient evidence. It would be better that they should do it then "—he refers to a plan suggested to him—" that the visiting committee should take the case before a magistrate, which might entail needless publicity. The Commissioners might act on the application of the superintendent. In any case the power if granted would affect a fair number. There have been about 25 per cent. of the patients who have been discharged who are returned to asylums. Not 25 per cent. within the year, but a good many within the year. Of these a large proportion are alcoholic cases."

Needham, Vol. IV., 26947.

Dr. Needham admitted the difficulty, but was doubtful as to the remedy suggested—the power of discharge in these cases being placed in the hands of the Commissioners.

Clouston, Vol. IV., 31028.

667. The methods adopted in Scotland were also suggested to us for application to England. These Dr. Clouston, Superintendent of the Royal Asylum, Edinburgh, described. He said :—

> " It might be interesting to the Commission to hear that in Scotland we have five kinds of discharges, one is—and that covers nine-tenths of all the cases—by the medical superintendent ; he discharges, as it were, ' off his own bat ' ; when he thinks a patient has recovered he discharges him, he sets aside by that act of his the sheriff's order under which the patient is placed there. That is the chief thing. The second is in the case of an unrecovered pauper patient whose relative requires to go to the parish council, and he can get him discharged in that way ; but the medical superintendent has a veto if the patient is dangerous. A third is that all private patients can be removed by their relatives, except that there also the medical superintendent has a veto if he gives notice to the procurator-fiscal. Then there is a mode of discharge which is not very well known, I think. Every patient in an institution in Scotland who is under certificate has the right to ask for an examination by two independent medical men. The Lunacy Commissioners must approve of the particular medical men ; if the report is that the patient has sufficiently recovered, they do not require to say that he is recovered, but ' sufficiently recovered,' then they can order his discharge. The fifth mode is that the sheriff of the county, or the sheriff-substitute, can do the same thing, only the sheriff has no such power of selecting the doctors. Those are different methods of getting patients out of institutions. . . .
>
> " The medical superintendent has no power to discharge an unrecovered pauper patient, and very properly, because that patient must be looked after by somebody else. It is doubtful whether he has a statutory power of discharging an unrecovered private patient unless he can certify that he has ' sufficiently recovered.' "

Clouston, Vol. IV., 31029.

In Scotland, therefore, there is (1) discharge by the superintendent and not by the committee ; (2) as in England, there is the retention of the " unrecovered " pauper patient whom his relatives wish to remove, but who is dangerous ; and also, as in England, there is a similar power of detaining a private patient who is dangerous and unfit, but whom his friends would wish to remove ; (3) in general, the superintendent discharges when he is of opinion that the inmate is recovered, and he does so without formal certificate.

Conclusions as to discharge.

668. We have, then, these courses : (1) the asylums committee to discharge or retain " unrecovered " cases ; (2) the superintendent to have these powers ; or (3) the Board of Control or some such authority to have these powers. Considered as a medical question solely, the superintendent and Medical Commissioner should have power to discharge or retain. But probably, from the point of view of a continuing interest in administration on the part of members

of visiting committees, it is best to adhere to the present practice in a somewhat modified form. The superintendent, we suggest, should report "unrecovered" cases as a definite class of patients to the committee, and if in his opinion, contrary to the judgment of the committee, these patients should not be discharged, he should have the right of reporting them to the Board of Control within a certain period with all necessary records, and the Board should then settle the question finally. Again, if the superintendent felt doubts as to his ability to give a continuing certificate in the case of a patient who had in the calming conditions of asylum life become apparently rational and tranquil, but whose history justified misgivings as to his ability to retain self-control in freedom, he should be empowered to submit full details of the case to the Board of Control, whose decision should be final. The visiting committee with the superintendent would thus be primarily responsible for discharge with a right of appeal to the Board of Control in difficult cases. Except when his advice as an experienced consultant is desired, the Commissioner on his visits would have no obligation to consider this class of cases specially in his visitation. A clear order or memorandum on the subject ought, we think, to be issued to asylums for their guidance in regard to it.

Conclusion as to discharge—*contd.*
Recommendation LVIII.

Recommendation LXII.

The Board of Control would not in ordinary cases exercise any power of discharge from institutions for the mentally defective, but, by the extension of the provisions of Sec. 206 of the Lunacy Act to all mentally defective persons, the powers therein, at present relating to "lunatics" only, would be applicable to the whole class.

Recommendation XII.

Under this section so extended, the Lord Chancellor or the Secretary for State might direct the Commissioner or any one else to visit any mentally defective, or alleged mentally defective, person and to inspect the place where he was detained and to report thereon.

It should, also, be borne in mind that though continued detention in an institution may not be necessary in all these cases, yet some care and control may be required, and the report of such cases by the medical superintendents to the Committee, and, in case of need, to the Board of Control, should ensure the exercise of the care and control which was needed for the particular case.

CHAPTER XXXIV.

The Extension of Asylum Accommodation.

669. We now pass to the position and duties of the Commission in regard to the approval of plans for building asylums. Statements as to their delay and their want of appreciation of the requirements and difficulties of local authorities have been made to us, and it has been urged that they have greatly increased the cost of building by insisting on unnecessary and vexatious additions, or, if large and pretentious plans have been submitted to them by local authorities, by neglecting to suggest cheaper material or more economic construction. On the contrary, they have, it is contended, fallen in with extravagant proposals, which have needlessly increased both the amount of the loans incurred by local authorities and the cost of maintenance. On the other hand it is pointed out, on behalf of the Lunacy Commissioners, that if such expenditure as this, is to be effectually reduced by them, they must receive more assistance, as, for instance, by the appointment of a permanent architect.

Urmson, Vol. IV., 26319.
Coupland, Vol. IV., 26775, *et seq.*

670. We will first submit an outline of the law in regard to the provision of asylums.

The law as to provision of asylums.

The local authority in the Lunacy Act of 1890 is the council of every administrative county and county borough, respectively, constituted under the Local Government Act of 1888, and the councils of some thirty other boroughs named in the fourth schedule of the Act. This authority is required to "provide and maintain an asylum or asylums for the accommodation of pauper lunatics." If the local authority considers the accommodation insufficient, it may, under powers conferred by the Act, provide asylum accommodation or rebuild or enlarge any existing asylum. It may purchase for the purpose, any licensed or other houses or land. If the local authority is not a county or borough council it is allowed powers similar to the above under the 65th Section of the Local Government Act of 1888.

Lunacy Act, 1890, Secs. 238, 239, 240, 242–253.

The law as to provision of asylums—*contd.*

Other clauses of the Act permit of the establishment of asylums in combination with other councils, and of contracts made with the visiting committees of other councils, for the reception of pauper lunatics—subject to the approval of a Secretary of State. Further clauses deal with the procedure of a visiting committee of a county or borough council authorised to provide asylum accommodation.

Lunacy Act, 1890, Sec. 254 (1) & (2).

"A visiting committee authorised to provide asylum accommodation may agree upon plans and estimates, and contract for the purchase of lands and buildings with or without fittings and furniture, and for the erection, restoration and furnishing of buildings, and for the supply of clothing, and for all the matters necessary for carrying into effect the authority conferred upon them. Plans and contracts agreed upon by a visiting committee shall not be carried into effect until approved by a Secretary of State. . . ."

Sec. 255.

"The visiting committee of an asylum, with the consent of each local authority by whom the asylum is provided, and with the approval, in writing, of a Secretary of State, may make such alterations in, or additions to the asylum either by way of detached buildings or blocks of buildings or otherwise, as they think fit for the purpose of providing accommodation for private lunatics." Lastly, subject to certain financial checks, "the visiting committee of an asylum may, of their own authority, order all necessary and ordinary repairs. They may also, of their own authority, order all necessary and proper additions, alterations, and improvements which the asylum may require, to an amount not exceeding four hundred pounds in any one year."

Sec. 266 (1).

Sec. 247.

671. Thus, (1) The local authority has to provide asylums for the accommodation for pauper lunatics, subject to the approval of the Secretary of State, under Sec. 247 of the Lunacy Act, 1890; (2) The extension of this accommodation can only be undertaken of its own will; (3) If it provides asylum accommodation, it does so through the visiting committee; (4) If the visiting committee and the local authority agree to plans and contracts for the purchase of land and buildings and for the erection of buildings, etc., the plans and contracts have no validity till approved by a Secretary of State; (5) Subject again to the approval of a Secretary of State, they may build or alter buildings to receive private patients; and (6) They may undertake necessary and ordinary repairs up to £400 in the year "of their own authority," still subject, however, to the approval of the Secretary of State, but without reference to the local authority.

Sec. 272.

Further we have to add, (7) To obtain the approval of the Secretary of State, the local authority has to submit any agreements or contracts or plans with an estimate of the probable cost to the Commission, who "shall make such inquiries as they think fit and shall report thereon to the Secretary of State, who

Sec. 274 (1).

may approve the agreement, contract or plan with or without modification or may refuse his approval." Also, (8) If the local authority desire to borrow, they can do so only "with the consent of the Local Government Board and subject to the provisions of the Local Government Act of 1888 and the Municipal Corporations Act, 1882." The security for the loan is the county or borough fund and any revenue of the local authority or, either such fund or revenues, or any part of the revenues.

Local Government Act, 1888, Sec. 69 (1) & (2).

Before giving their consent to a loan the Local Government Board "shall take into consideration any representation made by any ratepayer or owner of property rated to the county fund." On the other hand, if "the total debt of the county council, after deducting the amount of any sinking fund, exceeds, or, if the proposed loan is borrowed, will exceed, the amount of one-tenth of the annual rateable value of the rateable property in the county, ascertained according to the standard or basis for the county rate, the amount shall not be borrowed, except in pursuance of a provisional order made by the Local Government Board and confirmed by Parliament." Thus, (9) When the plans, etc., have been passed by the Commission and then approved by the Secretary of State, the approval of the Local Government Board is required—if a loan has to be raised—subject apparently to the two simple issues whether any of the ratepayers object and whether the total debt together with the proposed loan will exceed one-tenth of the rateable value of the county.

672. We now pass to the procedure of the four bodies concerned in the administration of these clauses of the Lunacy Act, the visiting committees, the Lunacy Commission, the Secretary of State, and the Local Government Board.

673. The visiting committees, from causes which we have mentioned, are, generally speaking, much pressed for accommodation. The number of lunatics who require provision in asylums is greatly on the increase. Between 1882 and 1905 the number chargeable has increased by 62 per cent., from 67,039 to 109,109. And, owing to the 4s. grant, and other reasons, the number of certified lunatics of all kinds sent from the workhouses to asylums has been very large. The indoor relief of the Poor Law, which otherwise would have had to suffice for a great part of this lunacy, has increased. In the same period, the number of indoor paupers has risen from 189,697 to 259,346, or 37 per cent. The accommodation for the harmless and chronic insane in most workhouses is of a simple and inexpensive description, if compared with that usually provided in asylums. These "imbeciles and chronic lunatics who, being harmless, could suitably be treated in suitable workhouse wards, or in any similar institution," amount to about 37·45 per cent. in some asylums. Hence more than a third of the asylum patients, it may be argued, at least in some districts, might be provided for at a comparatively small cost, but once admitted to an asylum, there is no place to which they can be sent. Licensed houses, by the policy of legislation, are reduced in number, and they provide for very few pauper lunatics. Boarding-out, to which the authorities in Scotland and on the Continent have turned for relief when the accommodation in asylums proves insufficient, is not available in England and Wales under present circumstances. Hence there is an *impasse*, the trouble and inconvenience of which chiefly affects the visiting committees.

The Visiting Committees and the provision of accommodation.

Davy, Vol. IV., p. 349, c. 1.

Local Government Board Report, 1905–1906, p. 561.

Local Government Board Report, 1905–1906, p. 562.

Return, Denbigh Asylum, Vol. IV., p. 431.

674. The pressure of the large financial obligations incurred by local authorities, chiefly during the past five-and-twenty years, aggravates the difficulty of providing accommodation. The rate of interest charged by the Public Works Loan Commissioners has been low. In August, 1897, it stood for loans repayable in thirty years at 2¾ per cent., the minimum interest allowed by Public Works Loan Act, 1897; on 3rd March, 1904, it stood at 3¾ per cent. Cheap money has encouraged expenditure, and in sanitary administration, to take that as an instance, after 1897, when public authorities borrowed £5,886,562, the demand for loans rose rapidly to £13,000,000 in 1901, and continued as high as £11,000,000, and was over £10,000,000 in 1904. Then, in 1905, the loans dropped to £6,386,074. The local indebtedness of the country between 1875 and 1904 increased by 324 per cent., and the average rate rose between 1879 and 1904 from 3s. 3½d. in the £ to 5s. 9½d. in the £, or 77 per cent. The rateable value increased from £119,079,589 in 1875 to £199,355,590 in 1904, or only 67·41. During the latter part of this period, between 1885 and 1904, the debt under the Lunacy Acts increased from £3,326,396 to £9,446,986, an increase of 184 per cent. in nineteen years. Hence, on financial grounds, there is very naturally a great disinclination to launch out in new expenditure. On the other hand, it is obvious that, in the endeavour to meet the great increase in the demand for accommodation, a very considerable increase in indebtedness was inevitable. Chargeable lunatics mostly accommodated in asylums could not increase at the rate of 62 per cent. in the twenty-three years, 1882 to 1905, without that result; and the statement submitted to us by Mr. Kershaw, Assistant Secretary to the Local Government Board, of the borrowing powers and indebtedness of counties proves it. In some cases, the percentage of the asylum debt to the total debt (excluding the education debt) amounts to over 70 and 80 per cent. and runs up even as high as 95·23 in the case of Norfolk, and 98·00 in the case of Hereford; while in Rutland, Kesteven, East Suffolk and Radnor the whole margin available is absorbed. But the point on which special stress is laid is that this indebtedness is excessive by comparison with the indebtedness incurred in the same period by the Poor Law. This hardly seems to us to be the case. Accepting generally the criticism that there might and should have been much more economy in the building and extension of asylums, we think that, if a great part of the demand had not been met under the lunacy account of the nation, it would have had to be met under the poor relief account, which to that extent would have had to borrow largely for the purpose; and next, allowing that expensive asylum accommodation is in present circumstances necessarily used to the extent of some 33 per cent. for harmless and chronic patients who do not require it, we think that the buildings that have to be erected in Poor Law administration are, except in the case of infirmaries, for obvious reasons less expensive than asylum buildings. The asylums are in a great measure hospitals, built always subject to an additional

The financial pressure on local authorities.

The financial pressure on local authorities —*contd.*

expense which has to be incurred for the purchase of the land which is required for purposes of employment and recreation, and also for possible extension in the future. To most Poor Law buildings, these conditions do not apply. Hence, in the circumstances we do not attach so much weight to the comparison between loans for Poor Law purposes and loans for lunacy purposes, especially as calculated at so much loan expenditure per head. For the number of indoor paupers is large—259,909 in 1903–4—and the number of lunatics comparatively few—only 84,549. For 36 per cent. of the lunatics, it must be remembered, new provision had to be made during the period 1889–90 to 1903–4. But for only 22 per cent. of the indoor paupers was extra or new provision required.

General disregard of economy and want of financial control.

675. But after all, these figures and the circumstances which we have mentioned are only additional reasons for economy now. However unwilling the local authorities, in some cases, may have been to embark on asylum construction, when the work was once taken in hand, undoubtedly they spent at a high rate; and on the part of the supervising authorities there has been, at least, a disinclination to prevent excessive expenditure. The evidence on this point is abundant. The municipalities are very powerful and able to spend large sums of money. Sir John Batty Tuke admitted: "They build one against the other." Mr. Brooks, Chairman of the Brookwood Asylums Committee of the Surrey County Council, said—"I believe myself that, given a free hand, efficient asylums could be built at much less cost than modern asylums, but the wards would have to be designed of the most economical size to construct, as well as to administer, and every building and fitting would have to be of the very simplest and most inexpensive character."

Tuke, Vol. IV., 28846.
Brooks, Vol. IV., 31132.
Hodgson, Vol. IV., p. 261, c. 1.
See also Paragraph 698 below.

Then, referring to a particular case, he said, "Teak used for flooring will cost over £4,000. Other flooring could have been used and have saved at least half the money"; and, admitting that this was not due to the action of the Commission, he proceeded—"I admit that, but this is the tendency in modern asylums. Then there is the extravagant cost in the day room, pitch pine dados 4 feet high . . . I hear very often that it is the wish of the Commissioners that this expensive work should be put an end to. They advocate more inexpensive though efficient construction, but I can never see where it is enforced. It is a crying evil."

Brooks, Vol. IV., 31135, 31136.

676. Turning to the controlling authorities, in regard to the Lunacy Commission, Mr. Giffard, a Commissioner in Lunacy, said:—

> "I think the view generally, not only of the Commissioners, but—I speak in the presence of Mr. Byrne—I believe also the view of the Home Office at one time was that we were not concerned with cutting down expenditure: that was supposed to be a matter for the local authority. I think of recent years the view has properly obtained that we ought to control expenditure in some way if possible."

Giffard, Vol. IV., 27193.

He was then asked:—

> "One hon. member said, amongst his complaints of the Lunacy Commissioners, that 'in a Yorkshire district they had been obliged to provide farm buildings and land in connection with the asylum, costing in one case £600; they had erected two greenhouses costing £2,800, and he had noticed a considerable item for canaries and cages and actually three guineas for a bassoon.' Could that kind of thing be checked?"

27194

His reply was:—

> "It could be, but I do not think it is desirable. If you were to walk through a ward and see it decorated with flowers and other objects calculated to make the patients happy, you would see that the quietness of the patients is due in a great measure to that."

This reply marks a different point of view to that of the ratepayer and the critic.

677. But the whole character of financial control seems to have been enfeebled during the period with which we are concerned. Mr. Hine, the consulting architect of the Lunacy Commission, admitted that an officer who gave his whole time to the work, and thus acquired a better position and greater authority than an architect who was only employed from time to time, would not have approved such a plan as that of the Napsbury Asylum, where the recreation hall in the hospital block was a waste of many thousand pounds. He said also, speaking generally of his work, "I do not think the subject of economy

Hine, Vol. IV., 32943-32948.

Hine, Vol. IV., 32749.

Hine, Vol. IV., 32756.

is a very old one; it is only within the last decade that we have heard very much of the excessive cost of public buildings—" and only "latterly had the strictures on extravagance" on the part of local authorities "been more frequent." To him the Commissioners sent the plans, estimates and specifications which they received, but he did not, as a rule, look into the detailed specifications, as he had not time to do so. Specifications were only examined when the cost seemed excessive. In the suggestions of the Commission with reference to sites and buildings issued in 1887, there had been a warning to local authorities that "superfluous decoration" should be avoided, but the idea of economy as a prominent idea was of comparatively recent growth, a few years' growth, both as affecting the Lunacy Commission and generally as affecting central authorities. The absence of financial check at the Home Office in the past was also admitted; and as to the Local Government Board, Mr. Kershaw showed that it was not until 1900 that the architect of the Board largely reduced the expenditure authorised by them for Poor Law buildings and sites. Mr. Davy, Chief General Inspector and Assistant Secretary to the Local Government Board, confirming Mr. Kershaw's statement, said that in 1890 the Board :—

General disregard of economy and want of financial control—*contd.*

Hine, Vol. IV., 32845.

Kershaw, Vol. IV., 32214, 32279, 32312, 32313.

Cunynghame, Vol. IV., p. 321, c. 2.

> "Authorised buildings for Poor Law purposes to cost £530,000, and in 1900 the cost ran up to £2,600,000, ... The cost of building has dropped from £2,600,000, and last year (1906) the cost fell to £789,000. This year I do not know what it will be, but I have traced £135,000 taxed off, so to speak, and probably there will be another £50,000 due to sheer refusals to build. So I should not suppose that this year we shall be over, say, £600,000. We are not, as sanctioners of loans for Poor Law buildings, doing a quarter of the business which we used to do."

Davy, Vol. IV., 33944.

It may be concluded from this evidence that now at least there is a general desire for economy. It is the order of the day. The straitened finanical conditions of the present and the excessive expenditure of the past necessitate it. It is on these terms, therefore, that we have to consider the statutory requirements of the Lunacy Act in their application to the question.

Clare, Vol. IV., p. 341, c. 1.

678. First, then, plans, estimates and specifications are sent to the Lunacy Commission. Their architect is a busy man, engaged on many other professional duties, and often himself the architect for local authorities in building asylums which the Commission have passed. It is admitted that an independent architect would have ample time at his disposal, and from the official point of view a stronger and more influential position. The Lunacy Commission examine every plan critically, but they are working at excessive pressure, for as Mr. Giffard says, "it is getting to a point when we can no longer go on doing the work adequately if any one of us gets temporarily ill"; and they require "a paid architect whose duty it would be to look into specifications and check expenditure." They have no power to hold local inquiries, and at present they would not have time to do so. Nor do they confer personally with the Visiting Committees on the spot. It must be admitted, therefore, that as a guide to the Secretary of State under Section 272 of the Lunacy Act, 1890, in spite of both competence and will on their part, the Commissioners, as now staffed, can hardly fulfil their obligations.

The actual procedure in regard to sites, plans, etc.

Hine, Vol. IV., 32943-32946, 32650.

Giffard, Vol. IV., 27242, 27341, 27342, 27344, 27343.

We come then to the Local Government Board. It would seem that in 1892 in connection with an application for a loan from a local authority the question was raised whether the Board, when the plans had been approved by the Home Office, should raise a question as to the cost of the building. After careful consideration it was decided that they ought not to do so; and this, it would seem, is the necessary interpretation of Section 274 of the Act and of the sections referred to in the Local Government Act of 1888 and the Municipal Corporation Act, 1882, which are quoted above. Yet the Lunacy Commission is essentially an exceptional and supplemental body created for several distinct purposes, and in some directions it is almost necessarily dependent on the co-operation of other branches of the Government service. It has no staff of architects, sanitary officers, and engineers: and there can be no question of multiplying officials unnecessarily merely to provide it with such a staff. Nor have the Home Office any such staff at their disposal. Nevertheless, the Local Government Board, who have at their disposal such a staff, provided for other purposes, do not, and apparently cannot, communicate with either body in regard to items which they think extravagant; and for neither body is their staff made available. It is quite clear, therefore, that for the assertion of proper and sufficient financial control a thorough change is necessary.

Chapter XXXIV.
The Extension of Asylum Accommodation.

Changes of procedure in regard to sites, plans, etc.

Davy, Vol. IV., 33930. 34037. Recommendations XXVIII., XXX., XLII. Clare, Vol. IV., p. 341, c. 1.

679. We have adopted the principle that there shall be one authority responsible for the protection and supervision of the mentally defective, wherever they may be, if they are notified to the Board of Control and are considered to require their care. On this plan there would be no "pauper" lunatics. Lunacy and pauperism would be separated. The local authorities associated with the Board would be the committees of the county and county borough councils for the care of the mentally defective. All mentally defective persons would come under their care locally; and they would have power to provide and to contract for the maintenance of the mentally defective in workhouses or in any other institutions which they thought suitable, subject to the approval of the Board. They would, we suggest, have power to build or enlarge buildings for mentally defective persons. Both upon the Board and upon the committees much larger responsibilities would be placed. Besides the charge of the present "certified" insane they would have the care of the mentally defective at present non-certifiable. This change, which will separate the administration of mentally defective persons entirely from that of the Poor Law—so that, for instance, mentally defective persons would no longer be maintained by the poor rate but by the county rate—would involve a much closer supervision of sites, buildings, plans, estimates, and specifications than any that exists at present. The economy which it would seem possible to secure by better classification and by special provision for the harmless and chronic insane would also require constant attention; and a closer and, in some ways, a more personal relation would have to be formed between the Board and the local authorities. For these reasons it is, in our opinion, indispensable that in regard to building and finance there should be a good working arrangement between the Board of Control, the Home Office and the Local Government Board in carrying out the duty of providing for the mentally defective. Many new schemes and proposals will have to be considered. There will be a change and an expansion of the work both of the central and of the local authorities. The Lunacy Commission which would deal with all mentally defective persons, and not with "lunatics" merely, would become the "Board of Control," and the local authorities would act through "Committees for the care of the mentally defective."

Clare, Vol. IV., 33663.

680. The financial arrangements of the future must, we think, be consistent with the enforcement of these large and material changes. We are not agreed, however, on the question as to the extent to which, or the mode in which, the discretion of the Board of Control in the matter of the approval of sites and plans should be subjected to the control and consent of the Secretary of State or of the Local Government Board or both; but a majority of us recommend that the reorganisation of financial control should be carried out in the manner suggested below, and nearly all of us consider that some such arrangement, with any modifications which Departmental experience may suggest for the purpose of expediting decisions upon the proposals which are submitted by local authorities, ought to obviate the difficulties which have been described to us as arising from the existing practice and ought in future to secure due economy in the provision of accommodation for the mentally defective. Accordingly we suggest a reorganisation of financial control on the following lines:—

Recommendation XLIII.

(1) That an architect be appointed to assist the Board of Control by examining and reporting on plans, contracts, particulars and specifications submitted by local authorities to the Board and in other ways, and that such architect receive a fixed salary, on the understanding that he is exclusively employed on the work of his department.

Recommendation XLIV. (1).

(2) That the staff at the offices of the Local Government Board for surveying, engineering, building and sanitation be available for the Board of Control in regard to sites, plans, particulars, specifications and estimates for the provision of accommodation for mentally defective persons, and that in cases of applications involving loans the Board of Control be under obligation to apply for such assistance.

Recommendation XLV.

(3) That the Board of Control have power to hold a public local inquiry in regard to any plan, scheme, or proposal which has been submitted to them for the care of mentally defective persons.

Recommendation XLIV. (2).

(4) That a local authority proposing to establish, alter, restore or enlarge buildings, or to purchase or lease any estate or house, for the accommodation of mentally defective persons, shall send to the Board of Control all necessary plans and particulars with estimates; That the Board of Control on receiving these plans, particulars and estimates, give them a preliminary consideration and, with the advice of their

architect, decide from their expert point of view, whether they are *prima facie* suitable for the purpose intended and involve no unreasonable expenditure; That the Board of Control should next transmit them to the Local Government Board for report in regard to all questions as they arise connected with the survey of land, engineering, building and sanitation, for consideration and report in regard to the proposed cost, and for their opinion as to whether a loan to meet this cost would fall within the conditions of the Local Government Act of 1888, and the Municipal Corporations Act, 1882, and whether, subject to public inquiry, they are prepared to sanction the loan; That on the receipt of the report of the Local Government Board, and of the information above mentioned, the whole matter be further considered by the Secretary of State, the Board of Control, and the representative of the Local Government Board, and, if desired, by representatives of the local authority.

Changes of procedure in regard to sites and plans—*contd.*

Recommendation XLIV., (4), (5), (6), (7), (8).

(5) That it be laid down clearly in the Act that plans, etc., shall not be approved which involve unreasonable expenditure.

(6) That hereafter the approval of the plans, etc., be notified to the local authority by the Secretary of State, and the local authority then apply to the Local Government Board for a loan.

(7) That the Secretary of State, on the report of the Board of Control, shall have power to prohibit the use of any parts of buildings for purposes other than those which were approved by him, or which shall be deemed insanitary or unsuitable.

681. We believe that, by some such method as that recommended, the four authorities now concerned in this branch of the work of the Commission, viz., the local authority, the Commission, the Home Office and the Local Government Board, would be brought into association and agreement before a loan was asked. And this administrative concentration appears to us to be a necessary outcome of the Local Government Act of 1888, which with the power to grant or refuse loans has virtually given to the Local Government Board an indirect and incidental control over local finance generally. At the time of the earlier administration of lunacy, the Home Office was the only central Department of State concerned with local affairs. Recent legislation has thrown the supervision of local government generally on the Local Government Board; and in reorganising the work of the Commission it seems to us necessary to accept the consequences of this change and to make recommendations in harmony with it. Under our recommendations we believe that much needless friction would be avoided and much disappointment prevented, as, for instance, when the intermediate Commission—the Lunacy Commission—approves the plans of a local authority and higher authorities eventually disapprove of them or of some of the conditions under which the loan is asked.

Davy, Vol. IV., 34150–34155.

Clare, Vol. IV., 33665.
Brooks, Vol. IV., 31132 and p. 230.

682. We have not in this discussion mentioned particular instances in which the cost of institutions per bed has been excessive. It is extremely difficult to deal fairly with evidence of this kind. In most cases, particular reasons may be assigned for the excess, and, in the comparison of the cost of different institutions, there is much that is misleading. The cost of site, of drainage, lighting, or furniture, may or may not be included. In the older institutions, the charges for the site and for the buildings may have been wholly or in part paid off, may no longer appear in the accounts, and may thus be omitted from the statement. In new buildings, the cost may seem excessive, because the administrative block is built on a large scale for an establishment that is incomplete and would be sufficient for a much larger number of resident patients than can be housed in the existing accommodation. Yet, it is but right to say that the impression left on our minds by the evidence is that in many instances the scale of expenditure has been too large; that there has been a general disregard for small economies and careful spending; that little thought has been given to what, after all, must be a chief factor in any provision made by the State, namely, the social status and normal requirements of the patients; that persons may be well cared for as patients, and yet need not be maintained under conditions altogether superior to those to which they are accustomed; and finally, that there has been no recognition of any definite and accepted standard of expenditure to which authorities should be required to adhere, and

for non-adherence to which they should be obliged to give cogent and satisfactory reasons. The material for such a method of standardising is available. In many instances, the establishment of an institution for the care of the mentally defective should not, we think, entail an expenditure of more than £100 a bed, site and drainage included, especially if regard is paid to the normal requirements of patients in the class of life from which they come. Under certain conditions it should be much less. For asylum accommodation for patients who require active treatment it should not, we think, exceed £200 or £220 a bed. We name these sums, however, not as settled standards of expenditure but as illustrating the position which, in our judgment, supervising and spending authorities should adopt. In the appendix volume and elsewhere will be found some plans of suitable buildings erected at the sums we have suggested.

CHAPTER XXXV.

Intermediate Hospitals, Family Colonies and Guardianship, Farm Colonies, and Observation Wards.

Recommendation XXXIV.

683. How to provide for chronic and harmless patients otherwise than in asylums, and to set free the accommodation in asylums for the more acute cases which require active treatment, is our next question. There are four methods: (1) To build separate "intermediate" or "workhouse" hospitals, or to build separate and cheaper buildings on the site of existing asylums; (2) to settle suitable patients in family colonies, in cottages or small buildings in connection with some central organisation formed for the care of mentally defective persons; (3) to board them out; (4) to place them in large farm colonies; or lastly, to return them to the workhouses.

We have then to consider (5) the probable cost of the Colony system; (6) the establishment of Observation and Reception Wards; (7) the method of what is called the "temporary certificate"; and (8) the promotion of scientific investigation.

The suggested return of mentally defective cases to the workhouses.
Davy, Vol. IV., 33859.

684. We will at once set aside the last of the proposals made for the provision of chronic and harmless patients; namely, to return them to the workhouse. The Local Government Board have accepted the policy, with which we are in entire agreement, that "instead of increasing the number of lunatics in workhouses, it is desirable in the interests of the poor who through poverty are obliged to have recourse to the workhouse, that the workhouses, should, as far as circumstances reasonably admit, cease to be asylums for lunatics. . . . The required accommodation can be much more economically provided by the county councils in additional asylums to be appropriated solely for chronic and harmless cases, the building and the arrangements generally being of a much less expensive character than those founded primarily for acute cases and curative treatment." To the category of cases to be excluded from the workhouses, we would add the cases of mentally defective persons now uncertifiable for whom care and treatment also are required. We would not, therefore, reverse the policy of removal from the workhouse, but accept and promote it.

These remarks, of course, do not apply to proposals as to the use, under contract between the Committee and the Poor Law authorities, of any infirmary or other building forming an entirely separate portion of a workhouse, and deemed suitable and licensed by the Board of Control for the detention of the mentally infirm, or other class of defectives, and reserved exclusively for that purpose. Such arrangements will no doubt be necessary for some time to come in certain localities pending the more suitable provision to be made by the Committees.

(1) *Intermediate Hospitals.*

"Intermediate" Hospitals or Homes.
Davy, Vol IV., 34030. 34005.

685. If this proposal then be set aside, there remains, first, the suggestion to build "intermediate" or "workhouse" hospitals. The suggestion has the support of the Select Committee of the House of Commons on the Cottage Homes Bill, 1899, and it has already been in some measure adopted. Dr. Pasmore, Superintendent of the Croydon Mental Hospital, thought that all lunatics should be removed from workhouses:—

Pasmore, Vol IV., 32470, cf. 32475.

> "They do not seem to get that supervision at the workhouses that they get at the lunatic asylums, and it is often observed in cases which are admitted to the lunatic asylum from workhouses that there are evidences of bruising of patients which you never see in lunatic asylums, or very rarely, and means of treatment are adopted at workhouses which are obsolete in the treatment of the insane."

But, he agreed, that it might be possible to collect them in certain suitable workhouses or workhouse asylums and to house them there. Senile dements at least might be so dealt with. And Mr. Davy, Chief General Inspector and Assistant Secretary to the Local Government Board, asked whether he thought the new infirmary buildings at Exeter were suitable for the chronic class, said :— "Intermediate" Hospitals or Homes–*contd.* Appendix, Vol. V., p. 312. Davy, Vol. IV., 34058.

> "You must remember that most of the imbeciles in workhouses are people who have been agricultural labourers or day labourers with a very low standard of comfort. They go into the workhouse, are kept clean and kept warm and well fed, and if they are not offensive to their neighbours they probably have as good a time as they ever had in their lives."

All, indeed, are agreed on the question of making cheaper provision for the chronic harmless patient; but experience shows that it should not be an entirely separate provision. Dr. Hodgson, Chairman of the County Asylum, Chester, and Mr. Clare, Clerk to the Lancashire Asylums Board, sum up the evidence on this point. Dr. Hodgson says :—

> "I hold a very strong view that chronic lunatics, harmless people, are of very great value in the ordinary asylum amongst the other patients; they are a steadying influence, they do not vary much, and their steadying influence is of very great value. On the other hand, it is extremely undesirable that any places for the incurable, mentally, should be erected where it might be practically morally inscribed over the door: 'Abandon hope all ye who enter here.' That kind of building, I think, is not desirable; I think it would be a great mistake to remove the helpful influence of the chronic from an ordinary asylum; it would be an awful thing for the medical staff to have a hopeless set of people to take supervision of, and I am not in favour of the erection of large and substantial buildings for hopelessly incurable people of that sort." Hodgson, Vol. IV., 31955.

Mr. Clare says :—

> "The point there is really this: whether we shall take the lunatics to the workhouse or bring practically the workhouse on the asylum site. I think the better opinion is at present, subject to further experience, that it would be better to bring what I call the workhouse administration on to the asylum site than to transfer the lunatics on a large scale to the workhouses, because it often happens, I am told by the superintendents, that cases which are considered to be chronic and harmless break out into dangerous lunacy; then they sometimes have to be transferred back from the workhouse to the asylum at considerable trouble and expense, whereas if they were treated in some building on the site of the asylum, they could be very easily transferred a few hundred yards from that building to a building where they could be specially treated having regard to their condition." Clare, Vol. IV., 33648. Cf. also 33702, 33703.

And there is one other reason. In the present pressure for accommodation, an institution built for chronic cases is soon utilised for acute patients and then filled with them. Banstead was established originally for chronic patients; it is now a general asylum. The same thing occurred at Winwick in Lancashire. It was built as a cheaper asylum for these patients. But "they [the asylum authorities] convert them all in time, the pressure of new cases is too great." Urmson, Vol. IV., 26712. In spite, then, of the difficulty, to which Dr. Spence, the Medical Superintendent of the Staffordshire County Asylum, refers, of having "in one establishment two classes of patients, the ordinary workhouse inmates and persons afflicted with mental enfeeblement," it would seem best in association with asylums to erect for chronic patients cheaper buildings or simple inexpensive homes. Spence, Vol. IV., 31754, 31756. Pennant, Vol. IV., 31934.

With this view we agree, on the understanding that by the terms of the certificate of the Board of Control such buildings shall be retained, as long as may seem desirable, solely for the use of this class of patient. Otherwise, in the erection of buildings of this type no remedy will be found for the present pressure.

We understand that it is alleged that there are in some districts workhouses, no longer required for strictly Poor Law purposes, which from their situation, construction, and the area of land which they possess, might, with advantage, be used as such auxiliary asylums, and might be handed over, on suitable terms, to the Committee for such use. We have not ourselves inspected any such institutions; but if they exist, we see no objection to the proposed conversion, subject, of course, to the Board of Control being satisfied of their suitability for the detention of some class of the mentally defective and to their entire disuse for other purposes, and to the consent of the Local Government Board. Davy, Vol. IV., 33859.

(2) *Family Colonies.*

686. But another, and less expensive, provision may be made for these cases, on the method of "family care" or "guardianship." The additional wards may cost £120 a bed, with maintenance at from 7s. to 9s. 2d. a week. And of building, there seems to be no end; for, that the £120 would be accepted as a maximum for a building for such a purpose is doubtful, unless the whole administration of mentally defective persons be conducted with a strong hand and with Family guardianship. Clare, Vol. IV., 33701–33703.

Family guardianship—*contd.*
Clare, Vol. IV., 33710.
Vol. IV., 33710.

a vigour and control that is not at present applied to it. In reference to this estimated cost and to the subject generally, Mr. Clare, the clerk to the Lancashire Asylums Board, said :—"I should not like to commit myself to any figures, because one sees the variation in the cost of asylums recently built; there is only one thing that seems invariable, namely, an increase in cost as time goes on, largely owing, of course to the increased cost of wages and material, and partly to carrying out the latest scientific ideas, or philanthropic ideas, for dealing with pauper lunatics, without any evidence really to show that the increased expenditure has benefited lunacy; in fact, as far as I can see, all the expenditure during the last twenty years on lunacy has not been any benefit to lunatics. I will not say it has done any harm, but there has been no substantial benefit derived."

Even if this be approximately true, an alternative method of dealing with that class without incurring a large initial expenditure, and, at least at no higher rate of maintenance than that at present in force—say, as in Scotland, 7s. a week, is worthy of careful consideration at the present time.

Boarding-out of children.

Mason, Vol. I., p. 107, c. 1, 1994.

Evans, Vol. I., p. 145, c. 2.

687. Boarding-out as practised in England and Wales is available for children only: its aim is to supply family homes for orphan and deserted children; it is organised in connection with local boarding-out committees, and if it be "outside the union" it is under the direct inspection of the lady inspectors of the Local Government Board. As a rule, judging from the evidence we have received from Miss Mason and Miss Evans, the inspectors, we do not think that, as at present conducted, it is to be recommended as a method applicable to the care of mentally defective children and young persons. For these children, other safeguards besides those required for healthy, sound children would naturally be desired, together with closer and more constant medical supervision and provision for the special education and training which their condition demands.

Outdoor relief of mentally defective children and adults as a form of boarding out.
Sixty-first Report Commissioners in Lunacy (1907), p. 2

688. Apart from boarding-out, strictly so-called, there is a kind of boarding-out connected with the administration of outdoor relief. Both mentally defective children and adults are so boarded-out, to the number of 5,595. Judging from our own visits and from the evidence of Dr. Cunyngham Brown, Deputy Medical Officer of His Majesty's Prison, Parkhurst, who had made a special investigation into these cases, and from the reports of our medical investigators, we think, as we have said before, that there is urgent need that these cases should be visited regularly by the Commissioners of the Board of Control and by the officers of the local committees for the care of mentally defective persons, the bodies who would be directly responsible both for their supervision, and, so far as need be, for their maintenance, if our recommendations are adopted.

As an indication of the present state of things we quote sentences from Dr. Cunyngham Brown's evidence.

Cunyngham Brown, Vol. I., p. 524, c. 1,

> "The care of the patients is entrusted in nearly all cases to their natural guardians or relatives . . . Out of 215 cases, of which I have careful notes, the guardianship was obviously bad in sixty-five, doubtful in twenty-seven, and in ninety-eight satisfactory. In a considerable number of cases I found pauper lunatics living under the care of relations, parents, or others who were distinctly of weak mind, and most of the Parochial Medical Officers with whom I spoke knew of cases of this kind. In one case in which the patient, an imbecile lad aged twenty, slept in the same bed with his sister aged eighteen, the mother was certainly weak-minded. In another case, in an adjoining town, one imbecile girl, who had however only been six months on the list, had an idiot child and was living under very bad guardianship."

Then follow two other extremely bad cases; and lastly, this one, and the conclusion.

Cunyngham Brown, Vol. I., p. 524, c. 1.

> "In another town two sisters, aged twenty and thirty, cases of congenital but not profound imbecility, were leading lives of prostitution. It is difficult to write of these things, but cases of this kind, and the conditions from which they must inevitably arise, are so frequently encountered that they constitute an evil which must be recognised and should be instantly remedied. In a very large proportion of cases the accommodation was bad. Out of 183 cases, serious overcrowding was present in fifty-three, or 28·9 per cent.; twenty-eight were lodgers and living in one room, and in 102 cases no overcrowding was present. In very few cases had the patients their own bed-rooms. The rooms in which the patients live were clean and comfortable in 55·5 per cent., fairly clean in 13 per cent., very dirty in 31·5 per cent. and in 68 per cent. of these latter absolutely filthy. The apparent dirt and state of neglect in which some of these

patients live is indescribable. I have found patients sleeping on beds made of straw, in sacks, on rags, on broken down camp-beds, and in many cases adult patients sleeping in the same room with other adult inmates of the opposite sex. In many other cases, however, I found the patients living in clean and comfortable rooms, well clothed and tended.

"I am unable to speak of the patients' diet, for though I called at many houses at the ordinary meal times I only rarely found them at meals. Probably this is due to the fact that in many houses of this class there are no set hours for meals. I was informed, however, by many of the senile class that their staple food was bread and dripping and tea, and in the case of single patients living alone it is difficult to see how they could afford much more out of the sums allowed to them by the boards of guardians.

"The sums paid by the board of guardians to the patients or their guardians range from 1s. 6d. to 7s. I have only, however, found one patient receiving the latter sum, and the average sum paid in the cases I visited is 3s. not including those cases in which the patients receive medical relief solely. These sums are, of course, utterly inadequate for the proper care and maintenance of the patients. It is true, however, that about one half of these cases are mild dements or high grade imbeciles who are not unable to earn small sums, as a rule very small sums, to add to the aid given by the guardians. In the case of the other half, the care of these patients presses with undue severity upon their guardians. This system is probably the cheapest, as it is almost certainly the worst form, of family care of the insane in any civilised country."

Outdoor relief of mentally defective children and adults as a form of boarding out —*contd.*
Cunyngham Brown, Vol. I., p. 524, c. 1.

Some of us visited the mentally defective "outdoor relief" cases in London and Cardiff and, from our personal investigations in these places, we are convinced as to the need of much more stringent supervision and control than, unhappily, exists at present.

689. Instead of outdoor relief, or boarding-out as generally understood, Dr. Cunyngham Brown advocated the adoption of the system of family care under special conditions applicable to England, but on general lines which are now widely approved and accepted in Holland, Belgium, Germany, France and Scotland. We have ourselves examined the method as it is in force in these countries, and by the application of it to England we think that a considerable advance may be made in the care of mentally defective patients and especially in the maintenance of harmless patients of unsound mind and the feeble-minded. We will not here describe the various plans in any detail. Descriptions of them will be found in the volume of Appendices, pp. 264–275, and in the evidence of Dr. Cunyngham Brown. We will only refer to two kinds of family care, that organised in relation to a colony and to the residents in the immediate vicinity, and the method of family guardianship, as it is now in operation in Scotland.

Boarding-out, family care or guardianship for adults on the lines of the Family Colony.
Cunyngham Brown, Vol. I., p. 519, c. 1.
Eichholz, Vol. I., p. 209. c. 1.
Cunyngham Brown, Vol. I., pp. 519–526.

"By the family care is understood the lodging of a suitable patient for adequate compensation in an appropriate family which places itself voluntarily at the service of the asylum and its doctors." "The patients after being placed in a family still belong to the asylum, and are still under the care and supervision of the director as well as that of the specially appointed doctors and overseers, and they may at any time be taken back into the asylum."

Cunyngham Brown, Vol. I., p. 525, c. 1.

690. One instance of this method of treatment is that provided at Gheel, a village of about 11,000 inhabitants, situated some twenty-five miles from Antwerp, which some of us visited in May, 1905. The patients, who number about 2,000, live mostly as boarders at houses in the village, or in small farms or other houses in the surrounding district. There is also a central asylum, accommodating a few patients for whom institutional care is necessary. There is a medical director assisted by five assistant physicians, and a special pathologist for scientific work. There are also several lay inspectors, who visit every house in their respective districts once a week.

Gheel Asylum and Village Colony.

All pauper patients are received first in the central establishment and thence are drafted to the care of their "hosts." If a patient shows dangerous tendencies the law requires that he should be sent to an asylum. Patients requiring continuous restraint, suicidal cases, homicidal cases, those likely to commit acts of indecency, etc., are not eligible for admission under the "Gheel" system.

The patients appeared to be treated, in most instances, as "one of the family" of their hosts.

The charge which was made for their care and maintenance varied from 8d. to 11d. a day, of which 2d. a day was deducted for administrative expenses, the "host" receiving therefore from 6d. to 9d. a day for each case. Private patients were also taken at charges varying from £16 to £150 per annum. As a rule, only one patient was allowed in each house, but where there were two, each was provided with a separate room; and there were stringent regulations as to the size of rooms, bedding and clothing and cleanliness.

Chapter XXXV.

Intermediate Hospitals, Family Colonies and Guardianship, Farm Colonies, and Observation Wards.

The Family Colony of Dun-sur-Auron.

691. Another instance of this method of treatment is that provided in the neighbourhood of Dun-sur-Auron and Ainay-le-Chateau in France. We quote the greater part of Dr. Cunyngham-Brown's account of it. It was established to meet the pressure of chronic harmless cases at the asylums, and it has greatly improved the health and increased the contentment of the patients. It provides for the patients at less than a shilling a day. It consists of a central colony with an asylum linked to more distant sub-colonies. The colony itself is an aggregation of patients who are placed under the charge of guardians, who are the heads of the families in which the patients are boarded and supervised. We believe that asylums—hospitals we would rather call them—especially asylums of the village type like that at Kingseat, near Aberdeen, might be used as centres of "colonisation," and that in country districts in connection with these asylums family guardianship might very advantageously be extended by degrees, when people in the neighbourhood became interested in it and found it profitable. Even if cottages suitable for the purpose were built in the district and let to tenants who would be suitable "guardians," there would, we think, be but little financial risk, once the custom of caring for the mentally defective in this way became established. Once this were done, a new, better, and more readily extended method of providing for perhaps a third of the mentally defective could be brought into operation. But we would quote Dr. Cunyngham-Brown's statement.

Cunyngham-Brown, Vol. I, p. 521, c. 1.

Cunyngham-Brown, Vol. I., p. 521, c. 1.

> "Founded in 1892, the colony of Dun-sur-Auron was instituted explicitly for the disencumbrance of the asylums of the Seine Department, and the cases selected for transfer were, conformably to the ministerial instruction of M. Loubet, 'aged people certified as insane, but in whom the condition of dementia, incurable but tranquil, and the senile enfeeblement of their faculties, hardly justified their detention in an asylum."
>
> "This class of patient still preponderates in these colonies, but as experience gradually disclosed the fact that the subjects of many other forms of mental affection did well under family care, Dr. Marie, the founder and first medical director of this colony, now medical superintendent of the asylum of Villejuif, obtained a progressive extension of the categories of cases likely to benefit by this form of assistance, and to-day there are also many cases of delusional insanity, chronic mania and melancholia, and adolescent dementia.
>
> "The colony at Dun-sur-Auron gave such good results that the numbers steadily increased; the dependent colony at Levet was opened in 1896; the colony at Ainay-le-Chateau was opened shortly after, and in 1900 converted into an independent colony; and numerous small villages in the neighbourhood were made the foci of sub-colonies, each with its little asylum, lazarette, or bathing establishment. At the time of my visit early this year (1905) there were 660 patients at Dun, 86 at Levet, some 200 odd at the sub-colonies of Bussy, Osmery and Ourouer, 438 at Ainay-le-Chateau, and arrangements were being made for future settlements at many other villages in the neighbourhood.
>
> "At Dun and Ainay there are asylums each in charge of a medical director, who is assisted at Dun by a *medecin-adjoint*; and another at the colony at Levet. Most of the sub-colonies are connected by telephone with the asylums at Dun or Ainay and each sub-colony is in charge of a lay overseer or *surveillant des placements*. The patients are visited at regular and frequent intervals, and come regularly to the asylum or the hospital of their sub-colony for bathing and examination. The asylum is, further, the social centre of the colony, where the patients meet in the *salle-de-reunion* for games and conversation.

p. 521, c. 2

> "I made a house-to-house visitation to most of the 600 patients in the village of Dun-sur-Auron, and also the hamlets of Bussy and Osmery, and encountered many in the streets, unmistakably demented, but attracting no attention whatever from the ordinary inhabitants. I found them occasionally at work, but as the majority are of advanced years, they were for the most part employing themselves in desultory fashion, or at meals. The interiors of the houses were certainly above the ordinary dwellings of the place in point of cleanliness and order, and the patients' clothing and bedding I found in excellent condition. Only two patients, as a rule, are permitted in one house, as it has been found there, as elsewhere, that when more than two are allowed, the proper blending of the patients with the life of the family is impeded. The rules stipulate that the food of the patients must be the same as that of the family and that at least three and a half kilograms of bread and one litre of wine must be supplied to each patient per week, and four days a week fresh meat, independently of vegetables and other foods. The patients appeared thoroughly contented, and though, being for the most part Parisians, many desired to return to Paris, not one wished, here or elsewhere, to exchange the life of the colony for that of the asylum.
>
> "At Ainay-le-Chateau and the sub-colony of St. Bonney I found the same condition and received the same favourable impression.
>
> "The only points that seemed open to question were, firstly, whether it is advisable to transfer aged people, habituated town dwellers, to a distant colony where they are out of reach of their friends or relatives, amongst a people who, however well disposed, have other ways than theirs; and secondly, whether some binding restrictions should not be inserted in the rules of the colony as regards the supplying of alcohol to the patients.

Macpherson, Vol. III., p. 33, c. 2. 21255.

"The sum paid to the *nourricier* for each patient is 1fr. 10c. per day. The personal clothing is supplied from the institution, and this, added to the expenses of the infirmaries, medical and other service, etc., raises the daily cost to 1fr. 40c. in the case of Ainay and to 1fr. 60c. in the case of Dun, per patient. The average cost per patient per day in the asylums of the Seine Department is 2fr. 75c. If to this saving be added the avoidance of erection of fresh structures the resulting economy is very considerable. Practically the same system is in operation at many of the family colonies. The two I visited were Gardelegen and Jerichow, and as the conditions obtaining amongst the patients are the same at both places, Jerichow only need be described."

The Family Colony of Dun-sur-Auron —*contd.*

For summary of points and detailed regulations, Vol. I. pp. 525, 526.

692. We think that a system of family care or guardianship, adopted under these conditions with all necessary sanitary and medical safeguards, is well worthy of careful consideration by the Board of Control, and by the local authorities connected with it; and we very strongly recommend that a scheme of this kind should be set on foot, and gradually extended, under capable management and good personal guidance. Possibly a religious body or community, or some large voluntary association, might undertake the task in a suitable county in England or Wales, and might combine personal insight and initiative with scientific methods and religious earnestness. In this and in other ways, voluntary institutions, organised in connection with the Board of Control, placed under the general supervision of medical men, certified, and made part of the general administration of the country for the care of the mentally defective, might render great assistance to the State at relatively a very small cost.

Trial of the Continental method of the Family Colony advocated.

(3) *The Scottish System of Boarding-out or Family Guardianship.*

693. The Scottish system of family guardianship or boarding-out is described by Mr. Spence, Secretary to the General Board of Lunacy in Scotland, in a very few words. He writes:—

Family Guardianship or "Boarding-out" in Scotland.

"Section 95 of the Lunacy Act of 1857 contains a provision to the effect that all pauper lunatics must be removed to the asylum serving the Lunacy District to which they belong, *unless the Board shall sanction their disposal otherwise.* It is the provision briefly summarised in the words italicised which brought the Board into official relations with all pauper lunatics wherever placed, and which enabled them to permit such pauper lunatics as could properly be provided for in private dwellings to be so disposed of.

Spence, Vol. III., p. 12, c. 1.

Cf. also C. Macpherson, Vol. III., p. 46, c. 2.

20 & 21 Vic., c. 71. S. 95.

"Pauper patients are kept with the sanction of the Board in private dwellings, either with relatives or unrelated persons, and either singly or in numbers not exceeding four.

25 & 26 Vic., c. 54. S. 5.

"They may either be removed from establishments for the insane to private care, or may be left under such care on becoming chargeable, without having been in an asylum or other establishment. In the former case no medical certificate is required beyond a statement by the principal medical officer of the establishment on a prescribed form, to enable the Board to judge of the patient's fitness for such a mode of care. In the latter case (the patient not being already certified), two medical certificates and other particulars on prescribed forms must be presented with the application. The Board may at any time withdraw their sanction to the residence of a pauper lunatic in a private dwelling and order removal to an asylum or other establishment, or to another house and guardian. The form of the medical certificates is as regards the certification of lunacy somewhat similar to that prescribed by the Act in the case of patients received into asylums, but they must state in addition that the patient 'does not require, either for his own welfare or the public safety, to be placed in an asylum, and is a proper person to be detained under care and treatment in a private dwelling', and further, that 'the circumstances in which the patient will be placed are suitable and sufficient for his proper care and treatment.'

29 & 30 Vic., c. 51. S. 13.

29 & 30 Vic., c. 51. S. 9.

"Pauper lunatics in private dwellings are visited at least once a year by a Commissioner or Deputy Commissioner. The visit is repeated when occasion calls for it, and in the case of many aggregations of patients boarded in villages, at least two visits a year are regularly paid. The inspector of poor must visit half-yearly, and a local medical officer quarterly, and these local visits must be recorded in a visiting book kept in the patient's house. The reports of the Deputy Commissioners are entered on a case record kept for each patient at the office of the Board, on which is recorded all such reports with minutes in reference to them, a summary of the leading facts of the patient's history, and a *précis* of all correspondence regarding his case. The past history of each patient can thus be at once fully traced."

694. The diffusion of this method of family guardianship in Scotland is very remarkable. Though only of comparatively recent origin, it is now very well established and works smoothly and satisfactorily. Under the influence of the Scottish General Board of Lunacy, it is adopted in some districts as a kind of local industry, so that the conditions of guardianship become well known in the locality, and the control over the guardians by inspection is exercised readily and effectually. Mr. Motion, Inspector of Poor to the Parish of Glasgow, told us how "boarding-out" was extended to meet the needs of chronic harmless cases at Glasgow. "Previous to May, 1885," he said, "the borough and parish of Glasgow had practically no boarding-out. After that period, to prevent the erection of additions to the asylums, and as we knew there were a number of chronic harmless cases quite fit to be boarded-out, efforts were at once started to find suitable places. I am a native of St. Andrews, and I knew that in the

Motion, Vol. III., 21851.

Family Guardianship or "Boarding-out" in Scotland.—*contd*
Motion, Vol. III., 21849.

county of Fife there were a number of little hamlets or villages where weaving had been practised for ages past, and I went there personally and sent my assistant to elicit the sympathy and good offices of the local medical gentlemen, and was able to board out, roughly speaking, what has now risen to a very, very large proportion of our insane, at sums varying from 6s. to 7s. per week. The average cost last year is 8s. 8d. per week; the difference between that and keeping them in an asylum, roughly speaking, would be about £2,500 or £3,000 . . . After the first few, we could then pick and choose the best type of guardian."

The medical men in the district advocated and assisted the movement greatly, and care was taken in the selection of cases.

Motion, Vol. III., 21854–21857.

"We went through this particular asylum," Mr. Motion said, "and found the class of inmates that were working about the farm, and on the land, and were otherwise suitable for boarding-out; we selected them and got the medical superintendent to certify that they were fit to be boarded-out and removed them accordingly.

As to the selection of homes we take the houses as they are, and preferably with some aged couples whose family have gone off and left them with plenty of bed accommodation, and preferably in fruit-growing districts, such as the village of Balmullo in Fifeshire, near Leuchars Junction, and Ceres and Craigrothie further west, and especially the district of Lanark which was visited by members of the Home Relief Congress under the presidency of Dr. Charles Macpherson, the previous witness. The house is first inspected by the Inspector of Poor; if it passes him, application is made to the General Lunacy Board, and Dr. Macpherson, the Deputy-Commissioner in Lunacy, and his colleague then visit, and before we can put a patient in there it must receive their approval."

Sutherland, Vol. III., p. 240, c. 1.
C. Macpherson, Vol. III., p. 46, c. 2.

Dr. Sutherland, Deputy Commissioner in Lunacy for Scotland, considered that if 30 per cent. of lunatics in asylums were boarded-out, as he and Dr. Charles Macpherson, his colleague, thought would be advisable, "the saving in Scotland would be £66,000 per annum and in England £480,000"; but he proceeded to show how far from being reached was his standard of 30 per cent. for Scotland. He said:—

Sutherland, Vol. III., p. 244.

"In ten counties, including Ayr, Aberdeen, Edinburgh, Stirling, Dumfries, etc., there are eighty-six parishes large and small, with 1,645 chargeable insane, of whom only 130, or 8 per cent. are boarded out; and in fifteen counties, including Ayr, Aberdeen, Fife, Renfrew, Stirling, Dumbarton, etc., there are 202 parishes with 1,152 insane, not one of whom is provided for outside the institutions."

Trial of Scottish method advocated.
Cunyngham Brown, Vol. I., p. 522, c. 1.
Macpherson, Vol. III., p. 46, c. 2.
Cunyngham Brown, Vol. I., p. 523, c. 1.

695. We have made inquiry in regard to the system here described, both in the evidence we have taken and by our personal visits, and while, no doubt, in particular instances, criticisms might with some justice be made, still, in our opinion, there seems no reason why, under close medical supervision, it should not be adopted gradually and experimentally in a country district in England. In Scotland, some 19 per cent. of the insane persons in receipt of relief are provided for under family guardianship. The sum paid for board and oversight varies from 7s. per week in the large urban and burghal parishes to 3s. 9½d. in the case of Shetland. We think that in suitable districts it should be the subject of fair experiment under altogether new conditions, supported by the local committees for the care of mentally defective persons, supervised and actively supported by the Board of Control, and altogether dissociated from the PoorLaw and pauperism. The medical officer or one of the medical officers of the committee might take the place of the "Inspector" or, as we should say, relieving officer, in the Scottish procedure and pay the half-yearly visits; a member of the committee might pay the quarterly visit; and the Commissioner or Assistant Commissioner of the Board of Control might visit yearly. For information as to the character of the houses in which and of the people with whom the mentally defective persons might be placed, inquiry might be made privately in many ways which are at the disposal of a standing committee of a county or county borough council.*

Preamble (7).

Accordingly we would recommend that the system of "boarding-out," or family guardianship, as practised in Scotland, should be adopted in England for suitable cases.

* We have learnt that an attempt was made to introduce this system into England in connection with the County Asylum at Melton in Suffolk. Dr. Whitwell, who gave evidence before us, subsequently furnished a short account of the experiment which he initiated. It is printed in the Appendix papers, Vol. IV., p. 451. The plan was tried in 17 cases and so far as it went was very successful. It continued for two years. It was held, however, by the Lunacy Commission, correctly no doubt, that a lunatic received under a Reception Order though boarded out (Lunacy Act 1890, Sec. 57) had to be recertified periodically (Sec. 38); and "I had not," Dr. Whitwell writes, "foreseen the difficulty, and, since in my zeal to give the experiment the best chance of succeeding, I had always, in selecting the boarding house, given preference to those well away from congregations of people, the patients were mostly away from railway lines and somewhat difficult of access for recertifying. We had therefore reluctantly to abandon the scheme."

(4) *Large Farm Colonies.*

696. Another method which we would advocate is the introduction of the system of large farm colonies on lines suggested to us by the colonies for the feeble-minded which have been established in the United States of America and in Canada, and which are described by us in Chapter XLI. In America, in many instances, large estates have been purchased, which give scope for training the mentally defective in labouring work generally, in farm work, and in horticulture. In some of these estates the colonists are thoroughly accustomed to manual work, and are capable of doing a large amount of hard labour. Thus, at the Templeton Colony in Massachusetts, they work in the field, break rock and drill it for blasting with explosives, store corn, haul bricks, and perform many other tasks in some cases even without supervision. And all this is done, not only by those whom we would call "feeble-minded," but by men who are extremely imbecile or idiotic, and who "have not human speech." On these farm colonies there is ample room for experiment and development. New plans of education can be put in operation. The originality of the teacher may find new methods of testing and training, and there is space and opportunity for different kinds of employment. Where, as usually in America, the State Authority is careful not to discourage freshness of thought and ingenuity, quite extraordinary results are produced on these estates by men whose lives are devoted to the care of the mentally defective, results which may throw light even on the methods of education that may be suggested for the education of normal scholars in public elementary schools.

Large Farm Colonies in America. Cf. Pars. 833, 834, 831, and cf. also generally the Report of the members of the Commission who visited America, Vol. VII. Cf. Preamble 7.

The establishment of one such farm colony in England would be of the greatest service, both directly and indirectly.

(5) *The Probable Cost of the Colony System.*

697. We now pass to some details respecting the probable cost of institutions of the type of farm colonies, though on a smaller scale than the more notable colonies in America, to which we have just referred. In his report for the year 1906, the Inspector under the Inebriates Acts publishes "some details concerning the original cost of establishment in the case of existing certified inebriate reformatories." Experience in regard to the cost of the buildings, etc., required for this class is of service in estimating the expenditure that may have to be incurred in establishing farm colonies. The following table (*see* Group III.) shows indeed with what economy the necessary buildings may be constructed.

The probable cost of Colonies in England. Experience of the cost of Institutions for Inebriates. Report of Inspector under the Inebriates Acts, pp. 25–26, (Cd. 3685).

Conditions of establishment.	Reformatory. (1)	Approximate amount expended on site, alterations, building, drainage, furniture, &c.* (2)	Number of inmates for which each Reformatory is certified. (3)	Approximate cost per head. (4)

	East Harling ...	29,980	†300	100
Total		72,716	649	112

* The sums mentioned in this column include all amounts, whether paid or not, which are required to make each institution freehold, and the absolute property of the governing body.
† Including accommodation for 91 inmates, not yet added to certificate.

The probable cost of Colonies in England. Experience of the cost Institutions for Inebriates—*contd.*

698. The comments of the Inspector on this table are as follows:—

"Of the twelve institutions founded under Section 5, three have been brought into existence by county councils, one by a board formed jointly by representatives of local authorities and philanthropic persons, and eight others have owed their origin to religious bodies, temperance societies, or private persons. With regard to buildings, two (Langho and Cattal) have been specially erected *de novo*, five others (Brentry, Ashford, Farmfield, Newdigate, and East Harling) consist for the most part of specially erected buildings added to an originally existing structure, and the remaining five (Lewes, Horfield, Ackworth, Chesterfield, and Duxhurst) have been established in already existing buildings which required but little adaptation. Two of these reformatories, Ashford and Newdigate, have lately surrendered their certificates, are no longer available for the reception of cases, and will therefore receive no further mention. The above table shows, in as compact a form as possible, the approximate cost of establishment in reference to all institutions now existing.

"A glance at Column 4 will show that the actual expenditure upon land and buildings ranges approximately from £100 per bed as minimum, to £596 as maximum, and that all institutions built by local authorities are provided at much greater cost than those which owe their establishment to philanthropic bodies and private persons. In respect to Group I., however, it is only fair to remark that all administrative requirements (lighting, heating, drainage, kitchen, stores, laundry, etc.) are provided to meet the needs of a considerable increase over the number of inmates for which each institution is now certified. Langho, for instance, could be extended to hold 400 or 500, Cattal at least 200, and Farmfield 200, without any further building than would be necessary to provide the additional sleeping and day room accommodation. With economy in all future expenditure it should be possible to provide this supplementary living space at an amount which would reduce the average cost at each place to a much lower figure. At the present time the balance between administrative provision in each reformatory, and accommodation for inmates, is unequal; therefore, so long as this condition exists, any estimate of expenditure based upon the present cost per bed, is misleading. When these institutions are completed, and the balance is adjusted, the amount per bed should work out at about £300, a figure more nearly representing the actual state, and consequently the one upon which all remarks concerning the original cost of these places will be based. Moreover, it should also be remembered in regard to the reformatories in Group I., when expenditure is compared with what is shown in relation to other institutions, that the buildings erected by local authorities are undoubtedly superior to others in every respect, including construction, decoration, fittings, and the hundred and-one small details which mark the public institution of the present day. Whether this should be so or not I am hardly prepared to say, but it is certain that many arguments could be adduced in favour of simpler construction, less ornamentation, and the elimination of many elaborate details which are now considered necessary in public buildings designed for the housing of persons who require care and control. Rightly or wrongly, these arguments appealed with force to those of us who were interested in the provision of accommodation for inebriates, and some efforts were made to encourage the erection of buildings which could be characterised as monastic in their simplicity. Unfortunately, these efforts failed wherever local authorities were concerned, mainly owing to the inclusion of details which were considered unavoidable, such, for instance, as decorative outside appearance, oak-panelled board rooms, tiled walls, tesselated pavements to corridors, expensive lighting and ventilation plant, and suchlike elaborations. The county architect is too strong a man to fight against so long as he is stimulated to erect buildings which shall be a 'credit to the county,' so long as he is permitted to vie with neighbouring professional men in the production of something which shall be a credit to himself, and so long as his commission depends upon what he spends instead of upon what he saves. For these reasons it soon became evident, if strict economy in the provision of accommodation were to be carried into effect, that philanthropic bodies or private persons would have to be relied upon rather than local authorities, and the result as justified that conclusion. Even accepting £300 per bed as the real figure representing Group I., that amount still compares unfavourably with the average cost of institutions established under Groups II. and III. Furthermore, comparison between the cost per bed of Brentry (partly controlled by local authorities) and the average cost of institutions in Group III. (in the establishment of which no local authority had any voice) shows distinctly in favour of the latter. Therefore, so far as our experience under the Inebriates Act is concerned, the result is both interesting and curious; local authorities acting alone need £300 per bed, a mixed board of local authority representatives and philanthropic persons requires £200, and philanthropic bodies and private persons (acting without local authorities) manage establishment at £112 per bed. As already indicated, the accommodation provided at the last-named figure will not bear comparison with that which results from the expenditure of £300; but what has been provided for the smaller amount has proved, in my opinion, good enough, and therefore sufficient."

699. Of the above reformatories, East Harling and Ackworth are undoubtedly the cheapest. The former was originally a country workhouse situated in a sparsely populated district in Norfolk. At the time of purchase the buildings were repaired, fenced in, cleaned, whitewashed and made fit for habitation. Practically all the walls were then rebuilt throughout, four

The probable cost of Colonies in England. Experience of the cost of Institutions for Inebriates—*contd.*

additional wings erected, a receiving house, a number of workrooms for industrial occupations, new kitchen, stores, refractory block, water tower, infirmary, and some cottages were added, until in the end all necessary accommodation was provided. It is now practically complete, and has cost, from first to last, including furniture and all fittings, the sum of £29,980. The institution has accommodation for 300 inmates and 30 officers; the cost therefore works out at approximately £100 per bed. A contract is now in existence for the duplication of the building upon a site some distance away—everything to be reproduced as it stands at present. The contractors are the persons who have already done the work at East Harling, and they jointly undertake to make a replica and hand it over, lighted, drained, and supplied with water for £24,000—to which sum the cost of the necessary furniture (say £3,000) and the value of the site would have to be added. The previous existence of a building which was partly incorporated in the present one has not therefore proved a financial advantage; it added, in fact, to the total cost. The buildings are in two storeys, and take the form of a large divided square. The walls are fourteen inches brickwork, quite plain outside, here and there finished inside with plaster, but for the most part merely whitewashed. Floors vary between ordinary plank, wood blocks, and cement. Rooms generally open into one another, so that no space is wasted in passages. With the exception of some few separate rooms for special cases, the sleeping accommodation is provided for in small dormitories holding an average of about eight or nine inmates each. The windows are mostly iron-framed, with hopper openings for ventilation. The institution is lighted throughout by acetylene gas, which is found to meet all requirements, and has proved highly satisfactory. Water is obtained from two wells, and is stored in large quantities in a water-tower and elsewhere on the premises. It is pumped so far as possible by windmill, failing this by a capstan actuated by inmates. There are a number of earth closets, but the greater part of the sewage will be water-carried as soon as the sewage system is ready for use, and will be dealt with by septic system and irrigation. The laundry is fitted with a minimum of machinery, practically all work being done by hand. The kitchen is supplied with ordinary ranges, bakers' oven, steam cookers, and boiler.

The whole place has been built on strictly economical lines, without attempt at architectural beauty, but with every intention of showing that good enough provision can be made without the enormous expenditure now apparently considered necessary in buildings erected for public purposes. The Inspector under the Inebriates Acts, in his report for 1905, sums up the position in the following words :—

> " East Harling is a marvel of cheapness, but cheapness which does not particularly obtrude itself. It is sufficiently well built, dry, well lighted, well ventilated, and can easily be kept clean by scrubbing, paint, and whitewash. A great contrast to the finely finished asylums and public buildings of to-day, yet it serves its purpose excellently, is in every sense efficient, and is quite good enough for the persons who need to be detained therein. Few of them, in fact, have ever lived in such comfortable quarters."

700. The Ackworth new reformatory will, when complete, include twelve separate buildings—a central block containing dining, day room, workroom and sleeping accommodation for 206 inmates, kitchen and laundry, an administrative block and quarters for the staff, two villa blocks, containing accommodation for forty-four inmates in separate sleeping apartments, a hospital with two general and two-single bed wards for fourteen patients, a mortuary, an assembly hall to seat 272 persons, a receiving house, an isolated refractory block, a superintendent's house, a porter's lodge, and engineer's shop, an extensive range of workshops, and water tower, a well (200 feet deep) to provide the water supply, an acetylene gas installation, and sewage disposal works.

The reformatory, when finished, will contain all necessary provision for the number of inmates and officers intended—250 inmates and twenty-five officers—and its cost, including the site, roads, gas and water mains, fire appliances, steam cooking plant, furniture, and all incidental expenditure, will not exceed £97 per bed. The several firms contracting are old-established and

The probable cost of Colonies in England. Experience of the cost of Institutions for Inebriates—*contd*

experienced, and have carried out considerable building and engineering operations to the satisfaction of various public and other bodies. The following is a memorandum of the details.

	£	s.	d.
The cost of site including legal expenses was	1,998	17	5
And the several tenders are as follows :—			
Erection of 1,000 yards of angle unclimbable steel fencing, 7 feet high, with set of three entrance gates	440	0	0
Construction of roads, asphalt yards and paths	480	11	10
Sinking artesian well (200 feet deep), providing and fixing lining tube, pumps, oil engine, ascending main and all necessary plant and fittings to supply 7,500 gallons per diem of eight hours	452	15	0
Providing and laying 3-inch heavy cast-iron water mains, fire hydrants, and 1-inch galvanized iron services to buildings, including all necessary stop-cocks, boxes, etc.	266	13	6
Construction of sewage works and main drains, including manholes, inspection chambers and connections	735	12	6
Construction of branch drains to buildings	202	7	2
Installation of acetylene gas, including generation plant, mains and service pipes and fittings	513	14	0
Erection of porter's lodge, and engineer's cottage	400	14	4
„ „ superintendent's house	564	16	9
„ „ administration block and officers' quarters	1,854	9	4
„ „ receiving block, for ten inmates	828	0	4
„ „ kitchen and laundry block, including steam plant	1,470	4	3
„ „ two blocks of work and day rooms, dormitories, and baths, for 206 inmates	4,014	12	0
„ „ two villa blocks of work, day, bed, and bath rooms for „ „ forty-four inmates in single bedrooms	2,889	17	0
„ „ refractory block for ten inmates	841	1	9
„ „ hospital block for fourteen patients	738	4	5
„ „ assembly hall and chapel to seat 272 persons	1,185	16	6
„ „ mortuary	127	1	0
„ „ water tower, tank stores, engineer's and other workshops	1,263	4	7
Furniture and fittings	1,973	8	9
Allowed for contingencies	1,000	0	0
	£24,242	2	5

£97 per inmate.

The actual expenditure will probably be less than £97 per inmate. The contractor for the erection of the administration block and assembly hall and chapel is prepared to reduce his tender for those buildings by 10 per cent. if certain ornamental stonework, cornices, and woodwork are omitted. It has also been pointed out that the division walls of some of the buildings are unnecessarily heavy, that they could be reduced without detriment to the buildings, and with satisfactory financial results.

Site.

701. The cost of the land for a Farm Colony need not be excessive, but, in choosing a site, the following points should be borne in mind. Light land is preferable, and it should be adapted for spade cultivation. The site should be of sufficient altitude to avoid fogs as far as possible, and for purposes of economical transit, it must not be situated too far from a railway or canal.

Colony scheme for mentally defective persons: Cost of provision.

Vide end of Appendix Vol. V.

702. Considering the question more directly in relation to a colony suitable for the mentally defective, we publish in our Appendix, Vol. V., some sketch plans and elevations of buildings which appear to us both satisfactory and economical, and a note of the building tenders which were received in regard to them. The buildings are sufficient to provide complete colony accommodation for 150 male and 150 female inmates, and thirty officers. By re-duplication, they could be extended to accommodate any number of inmates without increasing the cost per bed.

Colony scheme for mentally defective persons : Cost of provision —*contd.*

The estimated cost of site, roads, fencing, sewers, water and electric supply, workshops, furniture, fittings, and contingencies, is according to these plans £12,000 for a colony for 300 cases, or £40 per bed. The cost per inmate would remain about the same if the colony were instituted on a larger scale and provided for an increased number of cases. The tenders that have been received are as follows :—

	Builders' Tenders. Lowest.	Highest
	£	£
A. Porter's Lodge	366	483
B. Superintendent's House	640	900
C. Assembly Hall	1,634	2,100
D. Kitchen and Laundry	1,415	1,664
E. Administration Block	3,150	3,800
F. Hospital Block (22 beds)	1,640	1,781
G. Inmates Blocks (7) (280 beds)	12,600	16,058
H. Receiving Blocks (2) (20 beds)	1,880	2,306
I. Bath Blocks (2)	660	722
	£23,985	£27,814

Per bed : £80 1s. ; £99 7s. 6d.

SUMMARY OF THE ESTIMATED COST.

	Per Bed. £ s. d.
Site, road, sewers, furniture, fittings, etc.	40 0 0
Buildings as per lowest builder's tender	80 1 0
Total estimated cost	£120 1 0

Estimated cost of maintenance in colony.

703. In regard to the probable cost of the maintenance of mentally defective persons in a colony, it is extremely difficult to estimate. Very much depends upon circumstances, of which, as yet, we know but little.

The cost at East Harling Certified Inebriate Reformatory would perhaps more nearly represent the cost of a colony than any other of the institutions to which we have referred. There the cost works out as follows :—

	Per Inmate per Week. s. d.
Staff expenses (salaries, wages, provisions, officers' uniform and laundry)	3 6
Inmates' expenses (provisions, clothing, laundry, and medical stores)	4 2
General expenses (fuel, light, water, household stores, repairs to buildings, furniture, and fittings, rates, taxes, and insurance)	1 6
Total	9 2

Some of us who have had experience in institutional management are of opinion that under all the circumstances the cost in the proposed colonies for the mentally defective should be rather less. There should be a saving of at least 6d. per week, and possibly more in the cost of staff. There should also be a saving in the cost of the food of the inmates, as greater elasticity in the dietaries would be possible. The figure 9s. 2d. per week does not, of course, include anything for central office expenses, rent or interest, or for the repayment of the cost of the provision of accommodation. On the other hand, no allowance is made for the earnings of inmates. In many inebriate reformatories the industries produce an average of 1s. 2d. per week per inmate, and so reduce the cost to 8s. per week. There is no apparent reason why somewhat similar results should not be obtained in the case of the mentally defective.

Conclusions as to probable cost of provision of and maintenance in colony.

704. Though these statements of expenses cannot be accepted as final, we think that they show that for some classes of the mentally defective colonies well suited for the purpose may be provided at a very reasonable cost ; that the cost per bed should not exceed approximately £100—£120 including site, roads, sewers, water, lighting, buildings, furniture and fittings ; and that the cost of maintenance (inclusive of everything except central office expenses, rent or interest, and sinking fund) should not exceed from 8s. to 9s. a week.

705. We are, we fully recognise, recommending a considerable change in the methods hitherto adopted in England for the care of the insane ; but the evidence proves, we think, that to meet the new demands that have now arisen, both in reference to the unsound in mind, and to the mentally defective generally, new and more economical provision must be made under new administrative leadership, and on new lines, more adaptable, more varied, and more discriminating.

(6) *Observation and Reception Wards.*

Preventive measures.

706. It remains for us to consider preventive measures, the effect of which should be to forestall the erection of new asylums by a more careful preliminary scrutiny of cases at their earlier stages, and by their improved medical treatment, so that only patients who ought certainly to be admitted to asylums should be certified and sent to them. With this object three methods have been submitted to us; the observation ward, the reception house or ward, and the "temporary certificate"; and to these, we should add the general method of scientific investigation and research. Modern experience shows that the variations and differences in mental defect require close scrutiny, and that in many cases of unsound mind the disorder, if it be dealt with at an early stage, tends to disappear under the quietness and discipline of treatment, while in other cases to which reference has already been made, the alleviation which is obtained under custodial care soon passes away, if the patient is discharged and left to his own devices. Further, mental derangement may be due to many causes, as many different conditions may culminate in one general form of enfeebled and depleted physical life. Hence, if we hope to prevent it, we must study it in all its bearing with systematic observation and experiment. It is admitted, indeed, on all hands that very much more scientific work of this kind should be undertaken.

Observation Wards.
Spence, Vol. III., 20815.

Mackenzie, Vol. III., 23366–23375.

Mackenzie, Vol. III., pp. 155, 156, 157.

23374.

Vol. III., p. 156.

707. An observation ward is a place, wholly disconnected with asylum associations, where patients who are considered to be suffering from any form of mental derangement or disorder may be admitted freely and at once, with a view to ascertaining the disease from which they are suffering. In Scotland only mentally defective persons who are certified as such may, subject to the approval of the General Board of Lunacy, be retained in the poorhouses, and there they have to be kept in special wards which are licensed for that purpose under definite regulations. But it was ascertained that, in spite of licence and certificate, many persons of unsound mind were living in the ordinary wards of the poorhouse. It was proposed, therefore, to establish observation wards; and the Scottish General Board of Lunacy and the Local Government Board for Scotland agreed to regulations for their management. There was also another element in the desire to establish these wards. "The general public were resenting the going to asylums, because it meant loss of wages and loss of employment and general economic deterioration, as it were, and partly because patients preferred to remain in the poorhouse, as it had not the reputation of being an asylum. It was just the public wrath against asylum treatment." "Perhaps that was too strong a word to use," Dr. Leslie Mackenzie, the Medical Member of the Local Government Board for Scotland, who gave this evidence, said: "I think it should be 'public resentment.'" Then, in support of the view he had expressed, he quoted from his statement the words of a witness who had given evidence before a Departmental Committee in Scotland. "It is my experience that when once a person has been in an asylum, people have a strong objection to employing him or her afterwards. I have seen that occurring in the cases of females who have been out of asylum for some time and who are quite well: they get into service, but the moment their employer finds out about the asylum they are dismissed." This unfortunate result of admission to any asylum the observation ward, which is in the Eastern District Parochial Hospital, Glasgow, prevents. During the year ended 15th May, 1903, 242 patients suffering from symptoms of insanity were there treated, of whom only thirty-six were ultimately certified as insane and removed to the asylum.

708. Dr. Carswell submitted to us some further details on this question which are worthy of careful consideration. They are summarised in the following statistical statement :— Observation wards—*contd.* Carswell, Vol. III., p. 64.

OBSERVATION WARDS OR HOSPITALS FOR THE CARE AND TREATMENT OF INCIPIENT OR UNDEFINED INSANITY.

The Glasgow Parish Council provided two wards for the care and treatment of early cases of insanity, and I have had medical charge of the patients since the opening of the hospital in June, 1904. I submit a return showing the number of patients treated and the results of treatment from the opening on 15th June, 1904, till 18th February, 1906.

Note.—During the period reported upon, ninety admissions were re-admissions.

The system has worked satisfactorily, and has been greatly appreciated by the patients and their relatives. Under proper safeguards for the separation of respectable patients from the degraded or criminal class of defectives, it would be possible to utilise the wards, or additional wards, for the purpose of systematic and extended observation of persons supposed to be feeble-minded who may have fallen into criminal ways.

The patients admitted were suffering from disease of very various kinds, it will be noticed. The scrutiny of the observation ward differentiated them, and as a result, after treatment, 61 per cent. were discharged, cured, or relieved.

709. One or two of the conditions required by the Scottish Local Government Board in the establishment of observation wards may be noted. The observation ward should be separated from the other wards in a poorhouse. The wards are like "ordinary hospital wards modified to suit their special purposes"; and the nursing and treatment is on hospital lines. No inmate who is not medically certified as suitable for treatment is lodged there. The certificate is a certificate for observation and treatment, not for detention, and apart from other questions as to the applicant's health and dependants, "the medical officer is requested to state the grounds that have led him to conclude that the applicant is suitable for treatment in the observation wards of the poorhouse." The wards provide accommodation for not fewer than four Memoranda of conditions of establishment of observation wards, and as to cases suitable. Mackenzie, Vol. III., p. 156, col. 2. Mackenzie, Vol. III., p. 158, c. 1.

Memoranda of conditions of establishment of observation wards and as to cases suitable—*contd.*

patients of each sex. The period of stay may extend to six weeks, with an extension in exceptional cases, on the production of a certificate to that effect, which has been transmitted to the Local Government Board. Registers of the cases have to be kept by the medical officer. If the wards contain sixteen beds and upwards, there must be at least one medical officer resident in the poor-house. In another Memorandum, issued by the Local Government Board for Scotland, there is a note of the kind of cases for which observation wards are suitable, and of those for which they are not suitable.

Mackenzie, Vol. III., p. 156, c. 2

Mackenzie, Vol. III., p. 157, cols. 1 and 2.

(*a*) Where the mental symptoms are a sequel or accompaniment of diseases that in ordinary circumstances terminate within a definite time. The point specially to be kept in view here is the likelihood of the speedy disappearance of the symptoms of mental disturbance.

(*b*) Where, although the mental symptoms would seem to indicate lunacy, the medical officer is clearly of opinion that such symptoms are likely to be of short duration.

(*c*) Where the patient's mental state gives rise to apprehension, but where the symptoms are not sufficiently marked to enable the certifying physician to affirm either sanity or insanity.

(*d*) Where the mental disorder is associated with alcoholic abuse.

(*e*) Senile cases where there are temporary symptoms of mental derangement which make it undesirable that the patients should be treated in a general hospital ward.

(*f*) The presence of the following conditions should be regarded as contra-indicating suitability for such wards :—

(1) Homicidal tendencies.
(2) Dangerous violence.
(3) Acute and persistent suicidal tendencies.
(4) Long-established insanity or known existence of chronic delusions.

Tuke, Vol. IV. 28617.
Savage, Vol. IV., 29094.

710. In favour of the utility of these wards, there appears to be a general consensus of opinion. The change marks a further step towards the substitution of the hospital for the asylum. The procedure is simple ; it suggests a larger and more scientific handling of the whole problem of mental defect, and it allows of the disease being combated in its earliest stage.

Reception wards and reception houses.
The Lewisham Infirmary Ward for observation purposes.

Appendix Vol. V., p. 241.

711. In support of this view, we may quote Dr. Toogood, the medical officer of the Lewisham Infirmary, who, acting as Secretary to the Committee on Lunacy of the Medical Infirmary Superintendents' Society, has forwarded to us a very interesting account of a similar method of dealing with cases of alleged lunacy adopted by him at Lewisham :—

"The relieving officer, either upon his own authority in obvious cases of mental derangement or upon the direction of a justice of the peace after a medical examination in less apparent cases, conveys the alleged lunatic to the workhouse or infirmary for detention, until the justice decides whether the case is fit to be discharged or to be transferred to the county asylum."

Of this period, advantage is taken for observation. "The great majority of the cases treated in these wards, although temporarily insane, and requiring control and observation, are not asylum cases." The disease is considered and dealt with apart from the "stigma of lunacy," for "friends of patients do not object to the detention in infirmaries or workhouses, but they have a very keen horror of an asylum." It is considered, too, in relation to illness, generally, as one form of malady which requires hospital care ; not as a malady dissociated from other maladies both in scientific thought and in medical treatment. The results achieved coincide with those obtained at Glasgow. The following is a return of them :—

In 1902, out of 8,076 cases of alleged lunacy admitted to metropolitan infirmaries and workhouses, 3,920 were sent to lunatic asylums and 3,560 were discharged cured.

In 1903, the figures were 8,004 admissions, 3,792 sent to asylums and 3,443 discharged cured.

In 1904, 7,654 were admitted, 3,716 sent to asylums and 3,155 discharged cured.

In 1905, 7,322 were admitted, 3,583 sent to asylums and 2,877 discharged cured.

The reason of this large percentage of cures lies in the fact that the mental state is often merely a symptom of a disordered bodily condition, and clears up entirely when that condition is cured.

712. It is evident that here, too, much insanity has been mitigated or stayed and prevented at an early stage, which is economy of the best kind. And we think that on these lines, by arrangement between the Board of Control and the local authority, there should be reception wards or reception houses wherever it may be necessary, and that whatever legal provision is required for their

establishment should be made without delay. We regard it, indeed, as very important that a free hand should be allowed to committees in dealing with this matter so that they may be able to utilise many existing agencies for the purpose. We do not consider it at all necessary that in crowded centres of population, large and expensive buildings should be erected like the reception blocks of the great county asylums. Separate wards in workhouses or in general hospitals might be used under contract, or existing houses or other buildings adapted. The special advantages of these reception wards for the clinical study of mental disease are so evident that many general hospitals, especially those to which medical schools are attached, would be glad, we think, if they were subsidised, to provide them within their own premises, or in neighbouring buildings, with medical, nursing and attendant staff complete. Those of us who visited America were much impressed with what we saw of the work done in reception and observation wards there.

Reception wards and reception houses—*contd.*

(7.) *The "Temporary" Certificate.*

713. Another similar procedure has also to be considered from this point of view—the certification and treatment of "unconfirmed" cases. No statistics are forthcoming in regard to it, but the evidence respecting it is entirely favourable. Dr. Clouston, the Superintendent of the Royal Asylum, Edinburgh, explained to us its origin :—

The "temporary certificate" and the treatment of "unconfirmed cases."

Clare, Vol. IV., 33733–33734. Clouston, Vol. IV., 30942, 31036. Smith-Whitaker, Vol. IV., p. 237, col. 2. Pennant, Vol. IV., p. 257, col. 2. Tuke, Vol. IV., 28617, 28623.

> "We have," he said, "in the original Lunacy Act in Scotland a clause which comes in the middle of one of the sections which empowers any registered medical man to give a certificate, as we say in Scotland, 'on soul and conscience'—a kind of solemn certificate that his patient is afflicted with a certain disease. You do not require to put anything mental in your certificate at all. You usually put something in reference to mental disturbance, but you do not use any of the technical terms. . . . You say that he labours under some mental disturbance, or that he has certain nervous symptoms, with mental depression : you put that in, but the certificate says that the malady is 'not confirmed.' This is the very gist of the whole thing. You cannot do it in a case you know to be incurable, it must be really for the purpose of cure. 'And I consider it expedient with a view to his recovery that he should be placed,' and we specify the house in which the patient is to be kept, 'for a temporary residence, a term not exceeding six months.' This procedure is used 'to a very considerable extent.'"

And Dr. Clouston adds :—

Clouston, Vol. IV. 30942. 30943.

> "I am not aware that any bad result has ever occurred from its use. The certificate is the more effectual for its purpose—'recovery and temporary confinement'—because it is not notified to any lunacy authority whatsoever ; in fact it is a private certificate about which no one knows anything."

The patients under it go to private houses only. In England such cases as are described by Dr. Clouston are frequently admitted to private or nursing homes. 30944.

714. A somewhat similar, though amplified, procedure has already been included in the draft of a Lunacy Acts Amendment Bill. The utility of the method, however, lies largely in its simplicity and informality, and in amplifying the regulations, this must be borne in mind. No more than this is necessary, for the certificate, as in the case of the observation ward, is not a certificate for detention, but for temporary residence, cure and treatment. This method is already taking root in England, and by turning it to account the pressure on asylums might, we think, be yet further reduced.

Bill to amend the Lunacy Act presented by the Attorney General [Bill 179] 1905.

Smith-Whitaker Vol. IV., 31358. Buist, Vol. IV., 31487–31497. 31501. 31506–31509.

Recom. LXVII.

We recommend in Recommendation LVII. : That anyone who for profit shall receive to reside as a patient or maintain any person appearing to come within any of the classes of mentally defective persons defined in Recommendation IV. shall within seven days thereafter notify the same to the Board of Control. And, further, under Recommendation XIII. the Board of Control are required to undertake the registration, supervision and inspection of all houses in which *two or more* mentally defective persons are maintained for private profit, and to visit such houses at least twice a year.

Recom. LVII.

Recom. XIII. : Preamble (6).

(8.) *The Promotion of Scientific Investigation.*

715. Lastly, there is the direct promotion of scientific investigation as leading ultimately, it may be hoped, to yet further preventive measures. Sir James Crichton-Browne, who strongly advocated the establishment of a Ministry of Public Health as a centre for the promotion of medical science and the supervision of all departments of sanitary and medical administration, insisted on the necessity of further developments in the study of insanity.

Scientific investigation should be promoted.

Crichton-Browne, Vol. IV., 29684.

> "It seems to me," he said, "to be the important question for the country : beyond all administrative machinery is this enormous growth of lunatics which is

Scientific investigation should be promoted—*contd.*

going on, and the great duty is the investigation of the causes, and the scientific treatment, and the improved scientific treatment of lunacy so that this increase may be checked and reduced. There are, I believe, various methods by which that may be done, and I think that in order to get these a more scientific element ought to be introduced."

Crichton-Browne, Vol. IV., 29687.

The Lunacy Commission "had gone round and insisted on post-mortem examinations, they had encouraged medical officers to carry out inquiries, encouraged the teaching and admission of students to asylums, so that the profession might be instructed in the nature of mental disease in all those ways. They encouraged me—without their assistance I could not have done it—to establish a laboratory, and in that laboratory at Wakefield Professor Ferrier's first experiments were conducted, experiments which have done so much to elucidate the structure and functions of the brain. But for the Commissioners in Lunacy, my committee at that time, county magistrates, not very scientifically inclined, would scarcely have allowed me to carry out that work. In various ways the Commissioners in Lunacy have helped."

But he said the Commission "had never initiated investigation." That was their duty now. And Dr. Mercier and others supported this opinion. Dr. Mercier said :—

Mercier, Vol. IV., 29894, 29898.

"Some years ago, I can remember the time when the medical superintendents of public asylums in this country, although they possessed medical degrees, had ceased to be medical men. They are excellent organisers, admirable administrators, many of them, but when they were appointed heads of asylums they put their medical functions behind them, and sometimes avowedly so. . . . That state of things no longer exists to the extent to which it did exist, and the cessation of it is very largely due to the influence of the Lunacy Commissioners, and especially to the influence of one particular Commissioner, who made it his business to emphasise in his reports the importance of the medical side of insanity. . . . There has been a great revival of late years, but that revival is not nearly so great as most of us would like to see. The qualifications required in a superintendent by his Committee are not largely medical qualifications. . . . Superintendents are chosen as a rule from assistant medical officers." . . . Hence the assistant medical officer cultivates the general and social side of his office, and "does not as a rule cultivate his own peculiar profession, for he finds it does not pay. I think the Commissioners might exercise a very important influence, in the first place by educating county councils to appreciate the value of medical knowledge and insisting upon a high standard of medical attainment in the officers they appoint, and also in encouraging assistant medical officers in cultivating the scientific study and treatment of insanity. We have to remember that many of these public asylums are in remote country districts, far from a populous town, far from a medical school."

716. Thus, it appears to us, that an obligation rests with the Board of Control, supplied, as it should be, with a sufficient staff to initiate investigation; to educate county and county borough councils to appreciate the value of medical knowledge, and to encourage scientific study among assistant medical officers; to set on foot a sufficient system of records, and to promote the establishment of observation wards and pathological laboratories and the study of new methods of treatment. For we agree entirely with Dr. Clouston's suggestion that it should be made legal for committees of visitors to contribute to a joint laboratory for several counties, or in the larger counties to a laboratory for each county. All these are methods which should, in our opinion, be adopted and enforced with vigour in order to stay the growth of mental defect and disorder; and we have made recommendations that will enable the Board of Control and the local authorities to act in these ways.

Mott, Vol. I., 8356, 8358. Clouston, Vol. IV., 31019, 31020. Potts, Vol. II., 19178, p. 471, c. 2.

Recommendation XXIII. Preamble (7). Recommendations LXIV.-LXVII.

CHAPTER XXXVI.

Certification, Wardship, and Detention.

717. The Lunacy Commission may be defined as a body established to ensure by its inspection and advice the responsible and effectual guardianship of insane persons. The responsible guardianship of the person is largely secured by certification and licence—certification, that the person is suitable for detention; licence, that the place where he is detained is suitable for his residence and treatment. The Judge and Masters in Lunacy with the aid of the Chancery Visitors (Parts IV. and VII., Secs. 183 to 186 of the Lunacy Act, 1890), are appointed to ensure the responsible and effectual guardianship of the property of insane persons, by supervising and controlling its management and administration. The distinction between the Lunacy Commission and the Judge and Masters in Lunacy and the Chancery Visitors, and their respective functions, is not absolute, as, for instance, persons "found lunatic," that is lunatics, not by certification, but by inquisition, are under the care and control of the Judge and Masters in Lunacy, either in regard both to persons and property, or in regard to one or the other.

718. In this branch of work we submit recommendations which we believe will lead to simplification and efficiency in official administration, and to economy. The changes we propose are these :— Reorganisation in regard to certification and wardship, and the office of the Judge in Lunacy.

(1) A simpler system of certification than is now in operation, which may be put in force, if, in the interest of the person or of society, detention or segregation or the right to detain is considered necessary.

(2) A simple system of wardship for the oversight and control of the person who is under age, and also a method of recognised friendly care for his oversight and guidance, with after his coming of age a reconsideration of circumstances and conditions, followed by continuing supervision or control if it be necessary.

(3) The extension of the protection of the property of a mentally defective person, on the lines of Sec. 116 of the Lunacy Act, to all the classes coming under that term, as defined in Recommendation IV. Chap. XXXVII.

(4) The transfer of the work and duties of the Judge and Masters in Lunacy to the Judges and Masters in the Chancery Division, with, as one result, the inclusion in one body of the present Commissioners in Lunacy and the Chancery Visitors. Chap. XXXVIII.

In the chapters that follow, we take these points in turn, and finally we will describe our scheme as a whole in reference to the various suggestions made to us by witnesses, more particularly the suggestions which are stated at some length in Chapter XXXII. Chap. XXXIX.

I. Certification.

719. In regard to certification we have to provide for simplicity of procedure in arranging for detention ; for the supervision of certification, so that institutions and methods of treatment that are available, of whatever kind they may be, may be used for the right persons ; for the transfer of persons, as conditions change, from one institution or from one kind of care and treatment to another ; and for the continuance or discontinuance of certification.

720. Generally in the procedure of certification we adopt the lines of the Lunacy Act of 1890, but, in the case of reception orders on petition, we recommend the following changes:— Reception orders on petitions.

The principle of these alterations is to adopt the system in force under the Lunacy Act and extend it to all classes of mentally defective persons as defined in Recommendation IV., without regard to the question whether they are " paupers " or not.

" (1) The word ' lunatic ' is replaced by ' mentally defective person ' throughout, and the word ' pauper ' eliminated. Recommendation LXVIII.

(2) The committee may, through its representative, present a petition as ' next friend ' of the mentally defective person where it thinks such petition ought to be presented, either at the request of the relatives or where the relatives or friends have failed to act (Section 5 (5)).

(3) The judicial authority may select a suitable institution or house or leave the selection to the committee, in cases where the relations or friends of the mentally defective person have failed to select one (Section 6 (1)).

(4) The order of the judicial authority should state whether or not the patient has been personally examined by him (Section 6 (2))."

721. Similarly, we recommend certain changes in the procedure as to urgency and summary reception orders. The principle of these alterations is to adopt the system in force under the Lunacy Act and extend it to all classes of mentally defective persons as defined in Recommendation IV., without regard to the question whether they are " paupers " or not. Urgency orders and summary reception orders.

" (1) The word ' lunatic ' is replaced by ' mentally defective person ' throughout, and the word ' pauper ' eliminated. The latter change renders Sections 14 and 18 unnecessary, and they are accordingly printed in large square brackets." Recommendation LXXI.

Urgency Orders and summary reception orders—*Contd.*

Recommendation LXXI.

"(2) The word 'workhouse' is deleted in the other sections which stand, and the words 'receiving house or reception ward' substituted. It will be noted that under Recommendations LXIV.–LXV. the committee may contract with others, including boards of guardians, to provide the necessary accommodation for receiving houses or reception wards.

"(3) The committee may, through its representative, make an 'urgency order' as 'next friend' of the mentally defective person where it thinks such a course advisable, either at the request of the relatives or when the relatives of the mentally defective person have failed to act (Section 11 (8)).

"(4) The 'Master in Lunacy,' where referred to, is eliminated, and 'Legal Commissioner or a Judge of the High Court' substituted in accordance with Recommendation VII.—(Section 12).

"(5) The procedure on summary reception orders is altered in the following ways :—

(*a*) The duty of informing a judicial authority as to mentally defective persons not under proper care and control, or cruelly treated or neglected, is imposed on medical officers of a Poor Law parish or union and representatives of the committee, in addition to constables, relieving officers, and overseers who at present have to give such information as to 'lunatics' (Section 13 (1)).

(*b*) The judicial authority, on receiving information on oath of any person whomsoever as to such mentally defective person, must authorise the medical officer or a certifying medical practitioner to examine the mentally defective person.

It will be noted that one medical representative of the committee is substituted for the two medical practitioners who at present make the examination of 'lunatics' under similar conditions (Section 13 (2)). Under Section 16 the Justices could at present make an order on one medical certificate in the case of a pauper alleged to be a lunatic or an alleged lunatic wandering at large. We propose to eliminate Section 14, relating to a pauper alleged to be a lunatic, but to extend the provisions of Sections 15 and 16 to all mentally defective persons wandering at large.

The effect of our alterations is to make it necessary—

(i) In cases of mentally defective persons not under proper care and control, or cruelly treated or neglected, brought before a 'judicial authority,' to require a certificate from one medical representative of the committee (Section 13 (2)).

(ii) In cases of mentally defective persons wandering at large brought before a Justice to require a certificate from any one medical practitioner (Section 16).

(*c*) The order of detention is, in the first instance, to be made for not more than fourteen days to a receiving house or reception ward, or other institution or house (Sections 13 and 16), during which period the committee will decide on a suitable institution (Sections 13 (3) and 16).

"(6) The procedure under Section 23, as to reception orders by any two or more Commissioners, is extended to all mentally defective persons, and to epileptics, whether mentally defective or alleged sane, in registered institutions or houses for epileptics. The Commissioners will communicate with the committee as to the admission of such cases into suitable institutions or houses."

The ordinary form of certificate which we recommend will be found in Recommendation LXX.; but, in Recommendation LXVII., we suggest that mentally defective persons should be admitted into receiving houses or wards "under any immediate certificate or order that the Board of Control under its regulations may require."

Detention of persons under twenty-one without the intervention of a judicial authority.

722. As regards mentally defective persons (other than persons of unsound mind or mentally infirm), who are under twenty-one years of age, we recommend that they may be placed by parents or guardians or by the committee in suitable institutions or houses upon the certificate in writing of a qualified medical practitioner without the intervention of a judicial authority.

Recommendation LII.

Supervision of certification, admissions, discharges, etc.

723. We have made further recommendations (LVI.–LXIII.) as to notifications, admissions, continuance orders, transfers and discharges. By means of the procedure herein outlined we believe it will be possible to ensure that the methods of treatment shall be suitable to the individual case in the first instance, and that if at any time it should become no longer suitable a transfer or discharge should take place.

724. It may be added that in the case of mentally defective persons dealt with by magistrates under the Summary Jurisdiction Act, we have suggested that the procedure of the summary reception order be adopted, with the intervention of the medical officer of the committee or a certifying medical practitioner for the certification of the person and a reference to the committee for the selection of the institution suitable for him. In cases heard at Assizes and Quarter Sessions, after conviction, we would suggest that a similar procedure should be adopted.

Summary reception order in criminal cases. Recommendation LXXXVII.

725. To two other questions it may be well to refer. We have adhered to the present practice of certification by which the magistrate at his discretion makes or refuses to make the order for detention that may follow on certification, and also decides whether he will, or will not, see the alleged lunatic. In Scotland, in the case of an alleged lunatic the petition is submitted to the sheriff, whose "function is rather administrative than judicial. He sees that there is no ground to object to the petitions, that the prescribed forms have been complied with and that the two medical certificates are in terms such as afford reasonable evidence that the subject of the petition is insane. If he is not satisfied on these points the order is refused. There is nothing to prevent him having the patient brought before him, if he thinks fit, but he does not do so and would not be likely to do so for the purpose of determining the patient's lunacy, as that would put him in the false position of acting as a medical examiner." In England, the magistrate is in what is here called a "false position." He acts practically as supervising medical examiner, and sees the person with the object of judging of the reality of the alleged lunacy, apart from his judgment of the reasonableness of the evidence which the certificates contain. As an illustration of the result of adopting this course, a case was cited to us. The patient had been detained on a reception order signed by the magistrate in the usual way on the necessary certificates. There was no asylum very near, and consequently the patient was removed to a hospital. The magistrate had signed the certificate without seeing her, and accordingly, when she was at the hospital, she was given the opportunity of seeing another magistrate there. When this magistrate saw her he refused to certify her and "the patient had to be discharged, with very disastrous results to herself."

Functions of judicial authority. Claye Shaw, Vol. IV., p. 197, c. 2. 30443 30444. Lunacy Act, Sec. 6, 17. Spence, Vol. III., p. 14, c. 1.

Claye Shaw, Vol. IV., 30444. Cf. Tuke, Vol. IV., 28804–28806.

726. The magistrate is called in to give the order for reception, that the public may have complete confidence in the justice of the transaction, and that the interest of the patient may be fully considered. If he is to assume a position that is judicial rather than administrative, it appears to us that he should, as a rule, see the patient. We believe that it accords best with English feeling that the judicial authority should make the order judicially.

Recommendations LXVIII and LXXI.

727. Another point in regard to certification has also been raised. The present form of certificate includes (1) a statement of facts observed by the medical practitioner and (2) a statement of facts observed by others. It has been suggested that in the form of certificate it should not be necessary to enter facts observed by the medical practitioner, but only his opinion and such facts observed by himself as he may think fit to record. The reason for the suggestion is that an experienced medical man will, by various signs and indications, be able to judge whether a person is or is not mentally defective, but with the time at his disposal he can, in some cases, hardly observe facts which by their strangeness and peculiarity would impress a magistrate or any person unaccustomed to medical investigation, though, with a greater opportunity for observation, such facts might come to light. There is thus much to be said for this suggestion, but the difficulty is rather to be met, we think, in a different way. It may indeed happen, and often does happen when insanity is combined with cunning, that even a protracted interview will not enable the medical man to observe such facts, if they were recorded, as would support a certificate. The opportunities for observation before certification should therefore be greatly increased, and for this we recommend that the fullest facilities be given. We would, on this understanding, adhereto the present form and require that the "statement" of facts should be filled up by the medical man, though the actual wording of the questions on the statement might be revised.

Statement of facts observed by certifier in certificate.

Crichton-Browne, Vol. I., 6042–6044.

II. Wardship.

The principle of wardship for the mentally defective.

728. Under recent legislation methods for the care and custody of children have been introduced which have extended the principle of wardship in many ways. Infancy, in cases in which the infant is the prospective possessor of property, is ground for wardship; and the analogy between infancy and unsoundness of mind or idiocy, as states of insufficient or defective discernment, is obvious, and has long been recognised. The Court that deals with the one may well deal with the other. And in fact this principle is now taking many new forms.

Compulsory education; the principle of the Reformatory and Industrial Schools Acts.

Industrial Schools Act, 1866, Sec. 14.

729. Under the Reformatory Acts, the ground for interference and compulsory education is conviction in respect of an offence committed by a child between the ages of ten and sixteen punishable with penal servitude or imprisonment. In the Industrial Schools Acts, intervention in the case of children apparently under fourteen years of age depends not only on the committal of an offence, but also, apart from that, on the existence of immoral or injurious conditions of life—exposure to vice and crime—"found begging or receiving alms"; "found wandering"; "found destitute, either being an orphan, or having a surviving parent who is undergoing penal servitude or imprisonment"; "frequenting the company of reputed thieves" or "of prostitutes," and so forth. And in these instances, also, the law imposes compulsory education. With the close of the education the control ceases, at the age of sixteen or eighteen or nineteen as the case may be.

The development of guardianship.

Prevention of Cruelty to Children Act, 1904, 4 Edward VII., Ch. 15.

Sec. 6.

Sec. 7.

730. But the enforcement of education at the charges of the State, and, as far as possible, at the expense of the parent, is often found to be insufficient. The evil is done before the offence is committed. The return of the young person to the family after the period of compulsory education exposes him to the very vice and crime from the influence of which it was desired to withdraw him. Legislation consequently tends to extend the field of guardianship, and to use it as the instrument of a control, not merely educational, but social and personal. Thus, in the Prevention of Cruelty to Children Act, 1904, where a person who has the custody of the child under the age of sixteen has been convicted of committing an offence of cruelty as defined in the Act, the child may be "committed to the custody of a relation of the child, or some other fit person, including any society or body corporate established for the reception of poor children or the prevention of cruelty to children, named by the Court (such relation or other person being willing to undertake such custody) until it attains the age of sixteen years or for any shorter period." And "any person to whose custody a child is committed under this Act shall, whilst the order is in force, have the like control over the child as if he were its parent, and shall be responsible for its maintenance, and the child shall continue in the custody of such person, notwithstanding that it is claimed by its parent." This principle is pushed still further in connection with Poor Law administration. The Poor Law Act of 1899 permits the guardians, in certain cases, to "resolve that until the child reaches the age of eighteen years all the rights and powers of such parent as aforesaid . . . in respect of the child shall . . . vest in the guardians, and thereupon those rights and powers shall so vest accordingly and shall continue so vested whether the child does or does not continue to be maintained by the guardians." The cases to which such a resolution applies are amongst others: the desertion of the child by the parents; "cases in which the guardians are of opinion that by reason of mental deficiency, or of vicious habits, or mode of life, a parent of the child is unfit to have the control of it," and so on. And, under the Custody of Children Act of 1891, in cases of the abandonment or desertion of a child or the neglect of him so as to allow the "child to be brought up by another person at that person's expense or by the guardians of a Poor Law union for such a length of time and under such circumstances as to satisfy the Court that the parent was unmindful of his parental duties, the Court, 'it is enacted,' shall not make an order for the delivery of the child to the parent unless the parent has satisfied the Court that, having regard to the welfare of the child, he is a fit person to have the custody of the child." Thus, under the circumstances of parental neglect or moral incapacity the right of the parent is definitely curtailed by modern legislation, and till the child reaches some age short of twenty-one years, he remains deprived of his authority, if the state of things that justified interference still continues.

Poor Law Act 1899 (62 & 63 Vict., Ch. 37). Sect. I. (6).

Sect. I. (1).

Custody of Children Act, 1891, Sec. 3 (b).

731. In Germany, in the case of children neglected but not themselves guilty of an offence, the same tendency of legislation is apparent; and for their case an extended system of "guardianship education" has been introduced.* "If the mental and bodily well-being of a child is endangered (not simply prejudicially affected)," the Court of Ward (*Vormundschaftsgericht*) is "empowered to take the necessary measures for removing the danger"; and "endangered" includes cases (*a*) where the father abuses his right to take care of the child; (*b*) where he neglects the child; or (*c*) where he is guilty of dishonourable or immoral conduct": and, further, though the child be under the charge of a guardian, the Court of Ward may interfere if "there is reason to fear continued neglect." In these cases—if "there is danger of neglect, whether of a moral, mental or a bodily kind"—the child may be placed under "guardianship education." So, "if the child has been guilty of a punishable offence for which, on account of his tender age, punishment cannot be inflicted." So again, if the educational influence of the parents or others responsible for his education, or the influence of his school, is inadequate to "prevent his complete moral ruin."

"On the Education of Neglected Children in Germany." Journal of the Society of Comparative Legislation. New Series, No. VII., June, 1901, p. 66.

If the Court of Ward decides to order "guardianship education," the ward may be placed in a suitable family or in an educational or correctional establishment. In coming to a decision on the point the peculiarities of each individual case have to be considered, the nature of the degeneracy and the causes of it; and a curator is appointed to supervise the education and maintenance of every pupil placed in a family. The office of curator is honorary, and may be filled by women in the case of children under twelve years of age; and in the case of female pupils, women are preferred as curators. "Pupils may also be placed in institutions for the sick, infirm, insane, lunatic, deaf and dumb, or blind, so long as may be required by their physical and mental condition." The "guardianship education" terminates at the age of twenty-one, and, towards its termination, every care is taken to ensure that the pupil starts in life under good auspices. The cost is met thus: the provincial unions (*Provincialverbände*) or, as we should say, counties, are responsible for the establishment of educational or correctional institutions; the communal unions (*Kommunalverbände*) or, as we should say, the boroughs and urban and rural districts, bear "the principal expenses for maintenance and education, and for providing for discharged pupils," but the Government supply two-thirds of the expense.

732. This principle of guardianship education we would apply to the mentally defective, and with that object would recommend for the wardship of children and young persons up to the age of twenty-one, the adoption of a method similar to that described in the Acts of 1891, 1899, and 1904, quoted above. We have treated all proposals for the prevention of the generation of mental defect by physical means as outside the scope of practical administration. We have the more reason therefore to recommend that provision be made for the control of mentally defective persons by the honourable method of guardianship; and it may be noted that the Poor Law Act of 1899 has already accepted "mental deficiency" on the parents' part as a ground for the diminution of parental rights.

Guardianship and supervision of mentally defective persons under twenty-one.

733. We therefore recommend that the local authority should have power to pass a resolution of wardship—that is, a resolution for the transfer of the rights and powers of the parent or guardian of a child, until the child reaches the age of twenty-one, to the committee for the care of mentally defective persons—"in the case of persons under twenty-one years of age, for whose care and control any council is required to make suitable and sufficient provision and who, in the opinion of the committee, are not under suitable parental or other control, and are not receiving suitable training or are cruelly treated or otherwise neglected and who, in the opinion of the responsible medical officer of the committee, come within any of the classes (3) to (9) inclusive of Recommendation IV." These powers should be exercised, as we state in Recommendation XLIX., subject to appeal to a Court of Summary Jurisdiction and a further appeal to a Court of Quarter Sessions. And we propose, further, that where the mentally defective person, being less than twenty-one years of age, is receiving suitable training and parental control, and is not cruelly treated or otherwise neglected, "the Committee endeavour to make a voluntary agreement with the parent

Recommendation XLIX.

Recommendation LI.

* Gesetz über die Fürsorgeerziehung minder jähriger vom 2 Juli 1900.

Guardianship and supervision of mentally defective persons under twenty-one—*contd.*

Recommendation LI.

or guardian for the appointment of a friendly visitor who, with the committee, shall be consulted as to any proposed removal of the person from his or her present residence, or any change in regard to his or her education and training, or any question of marriage, and generally in regard to any matter that may affect the well-being of the person at the time or in the future."

734. So far, we have dealt with wardship up to the age of twenty-one. But other proposals have been made to us, which would be applicable to persons after that age. The first of these proposals is the adoption of the system of *curatelle*, as practised in Jersey. The second proposal is the adoption of the French system known as the *Conseil de Famille*. Next, we will discuss the Scottish procedure under which a "curator bonis" is appointed to the property of a minor or of an "incapax." And lastly, the suggestion made to us by Sir James Crichton-Browne for the appointment of "legal guardians."

III. Curatelle.

The system of *Curatelle*.

735. Sir William Venables Vernon (Bailiff of Jersey) described very fully the system known as *Curatelle* which is in force in that island, and which furnishes a useful parallel to any system which might be introduced into this country. It will perhaps be convenient to consider in the first place the type of persons to which *curatelle* applies. The Royal Commission of Inquiry into the Civil, Municipal, and Ecclesiastical Laws of the Island of Jersey, 1861, thus stated the law :—

Venables Vernon, Vol. I., p. 589, col. 2.

> "It is to be observed that by the law of this island recourse may be had to a *curatelle* not only in cases of lunacy and mental incapacity, but whenever through drunkenness, prodigality, misconduct, or incapacity of any other kind it may become necessary or expedient to subject a person to control in the management of his property."

This statement of the law was questioned by the Privy Council in the case of *Ex-parte* Nicolle on appeal from the Royal Court of Jersey (L. R. Appeal Cases, Vol. 5, 1879–1880, p. 350). In this case, the Privy Council appear to have held that the interpretation given by the Royal Commission was too wide. Sir William Venables Vernon, however, informed us that :—

Vol. I., 10201–10203.

> "The practice has been to continue the administration of the law on the old lines."

He considered that the Privy Council had not the facts fully before them, and that much that was said in the judgment must be taken as *obiter dicta*. He concluded as follows :—

> "By the law of Jersey all insane and feeble-minded persons and prodigals must be either protected or restrained in the management of their property,"

adding that this system, as applicable to defective persons, is in practical working order in Jersey at the present time, and has been from time immemorial.

Account of the "*Curatelle*" Procedure.

736. In order to establish *curatelle*, the proceedings usually commence in the following way :—

Venables Vernon, Vol. I., 10203.

> "Any interested person, whether a member of the family, or some person interested by reason of business relations, such as a creditor, or other person, gives information usually to the police of the district; a preliminary inquiry is carried on by the police, or at any rate is supposed to be carried on. As the result of this, the head of the police communicates with the Attorney-General, who is also *ex officio* the public prosecutor of the island. Thereupon the Attorney-General files an information with the court, and states that a case has arisen for an inquiry, and moves the court to make an Order. That Order goes, as a matter of course; the Attorney-General being responsible and representing the Crown moving for the inquisition, the Order issues as a matter of course."

If no action is taken by relatives or friends the procedure may be set going in other ways :—

Venables Vernon, Vol. I., 10211.

> "1. The police may *ex officio* give information.
> 2. The Attorney General may *ex officio* institute proceedings on some fact being brought to his notice.
> 3. The Court might in the course of other judicial proceedings discover that a man apparently was incapable or incompetent to manage his own affairs and might draw the attention of the public prosecutor to the fact."

The next step is as follows :—

Venables Vernon, Vol. I., 10211.

> "The Attorney-General, after conferring with the head of the police of the district selects a given number, usually eight or nine, of the notables of the district, persons of substance and integrity, presumably acquainted with the person in question, having known him for at least a year and a day, having had opportunities of seeing him and knowing his mental state and his general behaviour, as well as acquainted with his mode of administration and management of his affairs and property, and these persons are according to the form summoned to appear before the Court on a special day. At the same time the defendant is made a party to the proceedings by a specific form of summons."

These six persons are called *principaux*. They are not in the position of a jury, but are selected witnesses. They are examined and cross-examined on oath, usually very closely by the court itself. If the court considers the evidence sufficient, the person in question is declared incapable. Seven *electeurs* are then appointed, usually from among the near relatives, four on the father's and three on the mother's side. These *electeurs* appoint the *curateur*, who consults them in his management of the estate and person, and for whose acts they are liable, as sureties, if they have concurred in them. The seven *electeurs* are then known as *la curatelle*. Account of the *Curatelle* Procedure—*contd.* Venables Vernon, Vol. I., 10212–10213, and p. 587, col. 1.

737. There is a further method by which the feeble-minded can *voluntarily* place themselves under control by signing a *procuration* appointing a *procureur* whose powers are then similar to those of a curateur. A *procuration* may be either (1) general, in which case it can only be revoked by the Court, on cause shown, or (2) special, in which it can be revoked without cause at pleasure. Whenever *procuration* is resorted to, it is usually done in order to avoid the compulsory process of appointing a *curateur*, which is looked upon as a disgrace. Procuration. Venables Vernon, Vol. I., p. 587, c. 2.

738. Sir William Venables Vernon stated that he had never known the hearing of such a case to last for more than two days. A disputed case might take a day at most. The minimum cost would be £6 or £7 and the maximum £14 or £15, including counsel's fees. If interdiction is pronounced, the cost comes out of the estate; if not, it is paid by the ratepayers. Length and Cost of Proceedings. Venables Vernon, Vol. I., 10214–10220.

739. By a statute of January 22nd, 1883, no person may keep in his or her custody "any person suffering from mental infirmity whatever may be the degree thereof" without notifying the fact to the President of a permanent Committee of the States of the Island appointed for that purpose under a penalty of £10 to £25. Parents must, under this law, report children as soon as they can reasonably tell that they are mentally defective. The Committee may visit such feeble-minded persons at any time and may give notice to the public prosecutor in regard to any circumstances which may come to their knowledge. Two visitors are usually appointed, and should they think it necessary to institute proceedings these must be conducted according to the usual procedure in *curateurship*. Great discretion is observed in the manner in which this law is put into force, the information thus obtained is never allowed to leak out, and, consequently, no resentment is felt by the public at having to notify cases of feeble-mindedness in their own families, as might otherwise be the case. This procedure applies to rich and poor alike. Compulsory Notification of Cases. Venables Vernon, Vol. I., 10235–10242.

740. In cases where something more is required than management of the property of the feeble-minded person the *curateur* has power to place him under restraint. To quote Sir William Venables Vernon again :—

> "If the *curateur* and his *electeurs* found they could not keep the man under proper and sufficient restraint in his own home they might place him as a boarder in the general hospital of the island or some other institution of that sort, or in a private asylum, or in a public lunatic asylum."

In case of escape, the Attorney-General would be informed, and would give directions to the police if he thought fit. The power of the *curatelle* is subject to supervision by the Attorney-General, and ultimately by appeal to the Court. Provision for Custody of the Person. Venables Vernon, Vol. I., 10272–10274.

There are two institutions in Jersey to which children can be sent—the Family Orphanage at Granville—supported by State grants, and the Jersey Home for Boys, which is a public institution. The parents can be compelled by legal process to maintain their children if sent to such institutions. Venables Vernon, Vol. I., 10255–10257.

741. The evidence upon which interdiction is allowed is that of the six *principaux* who are summoned as informants. There is no certainty that any of these will be medical men, though it is usual for the Attorney-General to appoint one or two out of the six. Medical certificates may be presented by counsel on behalf of the alleged feeble-minded person as also by the Attorney-General, but these would be unsworn and there would be no opportunity for cross-examination. Evidence of Mental Defect required. Venables Vernon, Vol. I., 10263–10271.

The system of *Curatelle*.

> "No witnesses not being members of the inquest can be examined on either side, unless therefore some medical man cognisant of the facts is competent to serve, medical evidence is unattainable." (Extract from Report of the Royal Commissioners (Jersey), 1861, Vol. I., p. xxix.

Venables Vernon, Vol. I., p. 589, c. 2

Sir William Venables Vernon mentioned in dealing with this point that it was thought by some that an alteration was necessary, and that medical evidence should be admitted.

Success of the *Curatelle* System.

Venables Vernon, Vol. I., 10204–10205.

742. As evidence of the success of the system, Sir William Venables Vernon mentioned that in his own experience, which extended over thirty years, there had been on an average from twelve to fifteen cases heard and determined before the Royal Court of Justice every year. The population of the island would be between 50,000 and 60,000. He also quoted from the Minutes of Evidence of the Royal Commission of 1860 as follows :—

Venables Vernon, Vol. I., 10206.

> "The Commissioners were: Sir John Awdrey, Lord Devon, and Mr. Jebb, and they had on that particular day before them the then Attorney-General of the island, the members of the Bar, the leading members of the legal profession, and others, and they had been inquiring into the specific cases of grievances under the law of *curatelle*, and they wound up a very long examination of the Attorney-General and the other members with the following: Sir John Awdrey to Mr. Dupré, the Attorney-General, Question 12863: 'Do you conceivet hat the power which is exercised by the court in this manner authorising restraint upon drunkards and prodigals is on the whole beneficial ?—(*A.*) I think it is generally considered so in the island; many families have been saved from ruin by it. (*Q.*) Taking place upon the examination of six *principaux*, if they are fairly selected is not that some evidence that the general sense of the island is in favour of it ?—(*A.*) I think so. (*Q.*) Do you then think that it involves greater restraint upon personal liberty than ought to be allowed ?—(*A.*) I do not think so. (*Sir J. Awdrey.*) Would any other gentleman like to give an opinion upon this very important question ?—(*Mr. H. Godfray.*) There are many instances where families have been brought to ruin by an incompetent person not having a *curateur* in time. (*Lord Devon.*) Is any legal gentleman aware of any cases in which this process has been used for the purpose of oppression or private wrong ? (*Mr. Dupré.*) I have no knowledge of any case of that kind. (*Mr. J. Aubin.*) Speaking from forty years' experience, I may say that I do not know of such a case."

Venables Vernon, Vol. I., 10286–10287.

There is no tendency for the work of the *curateur* to be habitually carried out by a solicitor as is the case in France. The courts always discourage this practice, and press for the appointment of a relative whenever possible. Consequently, the system has not lost its freshness, and is looked upon with confidence, and appreciated by the people generally.

In conclusion, it appears that "curateurship" is an efficient method of dealing with persons in possession of either large or small properties who have proved themselves incapable of managing their affairs. It is, however, inapplicable to the pauper class, amongst whom the existence of the feeble-minded causes the greatest distress; and secondly the ground for interdiction often falls far short of any actual mental defect such as doctors would be prepared to certify, but may be merely a general incapacity as shown by conduct, the type of person contemplated being thus described by Sir William Venables Vernon :—

Venables Vernon, Vol. I., 10224.

> "A man who having inherited good estate, having a wife and children, would be bringing destitution upon himself and them by reason of gambling and horse-racing or otherwise doing away with his property."

IV. The Conseil de Famille.

The system of *Conseil de famille*. Type of Persons to whom it applies. Budd, Vol. II., 17256.

743. We pass now to the consideration of the French system known as *Conseil de famille*. This is in many respects similar to *curatelle*. The class of persons to whom it is applicable is, however, less wide, the state of mind which gives rise to interdiction being described as "imbecility, dementia, or *fureur*," but these words are said to be widely interpreted by the court.

Account of Procedure. Budd, Vol. II., 17252.

744. The procedure is thus described by Mr. Wreford Budd, who gave evidence on behalf of the Incorporated Law Society :—

> "An application is made for an interdiction. The classes of person who could make that application are clearly defined in the code. The judge, when the application comes before him, interviews the person against whom the application is made; he then appoints a *conseil de famille*, and he asks the opinion of the *conseil de famille*. That opinion is given to him: there are minute directions as to how the *conseil de famille* is composed, who must, and who must not, sit upon it. The judge then pronounces in open court the interdiction—that is to say, he prevents the profligate person, or whatever he may be, the person against whom the application is made—from entering into contracts, and appoints a receiver of his property."

745. Mr. Wreford Budd recommended an adaptation of the French system in this country, the actual appointment of the "family council" being unnecessary as, in his opinion, the supervision could be exercised by the Chancery Division. Dr. Savage, who gave evidence on behalf of the Royal College of Physicians, also suggested "the French system of the family council or something like that" for dealing with cases in the upper and middle classes.

The system of *Conseil de famille*; how far adaptable to this country. Budd, Vol. II., 17262–17265. Savage, Vol. I., 6521.

Mr. C. M. Barker, the President of the Incorporated Law Society, after referring to the successful working of the system, pointed out :—

> "It must not be forgotten, however, that it is to some extent based upon the French law that a man cannot leave a certain proportion of his property away from his own family.

Barker, Vol. II p. 357, c. 2.

These words indicate the fundamental difference which exists between French and English law in the matter of alienation of property.

746. In England, a testator is under no obligation to bequeath his property to his relatives. He might leave everything to "a man in the street," and his will would be valid if he were "sane and of sound disposing mind." In this respect the law of Jersey resembles that of France, and in both cases, the popularity of the "Family Council" system is largely due to the different conception which exists with regard to private property.

How far should the State interfere in the Protection of Private Estates?

We cannot do better than quote Sir William Venables Vernon, who thus graphically describes the contrast between the two principles :—

> "I presume I may take it that the law of England is that a man, under God, is absolute master of his property, and, consequently, that he may deal with it exactly as he likes, both during his lifetime, and in contemplation of his death. The law of Jersey, which is founded on the ancient Norman law, is founded upon a radically different principle, the principle that a man holds, enjoys, and administers, and can only dispose of, his property, both *inter vivos* and *mortis causa*, subject to what is due to himself, to his family, and those dependent on him, to the community, and to the State. The consequence is that the law of Jersey from time immemorial has always held that the incapable must be protected, and the unfit must be restrained with regard to the exercise of the right of management of their own property."

Venables Vernon, Vol. I., 1020?.

Good and salutary as is the system of *curatelle*, we fear that it would not be possible to graft it into English procedure for the care and control of the mentally defective.

747. The difference between Norman law, and English, is deeply engrained in the social organisation and feeling of the communities of which those laws are the expression. The one recognises the unity and obligations of the family as a whole in relation to property. The predominating characteristic of the other is the liberty of the individual. In England, it would seem as if the "restraint of the unfit" would be effected, not through the family acting of itself as a controlling agency under the co-operative guardianship of a curator, but by the guardianship of a court whose protection is obtained by a procedure like that in force under Sec. 116 of the Lunacy Act. Members of the family of a mentally defective person should, we think, have the fullest opportunity of applying for the protection of the court, and, in order to achieve this, we recommend "that the powers and provisions of the Lunacy Act, 1890, relating to management and administration, shall apply to all mentally defective persons as defined in Recommendation IV."

Conclusion that neither the system of *Curatelle* nor the *Conseil de famille* would be possible in England.

Recommendation X.

748. It appears, therefore, that whatever alteration may be necessary in the existing law of this country, it must be based on some other principle than that in force in Jersey or France. English law does not recognise a right on behalf of relatives to be protected; it would be rather a question of the right of a feeble-minded person who inherits property and is incapable of managing it to be protected against himself. This appears to be the basis for any possible legislation. It should, however, be mentioned that the members of the Law Society who gave evidence were impressed by the effectiveness of the French method, and some desired that the courts of our own country should be armed with equal powers, not only covering the control of property held in full possession, but extending even to the variation of settlements under which the mentally defective person may be entitled.

Rawle, Vol. II., 17426. Budd, Vol. II., 17333.

V. The Curator Bonis.

Administration in Scotland of estate of an *incapax*.

749. We turn now to the Scottish system of the *curator Bonis*. Mr. Richard Brown, who had acted in many cases as *curator bonis*, gave evidence before us as to the procedure in Scotland for the administration of estates of persons who are found by the Court to be incapable of managing their own affairs or of giving directions for their management. We have not recommended the adoption of this procedure in England, as we are of opinion that an extension of the existing system in England will meet the case. But the Scottish method is both suggestive and far-reaching, and well worthy of consideration side by side with the methods of *curatelle* and *conseil de famille* and the English system.

In Scotland, the Court of Session has, from an early period, exercised the power of appointing an officer to whose care, under the supervision of the Court, are entrusted estates and interests without a capable owner or administrator. Such an officer is called a "judicial factor."

Brown, Vol. III., p. 41, col. 2.

By the Judicial Factors Act of 1880, the power of appointing judicial factors in cases of estates, the yearly value of which does not exceed £100, was extended to the Sheriff (or County) Courts in Scotland, an appeal from these Courts to the Court of Session being competent.

The designation—judicial factor—is a general term applicable to all persons appointed by the Court to take charge of estates. A person appointed to the property of a minor or of an *incapax* is specifically known as a *curator bonis*.

The conditions which justify an appointment may be either mental or physical; and, in either case, the question to be determined is, do they, or do they not, render the party incapable of managing his affairs? It is not necessary that the party be absolutely insane, if mentally unfit to manage his affairs. Appointments have also been made in cases of physical incapacity, such as paralytic affection, apoplexy, deaf and dumb, and blind and deaf, but it would rather appear that the Courts are averse to appoint on grounds of physical incapacity alone.

Mr. Brown continues:—

Brown, Vol. III., p. 42, col. 2.

> "The system appears to be sufficiently elastic to cover all necessary cases. If habitual drunkards or even spendthrifts were certified to the Court as incapable of managing their own affairs, possibly the present law in Scotland might be sufficient to enable the Court to appoint a curator of their estates. But whether under the present law or under a new law I have no doubt that the system of administration which I have described would be found perfectly suitable for all such cases."

Petition for appointment of *curator bonis*. Brown, Vol. III., p. 41, col. 2.

750. "A petition is presented to the Court by either the *incapax* himself, his relatives, or, failing relatives, any parties interested; by the Accountant of Court where a factor has died or ceased to act, and by the Lord Advocate where a report has been made to him under the Lunacy (Scotland) Act, 1857. These petitions come before a Judge only, either the Junior Lord Ordinary of the Court of Session or a Sheriff or Sheriff Substitute in the County Courts, and are not referred to a jury. There must be produced with the petition certificates by two medical men, on soul and conscience, to the effect that the party is incapable of managing his affairs or of giving direction for their management, and stating specifically the cause of this incapacity and its duration. One of the certificates must be by a medical man unconnected with the asylum where the *incapax* may be detained. The petition must be served personally on the alleged *incapax* and upon the other persons interested, who are named in the petition. Eight days' notice is given. All parties interested may appear in the case, whether the petition has been served upon them or not. Where the appointment is opposed by the alleged *incapax* with a denial of incapacity, the Court may cause an inquiry to be made into his state, and may examine him and other witnesses, or may adopt what course is considered best to obtain the necessary information. The alleged *incapax* is not entitled to demand a cognition and formal medical inquiry."

Appointment, duties, and discharge of *curator bonis*, in Scotland. Brown, Vol. III., p. 42, col. 1.

751. Speaking generally, any male person twenty-one years of age, in Scotland, in solvent circumstances, and not disqualified by incapacity or interest, may be appointed *curator bonis*. Where no objection is stated or appears, the Court will usually appoint the petitioner's nominee.

The curator's first duty is to find caution or security for his intromissions to the satisfaction of the Court. Until this has been done, he cannot obtain the official act and decree of his appointment which has the effect of a complete transfer to the curator of all property belonging to the *incapax*. As soon as he has received this he enters upon the administration of the estate. He requires

to prepare and lodge with the Accountant of Court within six months at the latest a full and distinct rental of all lands committed to his management and a list of all monies and funds belonging, and debts due to the estate, and also an inventory of any furniture or other movables. He must also acquire all writs and documents of importance belonging to the estate, and collect all monies not securely invested. He must satisfy the Accountant of Court as to the accuracy of the statements lodged by the production of vouchers."

Appointment, duties and discharge of *curator bonis* in Scotland—*contd.*

"While the curator appointed by the Court is not given specific control over the person of his ward, he has in effect such control, seeing that he has command of the whole of the ward's property. In practice, the curator sees that his ward is comfortably and suitably maintained according to his means. The ward may be placed either in a lunatic asylum or a private house, according to his condition, or he may even be allowed comparative freedom, but he is, of course, under the supervision of the Board of Lunacy, and if the officers of the Board think that the ward is not being properly or suitably taken care of, they may communicate with the curator and require him to make better arrangements."

Brown, Vol. III., p. 42, col. 2

"A curatory comes to an end on the death of the ward, and an appointment may be recalled at any time on the following grounds :—

"When the *incapax* can show that he has recovered, or was never incapable, or when the curator is superseded by a tutor-at-law or by a foreign guardian, or when the original appointment was incompetent or irregular. Medical certificates are usually held sufficient proof of the ward's recovery. When the curatory comes to an end the curator applies for his judicial discharge, which is granted by the Court after intimation and the receipt of a report by the Accountant of Court to the effect that the discharge may be given."

752. With regard to the cost of the procedure, Mr. Brown says :—

Cost of administration.

"I have ascertained that in the case of persons incapacitated, the average costs connected with the petition for, and appointment of, a curator, where there is no opposition, are £18 to £20 in the Court of Session, and £8 to £10 in the Sheriff Court. Where the petition is opposed the costs are usually larger, but it is in the discretion of the Court whether and how far the costs of unsuccessful opposition will be allowed out of the estate."

Brown, Vol. III., p. 42, col. 2.

He further states :—

"That the whole cost of administering the Court of Session factories amounts to less than 8 per cent. of the Revenue and the Sheriff Court factories less than 15 per cent. of the total expenditure. In the latter case the expenditure has been used as the basis of comparison, as the income in many instances is insufficient for necessary expenses, so that the capital has to be encroached upon. It will be understood that Sheriff Court factories consist entirely of estates of less than £100 annual income."

Brown, Vol. III., p. 42, col. 2.

VI. Legal Guardianship.

753. Another suggestion has been made to us, which we have not adopted, but which is well worthy of consideration. Sir James Crichton-Browne suggests the appointment of legal guardians by the County Court Judge. He says :—

Suggested appointment of legal guardians by County Court Judges in cases of mental defect.

"Over idiots and persons of defective intellect who have no property, some legal control is necessary in many cases for their own protection and for that of the public. So long as they are wholly maintained by their parents or relations, and are living at home and properly treated, no interference would be justifiable, but wherever relief was sought on their behalf, or wherever it appeared that they were subjected to privation or harsh treatment, or were not under proper control, then I would suggest that the County Court Judge should, on the application of the board of guardians or parish council, having satisfied himself of the existence of idiocy or mental defect, appoint a guardian who should have all the powers of the Committee of the person. The guardian thus appointed would have the custody of the idiot or mentally defective person, would decide his or her place of abode and education or industrial training, and recover from the parents such contributions to maintenance as they might be capable of making. The guardian should, I think, be an official person, acting for a large area, and appointed by the town or county council. He or she—for in the case of female idiots and defective persons it would be advisable to have a female guardian—would stand in *loco parentis*, would visit his or her wards regularly, and report to the board of guardians. They should be responsible for the safety and good conduct of their wards, arrange for the employment of such of them as might be safely hired out for employment, and supervise those in schools, homes, and colonies."

Crichton-Browne, Vol. I., p. 334, col. 1. Cf. Bramwell Booth, Vol. II., 14063.

754. In preference to this proposal, we have decided to recommend that the committee for the care of the mentally defective may resolve in certain cases to become the guardian of the mentally defective person, up to the age of twenty-

Conclusions as to guardianship and supervision.

Conclusion as to Guardianship and supervision—*contd.*

one, and after that age shall report the condition of the case to the Board of Control, who shall decide what further steps shall be taken in view of the continuance of the mentally defective person under care and control.

Recommendations XLIX., L. and LII.

For the control of mentally defective persons, Classes (3) to (9), we have adopted the method of the Idiots Act, 1886, which allows of admission to an institution on the application of a parent or guardian under the certification of a single qualified medical practitioner; and persons who have been received into an institution, when under the age of twenty-one, may be there retained after they are of full age, with the approval of the Board of Control.

VII.—Detention.

Cf. Chap. XX., par. 372.

Of detention, we have here said nothing. The whole argument of our report is an argument for its necessity in particular cases. The evidence in favour of it on the part of our witnesses is almost unanimous. By the proposals which we submit it would be within the power of the committee for the care of the mentally defective, subject to certification, to arrange for the detention of a mentally defective person. It would thus be in their hands as an instrument at any time available. But, in very many cases it may not be required; in many, once settled, it may rather remain in abeyance than be actually turned to account for the control of the patient. For some cases oversight will suffice, for others certification, and for others certification with an order for detention.

Preamble (7).

See paragraphs 372, 683–754, and 76".

The aim of the scheme is the application of particular methods suitable for the cases of different persons, not the general adoption of any one method exclusively. We have described these methods in our Report.

CHAPTER XXXVII.

The Management and Administration of Property.

755. To understand the conditions under which property is administered and managed in connection with Lunacy or mental infirmity it is necessary to study Sec. 116 of the Lunacy Act, 1890. The Section is as follows:—

Section 116 of the Lunacy Act, 1890.

"(1) The powers and provisions of this part of this Act relating to management and administration apply:—

(*a*) To lunatics so found by inquisition;

(*b*) To lunatics not so found by inquisition for the protection or administration of whose property any order has been made before the commencement of this Act;

(*c*) To every person lawfully detained as a lunatic though not so found by inquisition;

(*d*) To every person not so detained and not found a lunatic by inquisition, with regard to whom it is proved to the satisfaction of the Judge in Lunacy that such person is through mental infirmity arising from disease or age incapable of managing his affairs.

(*e*) To every person with regard to whom it is proved to the satisfaction of the Judge in Lunacy by the certificate of a Master, or by the report of the Commissioners, or by affidavit or otherwise, that such person is of unsound mind and incapable of managing his affairs, and that his property does not exceed two thousand pounds in value, or that the income thereof does not exceed one hundred pounds per annum;

(*f*) To every person with regard to whom the Judge is satisfied by affidavit or otherwise that such person is or has been a criminal lunatic and continues to be insane and in confinement.

"(2) In the case of any of the above-mentioned persons not being lunatics so found by inquisition, such of the powers of this Act as are made exerciseable by the committee of the estate under order of the Judge shall be exercised by such person in such manner and with or without security as the Judge may direct, and any such order may confer upon the person therein named authority to do any specified act, or exercise any specified power, or may confer a general authority to exercise on behalf of the lunatic, until further order, all or any of such powers without further application to the Judge.

"(3) Every person appointed to do any such act or exercise any such power shall be subject to the jurisdiction and authority of the Judge as if such person were the committee of the estate of a lunatic so found by inquisition.

"(4) The powers of this Act relating to management and administration shall be exerciseable in the discretion of the Judge for the maintenance or benefit of the lunatic or of him and his family, or where it appears to be expedient in the due course of management of the property of the lunatic.

"(5) Nothing in this Act shall subject a lunatic's property to claim of his creditors further than the same is now subject thereto by due course of law."

These "powers and provisions" include practically everything that is necessary to divest the person, in whose case the order is made, of the control and management of his property and business and to secure their management by others on his behalf under the supervision of the Courts.

Lunatics found by "Inquisition." Sec. 116 (1) (*a*).

756. The first Sub-section (*a*) refers to cases so found by inquisition. We have thus at the outset a distinction of cases "so found," and cases "not so found." If a person is found by inquisition of the Judge or Masters in Lunacy, with or without a jury, to be of unsound mind and incapable of managing himself or his affairs, he comes under Sub-section (*a*). Inquisition cases are comparatively few, and it has been proposed to us on various grounds that the system should be set aside; or that, at least, the inquisition should not be made by a jury, but by a Master in Lunacy only. It exists in no other country. It creates a quite unnecessary cross division both in the classification of mental defect and in the administration regarding it, and except as imposing an absolute status of lunacy on the individual, it offers no advantage which cannot be obtained under certification. And in some well-known cases the reference to a jury of difficult questions touching mental disorder complicated by all sorts of irrelevant issues of personal sympathy and social position has led, it is admitted, to very unsatisfactory judicial conclusions. On the other hand, authoritative evidence favours the continuance of the procedure; and hence we hesitate to make any definite recommendation for its abolition.

Crichton-Browne, Vol. I., 5990. Cozens Hardy, Vol. IV., 28409, 28485, 28510, 28511.

Lunatics not so found by inquisition. Sec. 116 (1) (*c*). Nicolson, Vol. IV., 27436. Fischer, Vol. I., 3008, 3068, 3058. Fischer, Vol. I., 3061. Cozens-Hardy, Vol. IV., 28409.

757. By far the larger number of lunatics are certified under reception orders and are thus by legal interpretation not "found" to be lunatics.

To these the Sub-section (*c*) refers—persons certified as lunatics "lawfully detained as lunatics though not so found." With this distinction, there follow weighty consequences. A lunatic "so found" has his whole status changed. He cannot marry, and no deed he executes during a lucid interval is valid. He is practically a ward of the Court and his property is protected. The management of oneself and of one's property are different things, and a person may be found of unsound mind and incapable of managing his property, but yet be found capable of managing himself; the certified lunatic is certified merely as to his person. The question of his property does not necessarily come up for settlement. Even though he be undischarged, his acts are held to be responsible and are validated, if it is proved that they were done in a lucid interval. He is not under any restrictions, apart from personal detention, nor under any incapacity, except at the actual moment or period of his insanity.

It is evident, therefore, that for most people and for their friends, detention after certification, which may be arranged by petition privately, would be preferable to detention after inquisition with its definite withdrawal of social independence; and under (*c*) their friends can claim for them the protection which the Court affords for the management and administration of their property.

Mentally Infirm Persons. Sec. 116 (1) (*d*).

758. But Sub-section (*d*) goes further and deals on the lines of the Lunacy Act with people who are not lunatics so found or so certified, and who are not of "unsound mind," as under Sub-section (*c*). The Judge in Lunacy has to be satisfied that "through mental infirmity arising from disease or age" they are "incapable of managing their affairs." We have thus a third class of persons in regard to whom no question of detention is raised and to whom strictly a "Lunacy Act" should not apply. They are, if the mental infirmity be due to age, senile dements; if to disease, probably prematurely senile. But the clause has been found popular and much use has been made of it. It is at least a recognition that mental defect exists outside the definition of lunacy, idiocy, or unsoundness of mind as these terms are defined and used in the Lunacy Act.

Unsound mind. Small property cases. Cozens-Hardy, Vol. IV., 28537. Sec. 116 (1) (*e*).

759. Sub-section (*e*) is a clause differing from the last, in that "unsoundness of mind" is the condition which justifies application under it, together with incapacity to manage affairs; and it applies only to persons of small property. It creates, however, a fourth way—yet another procedure, for proving unsoundness of mind and incapacity of managing affairs; that is to say, "by the certificate of a Master, or by the report of the Commissioners, or by affidavit or otherwise." In this case also there need be no detention; and, if detention becomes necessary, it is provided by inquisition or by a reception order in the usual way. Further, many who are dealt with under Sub-section (*d*) and (*e*) are not visited either by Lunacy Commissioners or Chancery Visitors.

Use made of the practice in various Sub-sections of Section 116 of the Lunacy Act, 1890.

Palmer, Vol. IV., 27817.

760. Upon the use of Section 116, Sub-section (*d*) something of a premium has been put. Sub-section (*d*) applies, as we have seen, to mentally infirm people who are not lunatics. "It was very soon discovered that, though all infirm people were not lunatics, all lunatics were infirm, and the solicitors very promptly found out that to claim 2 per cent. percentage fees instead of 4 per cent. (as under the other procedure would have had to be paid) was a very great advantage to their clients, especially as they got their people relieved from visitation either by the Commissioners or the visitors." The saving of 2 per cent. was a valuable thing with an income of £30,000 a year and a still more valuable thing with an income under £50, so that the patients, who before would have been found under the inquisition clause, were subsequently found under the subsection (*d*) as infirm and not lunatic.

Appendix to Vol. IV., p. 427.

761. Statistics respecting the extent to which the Sub-sections of Section 116 have been used, have been laid before us.

During six years (1901 to 1906) the cases dealt with under all clauses amounted to 3,244. The detailed figures are :—

1901–1906.	Sub-section (*a*)	(*b*)	(*c*)	(*d*)	(*e*)	(*f*)	Total.
Totals - -	89	35	1,565	592	941	22	3,244

Under Sub-section (*a*), inquisition, there is practically no increase of cases : they number only thirteen to eighteen in the year.

Under Sub-section (*b*) the number is dwindling constantly : the subsection refers only to cases dealt with on other lines before the Act of 1890 came into force.

Appendix to Vol. IV., p. 427.

Under Sub-section (*c*) come half of the total number of cases—cases "not so found," but certified. They tend to increase : 259 in 1902 ; in 1906, 310.

Under Sub-section (*d*) the mentally infirm cases also tend to increase : in 1906 the number was 113.

Under Sub-section (*e*), cases in which the question of unsoundness of mind and incapacity of managing one's affairs is settled "by the certificate of the Master, or by the report of the Commissioners or by affidavit or otherwise," the numbers keep at about 150 to 160 a year.

Under Sub-section (*f*), criminal lunatics, there are three or four cases a year.

Nicolson, Vol. IV., p. 87, c. 2.

The total number of cases dealt with under the section was—in 1902, 518, and in 1906, 608. The total number of inquisition cases under care is 653. The total number of Section 116 cases (other than those found by inquisition) is 3,129.

Appendix to Vol. IV., p. 430.

762. Another table shows the value of the estates dealt with under these clauses. The first class consists of estates under £20 a year. Of these, under "lunatics so found" there were only eleven ; under persons suffering from mental infirmity, clause (*d*), only twenty—evidence that these clauses are little used by poor people. On the other hand under (*c*), the certified insane and (*e*) the unsound in mind and incapable of managing affairs as proved by affidavit, etc., the numbers are respectively 142 and 433. As regards estates with an income of £20 a year but less than £100, there are 1,379 cases ; and as regards estates with an income of over £100 and paying "Lunacy percentage" there are 1,773 cases, of which 557 are inquisition cases. The lunacy percentage is 4 per cent. on inquisition cases. It produced £16,821. On non-inquisition cases it is 2 per cent., and produced £10,157. The percentage thus produced, £26,978, is enough to pay the expenses of the Court and leave a considerable margin. It is evident that the procedure under Section 116 and especially clause (*e*) is greatly appreciated by owners of small property. All these cases are notified to the Lunacy Commissioners, and they, and not the Chancery Visitors, visit them. A good many would not be certified except for this action on the part of the Commissioners. Those who apply under this clause avoid inquisition, and might otherwise, equally, avoid certification.

Southwell Keely, Vol. IV., 27968. Needham, Vol. IV., 26924. Nicolson, Vol. IV., 27413, 27417.

System of certification should harmonise with system for administration of property.

763. Our conclusion is that the system of certification for the person should be brought into harmony with the system of protection for the management and administration of property. The simpler the procedure, the more the advantages of the Act are likely to be utilised. We have suggested that the word "lunatic" should not be used in future statutes, and that under the general term mentally defective there should be several different classes. Under these would come

all those who would now apply for the protection of Sec. 116, and others beside, as, for instance, the morally imbecile. In Class 2 (*see* Recommendation IV.) would come the mentally infirm from age, and the mentally infirm, owing to decay of the faculties. The distinction between control of the person, and control of the property would remain. The test in most cases would be capacity or incapacity "to manage themselves or their affairs." Certification would settle this alternative, and the further question also, whether the person can manage himself, and not his affairs. Or this issue might be set aside, and the certificate, according to what seems to us the better plan, might carry with it incapacity on both counts, for as Master Fischer, a Master in Lunacy, says: "It is difficult to see how a person of unsound mind who is incapable of managing his affairs, can be capable of managing himself." At the same time, under our proposals, the courses open to the courts for providing for the care and supervision of these cases, through the operation of the committees for the care of mentally defective persons and of the Board of Control, would be much more various than those which at present exist. Certification would not carry with it one possibility only—detention in an asylum or licensed house or hospital or workhouse. It might carry with it, stay in a voluntary home, or in a "colony," or family care and guardianship. We have therefore no fear that any undue or unduly prolonged detention would result.

System of certification should harmonise with system for administration of property—*contd.*

Fischer, Vol. I., p. 155, c. 1.
Preamble (7).

764. We propose in the next chapter to discuss the transfer of the work of the Judge and Masters in Lunacy to the Chancery Division. But, here, we may make the suggestion that it is worthy of consideration whether the percentage levied on property should not be altered at the same time. In Chancery, 2 per cent. is paid for management; possibly the same percentage might be charged on all cases coming under Section 116, and the differences in the charges now made in accordance with different scales of income be abolished.

We recommend in general:—"That the powers and provisions of the Lunacy Act, 1890, relating to management and administration, shall apply to all mentally defective persons as defined in Recommendation IV."

Recommendation X.

CHAPTER XXXVIII.

The Chancery Jurisdiction and the Lunacy Commission.

765. Parallel with, and in some respects overlapping, the jurisdiction of the Lunacy Commissioners is the authority exercised by the Judges of the Supreme Court. To the origin of this authority, we alluded, when we dealt with the constitution and procedure of the Lunacy Commission. Here, we refer to it more at length, specially in relation to the judicial procedure which is in force for the control of the person and the property of lunatics.

The Judge in Lunacy: Historical.

Amongst the insane the common law of England draws a marked distinction between the lunatic and the idiot or "born fool." Edward I., desirous of following the Scottish precedent where the feudal lord had wardship of an idiot's land, laid claim to a wardship of the land of all natural fools, no matter of whom the lands were actually held. "There is reason to believe that the claim was novel, or at any rate there had been a struggle for it between the lords and the King. If idiocy be treated as similar to infancy this analogy is in favour of the lord; at all events if the idiot be a military tenant, feudal principles would give the custody of his land not to the King, but to the lord, while of socage land some kinsman of the fool might naturally claim a wardship. But in England a different rule had been established, and this, as we think, by some statute or ordinance made in the last days of Henry III. The King's right is distinctly stated in the document known as *Prærogativa Regis*, which we believe to come from the early years of Edward I. The same document seems to be the oldest that gives us any clear information about a wardship of lunatics. The King is to provide that the lunatic and his family are properly maintained out of the income of his estate, and the residue is to be handed over to him upon his restoration to sanity, or, should he die without having recovered his wits, is to be administered by the ordinary for the good of his soul; but the King is to take nothing to his own use."

Blackstone, Com. i., 302.
Pollock and Maitland, "Hist. of English Law," ii., 481, 2nd ed.

The Judge in Lunacy : Historical — *contd.*
Beverley's Case, Coke's Report, Part IV., p. 577, 1. James I.

Blackstone, i.,303–5.

In early days, before the abolition of feudal tenures, there was much law upon this subject of wardship of persons of unsound mind. Lord Coke says that the duty of the King to defend his subjects and their goods and chattels, lands and tenements, extends as well to *non compos mentis* as to an idiot, "but in case of *non compos mentis* the King has not any interest in the lunatic (as he has in the idiot) because the lunatic may recover his memory which he has lost, and therefore in the case of the idiot the law says *Rex habebit custodiam*, but in the case of *non compos mentis, Rex providebit.*" A later writer draws the distinction thus, that if a man were found *purus idiota* under the writ *de idiota inquirendo* the profits of his lands and the custody of his person became in the King's hands. If, on the other hand, he were found lunatic or *non compos mentis*, which Blackstone defines as "one who hath had understanding, but by disease, grief, or other accident, hath lost the use of his reason," and who "is indeed properly one that hath lucid intervals, sometimes enjoying his senses and sometimes not, and that frequently depending upon the change of the moon," the King provided for the patient, preserving his property and profits and taking nothing to his own use.

Archbold's "Lunacy," p. 147, 4th ed.
Beverley's Case.

Calr. of Inquisitions, P.R.O., Vol. I., No. 326.

It is believed that the royal prerogative in this respect was never exercised except upon office found. As an instance may be cited the return to a writ, *de idiota inquirendo*, dated August 8th, 3 Hen. VII. The Commission was held on October 23rd, in the same year, and the jurors returned, "He is, and for a long time past has been, frantic, lunatic, and an idiot with lucid intervals." Since the abolition in 1660 of the Court of Wards and Liveries the Crown has, by sign manual, delegated its powers and authority to some high officers or officer of justice or State. The practice has been to entrust the Lord Chancellor with the exercise of the royal prerogative in respect of the case of the persons and property of lunatics, a course convenient because he could exercise his jurisdiction as Chancellor in aid of his authority under the royal warrant.

Fitzherbert, "Natura Brevium" 232 B. ed. of 1588 and pp. 232–233 of ed. of 1794 for form of writ and notes.

"In addition to the authority so entrusted to the Lord Chancellor under the royal sign manual at common law, aided by his general jurisdiction as Lord Chancellor, he had certain statutory jurisdiction conferred upon him by various statutes of the reigns of George II. and George III., both in respect of his office as Lord Chancellor and also as, and when, entrusted, by virtue of the sign manual, with the custody of the persons and estates of lunatics, idiots, and persons of unsound mind, so found by inquisition."

Archbold's "Lunacy," pp. 147 and 148, 4th ed.

766. "Subsequently, when the office of the Lords Justices of Appeal in Chancery had been created by 14 and 15 Vict., c. 83, although that statute contained a saving of the powers, authorities, and duties of the Lord Chancellor under and by virtue of any appointment under the sign manual of the Crown, as having the custody of the persons and estates of persons found idiot, lunatic, or of unsound mind, it was found expedient to make out a similar warrant to each of the Lords Justices, and provision was made by Section 11 of 15 and 16 Vict., c. 55, and Section 15 of 15 and 16 Vict., c. 87, for extending to them all the statutory jurisdiction of the Lord Chancellor when so entrusted by sign manual, as well as his other statutory jurisdiction in relation to lunatics."

Lunacy Regulation Act, 1853 (16 & 17 Vict., c. 70).
30 & 31 Vict., c. 87, sec. 13.
38 & 39 Vict., c. 77, sec. 7.

The effect of later statutes has been to give the Lords Justices so entrusted, either jointly or severally, all the ordinary powers, duties and authorities of the Lord Chancellor in Lunacy.

767. By the Supreme Court of Judicature Act, 1875, it was enacted that any jurisdiction usually vested in the Lords Justices of Appeal in Chancery, or either of them, in lunacy, should be exercised by such judge or judges of the High Court of Justice or Court of Appeal, as might be entrusted by the sign manual with the care and commitment of the custody of the persons and estates of persons of unsound mind, and that all enactments referring to the Lords Justices as so entrusted should be construed as if such judge or judges so entrusted had been named therein instead of such Lords Justices.

The Judge in Lunacy : Jurisdiction of, how exercised at present time.

768. Now, by the Lunacy Act, 1890, Section 108, "The jurisdiction of the judge in lunacy under this Act shall be exercised either by the Lord Chancellor for the time being entrusted by the sign manual of Her Majesty with the care and commitment of the custody of the persons and estates of lunatics, acting alone or jointly with any one or more of such judges of the Supreme Court as

may, for the time being, be entrusted as aforesaid, or by any one or more of such judges as aforesaid." The Judges of the Supreme Court now entrusted with lunacy jurisdiction are the five Lords Justices and the Master of the Rolls. For this business, the Lords Justices have the assistance of a secretary, who was appointed upon the coming into existence of the Lunacy Rules of 1883. He is paid by the Treasury, but there is no statutory provision for his appointment.

The Judge in Lunacy: Jurisdiction of, how exercised at present time—*contd.*

James, Vol. IV., 30298–30303.

I. Administrative Powers and Duties.

769. The administrative powers of the judge in lunacy are defined by statute. They apply :—

The Judge in Lunacy: Administrative Powers of.

(*a*) To lunatics so found by inquisition.

(*b*) To lunatics not so found by inquisition, for the protection or administration of whose property any order has been made before the commencement of this Act.

Lunacy Act, 1890, Sec. 116.

(*c*) To every person lawfully detained as a lunatic, though not so found by inquisition.

(*d*) To every person not so detained and not found a lunatic by inquisition, with regard to whom it is proved to the satisfaction of the judge in lunacy that such person is, through mental infirmity arising from disease or age, incapable of managing his affairs.

(*e*) To every person with regard to whom it is proved to the satisfaction of the judge in lunacy by the certificate of a master, or by the report of the Commissioners, or by affidavit or otherwise, that such person is of unsound mind and incapable of managing his affairs, and that his property does not exceed two thousand pounds in value, or that the income thereof does not exceed one hundred pounds per annum.

(*f*) To every person with regard to whom the judge is satisfied by affidavit or otherwise that such person is, or has been, a criminal lunatic, and continues to be insane and in confinement.

770. The extent of the business of the Lunacy authority may be gathered from the following figures :—In December, 1906, the number of existing cases under inquisition was 653, and of those under the other sub-sections of Section 116 (1) was 3,129, of which 347 were dealt with under Sub-section (*d*). In 1905 the number of inquisitions held was eighteen, one with a jury and seventeen without. The number of inquisitions has been rapidly decreasing, and, as an explanation, it was suggested to us that many cases which would formerly have required an inquisition are now dealt with under Sub-section (*d*) of Section 116 (1).

The Judge in Lunacy: Extent of Business.

Ambrose, Vol. IV., p. 154, c. 2.

Nicolson, Vol. IV., 27413.

In 1905, the judge made eighty-two orders and the masters made 1,368, of which 484 were first orders under Section 116, in cases other than those under inquisition. The sums of cash and stock dealt with by these orders amounted to £4,114,789 18s. 2d. In addition, the masters, by certificate, dealt with the lodgment and investment of cash and stock, amounting to £244,819 6s. 8d., while the receipts shown by the accounts of committees and receivers taken during the year were £1,937,045 6s. 6d., and the disbursements £1,645,210 19s. 11d.

771. The general business of the judicial authority, except such as has to be performed personally by the judge in lunacy, is under the supervision and control of the masters.

Masters in Lunacy.

Lunacy Act, 1891, Sec. 27 (1).

There are two masters who are appointed by the Lord Chancellor. The necessary qualification is that the master must be a barrister of ten years' standing. There is no statutory obligation that he should give the whole of his time to his official duties: an obligation which, we think, should be imposed. He holds office during good behaviour, and there is no age limit for retirement. His salary is £2,000 per annum, which is paid by the Treasury. There is no power at present to appoint a deputy master, so that if a master falls ill the business of his office comes to a stop. This defect could probably be cured by the suggested transfer of the masters to the Lunacy Commission, without the need of statutory amendment, under the powers conferred by Section 337 of the Lunacy Act, 1890.

Lunacy Rules, 1892, Rule 10.

Lunacy Act, 1890, Part III.

Lunacy Act, 1890, Sec. 337.

Ambrose, Vol. IV., p. 153, col. 1.

Ambrose, Vol. IV., 29380–29385.

Masters in Lunacy: Summary of Duties.

Ambrose, Vol. IV., p. 154, col. 1.

772. The duties of the masters as summarised in a memorandum prepared in the department and prefixed to the evidence of Master Ambrose, K.C., then a Master in Lunacy, are as follows:—

They hold inquisitions with or without a jury, and while executing an inquisition the master has the powers of a judge of the High Court. Orders for inquisition, with or without a jury, or for the trial of an issue in the High Court in lieu of inquisition, for a traverse, and for a supersedeas, are made by the judge without previous consideration of the applications (which are by petition) to the masters.

The masters performed the duties formerly performed by the Masters in Ordinary of the Court of Chancery relating to all inquiries and matters connected with the persons and estates of lunatics and such other duties as the Lord Chancellor directed by general orders, *e.g.*, they enquired and reported or certified to the judge in lunacy, as to the most fit persons to be appointed committees, the lunatic's kin, fortune, income, maintenance and debts, and any matter affecting his person or estate, and submitted consequential directions or minutes of order for the confirmation and approval of the judge. They further, *inter alia*, approved of the security to be given by committees and receivers, and took their accounts and collected the lunacy percentage, and they still do so.

Lunacy Act, 1891, Sec. 27 (1).

Now, by Section 27 (1) of the Lunacy Act, 1891, it is enacted that "subject to Rules in Lunacy, the jurisdiction of the judge in lunacy as regards administration and management may be exercised by the masters, and every order of a master in that behalf shall take effect unless annulled or varied by the judge in lunacy"; and Rule 10 of the Rules in Lunacy of 1892 authorised the masters to make orders as regards administration and management and costs.

Rules in Lunacy, 1892, Sec. 10.

Vesting orders, and orders requiring Chancery jurisdiction, and orders under the Lands Clauses Consolidation Acts, the Settled Estates Act, 1877, the Settled Land Acts, 1882 to 1890, are made by the judge, the applications being made by summons at Chambers before the masters, who prepare the minutes of the order and submit them, with the evidence, to the judge. Appeals from the master go to the judge. All matters for the judge are brought before him out of court, but may be adjourned by him into court if necessary for fuller consideration. The judges entrusted with lunacy jurisdiction, by arrangement amongst themselves, take duty each for a period of six weeks at a time, and hear cases after four o'clock in their private rooms.

The Masters in Lunacy: Clerical Staff of the Masters.

Ambrose, Vol. IV., p. 153, c. 1.

773. The staff of the office, other than the staff attached to the Chancery visitors, consists of a chief clerk at £800 per annum, seven first-class clerks at salaries, except in one instance, of £500 rising to £600 per annum, four second-class clerks at £250 rising to £400 per annum, and seven third-class clerks at £100 rising to £200 per annum. In addition there is a messenger, who also serves the office of the Lord Chancellor's visitors, at an inclusive salary of £100 per annum.

Keely, Vol. IV., 28196–28208.

The masters appoint the clerks in their office, their number and salaries being determined by the Lord Chancellor with the concurrence of the Treasury. The appointment of the chief clerk must be made with the approbation of the Lord Chancellor. Since the passing of the Supreme Court (Officers) Act, 1879, the clerks must obtain the certificate of the Civil Service Commissioners. There is no age limit. There is no qualification required beyond a medical certificate and the certificate of the Civil Service Commissioners, and apparently a clerk can only be removed from office by the Lord Chancellor, notwithstanding the Civil Service rule as to retirement at sixty-five under Schedule A.

Keely, Vol. IV., 28219–28233.

Keely, Vol. IV., 28306–28312.

The Masters in Lunacy: Costs in Lunacy.

Ambrose, Vol. IV., p. 153, c. 2.

774. Costs in lunacy are at present taxed by and under the direction of the masters, but the actual taxation is performed by one first-class clerk who has a salary of £700 per annum, with the assistance of a third-class clerk. By rules dated December 13th, 1901, provision was made for the amalgamation with the central office, of the taxing department of the Lunacy Office, and the transfer to the central office of the lunacy taxing clerks, but such amalgamation has not been effected. We were told, however, that upon the retirement of the present taxing officer, the transfer would be carried into effect.

775. There are now three visitors, two medical and one legal. Visitors are appointed by the Lord Chancellor as vacancies occur, a medical practitioner in actual practice to succeed a medical visitor, and a barrister of not less than five years standing to succeed a legal visitor. A person shall not be appointed if he is, or has been within the two years preceding, directly or indirectly interested in any licensed house, and if any visitor after appointment becomes so interested, his appointment becomes void. They hold office during good behaviour and there is no age limit, but there is superannuation.

The Lord Chancellor's Visitors: Constitution. Lunacy Act, 1890, Sec. 163. *Ibid.*, Sec. 165. Sec. 164. Nicolson, Vol. IV., 27529–27530. Palmer, Vol. IV., 27738.

Each visitor receives a salary of £1,500 per annum, which the Statute directs shall be paid out of moneys provided by Parliament. It was claimed before us that these salaries, and all other expenses of the offices of the masters and visitors, were paid primarily out of the lunacy percentage fees, the balance of which, after all expenses are defrayed, now amounts to £9,000 more or less, and is paid into the Treasury. But against this it must be observed that should the lunacy fees become diminished, so that no surplus would be payable to the Treasury, the expenses of the offices would none the less have to be discharged out of moneys provided by Parliament.

Lunacy Act, 1890, Sec. 163 (4). Nicolson, Vol. IV., 27377, p. 87, c. 1 and 2. Palmer, Vol. IV., 27790–27791.

In addition, the visitors receive 30s. a day subsistence money when out, and travelling expenses. Visitors in office when mileage was abolished receive 20s. a day subsistence money when visiting in London, but it has not been given to a visitor since appointed. He is put on the ordinary Civil Service allowances.

Crichton-Browne, Vol. IV., 29835–29851.

The visitors have such clerks and officers as the Lord Chancellor may, with the concurrence of the Treasury as to numbers and salaries, determine. The present staff consists of a secretary at £300, senior clerk at £370, rising to £400, second clerk at £200, third clerk at £104. The office hours are from ten to four, except in vacations, when they are from eleven to one. There are always two clerks in attendance.

Lunacy Act, 1890, Sec. 163 (3). Nicolson, Vol. IV., 27377, p. 87, c. 1. Crichton-Browne, Vol. IV., 29706–29712.

776. The duties of the Chancery visitors with respect to visits of inspection and report, are governed by the Lunacy Act, 1890, Sections 183 to 186, the Rules in Lunacy of 1892, rules 100 to 109, and the fifth of the rules of 1893. By virtue of these provisions, every lunatic so found by inquisition is visited twice in every year, the interval between successive visits not exceeding eight months. Every lunatic resident in a private house is visited four times in each year during the two years next following inquisition. As already stated, the number of inquisition cases is 653.

The Lord Chancellor's Visitors: Visitation.

The visitors also visit, when specially required under order of the judge or master, such cases of infirmity or lunacy as are provided for under Section 116 of the Lunacy Act, 1890, other than Sub-section (*a*). The number of cases other than those found by inquisition as given to us were, under Sub-section (*b*), (*c*), (*e*), and (*f*), 2,782; under Sub-section (*d*) 347; in the whole for cases under these sub-sections, 3,129. Persons detained under reception orders under Sub-section (*c*) are not visited by the Chancery visitors, but they can be. They are visited by the Lunacy Commissioners.

Nicolson, Vol. IV., p. 87, c. 2. Ambrose, Vol. IV., p. 154, col. 2. Nicolson, Vol. IV., 27597.

The jurisdiction of the visitors is limited to England and Wales, but occasionally visits are paid to inquisition patients in Scotland by arrangement with the Scottish authorities. Each visitor takes a third of the area covered by the jurisdiction every year in rotation. These areas are known as the Home, Northern, and Western Circuits.

Nicolson, Vol. IV., p. 88, col. 1. Palmer, Vol. IV., 27759–27760. Crichton-Browne, Vol. IV., 29777.

The total number of visits paid in the year ending October, 1906, was given to us as 1,583, or an average of 527 visits by each visitor.

Nicolson, Vol. IV., p. 88, c. 1.

777. We found it impossible to ascertain with precision the amount of time during the year that a visitor has to devote to the discharge of his official duties. Inasmuch as each visitor has his own allotted share of work, he can, with some limitations, do it as he likes. Dr. Nicolson, Lord Chancellor's Visitor in Lunacy, could not say exactly, "We each have our own work to do, and we can do it as we like. . . . There are three months legal vacation at the Law Courts which prevent the masters having the opportunity of sending us special cases. I can take three months' holiday if I like and work nine months. No holiday is allotted at all. I can pick and choose my own time, as I like." Mr. Palmer, Lord Chancellor's Visitor in Lunacy, told us that it was "A recognised thing that visitors cannot get away for more than a fortnight at a time. I do not say it cannot

Nicolson, Vol. IV. 27485, 27490–27491.

Palmer, Vol. IV., 27806–27811.

The Lord Chancellor's Visitors. Visitation—*contd.*

be done, but as a matter of fact I have never done it. I do not like to say that it would have been impossible for me; it certainly would not have been impossible. I might have gone away, as I did this year. As a matter of fact I never have, and the reason which has kept me is that there has always been work at all these times. I cannot say if that is true of the other visitors. We all manage our own affairs ourselves. I cannot say what has been the case with them. . . . In August and September, when Parliament is not sitting, and we have no Board meetings, I have no knowledge of what my colleagues do under those circumstances." Sir James Crichton-Browne, Lord Chancellor's Visitor in Lunacy, said, "Of course I cannot speak for the other visitors, but for myself the longest holiday I have ever had was six weeks, and then I asked special permission of the Lord Chancellor to go out of the country. We get holidays in a fragmentary way. I have had a month again and again. You get your instructions, and if you can go through them rapidly and clear off your cases, particularly in the long vacation, when there are no specials coming in, then you can take a month at a time." The visitor "takes his holiday when he likes; he is asked no question; he must do his work, and must be there to take the specials when they arise."

Palmer, Vol. IV., 27811.

Crichton-Browne, Vol. IV., 29870–29871.

Palmer, Vol. IV., 27712–27719, 27753.

The reasons adduced for this uncertainty of time appear to be, put shortly, as follows:—Each visitor has to make a certain number of routine visits in each quarter of the year; how he makes them is left to his discretion. But there have been orders from the Lord Chancellor that he is not to make more than a certain number on a certain day, or to a certain place, but with that exception it is left to the discretion of the visitor. He is liable occasionally to have special inquiries put upon him by the master when sitting, on an average about twenty to each visitor. In addition a visitor may visit a case at odd times, and he has frequent correspondence with patients' committees and their medical attendants. He has also office duties and board meetings to attend. The board meets nominally once a month, "We try to have always eleven, and we have special boards from time to time."

Crichton-Browne, 29732–29733, 29743.

Crichton-Browne, Vol. IV., 29725.

Nicolson, Vol. IV., 27521, 27534, 27674–27675.
Palmer, Vol. IV., 27735.
Crichton-Browne, Vol. IV., 29741–29743.

778. The impression produced upon us by the evidence on this head is that, although it may be difficult for a visitor to take a long holiday in any year, the amount of spare time at his disposal at intervals during that period is not illiberal. The visitors do not complain of too much work, but Dr. Nicolson and Mr. Palmer do not think that the number of visitors can be reduced. Sir James Crichton-Browne, on the other hand, is of opinon that two visitors could do the work at present.

Lunacy Act, 1890, Sec. 166.
Nicolson, Vol. IV., 27613–27615.

The visitor can appoint a deputy, if necessity arises by reason of illness or unavoidable absence, but not otherwise, with the approbation of the Lord Chancellor. A Lunacy Commissioner, under similar conditions, has to apply to the Lord Chancellor to appoint a substitute. The masters are visitors *ex officio*, but they do not act in that capacity. They may visit on their own account, and have done so, but, if a visit has to be paid, they usually ask a visitor to make it.

Lunacy Act, 1890, Sec. 168 (1).

Lunacy Act, 1890, Sec. 151 (3).

Nicolson, Vol. IV., 27618–27621.

The function of the visitor is to report and to recommend. He has no power to compel. He can only refer the matter to the master for action.

The Lord Chancellor's Visitors. Cost.

Ambrose, Vol. IV., p. 154, c. 2.

779. The total cost of the departments of the masters and visitors for the year ending March 31st, 1906, was given to us as follows:—

Masters: Salaries, £11,530 13s. 4d.; Travelling, £136 2s. 8d; Pensions, £913 6s. 8d. Total, £12,580 2s. 8d.

Visitors: Salaries, £5,491 9s. 2d.; Travelling, £1,420 13s. 11d.; Pensions, £213. Total, £7,125 3s. 1d.

Add for messenger common to both departments, and we have a grand total of £19,805 5s. 9d.

This represents the cost of providing for:—

653 patients found by inquisition, 3,129 patients under Section 116, Sub-sections (*b*), (*c*), (*d*), (*e*), (*f*), of whom those under (*c*) are not visited except specially. Total, 3,782 patients.

Trevor, Vol. IV., p. 6, c. 1.
Trevor, Vol. IV., p. 18.

Here we may compare the cost of the Lunacy Commission.

On January 1st, 1906, there were 116,361 patients to be visited.* The cost of the Commission for the year 1904–5 as returned to us was £14,752 9s. 4d.

780. Lunacy percentage is paid to the judicial authority at the rate of 4 per cent. per annum on the clear annual income, amounting to £100 per

* The cost of the Commission, 1906–7, was (net) £15,618 8*s.* 11*d.* (Appropriation Accounts).

annum and upwards, of lunatics so found by inquisition, with a limit of £400 in any one year; and at the rate of 2 per cent. on the income amounting to £100 per annum and upwards of lunatics not so found, and of persons included within the scope of Section 116 (*d*) with a limit of £200.

The Lord Chancellor's Visitors. Cost—*contd.* Ambrose, Vol. IV., p. 154, c. 2. Keely, Vol. IV., 28326—28333. Ambrose, Vol. IV., p. 154, c. 2. Baker, Vol. IV., 33273.—89. Appendix, Vol IV, p. 446.

In addition, fees are charged and are taken in stamps. The amount put before us, as that contributed by lunatics' estates, by percentages and fees during one year was £26,943 for percentages and £5,033 10s. for fees. The Lunacy Department earns enough money by fees and percentages to pay the salaries of the Masters and Visitors, and their respective staffs, and to leave a surplus of over £11,000 a year. It was pointed out in the Report of Sir G. Jessel's Committee in 1882 that the State ought not to derive any portion of its general revenue from the contributions levied on the property of Chancery Lunatics incurred in protecting their interests. In the Chancery Division, percentages are also taken in certain matters, and, in the event of a transfer of business to that quarter, it would probably be found expedient to re-arrange the percentages in lunacy to bring them into conformity with those levied in Chancery.

Fischer, Vol. 4, p. 183.

II. Suggested Amalgamation of the Judicial Authority and the Lunacy Commission.

781. At the present time, there are two high authorities in Lunacy working side by side, and, to some extent, overlapping in their jurisdiction. On the one hand, we have the judicial authority of ancient origin, based on the prerogative of the Crown, and operative to protect the comparatively few lunatics and persons of unsound mind who are possessed of property. On the other, we have the Lunacy Commission, established by statute, founded with the object of preventing abuses and generally for protecting the persons of lunatics, irrespective of property qualification. The amount of business transacted by the former is less than that imposed upon the latter. The former, admittedly, is not overworked. The latter has been working under severe pressure for years, and an increase of its staff is called for. It is therefore of great importance to consider whether an amalgamation, in whole or in part, of the two authorities would be expedient, and if so, in what way it could be best effected.

The present position of the existing Central Lunacy Authorities.

782. Various suggestions have been put before us for the constitution of a central authority to which should be entrusted not only the duties now discharged by the above-named two lunacy authorities, but also such further and extended jurisdiction with respect to all mentally defective persons, not at present within their care, as might be recommended by us. In this part of our Report, however, we shall confine ourselves to the consideration of a proposal to amalgamate the judicial authority with the Lunacy Commission.

Suggestions as to constituting one Central Authority.

The views of the Lunacy Commission, and of the judicial authority, as represented by the masters and Chancery visitors, upon this question were diametrically opposed. The Lunacy Commissioners were unanimously of opinion that some such fusion was necessary. Whether the Commission absorbed the Chancery staff, or *vice versa*, did not seem to them a matter of so much importance. On the other hand, the masters and Chancery visitors were strenuously of opinion that their isolated position should remain unimpaired; that, no matter what should be recommended as to a central authority, the judicial machinery should not be touched.

It will be useful to state here the effect of the evidence directly bearing upon this branch of our inquiry.

783. First, as to the views of the Lunacy Commissioners:—

Views of the Lunacy Commissioners.

Sir John Dorington, an honorary Commissioner of considerable experience, said:—"I ventured to make the suggestion that the masters in lunacy with their visitors and the Commissioners, should all be amalgamated into one board, and that one of the masters in lunacy should be chairman of this board. You would then get your paid chairman at no increase of expense. You would have the two departments brought in connection with one another, and I think myself that the distinction between them is a very inconvenient one for administration; you get constant crossing between the two. One body is supposed to look after property, and the other after the mental condition. . . . You asked me whether I wanted to absorb the Chancery visitors in the Lunacy Commission or the other way. I think it is a matter of entire indifference. I think you might very well abolish the

Dorington, Vol. IV., 25470.

Dorington, Vol. IV., 25511.

Views of the Lunacy Commissioners—*contd.*

Commissioners in Lunacy, and found your new body on the masters. There is no objection to doing it in that way. You would arrive at the same result." Upon the question of double visitation, the witness said, "I do not see very well how it could be got rid of. These 695 I mentioned, are all under the direct jurisdiction of the Chancery visitors, but they are actually living in institutions which are necessarily visited by the Commissioners, and therefore they come under a double inspection." He explained that what he thought desirable was that the Lunacy Commissioners should be brought into closer connection with the judge in lunacy, but not that the whole jurisdiction of the Commissioners should be brought under the control of the judge in lunacy, or of a law court of any sort. "My idea was that you ought to be able to find the judge in lunacy within the composition of the board. I believe the masters in lunacy are the judges in lunacy; if they were the head of the Lunacy Commission, you would have the judge in lunacy within the composition of the board. . . . The present Commission works extremely well within its scope. In any alteration, its scope should not be lessened."

Dorington, Vol. IV., 25536.

Dorington, Vol. IV., 25739 and 25741.

Cooke, Vol. IV., 25825.

Dr. Cooke, a Commissioner in Lunacy, was asked whether it would be better, in his opinion, that there should be amalgamation of the Commission and the Chancery Visitors. His reply was in the affirmative, "provided on further investigation it is found feasible to work in the visitation now performed by the visitors with that performed by ourselves. If there were amalgamation and reorganisation, I think instead of creating another small department for the care and control of the feeble-minded, and so perpetuating a continuance of the present dual system, it would be better, on the whole, to have one general body." He added that, "Although Sir George Jessel's Committee, or the majority of that committee, was averse from amalgamation, in the Lunacy Act, 1890, provision was subsequently made giving power to the Lord Chancellor to amalgamate the two departments. Amalgamation would be a way whereby our Commission might be increased to an adequate extent without throwing any additional or only a very small additional burden upon the country. But we ought to have the power of single visitation as well. If our Commission were strengthened by the visitors being joined to us and with single visitation, I think we ought to be able to carry on the work of the Commission satisfactorily in the future. I am of opinion that it is absolutely essential that the power of single visitation should be conferred upon us. . . . Supposing the visitors were called Commissioners, or we were called visitors, I think they should be distinct from the masters; there would be so much for the masters to do, and their functions are so distinct from the duties of Commissioners, that, I think, it would be desirable to maintain the difference between the two, although the departments might be associated and called one. The functions of the masters should remain as at present, and they who have to discharge the duties of the masters should be quite distinct from those who have to discharge the duties of the Commissioners. I think they might do it as part of our department, but yet remain a different class of official from the Commissioners. All the Commissioners should be required to do the same work, and the same work as we do now, and that should not be mixed up with the purely judicial functions of the masters, nor with the other duties now performed by them. . . . If there were a concentration of the Commission business, Chancery business and Chancery masters, that would work all right, and you would have your two masters practically acting as part of the Commission."

Cooke, Vol. IV., 25863–25866.

Cooke, Vol. IV., 26259–26264.

Cooke, Vol. IV., 26312–26313.

Urmson, Vol. IV., 26628–26636.

The evidence of Mr. Urmson, then a Commissioner in Lunacy, on this point was as follows:—"(*Q.*) With reference to amalgamation of the Chancery department with yours, that has been frequently advocated, has it not? (*A.*) Yes. It has been in the air frequently. (*Q.*) I think I am right in saying that it was recommended in the Commission of 1860, and a scheme for effecting it has frequently been suggested; the Select Committee of 1859 recommended it in their Report in 1860, and a scheme for effecting it is embodied in one of the appendices to their report. The present section" (Section 337 of Lunacy Act, 1890) "is the outcome of the labours of the Dillwyn Committee, that is the section which enables the Lord Chancellor to amalgamate: the Dillwyn Committee recommended it? (*A.*) Yes, the Lord Chancellor has the power. (*Q.*) Has any attempt been made by the Commissioners to have that put into force?

(*A.*) No, it is rather an invidious thing for us to start. (*Q.*) Is it your idea, if there is an amalgamation, that precedence should be given to the Lunacy Commissioners or to the others ? (*A.*) We have no preference. (*Q.*) Who should absorb whom ? (*A.*) I do not care at all. (*Q.*) Do you not think great economy might be achieved ? (*A.*) Yes. (*Q.*) And that the time is ripe for it ? (*A.*) I do." Views of the Lunacy Commissioners *—contd.*

Mr. Shadwell, a Commissioner in Lunacy, said that he did not differ from the other Commissioners. He did not understand why it was necessary to have two sets of visitors. Shadwell, Vol. IV., 27052, 27056.

It will be noted that in this evidence no reference is made to the functions of the judges of the Supreme Court entrusted with lunacy jurisdiction. The Commissioners appear rather to have considered the question in its visitatorial aspect, and with reference to the powers, administrative and otherwise, of the lunacy masters acting apart from the judge.

784. It will, therefore, be convenient to consider next the opinions of the Chancery visitors on the proposed amalgamation from the visitorial point of view, leaving the question of administration and the exercise of court or judicial powers to be dealt with later in connection with the specific proposals which were put before us for the transfer of such duties to the Chancery Division of the High Court. Suggestions as to constituting one Central Authority. Opinions of the Chancery Visitors.

Master Fischer, a Master in Lunacy and *ex officio* visitor, gave his opinion thus :—" I think it would be a serious mistake to amalgamate the visitors with the Lunacy Commissioners, because the work of the Lunacy Commissioners is with a totally different class of people ; almost all of them are people in county asylums and institutions of that kind, and they have as much work as they can get done ; they are overworked, I believe, and they want more Commissioners. What I object to strongly is that you should put more work on the shoulders of the Chancery visitors who are fully employed and who do their work exceedingly well, if I may say so. . . . It is the fact that the essential difference between the two departments is possession of property, and no possession of property. An allowance is made out of a man's estate for his maintenance, and the visitor sees that that money is spent upon his maintenance, so that in addition to looking into his mental condition, they see to the mode of treatment of his property to ensure that he is getting its value. The visitors, if they notice that further expenditure is required, or would be beneficial to the lunatic, refer it to the master and the master makes that provision as soon as possible." " (*Q.*) Would it not be possible if there were an amalgamation for one of the Lunacy Commissioners to take over the duties of the Chancery visitors, to look specially after those matters concerning the patient and his property which are now looked after by the Chancery visitors ? (*A.*) I do not think any one Lunacy Commissioner could do it. It cannot be done by less than three. (*Q.*) Then three Lunacy Commissioners could do the work ; there is nothing in the work itself which requires a special official to do it, is there ? (*A.*) No. (*Q.*) So a qualified Lunacy Commissioner could do that work just as well ? (*A.*) A qualified Lunacy Commissioner could do it, no doubt. Of course, among the visitors we have two medical men and one legal man ; that is found to be sufficient for all purposes. The Lunacy Commissioners work in couples, as we know. There is a medical man and a legal man who go together. (*Q.*) But suppose we re-adjust the Lunacy Commission. Is there any reason why one of the Commissioners, or two, or three, should not discharge the same duties which are now done by the Chancery visitors ? (*A.*) Not that I am aware of. I am not concerned with the unfortunate people who are in county asylums, and places of that kind, but speaking for those who are under the care of the Lunacy Department, I say that they are properly taken care of by these visitors, and why should they be interfered with ? For the life of me I cannot conceive." Fischer, Vol. IV., 30069–30074. Fischer, Vol. IV., 30075–30078.

785. In the statement by Sir James Crichton-Browne, Lord Chancellor's Visitor in Lunacy, prefixed to the minutes of his evidence, he states that his board has considered the matter, and is of opinion that any fusion of the boards or offices is undesirable. He gives reasons which, shortly summarised, are these. The visitors are an adjunct to the courts of law, and their assistance is necessary for the administration of justice. It is, therefore, necessary that Crichton-Browne, Vol. IV., p. 162, p. 1.

Suggestions as to constituting one Central Authority. Opinions of the Chancery Visitors—*contd.*

they should be in some place near the courts. The whole of the information upon which the visitors act is derived from the master's office. The visitors are in frequent communication with the judicial authority, and the official solicitor:—"It would be to them highly inconvenient and confusing to have to attend on the same business at two offices distinct from, and at some distance from, each other. The separation of the masters' and visitors' departments would be equally inconvenient to solicitors concerned in lunacy cases, and would probably increase the costs." Another reason was that if duties were distributed "The Commissioners, then nine or ten in number, could not possibly have that intimate personal knowledge of the Chancery cases which the visitors possess. The relations of Chancery patients would, in some instances, be distressed to have their family affairs discussed by a large board, twelve or fifteen in number, for privacy and secrecy have always been characteristic of the visitors' department." He does not think that a saving in clerical staff would result, and, lastly, he considers it would be unjust that officials who are paid entirely by Chancery lunatics should be employed at the expense of the latter in work in which they have no concern. This last reason is of course founded on the fact that percentages are charged by the Chancery authority in respect of cases under that jurisdiction. We have dealt with that point elsewhere.

Crichton-Browne, Vol. IV., p. 162, c. 2.

Crichton-Browne, Vol. IV., 29583–29588. Report of a Committee appointed by the Lord Chancellor in 1882. Vol. IV., p. 447.

786. In his evidence, Sir James Crichton-Browne repeated his objection to amalgamation. He stated that he gave evidence before Sir George Jessel's Committee and he still adheres to it. "(*Q.*) The Committee reported against it? (*A.*) Yes, by a majority. There were two in favour of amalgamation and three against. (*Q.*) That Committee reported that it was a subject which ought to be reconsidered very shortly? (*A.*) I believe they did. (*Q.*) The finding of the Committee is not very decidedly against amalgamation? (*A.*) No. (*Q.*) In fact they went as near advising amalgamation as they could without advising it? (*A.*) They did not advise it." Referred to the Report of the Dillwyn Committee, the witness said that he gave evidence before it. "(*Q.*) They reported in favour of amalgamation? (*A.*) Yes, but their recommendation was not embodied in the subsequent legislation." He certainly did not agree with the finding of that Committee that "The possession of property requiring protection should not make any difference in the personal treatment of lunatics or in the supervision exercised over them. I think the Chancery lunatics having property and means are entitled to an entirely different form of treatment." "Every lunatic should be sufficiently and efficiently inspected. (*Q.*) Why should the Chancery lunatic get double inspection, and the pauper, in some cases, none at all? (*A.*) In the case of the pauper there is not the same motive for detention or pecuniary misappropriation. If a man is maintained out of the rates nobody has an object in keeping him shut up. In the case of the Chancery patients there are a great many people who have an interest in having them remain lunatics, so that they require a very special kind of supervision. . . . If the Lunacy Commission is to do it, it would involve an entire reconstruction of the law. If the visitation of Chancery lunatics were thrown on the Lunacy Commission they would have to nominate two medical Commissioners to devote themselves exclusively to that work. (*Q.*) If we assume that the duties of the Lunacy Commissioners are differently arranged, are they in any way incompetent to do the duties? (*A.*) Certainly not. It is not their competency, but their physical capacity I doubt. They would require two additional men to do it, and I think that there would then be great inconvenience in the Chancery work. If the administration of the Chancery Court is to remain, the visitor has to be near the courts, and ought to have constant opportunities of communicating with the masters and the Lords Justices. . . . The Commissioners are capable of performing every duty of the visitors, but it would be incompatible with their existing work. (*Q.*) Are there any duties which you discharge which could not be done by the Lunacy Commissioners? (*A.*) Certainly not. There are no duties which cannot be done by a physician or by a Commissioner in Lunacy or by any other person thoroughly qualified for it." Sir James Crichton-Browne was of opinion that patients properly under Section 116 (*d*) should not be visited. "I would not put the stigma on them of having lunacy visitors sent to them."

29591–29592.

Vol. IV., 29593.

Vol. IV., 29598–29599.

Vol. IV., 29601.

Vol. IV., 29602.

Vol. IV., 29624.
Vol. IV., 29627.

Crichton-Browne, Vol. IV., 29649.

787. Dr. Nicolson, another of the Lord Chancellor's Visitors in Lunacy, was also against amalgamation. His views seem to be summed up in the following answer. "There are several points of view from which that question could be approached. First of all there is the question how far the Commissioners and ourselves could do all the work. I have no doubt we could, by the addition of three to the Commission; but with regard to the question of the patients who, so far as the Board of Commissioners are concerned, form the prime portion of all our work and duty, we have to consider the patients who are first of all compelled to be labelled as lunatics, and in the second instance have their property removed from their own disbursement, and who pay for this out of their own income; I say that they have the first right to be heard in a matter of this sort, on the old principle that the man who pays the piper should call the tune. I think that the patients regard us just as they would regard the Commissioners if they were all made visitors; they regard us as their special patrons, their friends, and their consultant legal and medical advisers. If you mix us up with the general Board of Lunacy of the country you give them a grievance which must be permanent. If you are prepared to face that first difficulty—I say it would be wrong to do it—and make arrangements for the work to be done, I have no doubt that the Commissioners and ourselves could carry it out efficiently and thoroughly, so far as the mere Commission and visitation are concerned."

Suggestions as to constituting one Central Authority. Opinions of the Chancery Visitors—*contd.* Nicolson, Vol. IV., 27533.

788. Dr. Mercier, speaking from a position outside both the authorities under consideration, was of opinion that their amalgamation could be effected with advantage, but he advised the joinder with them of other bodies public and otherwise, in view of our possible recommendations. Other witnesses were in favour of an amalgamation of the Lunacy Commission, the masters in lunacy, and the Chancery visitors. The transfer of powers of control and management of lunatics' estates to the Chancery Division was recommended by the Lancashire Asylums Board, the Guardians of the West Derby Union, and the Manchester Board of Guardians.

Opinion of general witnesses. Mercier, IV., p. 176. *e.g.*, Spence, IV., p. 252, c. 1. White, IV., p. 232, c. 2. Stratton, IV., 31631 Muir-Mackenzie, 34604–15, 34810, 34881–3, 34909. App. vol. V., pp. 227–228.

III. The Scheme of Amalgamation Suggested by the Master of the Rolls.

789. A comprehensive scheme was put before us in outline by Lord Justice Cozens-Hardy, now Master of the Rolls, one of the judges entrusted with the lunacy jurisdiction. Stated shortly, it contemplates the fusion of the Chancery Authority with the Lunacy Commission, so far as visitation and the holding of ordinary inquisitions, where an issue was not directed, are concerned, and the transfer to the judges and staff of the Chancery Division of the judicial authority, and the business of administration and management.

Suggestions of Cozens-Hardy, M.R. as to constituting one Central Authority.

"I should like," he says, "the whole of the lunacy jurisdiction now exercised by the masters and the judge in lunacy to be transferred to the Chancery Division of the High Court, and the jurisdiction of the masters, as separate officials, to be abolished."

Cozens-Hardy, L.J., Vol. IV., p. 116–117.

"With the exception of the first step, viz., the inquisition, there is the closest possible analogy between the aim and object of the Chancery Division in taking care of and administering the estate of an infant, and providing for his maintenance and custody, and the aim and object of the lunacy authorities in taking care of and administering the estate of a person of unsound mind and providing for his maintenance and custody. In the Chancery Division these duties are discharged with reasonable despatch and with admirable care. Thanks to modern changes in procedure, the number of accounts to be taken and receipts to be vouched in the Chancery Division has been steadily diminishing, and I do not apprehend that the chambers of the judges of the Chancery Division would be blocked by the addition of the whole of the lunacy work. The change would be economical, but, what is more important, it would tend to efficiency. A judge in the Chancery Division is head of a large staff for whom he is, in great measure, responsible. If his attention is called to any lingering delay he can at once send for the master in charge, ask for explanations, and secure improvement. This is not so in lunacy. The judge has no responsibility for, and no control over, the lunacy masters. I feel myself powerless to correct anything that may seem wrong. Moreover, in the Chancery Division, there is always somebody ready to deal with urgent matters—the vacation master and the vacation judge. In administrative details, this is of great importance.

Suggestions of Cozens-Hardy, M.R., as to constituting one Central Authority—*contd.*

"If this is sound in so far as the administration of the lunatic's own property is concerned, it is almost too clear for argument that the trustee work (including mortgages) should be transferred to the Chancery Division. Appointment of new trustees, with vesting orders, is part of the regular business of that division. If a trustee is abroad, or cannot be found, you go to the Chancery Division. Why not if he is a lunatic? I never heard any argument in support of this anomaly. It not infrequently happens that an order has to be made both in Chancery and in lunacy, and this is highly perplexing. Cozens-Hardy, L.J., Vol. IV., p. 117, c. 1

"As to the inquiry itself, that is a matter which is not administrative in character. In the majority of cases there is no opposition on the part of the alleged lunatic, and the result is almost a foregone conclusion. And even when there is opposition there may be no demand for a jury. In all such cases one of the Commissioners, by preference one of the legal Commissioners, might hold the inquiry. But where the question of unsoundness of mind is really in issue, and a jury is demanded, a trial before a master is scarcely satisfactory. A judicial officer of high rank and considerable experience ought to be called in. And this can be done by directing an issue to be tried before a judge of the High Court (Section 94), as was done in two recent cases with great advantage. The order directing an issue, which is now made by the lunacy judge, might just as easily be made by the Chancery Division judge. In short, I would have the inquiry conducted by one of the Commissioners in every case except where an issue is directed."

Cozens-Hardy, L.J., Vol. IV., 28457.

790. In answer to questions by us, his Lordship said, "My strongest feeling, I confess, is about the absurdity of requiring the lunacy judge to make vesting orders, and appoint new trustees, and deal with mortgages and so on. The Chancery Division have no jurisdiction in that way [in lunacy] as matters now stand. That is business which is designed and intended for the Chancery Division, and there is no possible reason why that should not go to its natural place."

Vol. IV., 28494.

791. In explanation of so much of the scheme as relates to the holding of inquisitions he said: "At the present moment, as Lord Justice, I make an order for an inquiry. That goes before one of the masters; then I have done with it for the present. If the matter were transferred to the Chancery Division the judge would make the order for the inquiry, either before a Commissioner, if it were practically unopposed, or by an issue to be tried before a judge of the High Court. I have a very strong feeling that in contested cases, one of which we had recently, and another of which came before me personally, and gave me a good deal of trouble, it is extremely desirable that a judge of the highest position and experience should deal with what is one of the most difficult problems which can be presented to any man. I think it ought not to be dealt with by anyone but a judge of the first rank."

Nature of work done by the Judge and Masters in Lunacy.

792. Mr. Christopher James, barrister at law, who has held the office of "Secretary to the Lords Justices for Lunacy business" since the year 1883, furnished us with a statement showing the nature of the business at present transacted by the Lords Justices and the masters in lunacy, and explanatory of the manner in which such business would be conducted if the scheme recommended by Lord Justice Cozens-Hardy were adopted. This statement is prefixed to the printed notes of the evidence given by Mr. James. James, Vol. IV., pp. 193–194

James, Vol. IV., p. 193, c. 2.

793. The following is a short sketch of the nature of the work done by the Lords Justices and the masters. The business in lunacy may be classed under four principal heads:—

A. Proceedings antecedent to an inquiry into the lunacy of a person alleged to be of unsound mind; the inquiry itself; and proceedings for a supersedeas by which the insane person is upon recovery restored to the management of himself and his affairs.

B. The management and administration during lunacy of the property of a person who has been found by inquisition of unsound mind, or of a person whose property may, under Clauses (*c*) to (*f*) of Section 116 of the Lunacy Act, 1890, in effect, be administered as if he had been found of unsound mind.

C. The supervision of the lunatic in regard to his residence, maintenance, and treatment.

D. The dealing with property not strictly belonging to the lunatic, but as to which he is trustee or mortgagee and by reason of his lunacy unable to act. In these cases the lunacy authority has, in regard to trusts, power to substitute new trustees for the lunatic and to vest the trust property in them, and in regard to mortgages power to vest the property, as upon a reconveyance, when the mortgage is paid off. Nature of work done by the Judge and Masters in Lunacy —*contd.* James, Vol. IV., p. 193, c. 2.

There are minor matters in which jurisdiction is exercised, *e.g.*, under Section 134 of the 1890 Act for the purpose of dealing with property in this country of lunatics residing abroad, but the above four heads will be found to cover the principal branches of lunacy business.

794. Passing for the moment over *A*—

As to B. there seems to be no good reason why the property of a lunatic should not be sold, leased, invested, and otherwise managed and applied in the same way and by the same jurisdiction as the property of an infant, *i.e.*, by the Chancery Division of the High Court. Exactly the same considerations seem to apply to both cases, and the principle to be followed is in each case the same, *i.e.*, to do what is most for the benefit of the incompetent owner; and the appointment of a committee of the estate has a strong analogy to that of a guardian of the estate of an infant. James, Vol. IV., p. 194, c. 1.

As to C. The care of a lunatic is entrusted to a committee of the person appointed by the lunacy authority through whom that authority acts. This appointment is analogous to that of a guardian of the person of an infant. There is, however, in lunacy, a further and important supervision exercised over the care and treatment of a lunatic *so found*, by the periodical (or special) visits of the Lord Chancellor's visitors who keep in touch with the patients under their care and periodically report to the Lord Chancellor upon them. These reports might with equal facility find their way to the Chancery Division as to the Lunacy Office. Whatever amendment be made in the Lunacy Law it is matter for consideration whether some arrangement might not be advantageously made by which these periodical visits could be extended to some, if not all, of the persons *not so found* whose property is being administered in lunacy and who at present are only visited by one of the Lord Chancellor's visitors when special directions are given for a visit or visits.

As to D. It is really an anomaly that this branch of the jurisdiction should not be exercised by the Chancery Division, which exercises a similar jurisdiction in other cases of incompetent trustees and mortagees, *e.g.*, infancy, absence from the United Kingdom, etc.

It remains to deal with *A*. So far as the proceedings antecedent to an inquiry are concerned, they are almost always of a more or less formal character, the only question being whether there is established by affidavit a sufficient *prima facie* case to justify the holding of an inquiry.

795. So far as the inquiry itself is concerned, the cases may be sub-divided into two classes— James, Vol. IV., p. 194, c. 1.

(1) Those in which the inquiry is not opposed by the alleged lunatic. This class comprises by far the larger proportion of the cases. In these an inquiry is held without a jury before a master in lunacy, the evidence is probably all in the same direction, and the result in most cases a foregone conclusion. Such cases do not seem to require the aid of great judicial experience.

(2) Those in which the question of unsoundness of mind is really in issue, and these give rise to trials before a master in lunacy generally with a jury, which are obviously of the greatest importance to the alleged lunatic. There is in the Lunacy Act a power, which on some rare occasions has been exercised, of ordering these trials to take place before a judge of the High Court. It would seem not unreasonable that trials of this nature should in *all* cases be held by a judge of the High Court who might be either a judge of the Chancery Division, or the issue being really unconnected with the subsequent administration of the property which may result from it, a judge of the King's Bench Division.

796. We think upon the evidence that where an issue is not directed by the High Court or a jury is not demanded or thought necessary such inquiry with regard to the question whether or not a person who has property is suffering

Nature of work done by the Judge and Masters in Lunacy—*contd.*

Recommendation VIII.

from mental defect as defined in Recommendation IV., and is incapable of the responsible control of himself and his affairs, might be disposed of by one of the legal Commissioners in Lunacy, assisted, if necessary, by a medical Commissioner, while all opposed cases were disposed of by a judge of the High Court with or without a jury according, as at present, to the desire of the party affected. In the former cases the ancient right to traverse, under that or some other name or form, might be preserved as a protection to the party affected in the improbable case of the finding being wrong, while in the latter case, in which there would have been a full trial, it might be abolished.

With regard to supersedeas, the consideration of this question depends almost entirely upon medical opinions as to whether the party affected has recovered or not, great weight being attached to the Visitor's Report. The jurisdiction might be exercised as well by the Chancery Division as by the present authority in lunacy.

797. As to present practice. The masters in lunacy have, under the Lunacy Acts of 1890 and 1891, full power to deal with cases under the heads B and C, there being a right of appeal from their orders to a Lord Justice. Cases under A are dealt with by a Lord Justice only, except the holding of the inquiry, the practice as to which has been already explained. For reasons before appearing there seems to be no sufficient ground for retaining cases for ordering an inquiry, or cases of supersedeas, to be dealt with by a Lord Justice only. Orders under D are at present made by a Lord Justice only and form the greater part of the business done by the Lords Justices. Whatever other changes may be made, it is suggested that a transfer of these cases (D) to the Chancery Division would simplify the procedure in relation to trusts and vesting orders, the present dual jurisdiction being a source of confusion and perplexity in the minds of practitioners. There are also some cases of administration (*e.g.*, dealing with property under the Settled Land Acts or the Lands Clauses Consolidation Acts) in which orders have to be made both in Chancery and in lunacy, and therefore can only be made by a Lord Justice acting for this purpose as a Judge of the Chancery Division. A transfer of the lunacy jurisdiction to the Chancery Division would simplify these.

Suggestions as to constituting one Central Authority. Opinion of the Judges and Officers of the Chancery Division.

798. A considerable body of evidence bearing upon this proposal was afforded us by judges and officers of the Chancery Division.

The Right Hon. Sir Arthur Kekewich, the senior judge of that division, laid a Statement before us, which had been submitted to and had received the approval of all the judges of the division. We extract the following passage which bears directly upon the question under consideration.

Kekewich, J., Vol. IV., p. 334.

"It has been proposed that the jurisdiction in lunacy now exercised by the Lords Justices with the assistance of two masters in lunacy and a staff of clerks shall be transferred to the Chancery Division and be exercised by the judges of that Division and their masters. I am not sufficiently acquainted with the transaction of business in lunacy to express an opinion whether such transfer would be of advantage, but I am clearly of opinion that the business could properly be done by the judges and masters of the Chancery Division, all of whom are necessarily familiar with business of an analogous character. I do not think that the judges would have any difficulty in finding time and convenient opportunities for the disposal of such part of the business as would properly come before them, and although I cannot speak so certainly about the masters, I believe that they also could undertake their part. . . . The Chancery business is distributed among six judges, working in groups of two each, with four masters attached to each group and I think that if the lunacy business were transferred it ought to be distributed in like manner."

Kekewich, J., Vol. IV., 33528–33542

Sir Arthur Kekewich explained to us that he assumed that it was not proposed to transfer the duty of holding inquisitions, which the Chancery judges could not undertake, but he agreed that if the judges of that Division were constituted the judge in lunacy there would not be the slightest difficulty in any one of them ordering an issue to be tried before a judge of the King's Bench Division or an ordinary inquiry to be held before a Lunacy Commissioner. Nor could medical visits be taken in hand by the Division, but there would be no difficulty in giving directions to or obtaining advice from the Lunacy Commissioners or whoever might have the charge of the patient or the direction of the committee of his person.

Kekewich, J., Vol. IV., 33556–33562.

Suggestions as to constituting one Central Authority. Opinion of the Judges and Officers of the Chancery Division—*contd.*

799. Master Burney, who has been one of the masters of the Supreme Court for twenty-nine years and who had carefully considered the scheme, was unable to see any reason why the business of administration could not be transacted quite as efficiently and quite as economically in the Chancery Division as in the Lunacy Department, assuming that, in the event of transfer, the staff in lunacy would be distributed between the several Chancery Chambers. With this additional assistance he was of opinion that the extra work, even though the number of accounts should be largely increased, could be done with reasonable dispatch. The whole trend of modern practice in the Chancery Division had been in the direction of avoiding the lengthy and expensive accounts which were an essential part of every decree for administration under the old system, and probably year by year the number of such accounts will become less. The transfer to the Companies Winding Up Department, under the Companies (Winding Up) Act, 1890, of the work connected with the winding-up of public companies had the effect of taking away a large amount of business from the Chancery Chambers. "It is undoubtedly the fact that there is no longer the pressure which I can remember in the early days of my official career and which certainly used to result in regrettable though unavoidable delays." Master Burney was asked, with the view to satisfy us whether under the proposed scheme the property of a lunatic would be as well protected as it is now under the lunacy jurisdiction. "(*Q.*) They have someone whom they call Committee of the Estate; whether he is called Committee of the Estate or whether he is called Receiver, would he have the same duties under you and would you have to report to the court and would he be an officer of the court punishable for contempt of court, liable to all the liabilities which a defaulting or dishonest officer of the court would be liable to? (*A.*) That is so, certainly. (*Q.*) Then it is difficult to see why you could not with equal efficiency secure the protection of the property of the lunatic? (*A.*) That, after very careful consideration, is my deliberate opinion."

Burney, Vol. IV., p. 301, c. 1.

Burney, Vol. IV., p. 301, c. 1.

Burney, Vol. IV., 33018–33019.

The master was alive to the point that so far as the actual care of the person of a lunatic was concerned the duty could be better discharged by a separate body, such as the Lunacy Commissioners. He absolutely refused to entertain the idea that proceedings in Chancery would entail loss of privacy in lunacy cases. He pointed out that if a transfer were effected, the lunacy business should be divided among all the Chancery judges, and among all the masters, and not be confined to one judge and his staff. This was what he was authorised by Lord Justice Cozens-Hardy to say was the latter's intention. There are now, and there have been for thirty years, twelve masters. The number has remained constant notwithstanding increase or decrease of business.

Burney, Vol. IV., 33044–33047.

33070–33074.

33120.

33123–33124.

The opinions thus expressed by Master Burney were supported by Master Walker, the senior master of the Chancery Division, who informed us that they had the support of all his colleagues.

Walker, Vol. IV., p. 313, c. 1.

800. Mr. Hawkins, formerly senior master of the Supreme Court, now retired, who has had experience of the practice from the time of Lord Romilly, M.R., was requested by us to furnish us with a statement of his views upon this branch of our inquiry. Twenty or twenty-five years ago he prepared a memorandum upon the subject, upon which nothing was done. He says, "I thought then as now that the administration of estates of lunatics was analogous to that of infants and that it could be dealt with by the Chancery Division in the same way as the estates of infants, and that where the persons of lunatics had to be dealt with the judges of the High Court could deal with the persons much as those of infants. In the judge's chambers the management of real property of infants, such as letting land where necessary, selling land, granting leases, repairing and rebuilding property, making vesting orders, appointing new trustees, drainage, and in regard to personal property, dealing with investments, appointing guardians, approving of schools and education, and in short overseeing the care of the infants and their property, taking and vouching the accounts of receivers and guardians of estates has been done since 1852, when the court was reformed, and the Masters and their staffs are thoroughly used to such work, subject to adjournment to the judge in all cases of importance and in some cases where so directed, whether asked for or not, and I see no difference in thus dealing with the property and persons of lunatics and of infants. . . . I see no reason why the jurisdiction now exercised by the Lunacy Masters and their staff may not with advantage be transferred to the Chancery Division to be dealt with in a similar mode to that in which that division deals with infants and their property." Mr. Hawkins was also

Hawkins, Appendix Vol. V., p. 238, c. 2, and p. 239, c. 1.

p. 239, c. 2.

Suggestions as to constituting one Central Authority.

of opinion that the lunacy percentages were excessive and might be assimilated to the percentages in Chancery, bringing the practice into line with the Chancery Division.

Opinion of the Judges and Officers of the Chancery Division—*contd.*

801. Sir Kenneth Muir-Mackenzie, the Permanent Secretary to the Lord Chancellor, and Clerk of the Crown, was also of opinion that this administrative change could easily be effected, that the work would be well done in Chancery Chambers and that there would be a saving of expense, which would not, however, accrue to the Exchequer upon the whole. He added that the Chancery arrangements are carried on with the aid of a certain exceptional treatment for the cases of wards and that this would be very largely increased by bringing in "lunacy" and would, he believed, prove "a very heavy burden on the Judges themselves." The evidence given before us by the Judges and the Masters in the Chancery Division leads us to hope that they would be both willing and able to cope with the work.

Muir-Mackenzie, IV., p. 393, c. 1.

Cf. 34620, 34653–34668, 34681.

IV. The Taxation of Costs in Lunacy.

Taxation of Lunacy Costs. Baker, Vol. IV., pp. 313–315.

802. The question of taxation of costs in Lunacy was dealt with by Master Baker of the Supreme Court Taxing Office, who delivered the collective opinion of all the Taxing Masters. He informed us that until shortly before his appointment in 1889 the lunacy costs were taxed by a Chancery taxing master, but that, on the retirement of Mr. Bloxam in that year, the taxations were referred to the office of the masters in lunacy, and have since been taxed by the former principal clerk to Mr. Bloxam. Master Baker was of opinion that costs in lunacy should be taxed by a taxing master. These costs assimilate very closely to the costs relating to infants and their estates, cases which call for vigilance and the careful exercise of discretion. The responsibility, he declared, is certainly not less onerous in the case of the administration of the estates of lunatics. "There are occasionally contested cases in lunacy in which heavy costs are incurred involving the consideration of substantial fees to counsel, solicitors and witnesses. These should certainly be taxed by a master in fact, and not merely in his name. There is also the question of uniformity to be considered. It is, in my judgment, a first essential that, as far as practicable, taxations should be in accordance with a settled and uniform practice, and to this end it is of the greatest importance that the masters who deal with the taxation of costs should have frequent opportunities of discussion and co-operation. This has now been largely secured by the Rules of the Supreme Court, January, 1902, but for some reason, with which I am not acquainted, the operation of the Rules is suspended *inter alia* as to lunacy costs. These rules were the outcome of the Report of the Taxation of Costs Committee in 1901—lunacy costs remain the exception to the salutary rule that costs shall be taxed by a responsible master or registrar who has been either a member of the Bar or a solicitor, and has had the advantage of a legal education and of experience in the practice of his profession." The master suggested that the Rules of January, 1902 should be brought into operation as to lunacy costs, and that the number of taxing masters should be increased by the addition of one master and two clerks. The taxing office of the Supreme Court is open during vacations, so that, by transfer of the lunacy taxations to the Chancery side, there would be no reason for delay in respect of this branch of practice.

Baker, Vol. IV., p. 314, c. 1.

See Appendix to Vol. IV., pp. 441–445.

Baker, Vol. IV., p. 315, c. 1.

33252–33253, 33226.

803. We would point out that the appointment of the masters and taxing masters of the Supreme Court is in the hands of the Lord Chancellor:—

> Orders made by the Chancery Masters upon the face of them are stated to be the orders of the Judge, and for the acts of the master the Judge, as we have stated, accepts the full responsibility, although he has not the appointment of the person to fill the office. Orders made by the masters of the King's Bench Division are in different form, and purport to be only the orders of the master.

Local Jurisdiction.

Chancery of Lancaster Act, 1890, 53 and 54 Vict. c. 23. Cleaver, IV., pp. 368–369.

804. In recommending the adoption of Lord Justice Cozens-Hardy's suggestion that lunacy should fall within the jurisdiction of the Supreme Court, we are influenced by the consideration that it is of great importance that the Judge who would control the management and administration of property would be accessible at all times to the central authority that would have to ascertain the mental condition and be responsible under his directions for the control of the person of the mental defective.

This involves the principle that London would be the place where the main business affecting the individual and his affairs could most conveniently be transacted. We are far from saying that some details of property management might not for cheapness and expedition be administered in the provinces, when specially remitted by the Chancery Judge having seizin of the particular matter. On this principle we consider that no proceedings should be allowed to fall within the usual jurisdiction of either of the Palatine Courts of Durham or Lancashire.

Suggestions as to constituting one Central Authority.

Local Jurisdiction—*contd.*

Evidence was given on behalf of the Liverpool Law Society to the effect that if lunacy jurisdiction was transferred to the High Court it would follow automatically in such transfer that District Registrars in Chancery in Liverpool and Manchester would naturally deal with lunacy matters arising in their registries as they now do with Chancery business.

Cleaver, Vol. IV., p. 369, c. 2.

We think such a result undesirable. The Chancery Judges and the Chancery Masters being located together in London would certainly avail themselves of the opportunity thus afforded of securing uniformity of practice, with the assurance that greater regularity of administration would ensue than if district registries were allowed to administer.

It is not unlikely that in the management of property, especially in the country, the Chancery Division would in future be assisted by the services of the public trustee, as up to now it has been served by the official solicitor, and, occasionally, by judicial trustees. While encouragement might be given for the disposal of disputed issues, and other matters arising in property administration, in district registries or county courts, we do not think that substantial administration of the property of mental defectives should pass from the officials of the High Court regularly associated with the judges to whom the care of mentally defective persons would be assigned.

CHAPTER XXXIX.

Summary of Conclusions as to Part VII.

Transitory Measures. Recommendation VII.

805. We have now completed our statement of the changes which we recommend with a view to the reorganisation of the present Lunacy Commission, the transference of the Lunacy Jurisdiction now exercised by the Judge and Masters in Lunacy to the Chancery division of the High Court, and the abolition of the jurisdiction of the Masters as separate officials. But we should very shortly explain what transitory measures we deem necessary; for, it is evident, that, if the scheme which we propose is adopted, some time must elapse before it is put in force in its entirety; and the pressure of work on the Lunacy Commission is such that immediate steps should be taken to lighten it. We make four recommendations.

Recommendations XXIV.–XXVII.

Lunacy Act, 1890, Sec. 337, (1).

Under the Lunacy Act of 1890, Sec. 337, the Lord Chancellor may, by order under his hand, amalgamate the office of the Masters and their staff, and the office of the Chancery Visitors and their staff, and may amalgamate such offices, or either of them, with the office of the Commissioners. We recommend that, for immediate purposes, the Lord Chancellor should act on these powers and amalgamate the office of the Chancery Visitors and their duties and staff with the office, duties, and staff of the Lunacy Commissioners. A step would thus at once be taken in the direction of concentration and economy.

Recommendation XXIV.

Lunacy Act, 1890. Sec. 337 (2).

We also recommend that the Lord Chancellor, under the powers which he possesses under the same section of the Lunacy Act, should appoint two additional Medical Commissioners to the amalgamated office.

Recommendation XXIV.

We have, also, recommended that the Lord Chancellor in making fresh appointments and by the exercise of any of the powers and jurisdictions he possesses, whether by rules of court or otherwise, should, if possible, forthwith cause the transfer of the jurisdiction of the Judge and Masters in Lunacy to the Chancery Division as regards the existing business in lunacy, without waiting until the statute is passed which would be necessary for bringing our complete scheme into operation.

Recommendation XXVI. Lunacy Act, 1890. Sections 150 & 151.

In addition to this amalgamation and transfer and this increase of the paid executive, we think that the administration should be further strengthened by the immediate appointment of honorary Commissioners to fill the existing vacancies on the Board of the Lunacy Commission.

Transitory measures—*contd.*

Recommendation XXVII.

Lastly, we think that our recommendation that an architect should be appointed to devote his whole time to the Commission's work should also be acted upon as soon as possible.

The completion of these measures we believe to be a matter of great urgency, and we venture to hope that they may be brought into operation as soon as possible.

The Board of Control.

806. In the reorganisation of the Lunacy Commission, our policy has been to enlarge and remodel it, so that it may be able to accomplish the work which it now undertakes but for which its staff is insufficient, and to fulfil the new duty which may be imposed upon it with a view to the care and protection of the various classes of mentally defective persons defined in Recommendation IV. We recommend that under the name of "The Board of Control" it be the one central authority "for the general protection and supervision of mentally defective persons, and for the regulation of the provision made for their accommodation and maintenance, care, treatment, education, training and control."

Recommendations I. and V.

Recommendations III., IV. and V.

807. From the title of the Board, and from our recommendations, we have excluded the word "lunatic." We have shown to how large an extent the duties of the Board and of the local authorities, which, we propose, should be associated with it, are, in their nature, duties of guardianship; and the evidence suggests that this branch of work must assume a larger, and larger, place in its administration.

Recommendation VI.

808. With regard to the qualifications of Commissioners and their selection we have recommended that there should be appointed "Persons who are specially qualified for that post subject amongst others to these two qualifications: (1) That a certain proportion of the number be qualified medical men who have expert knowledge in regard to the various classes of mental defect mentioned in Recommendation IV., and respecting institutional and other administration; (2) That a certain proportion of the number be legal members, being barristers at law, qualified to deal with particular cases and points of law, including such questions as may arise out of the new conditions which the plan proposed by us must necessarily entail." But as the whole spring and vitality of the future administration will depend upon the selection of capable and energetic men who by ability and temperament are well qualified for the special work of the Board, we add a few words. The Board and the Committees will have before them a much larger and more various field of work than the Lunacy Commission have dealt with. They will have to consider varieties of treatment, not merely in closely regulated asylums but in training schools, industrial colonies, and voluntary homes of all kinds, and also under the methods of family guardianship and wardship, and they will have to bring into friendly co-operation with themselves a great many outer agencies which have hitherto lain entirely beyond the view of the Lunacy Commission, though in a tentative and experimental manner they have been endeavouring to handle one part of the problem of the mentally defective. In the selection of men for the office of Commissioners there should therefore, we think, be a recognition of this very great change in administration. And, in these circumstances, it is essential that the selection should have no relation either to party claims or personal predilection. For certain kinds of work, within certain limits, one person may be as well qualified as another, but for this work, for which wide experience and wide sympathies are necessary in combination with special knowledge and administrative ability, the selection, we would urge, should rest entirely on individual suitability and should be biassed by no other consideration whatever.

Relation of the Lord Chancellor and the Secretary of State to the Board of Control.

Lunacy Act, 1890, Sec. 247.

809. Two central authorities, if we may so call them, are associated with the work of the Lunacy Commission, the Lord Chancellor and the Secretary of State for the Home Department, but the authority that is actually responsible for the enforcement of the Lunacy Act of 1890 is the Home Office; and under the new conditions of administration which we propose it will of necessity be more than ever responsible for good management and progress in the field of work which now lies before the Board of Control. It is the authority at present entitled to approve of plans and contracts and to enforce and regulate the provision of accommodation for the insane by local authorities on mandamus. We desire the creation of a more efficient and economical administration. One condition of such an administration is that the Board, and the authority in connection

with which it serves, should each be held responsible; but that, in the case of the superior and mandatory authority, the responsibility should be recognised by representation in Parliament and be liable to the criticism of question and debate. Relation of the Lord Chancellor and the Secretary of State to the Board of Control —*contd.*

Further, the authority which is ultimately responsible should, according to the ordinary canons of administration, with its responsibility have the right of appointment. The two go together. An authority can hardly be responsible which has not the right of appointing the officers who ultimately are responsible to it; and the appointment of officers by an irresponsible superior authority is the abandonment of one of the chief securities of efficient local government. Accordingly, we think, that the Secretary of State for the Home Department, who is the central authority under the Lunacy Act, should have the right of appointing the Commissioners, and should represent the Board in the House and be expected to explain and defend its policy and reply to questions in regard to it, just as he would be expected to do in regard to other business which came more directly within his own department. It may be said that we have not recommended that the Board should be made a part of the Home Office, and that only on that condition could the Home Secretary be in a proper position to represent it in Parliament as fully as we have suggested. We think, however, that there are good reasons for preserving for the Board of Control a detached position similar to that of the Lunacy Commission. They stand outside the field of normal administration. They perform duties which are largely personal and private, medical and yet also judicial, duties which affect the lives, homes, and property of a large class who "cannot manage themselves or their affairs"; and to provide for this class effectually their administration must be staffed and organised in a manner that will enable them to fulfil quite special and characteristic functions. Thus, though perhaps on such a point too much stress should not be laid, in their capacity as Commissioners a certain respect may be paid to them, which, considered merely as the officials of a department, they might not always receive. On the whole, therefore, we have concluded that the Board of Control should, like their predecessors, the Lunacy Commission, be detached from the Home Office; and yet, in spite of this, we desire that it should be represented in the House by a member of the Cabinet, who, we think, should be the Home Secretary, and who, in assuming a fuller responsibility for the Board, should have also the right of appointing its members. Already, it need hardly be said, the Home Secretary, in branches of work which are within his department, appoints to important offices, both barristers and medical men, as well as laymen.

With regard to the question of the appointments being made, as they now are, by the Lord Chancellor, we would point out that the feeling of the House of Commons, in discussions at an earlier stage in the history of the Commission, was evidently in favour of the appointments being made by the Home Secretary. But we do not wish to enter on a discussion of the question from the point of view of there being any real or latent rivalry in making these appointments, such as the debates in the House of Commons and the action that followed upon them in 1832 seemed to indicate, between two of our highest State functionaries. We base our case solely on this main contention: that, if in this branch of work there is to be efficient and economical administration, the head of some one of the great departments of the State must be made responsible for it. This responsibility, we argue, involves almost as an administrative necessity, that the official who is ultimately responsible for the work should appoint the persons who are in turn responsible to him. The Secretary of State for the Home Department is in our view by the Act of 1890 placed in the position of final responsibility, which is from its very nature to a large extent supervisory. We conclude therefore that he rather than the Lord Chancellor should appoint the members of the Board. Hansard, 1831. 3rd Series, Vol. VI., p. 448; Vol. VII., pp. 603, 877.

810. We have not specified how many of the members of the Board should be medical men, and how many barristers, nor have we recommended that the Board should be constituted of a certain number of members only. There must, it is obvious, be legal members of the Board to preside at inquiries (Recommendation VIII.), and to settle many points of difficulty that must, almost of necessity, arise in the extension of the Board's work. We have recommended the appointment of a paid chairman. We have recommended, subject to conditions, that persons who are superintendents of licensed places may be appointed members of the Board. We have recommended, also, that one of the members of the Board be a woman of special experience in the subject. In view of their probable usefulness in the enlarged work of the Board, we have recommended that honorary members be appointed. Constitution of the Board of Control. Recommendations V. and VI. Recommendations VII. and VIII. Recommendation VI. Recommendation XVIII. Recommendation XX.

Constitution of the Board of Control—*contd.*
Recommendation XXIV.

We have also recommended that the Lord Chancellor's Visitors should transfer their services to the Board of Control and become members of it. Recommendation XIX.

Transfer of the jurisdiction of the Judge and Masters in Lunacy.
Recommendation VIII.

811. To concentrate the administrative force available for the care and protection of the mentally defective and their property, we have recommended the transference of the jurisdiction of the Judge and Masters in Lunacy to the Chancery Division of the High Court. This, we think, should lead to economy both of time and means. And we have further recommended that where an issue is not directed in the High Court, or a jury is not demanded or thought necessary, the inquiry in regard to the question whether a person who has property is suffering from mental defect, should be undertaken by a legal member of the Board, with a medical member of the Board as assessor, if necessary. The management and administration of property, on the ascertainment of mental defect by the legal Commissioner or on an issue directed in the High Court, would then be entrusted to the Chancery Division. Recommendation VII. Recommendation IX.

Visitation of institutions, etc., and persons by the Board.
Recommendation XI.
Recommendation XXII.
Recommendation XIV.

812. We have not recommended that any definite number of visits be paid to institutions of different kinds as laid down in Part VII. of the Lunacy Act of 1890. In the case of mentally defective persons, we have recommended that visits be paid twice a year, unless in particular circumstances the Board decide that a less number of visits will suffice. We have recommended that all institutions or houses (as defined in the Preamble) for the mentally defective should be visited twice a year. We have recommended that it be competent for a single medical member of the Board to visit an institution, where the Lunacy Act now requires that two members should visit. We have recommended that the Board should be the sole authority for licensing all institutions for the care of the mentally defective, including receiving houses or wards, whether they be in workhouses or infirmaries, or elsewhere.

Appointment of Assistant Commissioners.
Recommendations XV. & XVI.

813. As a step towards the connection of the work of the Board, with the local authorities, and for their assistance in visitation and other duties, we have recommended that England and Wales should be divided into districts, and that there should be at least eight Assistant District Commissioners, who should be medical men. We have fully weighed the evidence submitted to us in favour of there being no Assistant Commissioners; but in view of the duties that the care of the mentally defective will impose on the Board, and the amount of miscellaneous work which other changes that we propose will necessitate, we think it would be unreasonable to appoint Commissioners only, and we recommend that for special branches of work Assistant Commissioners may, if necessary, be appointed.

The Committees for the care of the mentally defective.
Recommendations XXVIII.–XXX.

814. Hitherto, the Commissioners have not been connected with any local authority acting in their behalf or in close relation to them. This, we think, has been a disadvantage, and we now propose that, the county councils and county borough councils who are the local authorities recommended, should act through committees for the care of the mentally defective, in which the visiting committees will be absorbed. All the evidence we have received would lead us to believe that the visiting committees are usually much interested in their work and would not be averse to undertaking larger obligations. We hope that, under the arrangements we suggest, there may be a closer personal connection between the members of the Board and the committees for the care of the mentally defective. With a larger staff, it should, we think, be possible for the Board to arrange that at times of inspection, and on other occasions, there should be some kind of conference between a member or members of the Board and the committees.

815. Our aim has been to broaden the whole position and outlook of the Lunacy Commission and to reorganise it as a Board of Control, so that it may be an active and efficient centre, both for the general protection and supervision of the mentally defective, and, also, for the promotion of measures of scientific administration and investigation, which will prevent, as far as may be, the increase of mental disease and defectiveness.

Savage, Vol. IV., 29315.

We have recognised, as Dr. Savage said, that the Commission is "the head of a great body, and that it ought as the head to have a directing, observing and supervising power." We have endeavoured to recommend the measures by which, to the best of our judgment, that result may be achieved.

PART VIII.

FINANCE.

CHAPTER XL.

816. In regard to Finance, we make the following Recommendation :—

Discontinuance of 4s. grant.

(1) " That the transfers and payments now made by county and county borough councils pursuant to s. 24 (2), (*e*), (*f*), and (*g*) of the Local Government Act, 1888, out of the funds placed at their disposal by the Exchequer contribution under that Act from Local Taxation, Probate Duties, etc., consisting of :—

Recommendation XL.

(*a*) 4s. per week to the county fund liable to bear the expenses of pauper lunatics chargeable to the county in respect of each county lunatic.

(*b*) 4s. per week to boards of guardians in respect of each lunatic chargeable to guardians and maintained in an asylum, registered hospital, or licensed house.

(*c*) 4s. per week to Borough Councils in respect of each lunatic chargeable to borough funds

shall be discontinued.

(2) " That the total cost of the maintenance, care and treatment, education, training and control of mentally defective persons and of the provision of suitable accommodation for them shall be borne by the County and County Borough Councils aided by new grants from the Exchequer.

Exchequer grant payable to local authorities.

Recommendation XLI.

(3).—That substantial financial assistance be granted from the Exchequer to a Council of the County or County Borough for the care and maintenance of mentally defective persons, and of epileptics not mentally defective, and that this assistance be granted by one or other of the following methods either :—

(i) On the method of an annual block grant on the principle that the grant be greater or less according to the proportion of the local expenditure to an approved standard of proper and economical expenditure and also greater or less as the assessable value per head of the population of the district is smaller or larger ; or

(ii) That in addition to the present Exchequer contributions there be paid by the Exchequer to the Councils of Counties and County Boroughs annually a grant based on the number of mentally defective persons and epileptics not mentally defective for whom provision is made beyond the numbers provided for on the 1st January, 1908, and that such grant be the sum which the Board of Control certify to be equal to one-half of the cost properly incurred by such Councils in respect of such additional numbers of mentally defective persons.

4).—That this block grant or this maintenance grant be payable subject to the certificate of the Board of Control that the local authority has carried out its duties under Recommendation XXVIII satisfactorily, and that in the event of the Board of Control refusing to give such a certificate an appeal shall lie to the Secretary of State, whose decision shall be final.

(5).—That in addition to the above grant, whether it is a block grant or a maintenance grant, there be provided from the Exchequer annually for a term of years a grant in aid for the provision of necessary accommodation in the manner and in the locality advised by the Board of Control."

We will take in turn the questions which these recommendations suggest. They refer, it will be noted, to Exchequer grants proposed to be made for the aid of all mentally defective persons, including pauper lunatics.

THE FOUR SHILLING GRANT.

The 4s. grant.

817. The first question is the discontinuance of the 4s. grant. The clause of the Local Government Act, 1888—Section 24 (2) (e), (f) & (g) which refers to this grant is as follows :—

> (2) In substitution for local grants, the council of each county shall from time to time as from the said day pay out of the county fund and charge to the Exchequer Contribution Account the following sums, that is to say—

The 4s. grant.—*contd.*

(*e*) They shall transfer to that account of the county fund to which the maintenance of any pauper lunatic chargeable to the county is charged, a sum equal to four shillings a week for each such pauper lunatic, for whom the net charge upon the County Council, after deducting any amount received by the County Council for the maintenance of such lunatic from any source other than local rates, is equal to or exceeds four shillings a week throughout the period of maintenance for which the sum is so transferred.

(*f*.) They shall pay to the guardians of every poor law union wholly or partly in the county a sum equal to four shillings a week for each pauper lunatic chargeable to that union, and maintained in an asylum, registered hospital, or licensed house, for whom the net charge upon the guardians, after deducting any amount received by them for the maintenance of such lunatic from any source other than local rates, is equal to or exceeds four shillings a week throughout the period of maintenance for which the sum is so paid ; and

(*g*.) They shall pay to the council of each borough to which the maintenance of any pauper lunatic is chargeable, a sum equal to four shillings a week for each such pauper lunatic for whom the net charge upon the council of the borough, after deducting any amount received by them for the maintenance of such lunatic from any source other than local rates, is equal to or exceeds four shillings a week throughout the period of maintenance for which the sum is so paid.

Report of Sir Henry Fowler on Local Taxation, 1893, pp. xliii., xliv.

Davy, Vol. IV., 34170–34192, 33859–33860, and the Finance Act of 1894.

See p. 103, Report of Sir Edward Hamilton and Sir George Murray :— Final Report of the Royal Commission on Local Taxation : England and Wales. Cd. 638, 1901.

Annual Report, Local Government Board, 1905–6, pp. xviii. and cxlvi., cxcix. Cd. 3105.

818. In 1874–1875 a new grant of 4s. a week for every pauper lunatic maintained in an asylum or registered hospital was passed by Parliament. This grant was paid direct from the Exchequer to boards of guardians, and, to that extent, reduced the amount expended from the union rate on each pauper lunatic in an asylum. It was fixed so as to meet the difference in the cost between maintenance in the workhouse and maintenance in the asylum, and it acted, as indeed was intended, as a direct bounty to the guardians to induce them to remove certifiable lunatics from Poor Law workhouses and infirmaries to asylums. In 1887–8 it amounted to £485,169. In 1888, the Local Government Act was passed, and in 1894, the Finance Act : and a considerable change was made. After 1888 grants were no longer paid by the Exchequer to the guardians, but there were handed over to the County Councils certain subventions called "Exchequer Contributions," and the Councils were required to pay to the guardians a weekly sum of 4s. for each pauper lunatic on the conditions mentioned in the last paragraph. The Exchequer contributions consisted of the proceeds of (1) local taxation licence duties within the county ; (2) a part of the probate, and subsequently, in lieu of it, a part of the estate duties, with (3) in 1890 "beer and spirit surtaxes," or "local taxation (customs and excise) duties," and (4) in 1896 a grant out of the estate duties in relief of occupiers of agricultural land. The amount so contributed, less the sums paid under the Agricultural Rates Act, amounted to £7,003,305 in 1905–6. The amounts applied by local authorities to the maintenance of lunatics from proceeds of these duties was £787,176.

Table : Number of insane persons chargeable to Poor Law unions, counties or boroughs Annual Report of the Local Government Board, 1905–6, p. 561.

Davy, Vol. IV., 34170–34184.

819. So far as the guardians were concerned, the position was only altered in that the subsidy paid to them came from the County Council instead of from the State. It became practically a subsidy of the union by the county—a transfer of revenue within the county from one authority to the other. It was no longer an alleviation of local taxation. It acts, indeed, in a contrary direction. It stimulates the boards of guardians to throw upon the county a charge which imposes upon the county an expenditure much greater than that which the union would have incurred if the person had not been sent into an asylum. Thus if a case costs 10s. a week in an asylum and it costs the guardians 6s. a week in the workhouse, and the guardians send it to the asylum, they are quit of the case without any greater cost to themselves, and if it costs them more than 6s., they make a profit on the transaction. But the ratepayer does not gain. He is paying 10s. for a person for whom he was paying 6s. ; and the 4s. grant has thus acted as an inducement to the boards of guardians to impose this larger charge on him quite unnecessarily, if, in fact, the case, though it may be certifiable, is not really suitable for asylum treatment.

4s. grant results in loss to ratepayers.

Davy, Vol. IV., 33860.

820. The extent to which this inducement has acted, Mr. Davy, Chief General Inspector and Assistant Secretary to the Local Government Board, has pointed out. He said that the result of the grant was—

> "That whenever a board of guardians was short of room, and would have had to build for some other class, they shipped their lunatics or their imbeciles off to the asylum, and used the workhouse buildings for other cases, thereby transferring the cost of buildings from themselves to the county authorities. I have known that done in a very glaring way in more than one case. Also medical officers of workhouses and masters occasionally do not like having persons of unsound mind there ; they are troublesome, and they are sent off to the asylums, the result being that you have now in some workhouses no lunatics, and in some 40 per cent. of the total lunatics, showing quite clearly that the complaint of the Commissioners that the asylums have been filled up with chronic cases is a just one.

"I can only account for the fact that the grant has been allowed to remain as it is by the fact that there are three bodies responsible for it; I mean to say the Home Office, the Lunacy Commissioners, and the Local Government Board. If the whole matter had been in the hands of one Department, I do not think that grant could have existed, because I think it can be demonstrated that it has resulted in a loss to the ratepayers. It was intended to benefit local taxation, and it has increased local taxation, and the sole advantage has been that it has removed all temptation from boards of guardians or their officers to detain persons of unsound mind in workhouses improperly." The 4s. grant results in loss to the ratepayers—*contd.*

It is clear that, in these circumstances, it will be well to discontinue the grants to the guardians, and this, indeed, will be the necessary consequence of the proposal which we have made elsewhere, that the care of the mentally defective should be removed from the Poor Law guardians to Committees for the care of the mentally defective under the Councils of Counties and County Boroughs.

821. As we have explained, at the present time the grant is stimulating the transfer of charges from the union to the county or county borough, but nevertheless it is desired to extend it. The unions are often poor, the county or borough relatively rich. And hence, whether the effect of the grant be understood or not, many witnesses have pressed upon us a demand that it should in future be payable not only for certified lunatics but for other classes of mentally defective persons. Mr. Davy in a few words stated the policy of the Local Government Board in regard to this movement: The suggested extension of the 4s. grant.

"It is a matter which has been very frequently before the Local Government Board. It was before the Local Government Board in 1882, when the Commissioners in Lunacy expressed the opinion that a return obtained by them with the concurrence of the Local Government Board from the medical superintendents of asylums established the fact that a great proportion of the asylum population might be adequately, and much more economically, provided for in workhouses. The return showed the number of cases in asylums who, in the opinion of the superintendents, might be sent to either workhouses with special lunatic wards, workhouse infirmaries with a paid nurse, or ordinary workhouse wards. The number of such cases was not very large in the return, only amounting to 5,745, but, as the Commissioners point out, the superintendents took varying views on the matter. For example, in the two Surrey asylums of Wandsworth and Brookwood, where the total numbers were about the same, four times as many patients were recommended for workhouse treatment from the latter of those asylums as from the former. So the personal equation of the medical superintendents had a great deal to do with it. Upon that return the Commissioners wrote to us and said: 'The Commissioners do not know what opinion the Local Government Board as administrators of the capitation grant may have formed on this point, but if it should be the case that any change in the conditions of the grant is in contemplation they would desire to throw out for their consideration whether it might not be well to exclude from the weekly grant all such persons in asylums as could be shown to be capable of being adequately taken care of in workhouses.' Davy, Vol. IV., 33859.

"Again, there is the continual application from the boards of guardians that the 4s. a week grant shall be paid for imbeciles in workhouses as a matter of the relief of local taxation. In 1897 the County Councils Association approached the Board with proposals that the grant should be so paid as a means of relieving pressure on asylums, and suggested that a chronic lunatic must be sent to an asylum before being transferred to a workhouse, and then if he were transferred from the asylum to a certified workhouse the grant should continue to be paid. The Board considered that proposal—it was rather an elaborate proposal—but finally decided against it on the ground that it would problably lead to increasing the pressure of asylum accommodation, because guardians would try all their imbecile cases in the asylum to see whether they should be sent out and so become eligible for the grant, and they also, the opinion of the inspectors having been taken, pointed out that there was not much room in workhouses for this class of case.

"The Board write: 'The scheme of the association is that the grant shall only be paid in respect of a chronic lunatic transferred from the asylum to a certified workhouse, that is, a workhouse where the accommodation for the lunatic has been approved and certified. This assumes that there are many workhouses where there is vacant accommodation of a suitable character for the reception and maintenance of lunatics transferred from asylums. But this is not the case, and it would be necessary, if such provision is to be made, that the guardians of a large number of unions should erect additional buildings for the purpose, and in each case provide a staff for the care of the patients. The Board would observe with regard to this that it appears to them that, instead of increasing the number of lunatics in workhouses, it is desirable, in the interests of the poor who through poverty are obliged to have recourse to the workhouse, that the workhouses should, as far as circumstances reasonably admit, cease to be asylums for lunatics. The Board direct me also to state that it appears to them that if a large number of unions, in order to qualify for the grant, have to provide new buildings and additional staff and officers, the required accommodation can be much more economically provided by the county councils in additional asylums to be appropriated solely for chronic and harmless cases, the buildings and the arrangements generally being of a much less expensive character than those founded primarily for acute cases and curative treatment.' This was the opinion of the Board in 1899."

Mere extension of 4s. grant would be useless.

822. This evidence strongly confirms our view that the solution of our question does not depend on the extension of the grant to guardians of the poor, or, indeed, on any form of subsidy to them, but on enabling county and county borough councils, in one way or another, to fulfil the duties for which they are already responsible, and in the performance of which the grant has been a hindrance to them rather than a help. The Exchequer contribution must, we think, take some other form and be available not for the maintenance of "persons of unsound mind" only, but for the maintenance of other mentally defective persons also, and, in the assignment of it, consideration must also be given to the necessary expenditure that will have to be incurred for accommodation, care, treatment, education, training, and control of all types.

THE PROPOSALS OF THE ROYAL COMMISSION ON LOCAL TAXATION IN REGARD TO GRANTS IN AID AND A BUILDING GRANT IN RESPECT OF PAUPER LUNATICS AND EPILEPTICS.

The extension of the 4s. grant and the proposals of the Royal Commission on Local Taxation.

House of Commons Paper, No. 362 of 1900.

823. The Royal Commission on Local Taxation adopted the opinion of the Select Committee of the House of Commons on the Cottage Homes Bill of 1899, "that all pauper imbeciles and epileptics should be provided for outside the workhouse," but apparently considered that they should remain under the care of the Poor Law Guardians; and they proposed an extension of the 4s. grant in the hope that it would "effect two very desirable objects, namely: (1) bring about a much needed reform in the administration of provincial workhouses; and (2) tend to reduce unnecessarily large expenditure in county and borough asylums."

Final Rep of Royal Commissi on Local Taxation England and Wale 1901, Cd. 638, pp. 2 and 26.

Final Report of Royal Commission on Local Taxation, England and Wales, 1901., Cd. 638, p. 26.

824. By the return of 1st January, 1900, they found that there were in the workhouses 17,460 pauper lunatics and 2,566 epileptics; in institutions of the Metropolitan Asylums Board in 1899 a daily average number of 5,953 imbeciles, at an annual expenditure of £151,994; and in county and borough asylums (1st January, 1900) 73,721 pauper lunatics. These amounted in all to 99,700, and, accepting that as the number for which provision was to be made, they recommended "the extension of the present pauper lunatic maintenance grant by an allowance of 3s. a week—£7 16s. a year—in respect of such of those lunatics and epileptics as were not in county and borough asylums, and might, therefore, if proper provision were made to the satisfaction of the Local Government Board for the separation of all of them from the other inmates of the workhouses, ultimately add at least £200,000 a year to this grant."

The proposal of the Royal Commission on Local Taxation to give a grant for providing accommodation.

825. They proposed also "a new grant towards the cost of providing accommodation for pauper lunatics and epileptics, whether in asylums or in other institutions. We estimate," they write, "that a grant of £500,000 might ultimately be required if one half of the annual expenditure on asylums, and other institutions in which pauper lunatics and epileptics are maintained, were made a charge on the Imperial revenue."

Final Rep of Royal Commissi on Local Taxation England Wales, 19 Cd. 638, p. 26.

The insufficiency of the present grant.

826. Passing by, for the moment, the question of a grant for accommodation, we agree with the view that one-half of the expenditure on asylums and other institutions, in which we would say not "pauper lunatics," but "mentally defective persons" and epileptics are maintained, should be a charge on the Imperial revenue. We hold strongly that the burden which now lies on local authorities in respect of the care and maintenance of lunatics and other mental defectives should be relieved by generous subventions from the Exchequer.

Annual Report, Local Government Board, 1905-6. p. cxcix.

It seems to us that the grant of £787,176, the present subsidy from Imperial revenues, is a very insufficient subsidy towards the extremely important and difficult work with which the visiting committees and the present Commissioners in Lunacy have to deal. We have shown how large is the necessary field of public intervention in the case of the mentally defective; and hence we would strongly urge that to meet the actual requirements of this class the Imperial subventions be considerably augmented. We have recommended that all mentally defective persons be under the supervision and protection of one central authority, the Board of Control, and we have suggested the removal of the responsibility of their maintenance and supervision from boards of guardians, except in so far as the committees for the care of the mentally defective may contract with them for that purpose. And so in the case of other authorities,

Recommendations I. and V., XXVIII. and XXX., XLII.

such, for instance, as the education committees of county and borough councils, charges for the care of the mentally defective which would, under existing legislation, fall on them, would, according to our proposals, pass to the committees of the county and county borough councils for the care of the mentally defective. We will deal with this point in more detail later; but it is obvious, we think, that if there is to be one central authority for the general protection and supervision of all persons of mental defect, with local authorities responsible for their care and maintenance, a reapportionment of charges and obligations, which now, sometimes to a large and sometimes to a small extent, fall on other departments of public work, is necessary.

Rateable value and the incidence of mental defect. Vol. VI., p. 55, Table, col. 12.

827. Another question has also to be determined. Our evidence goes to show that, while certain parts of the country may be more free from mental defect than others, *e.g.*, the mining and country districts of Durham and such a port as Hull, in general the incidence of mental defect is alike both in town and country, throughout England and Wales. It follows that a rural sparsely populated district may require, relatively to its population, as much help to enable it to deal with the difficulty as an urban area. Indeed, the need may be greater. A rural county has a low rateable value. It does not include the county boroughs, the centres of population and of commercial activity, and thus the local resources of the county, which, applied over the whole area, might in some degree equalise the conditions of the poorer districts to those of the large urban areas, remain altogether insufficient. It appears that the division of interests and sentiment between a county and a county borough is so strong that a local rate assessable for the whole county, including the boroughs and available equally for all parts of it, is not likely to meet with approbation, even for a purpose which, as we have shown, affects both town and country very seriously, and affects them alike We are led, therefore to suggest that some method of equalisation should be adopted through the operation of grants from a local taxation account or from the Consolidated Fund, by which the grants should be larger or smaller inversely as the assessable value per head of the population is smaller or larger. How great is the variation of rate between different urban and rural areas and of indebtedness between counties Mr. Noel Kershaw, Assistant Secretary to the Local Government Board, showed in his evidence.

Recommendation XLI. Kershaw, Vol. IV., 32038 *et seq.*

Recommendation XLI.

828. But proposals of the kind we have mentioned would entail the resettlement of our system of local taxation, a serious question which it may not be found possible for the Government to undertake. It seemed right to us, therefore, to submit alternative courses; one which would have the very desirable effect of equalising the burthen of local taxation in rural and urban districts, districts which have a low and those which have a high assessable value; and one which, though it would not have this advantage, would under more effective methods of supervision than now prevail, provide larger grants to local authorities to meet charges incurred by them on behalf of the mentally defective.

THE APPORTIONMENT OF STATE AID TOWARDS THE CARE AND CONTROL OF MENTALLY DEFECTIVE PERSONS.

Equalising system of apportionment necessary.

Final Report pp. 73–83 and 128–142, and Appendix, p. 206, to Final Report (England and Wales) of the Royal Commission on Local Taxation, 1902, Cd. 638, and "Local Taxation," an address by Lord Balfour of Burleigh, 1907.

829. As one alternative, we venture to suggest that the scheme which was submitted by Lord Balfour of Burleigh, and Sir Edward Hamilton and Sir George Murray, Joint Permanent Secretaries to the Treasury, to the Royal Commission on Local Taxation is worthy of very careful consideration. It promotes, alike, equalisation and economy. As matters now stand, it is, we think, impossible for counties with a low assessable value, and many claims on the county rate, to make a provision that in our opinion is absolutely necessary in the interests of the community and of the mentally defective themselves; and the mere fact that the subsidy of the Exchequer is increased, even largely increased, will not of itself meet the difficulty. On the other hand, by the application of definite standards to administrative finance the methods which we recommend would further economy.

Local expenditure falls into two divisions, national and onerous, and local and advantageous. Onerous charges, such for instance, as the care of the mentally defective, should tend to be national, while advantageous expenditure

Equalising system of apportionment necessary—*contd.*

designed to benefit a locality should be provided from local rates. Some local expenditure would thus be accounted onerous with a national claim; some advantageous with no, or a lesser, national claim. The question may be confined to the former. In estimating the financial position of a town or district, we have to ascertain two points: (1) what is the expenditure actually necessary to meet its requirements, considered in relation to the number of the population; and (2) what is the ability of the place to meet this expenditure, as represented by the local assessable value.† If we seek a standard of expenditure, by which we may judge of its local expenditure and the local expenditure of other towns or districts, and if we seek a standard of comparative ability to pay, or, what is the same thing, of assessable value by which we may compare the assessable value of this and other places, we must look for these standards outside. The external standard of expenditure we may find—so far as requirements and expenses go—in the sum per head of the population for which the services in question could be done under favourable circumstances. The external standard of ability or assessable value we may find in an estimated rate in the £, which, whether local assessable values be high or low, may be assumed to be assessable uniformly over the whole area of which our town or district forms part. These two standards we may apply to the financial position of the place. And we may say: (1) what would our local expenditure be, if it were at the standard scale of expenditure? (2) What would our assessment be, if it were based on the standard rate in the £? Our expenditure so calculated minus our assessment so calculated would produce a sum, which, as it is reckoned in relation to conditions which are applicable to the whole country, may fairly represent a grant payable to us by the Government, as, by similar calculations, other similar sums may be reckoned and considered to be payable to other towns or districts. This sum may be called the primary grant. On the difference between the actual expenditure of the town or district and an expenditure for the town or district taken at the standard rate, a further or secondary grant may be made.

Standards of Expenditure and Rating.

830. To apply and explain this statement of the method. First we have to fix a standard of expenditure, and next a standard rate in the £. To fix the former, amongst several ways, we might take a group of areas differently placed in regard to rating, administration, and expenditure, and from the deductions we make on these heads we might form a standard of expenditure. Or we might take an average of the expenditure over the whole of a large district, *e.g.*, England and Wales, or of England divided into two or three large "expenditure" districts, and so arrive at an expenditure standard for all England and Wales, or for an "expenditure" district. But, in some way, a standard of expenditure will have to be fixed, and it would be better, of course, if it were applicable to the whole country. We shall have thus met our first need *A*, as set out below—standard expenditure per head of the population.

So again with B., the standard rate in the £; it might be a standard based on the assessable value of a large actual or typical area, or aggregation of areas, or it might in some other manner be formulated as might seem just, as a basis for calculation.

Calculations based on standards.

831. Then, having worked out our standards, we may make our calculations on separate districts in detail as below, adopting figures which were suggested by Lord Balfour and will serve for purposes of illustration, though they relate, not to expenditure in connection with the mentally defective but to expenditure in connection with poor relief. The following statement sets out the data:— Report of Royal Commission on Local Taxation, pp. 134 and 135.

† "In estimating the ability of a district, the 'assessable value' should be the measure chosen, *i.e.*, rateable value after deduction of half the value of agricultural land (as under the Agricultural Rates Act), and after deduction also of half the value of tithe rent charge attached to a benefice. By taking assessable value thus defined (instead of full rateable value), the measure of ability of rural districts will be reduced in an equitable degree, and the amount of the grant correspondingly increased," p. 76. Report of Lord Balfour of Burleigh. Final Report of the Royal Commission on Local Taxation. (Cd. 638.)

Calculations based on standards.

EXPENDITURE FIGURES.

A		B		C	D
The standard expenditure per head of population. 3/6	×	Population of particular place or area. 10,000	=	The standard expenditure applied to that population. £1,750	Actual expenditure of the particular place or area. £2,500

FIGURES AS TO ASSESSABLE VALUE.

E		F		G
The standard rate in the £. 4d. in the £.	in	The assessable value in the particular place or area. £60,000	=	Product of the standard rate in the £ applied to the local assessable value. £1,000

Then (C) £1,750 (standard expenditure applied to the population of the particular place) — (G) £1,000 (standard assessable value applied to the local assessable value) = £750, which represents the difference between standardised local expenditure, that is, the reasonable or inevitable expenditure considered in relation to the locality, and the standardised local rate, that is, the generally accepted measure of ability to meet expenditure, considered also in relation to the locality. This difference, £750, is the amount which would be contributed by the Exchequer as the *primary* grant. But the actual expenditure (D) is £2,500. On this we work next, by deducting from it (C) £1,750, which represents the standard expenditure applied to the population of the particular place or area £2,500 – 1,750 = £750. This figure, then, represents the excess of local expenditure over the standard expenditure, and a part—a *secondary* grant—it is suggested, should be paid by the Exchequer to meet a part of this expenditure. Suppose it to be a third, then the figures would be £750 (*i.e. £2,500—£1,750*)—£250 = £500.

And the result would be ;

(1) Primary grant £750.
(2) Secondary grant £250.
(3) Balance to be raised by local rate £1,500.
(1) and (2) together would be the block grant.

Elements to be considered in equalised adjudication of State aid.

832. There are, it will be seen, four elements in the question : The requirements of the area in regard to the particular service or provision ; the expenditure as a fair indication of the legitimate satisfaction of those requirements ; the population in relation to its increase, adding to these requirements and thus increasing the expenditure ; and lastly, the assessable value, as indicating the means available for the satisfaction of the requirements, itself created in large measure by the increase in values which accompanies the economic demands of an increasing population. In an equalised adjudication of State help, these four elements should be taken into account. On all heads, there must be local variations. The requirements in regard to any particular service or provision differ from district to district. So, necessarily, does the expenditure, and with the extent and character of the population there arises the greatest difference in the assessable values. "Assume a simple case of two equally economical unions," Lord Balfour of Burleigh writes : "each spending 5s. a head of the population on poor relief. The amount of rateable value per head of population is £14 in one case and £3 in the other—variations which, though not common, do in practice actually occur. Thus the poor unions would require a rate of 1s. 8d. in the £, whilst the richer would only levy a rate of 4½d. in the £.

The "Block" grant.

833. Now, if it is possible to arrive at a standard of expenditure per head of the population, *i.e.*, a minimum standard, and a standard of assessable value which would be generally applicable, *i.e.*, a minimum rate per head of the population, this difficulty might be met, for, as the local expenditure and assessment taken conjointly rise or fall according to this double standard of expenditure plus assessable value, so the grants might be less or more.

Lord Balfour of Burleigh ; separate recommendations. Report : Royal Commission on Local Taxation 1901. Cd. 638, pp. 76–77.

"Since it is manifestly desirable that there should be some local contribution even in a union which confines its expediture to the minimum, each union should be required to raise a small uniform standard rate in the £ on its assessable value. This rate would of course produce more in the wealthier unions and less in the poorer ones. As it is also desirable that as many unions as possible should share in the State contributions to the

The "Block" grant—*contd.*
Report of the Royal Commission on Local Taxation, 1901, p. 77.

minimum expenditure, the rate should be so fixed that it will not produce more than 3s. 6d. per head of the population in any appreciable number of unions, otherwise those unions would receive no grant. This condition would be satisfied by a rate of 4d. in the £, since there are few unions in which this rate on assessable value would produce more than 3s. 6d. per head. On the other hand, to throw upon the localities less in any case than one-third of the expenditure would be inconsistent with prudence, and a rate of 4d. in the £ would produce about one-third of the expenditure in the more economical of the poorest unions. Consequently it is suggested that the standard rate should be fixed at 4d. in the £."

"The grant will then be divided into two parts, to correspond with the division of the expenditure, and from the first and larger part will be distributed to each area the product of 3s. 6d. per head of the population after the deduction of the product of the 4d. rate on the assessable value. The minimum expenditure would thus entail a rate of 4d. in the £ in every union. The second and smaller part of the grant would consist of one-third of the expenditure incurred in excess of the minimum (expenditure here means the expenditure of the financial year preceding legislation, "standardised" in the manner prescribed in the Irish Local Government Act, 1898 [Sec. 49])—thus leaving the remaining two-thirds of the expenditure above 3s. 6d. per head to be met from local sources. The grant might be fixed for a period of years, and this limit (coupled with the administrative safeguards to which I refer presently) would prevent aid being given to expenditure which is not necessary, and retain the inducements to real economy. As a further safeguard it would probably be desirable that no union should receive more than two-thirds of its expenditure, in case such a contingency should arise when revised figures of population, valuation, and expenditure are available for calculating the grant."

834. To apply this method then, for the details require close attention, and we repeat the calculation therefore in a rather different form—Suppose 3s. 6d. a head to be taken as the standard of expenditure per head of the population which is generally applicable. This standard of expenditure is applied to the population of the particular area. That area has, for example, a population of 10,000. This produces a sum of £1,750.

Again, suppose 4d. in the £ to be taken as the standard of assessable value which is generally applicable. This standard assessment is applied to the assessable value of the particular area. The area has an assessable value of £60,000. This produces £1,000.

The difference between the general standard of expenditure as applied to the population and the general standard of assessable value as applied to the assessable value of the particular area is the sum payable as a *primary grant* from the Exchequer to the area: £1,750 − £1,000 = £750. In this grant, we equalise rich and poor districts from the point of view of their assessable value in its relation to their standard expenditure.

The next process is to regulate the grant that may be made to the area in relation to any excess of expenditure on its part over and above the standard expenditure. The *actual* expenditure of the area is taken to be, say, £2,500. The *standard* expenditure we have seen is £1,750. If this be deducted from the other, £2,500 − £1,750 = £750, we have the *excess of expenditure.* And of this, some definite part, it is suggested, should be payable as a *secondary* grant. Lord Balfour of Burleigh proposes one-third. Accordingly the area would receive £250—one-third of the £750, its excess of expenditure.

The total grant would then be: as primary grant, £750; as secondary grant, £250. As the actual expenditure of the area is £2,500, it would have to raise the difference, £2,500—£1,000 (*i.e.*, £750 + £250) = £1,500 from the local rates.

The primary and secondary grants taken together would make what Lord Balfour calls the block grant. In this way, when account has been taken of expenditure, the larger the assessable value the less the grant, and vice versa.

Adoption of "Block" grant suggested.

We have endeavoured to explain the principle of this scheme, as we believe that, if it were generally understood, it would, on the financial side of our problem, lead to the application of conditions which would tend both to local economy and to fair and legitimate central control. The relative amount of the grant would be settled, according to the standard of expenditure per head of the population and the standard of assessable value agreed upon for a definite period, such as ten years. It would not vary according

Recommendation XLI.

to population merely, nor according to the number of certified patients, as in the case of the 4s. grant. It would be an equalising grant and it would be sufficient, being reckoned, it is suggested, as amounting in all to a half of the expenditure. Nor do we apprehend any difficulty as to defining the classes of mentally defective persons—a point raised by Lord Balfour of Burleigh—for, though in every series of recognised variations there must be borderland instances, the typical variations of mental defect are now generally recognised by members of the medical profession, and by others who are conversant with the subject; and, subject to the many safeguards contained in our recommendations, this would, we believe, suffice to prevent abuse and unwise expenditure. The scheme, too, is applicable to particular branches of administration as well as to a general subsidy payable towards the cost of local administration as a whole; and we would have submitted some examples of its application to administration connected with the care and control of the mentally defective had the preliminary data been forthcoming. But, in order to ascertain what in that regard would be suitable standards of expenditure and assessment, local inquiries would have to be made in a certain number of representative districts as to the extent to which different methods would have to be adopted in dealing with individual cases, for much would turn upon the answers obtained to such questions as these: How many of the mentally defective children will receive no benefit from "special" education, and should therefore be provided for in some more appropriate, but for them equally effective, manner; how many should remain with their parents, requiring no institutional maintenance; how many should be placed in "colonies." And equally in regard to the unsound in mind, much would turn on the extent to which persons in the asylums could be provided for as effectively and more economically in other and cheaper buildings, either near the existing asylums, or as part of some "colony." Further the cases of persons suffering from mental defect would have to be considered which are related at present to no department of administration, but are found in the general population; and for many of whom provision of some kind may be necessary. And so in the case of other classes.

Adoption of "Block" grant suggested—*contd.* Recommendation XLI.

See Lord Balfour of Burleigh's separate recommendations, Report of Royal Commission on Local Taxation, 1901. Cd. 638, p. 83.

835. The second scheme that we submit contemplates the division of the whole local expenditure on the mentally defective, excepting expenditure incurred in capital expenditure such as the building of institutions, the purchase of sites, etc., into two equal parts, of which one would be paid by the local authorities, and one by the Exchequer. The grants made by the Exchequer would be safeguarded. In order to protect the State against undue demands being made upon it, the Board of Control would be charged with the duty of certifying that the expenditure of the local authority had been proper and reasonable before the Exchequer issued its contribution. The advantage of this scheme is that the expenditure, towards which each grant from the Exchequer will be payable, will be subject to the official and independent scrutiny of the Central Board, and if the Board is supported in the event of its objecting to expenditure incurred by municipal and other bodies, it will be able to check undue expenditure very effectively. We think it right to mention this point, for the evidence shows how easy it is for an administration to slip into expensive methods of providing accommodation, and in such circumstances as those, for instance, which have prevailed in recent years, how difficult it is to check the decline. In view of these considerations, we recommend this as an alternative scheme of providing assistance to the local authorities from the Exchequer under conditions which should "secure economy."

Alternative scheme suggested. Recommendation XLI.

Cf. paragraphs 667–672. Spence, Vol. III., 21081–21084, 21073. John Macpherson, Vol. III., 21258–21263.

836. We have, also, recommended that, in addition to the grant made under one or other scheme referred to above, there be provided from the Exchequer annually for a term of years a grant-in-aid for the provision of necessary accommodation in the manner, and in the locality advised by the Board of Control.

Grant-in-aid for term of years for provision of accommodation. Recommendation XLI.

FINANCIAL CHARGES AND ESTIMATES FOR DIFFERENT CLASSES OF MENTALLY DEFECTIVE PERSONS IN THE AREAS INVESTIGATED BY THE MEDICAL INVESTIGATORS.

837. In regard to an estimation of financial charges all that it seems possible for us to do with any accuracy is to take as typical the areas in England and Wales in which the medical investigators have made their inquiries, and to treat these areas as a whole, and, in regard to each item, to set down how far the

Number of mentally defective in a conjoint investigated area.

Number of mentally defective in a conjoint investigated area—*contd.*

mentally defective are already supported from rates and taxes, and to submit some data that might be considered as preliminary to an estimate. Though we have later on ventured to make a general estimate of mentally defective persons "needing provision," as some such statement is likely to be desired, the course we here adopt is better, we think, than to apply proportionately to the whole of England and Wales the rough and uncertain estimate, which is all we can devise, of expenditure based on the data collected in the investigated areas taken together. Further inquiry alone could show what the value of any such estimate could be. Accordingly, here we only reprint the table in Paragraph 568 above and deal with the items in it point by point on the financial side, and in the table, it will be understood, none of the figures (cols. 2, 3 and 5) are mere estimates. They are figures which represent the actual facts as reported to us. Thus, for instance, we have entered no estimate of the number of certified lunatics that there may be proportionately in the investigated areas, nor of the number of mentally defective inebriates. The figures represent actual counts only.

See Vol. VI., Table III., IV., V., pp. 58–62, Part III. of Memorandum, and Forms Part I., pp. 7, 8 and 9.

TOTALS, less certified lunatics, of Mentally Defective Persons in the selected areas, England and Wales, in relation to local and other authorities and institutions for Education, Poor Relief, Crime and Lunacy, etc. Population, 2,362,222.

Authorities.	Total population, dealt with by the several authorities.	Total number of persons other than certified lunatics reported as mentally defective.	Percentage of Col. 3 on Col. 2.	Total number of mentally defective persons reported as "needing provision."[1]	Percentage of Col. 5 on Col. 3.

[1] The object of this column is to supply an estimate of the number of persons at the present time urgently in need of provision, either: (1) in their own interest; (2) for the public safety. It is recognised that there may be many others for whom the present accommodation is not ideal; these are not here included, but only such cases as are, in the opinion of the investigator, improperly, unsuitably, or unkindly cared for; or who, by reason of particular habits and characteristics, are a source of danger to the community in which they live.

[2] Less Insane (excluding lunatics in county and borough asylums, registered hospitals and licensed houses). *See* Pauperism (England and Wales) Half-yearly Statements, July 1st, 1905, pp. 17, 21, 23, 25, 27, 33, 35, 37, and 39.

[3] There were 1,414 persons found to be lunatic or insane and *not* certified. They are included chiefly in groups II. and IV. The number of these "needing provision" was returned as 141, or 9·97 per cent. of the total.

[4] This figure represents the number of prisoners seen in the local prisons. No mentally defective persons in convict prisons are included.

[5] This is the general population other than that included in institutions, etc., as above.

Education. Pooley, Vol. I., 242 and p. 96 *ante*.

838. I. Education.—Under column 3, there are 3,437 mentally defective children, and of these, as defined in the note, 2,590 "need provision." For these, in so far as they are "defective," and come under the Elementary Education (Defective and Epileptic Children) Act, 1899, if it be adopted, provision is already made in special schools or classes, and in these circumstances further payment is already made at the average of £10 a head—£4 from the Government, and £6 from the rates—a minimum average expenditure probably. Of the total 3,437, 2,963 were returned to us as "defective" by the medical investigators, and the remainder are almost all idiot, imbecile, feeble-minded, or sane epileptics.

Memorandum, Vol. VI., p. 59.

Recommendation I., XXVII. and LXXIV.

Thus for the bulk of this class, school provision and, if it is required (*see* p. 95), boarding in houses or special schools may be provided under the Act; and, if the Act were made compulsory, as many witnesses have desired,

a great part of the expenditure under this head would have to be met under existing statutes. Our recommendations would impose on the local authority and the Board of Control the obligation of dealing with all these children under the general Act for the Care and Control of Mentally Defective Persons. Education—*contd.*

The net expenditure from grants and rates on maintenance "in the certified day schools, conducted by school authorities for defective children," in 1902–3 was £35,633, with an average attendance of 3,474 children.

If the Act of 1899 were made compulsory, the expenditure that could be claimed on these terms for the mentally defective children in the conjoint area would be (3437 × 10) = £34,370, and for those "needing provision" £25,900.* To this figure some addition probably would have to be made to represent the cost over and above £10 per annum payable for cases which require treatment in residential institutions. On the other hand a deduction would have to be allowed for the annual cost of children in special day schools, which may be reduced below £10 by the adoption of other methods of care and treatment. The difficulty of making any certain estimate is obvious.

839. II. Poor Law.—Under this head come 2,864 indoor paupers—being mentally defective, of whom 481 "need provision." "The expenditure of Poor Law authorities exclusively relating to indoor relief," £7,251,874, includes "in-maintenance"† "salaries and other remunerations, rations and superannuation allowances of officers and servants; buildings, furniture, rent, rates and taxes; loan charges; principal repaid and interest; and other expenses. This total expenditure represents "an average cost per head of the mean number of indoor paupers‡ relieved of £37 16s.3d. in London, of £24 14s. 8¼d. outside London, and of £28 10s. 11¾d. for the whole of England and Wales." Poor Law. Annual Report of Local Government Board, 1905–1906, clvi.–clvii.

840. It is likely that many pauper lunatics in workhouses cost less than £28 10s. 11¾d. a head, though in particular institutions which are technically "workhouses," such as at Tooting Bec and the Darenth Imbecile Institutions, etc., they cost more. There are, however, no data for a more exact computation. The mentally defective in receipt of indoor relief who are already being maintained, becoming chargeable to committees for the care of the mentally defective instead of to boards of guardians, would represent not a new charge but only a transferred charge on public funds. Possibly under the suggested new conditions, the charge in many instances might be less than that which is now entailed by their maintenance. As a mere estimate the cost of "in-maintenance" might be taken at £28 11s. This would produce £81,767 as the cost of the total number of mentally defective persons in receipt of indoor relief, namely 2,864 persons, and for the cases needing provision (481) it would produce £13,732. See Mann, Vol. I., p. 284, 2.

* The estimate may be made in another way—that adopted in the case of Ireland (*see* Paragraph 1100 (c.), p. 437). It may be estimated (Kerr, Vol. I., p. 435, col. 1) that 25 per cent. of the mentally defective children will require maintenance in some kind of home or colony, and at present charges the cost per child so dealt with may be entered at £29 (Vol. III., p. 335). Both these factors—the number of the children to be so dealt with and the cost per child—are open to revision on further experience, and the cost especially may be considered high. But, subject to these qualifications, the estimate would, on these terms, be £38,193 for children "needing provision" as against £25,900, the figure in the text.

† "'In maintenance' comprises all the expenses incurred by boards of guardians, by the managers of the Metropolitan Asylum District (excepting patients treated in the small pox, fever, etc., hospitals, who, not being 'paupers,' are excluded from the term 'Poor Law institutions'), and of the asylum and school districts, and by Poor Law joint committees, in and about the maintenance, treatment, and relief of paupers in workhouses and other Poor Law institutions, *exclusive* of the cost of buildings and repairs thereto and furniture, and the salaries or other remuneration, rations, and superannuation allowances of the officers and servants, but *inclusive* of charges for apprentice fees, outfits, burials, and the necessary expenses incurred in warming, cleansing, and lighting the institutions, and otherwise keeping them fit for daily use. The cost of maintenance of vagrants in the vagrant wards is also included under this head." Annual Report of Local Government Board, 1905-6, p. cxlviii.

‡ "For the purposes of this calculation 'indoor paupers' is taken to include (*a*) those maintained in workhouses and in other Poor Law establishments under the direct control of guardians, including separate homes and schools, and schools under the direction of the managers of school districts, in sick asylums in London belonging to the managers of the sick asylum districts, and also in the institutions other than fever and smallpox hospitals belonging to the Managers of the Metropolitan Asylum District; and (*b*) the paupers who were maintained in hospitals and in other institutions, not under the direct control of guardians, which are designed for the education and training of children or to meet cases of particular infirmity for which the organisation of the workhouse may not be adequate, *e.g.*, institutions for the blind, deaf and dumb." Annual Report of Local Government Board, p. clvii. footnote.

Poor Law—*contd.*

841. Under Outdoor relief, 997 persons are entered, and 388 "need provision." "Out-relief represents the charges for relief, whether given in money or in kind to paupers—not being lunatics in asylums, registered hospitals and licensed houses—relieved otherwise than in workhouses and other institutions as are mentioned above, or in hospitals, institutions for the deaf and dumb or blind, or certified schools, together with school fees, schooling, and other expenses incurred with respect to such paupers, but exclusive of the salaries, &c., of officers and the charges for relief stations."

Annual Report of Local Government Board, 1905–6, p. cxlviii.

p. clvii.

The cost of outdoor relief per head thus defined is £6 18s. 10¼d. Taken at £6 19s. this would amount to almost £6,929 for the total number of mental defectives in receipt of outdoor relief in the conjoint area, and for those "needing provision" about £2,696—if they were kept as they are now kept. There is thus on their account a public charge of nearly £7,000 a year on the whole number, which may be considered as a transferred and not a new expenditure, if they were placed under other conditions in the charge of the proposed Committees.

Lunacy.

842. Lunacy. The number 1,414 referred to in note 3 of the table on p. 276 represents lunatics who are not certified, but in the opinion of the Medical Investigators should be. The pauper lunatics in England and Wales were returned by the Commissioners in Lunacy as 111,079 on the 1st January, 1906; but, by that return (Cols. 2 and 3), only 85,990 of these were "maintained in county and borough asylums, registered hospitals and licensed houses." The total expenditure (other than that out of loans) incurred for the maintenance of lunatics in county and borough asylums, registered hospitals, and licensed houses during the year ended Lady Day, 1905, was £2,339,963. "In this item the full sum charged by the asylum and other authorities for the support of insane paupers chargeable to the poor (or in London the general) rates is shown, without any deductions on account of grants charged on the Exchequer Contribution Accounts of County and County Borough Councils." Thus the cost, per lunatic chargeable, as above, would be, approximately, £27·21.

Annual Report of Local Government Board, 1905–6, p. 561.

p. cxliv.

p. cxlix.

We may say, however, that in this case, too, the expenditure on the mentally defective persons is already a recognised public charge, so that the 1,414 persons entered in our table do not represent a new demand on public funds. About a thousand of these are already in receipt of "in-door" or "out-door" relief and come under those headings. At the above rate, if they had to be provided for as lunatics, they would cost £38,475 a year. Proportionately, the number of "certified" pauper lunatics in the conjoint area would be about 8,067, and would cost about £219,503.

Prison authorities.

843. III. Prison Authorities. The local prisoners in the conjoint area who are mentally defective numbered 246 (col. 3), or as "needing provision" 216. From the Report of the Prisons Commission, 1905, pp. 106, 108, the expenditure on prisoners, exclusive of new buildings and alterations, was £27 a head; but this is on the basis of a year's maintenance. Many of these prisoners would only be in prison for a few weeks, and much more economical provision could probably in this instance, as in others, be made for them. But if the State accepted its responsibility of ameliorating their condition through detention in prison, it might be considered that already the £27 might legitimately be spent on them, as in the case of the convict prison at Parkhurst, out of which a kind of "colony" has been developed. On this understanding, the cost of the prisoners in the local prisons would be £6,642 in the case of the whole number of mental defectives, and £5,832 for those "needing provision."

Annual Report of the Prisons Commission, 1905. pp. 107.

Persons mostly under no public authority.

844. IV. "Persons mostly under no public authority." Of these, 3,381 is the total number, and 1,181 "need provision." In regard to these, it is not possible to make an estimate. But if all who need provision had to be maintained at 10s. a week, the cost would be £30,706; if the total number found were so maintained, it would be about £87,906.

845. On this basis we might set out the estimate of expenditure in the conjoint area; the figures are estimated on present basis of expenditure, *see* paragraphs 837–844, and we may supplement them by adding estimates of the number of certified pauper lunatics and mentally defective inebriates :— Statistics of numbers and expenditure in a conjoint investigated area, according to classes.

ROUGH ESTIMATES: CONJOINT AREA.

Population 2,362,222.

Class.	Total reported as Mentally Defective.	Estimated Annual Cost of Col. 2.	Total reported as "needing provision."	Estimated Annual Cost of Col. 4.	Whether already and to what extent chargeable to State or Local Funds.
1	2	3	4	5	6
		£		£	
I. Education: Scholars on the Registers.	3,437	34,370	2,590	25,900	These would be already chargeable to the extent of about £10 each, if the Elementary Education (Defective and Epileptic Children) Act of 1899 were made compulsory.†
II. Poor Law:					
(1) In-door Paupers	2,864	81,767	481	13,732	Already chargeable. Yearly charge taken at £28 11s. subject to considerations mentioned in the text.
(2) Out door Paupers	997	6,929	388	2,696	Already chargeable at £6 19s.
III. Lunacy:					
(1) Uncertified Lunatics	[1,414]	—	[1,414]	—	Reported by Medical Investigators as certifiable, and if certified would be chargeable at the cost of £27·21 for maintenance. Practically 1,000 of these are already chargeable under the Poor Law—II. above, as indoor or outdoor paupers. *See* Statistics, pp. 56, 58, 60, Part III., Reports of the Medical Investigators, Vol. VI. Others are to be found in the other classes, especially in Class VI.
(2) Certified Pauper Lunatics.	*8,067	219,503	—	—	This is a proportional number for the Conjoint Area. The cost is taken at £27·21 for maintenance. These are already maintained.
IV. Local Prisoners	246	6,642	216	5,832	Already *quâ* prisoners chargeable to the State while in prison. Annual cost of prisoner £27a head.
V. Mentally defective Inebriates.	*27	1,080	—	—	Already chargeable. The number (col. 2) estimated. *See* Report of Inspector for the year 1905 [Cd. 3246] p. 5. "Under detention at end of year" in Certified Inebriate Reformatories, 970. Of these 45 per cent. estimated as mentally defective (*see* paragraph 413 above): 436 therefore taken to be mentally defective: or in "conjoint area" only, 27. The maintenance expenditure, less cost of farm, garden, and industrial occupation, averages £40. —Report of the Inspector under the Inebriates Acts for year 1905 (Cd. 3246), pp. 70 and 71.
VI. Persons outside any of the above classes.	3,381	87,906	1,181	30,706	Not already chargeable. Estimated charge 10s. a week

* These are Estimates.

† The estimate may be made in another way—that adopted in the case of Ireland (*see* Paragraph 1100 (c) p. 437). It may be estimated (Kerr, Vol. I., p. 435, col. 1) that 25 per cent. of the mentally defective children will require maintenance in some kind of home or colony, and at present charges the cost per child so dealt with may be entered at £29 (Vol. III., p. 335). Both these factors—the number of the children to be so dealt with and the cost per child—are open to revision on further experience, and the cost especially may be considered high. But, subject to these qualifications, the estimate would, on these terms, be £38,193 for children "needing provision" as against £25,900, the figure in the text.

Conclusions and reservations as to statistics of numbers and expenditure in the conjoint investigated area.

846. This table shows that in an investigated area of 2,362,222 persons the budget of a local authority for the care of mentally defective persons may be expected to amount to about £438,197, in connection with 19,019 of such persons. Or if those who " need provision," the urgent cases, only are considered, the charge at the same rates may be estimated at £78,866—for 4,856 persons. But this statement taken by itself would be misleading. Those who " need provision " do not " need provision " of the same kind or at the same cost as that which they are now receiving. Nor, necessarily, do those whose cases have not been marked down as urgent, as "needing provision," require the provision which is now made for them and no other. Many of them may require a larger financial expenditure, as, for instance, removal from a special school or a workhouse, more constant attention and care. Some, on the other hand, may do better at a lesser charge, as, for instance, where a simple farm colony would take the place of a highly specialised asylum or training home.

So far as the items in the above table are concerned, the only charges which are almost entirely new are (Col. 3) for cases " outside any of the above classes." £87,906, or, if urgent cases, those " needing provision " only, are dealt with ; £30,706, affecting in the one instance 3,381, in the other 1,181, persons. The expenditure here is calculated at the rate of 10s. a week per case ; but obviously the rates of expenditure must vary greatly according to the case. Further, it will be understood (Col. 5) that in Class I. Education, the £25,900 entered against the 2,590 children who are in urgent need of new arrangements, is not now being spent. It is, practically, a new charge ; for, now, it is optional under the Elementary Education (Defective and Epileptic Children) Act, 1899, to incur this charge, and it is not incurred. This £25,900 should, also, therefore be treated as added to the charges of the future. Again in the case of children of school age, if they are properly cared for, the charges on their account are likely to continue after school age to a greater extent than heretofore ; and the after-charges must often exceed £10 a year ; the sum estimated as payable for them at the special schools. On the other hand (*see* IV. Local Prisoners : Estimated Annual Cost (Col. 5)), local prisoners are not in many cases kept in prison for nearly a year ; but for want of a better basis of calculation, the estimated annual cost of their maintenance has been taken for that period. This would be more consistent with the probable requirements of mentally defective prisoners in the future, but it represents a sum in excess of present expenditure. No entry is here made in regard to convict prisoners ; a small number are mentally defective and are supported by the State (*see* p. 188 *ante*).

In general, it will be observed, to how very large an extent the changes, which we propose, are changes of reorganisation, and to how comparatively small an extent, do they involve new or very large charges.

England and Wales. Number of the Mentally Defective, " needing provision."

847. For practical purposes an estimate of the cost of dealing with the cases of persons " needing provision," the urgent cases, in England and Wales, will be more useful than a general estimate, and accordingly we limit ourselves to it. The Table below refers to these cases only. In column 5 final estimates of their cost are given :—

(1) Class I., col. 5, mentally defective scholars are taken at the present charges per head ; but, as has been explained, those charges have yet to be incurred in regard to the 35,804 children in the estimate (col. 3).

(2) Class II., col. 5. The cost of indoor paupers, who " need provision " is entered in both the cols. 4 and 5 ; in col. 4 as representing expenditure already incurred, in 5 as representing part of the expenditure which would fall within the province of the Board of Control in future years. No additional expense probably will have to be incurred in regard to them. The present cost of outdoor paupers who are mentally defective may be taken at £33,290, but a considerably larger expenditure must be anticipated. This expenditure has been calculated at 10s. a week, and the estimate of the future annual cost under this head will thus become £124,540.

(3) Class IV., col. 5. The estimate for the cases of prisoners is ample.

(4) Class VI., col. 5. The estimate for these persons who are outside the other classes, viz., 17,317, is at 10s. per week per annum, and amounts to £450,242.

The total required is thus estimated approximately at £866,000.

ROUGH ESTIMATES: ENGLAND AND WALES.

TOTAL NUMBER OF MENTALLY DEFECTIVE PERSONS "NEEDING PROVISION" and their annual cost of maintenance as estimated, but subject to various qualifications mentioned in the text, and already in great part chargeable to rates and taxes.

England and Wales. Number of Mentally Defective "needing provision"—*contd.*

Class.	Population.	Estimated Number of Mentally Defective "Needing Provision."	Annual Cost, Estimated on the present basis subject to such qualifications as are above mentioned.	Annual Cost estimated for the future, subject to such qualifications as are above mentioned.

TOTAL	32,527,843	66,509	634,310	1,175,802

* For these provision is already made.

848. Reducing the question, therefore, to the estimated charges for person "needing provision"—the urgent cases—in England and Wales, we may estimate the annual cost at £1,175,802, an increase over the present annual cost of £541,492. It does not follow that the whole of this amount will have to be borne by the public. Some part will doubtless be furnished by relatives of the persons provided for, as is the case at present with lunatics and inmates of reformatories and industrial schools; and, further, we anticipate that the establishment of a new class of institution on simpler and more economic lines and the adoption of new methods of care and maintenance, especially family care or guardianship on the plans that we have described in France and Belgium, or boarding out, as applied to the case of the mentally defective in Scotland, will result in a considerable diminution of the expenses now incurred in respect of the treatment of persons of unsound mind.

849. Lastly, we come to the charges for the Board of Control. The yearly charges are:— Cost of the proposed Board of Control.

	£
Lunacy Commissioners (for year ended 31st March, 1905)*	14,752
Masters in Lunacy and Visitors in Lunacy (for year ending 31st March, 1906)	19,805
	34,557

Trevor, Vol. IV., 25382. Ambrose, Vol. IV., p. 154, c. 2.

In view of the various proposals that we have made for the reorganisation and concentration of the judicial and administrative work now being done for the mentally defective, we do not think that this sum need be exceeded in spite of the appointment of the additional officers which we have recommended, though with a reduction of the percentage charged for administration which we have suggested, some additional cost may fall upon the Exchequer.

ACCOUNTS OF ASYLUMS AND AUDIT.

850. We would conclude with a reference to suggestions made to us in regard to the accounts of asylums. It is urged that in connection with the Lunacy Commission there should be an accounts department. There is, it is stated, no uniformity in the preparation of asylum accounts; and owing to a certain rivalry among asylums to show a low rate of maintenance, some asylums, for instance, are led to charge to the repairs

Pasmore Vol. IV., p. 281, c. 1, 32493. Cunynghame, Vol. IV., 33519.

* The cost of the Commission 1906–1907 was (net) £15,618 8s. 11d. (Appropriation Accounts).

account items which other asylums charge to their maintenance account. Another witness points out that "asylums in which the conditions cannot be very substantially different, spend on maintenance a difference probably between 9s. and 12s. or 13s. a week." This should be explained, he urges. The visiting committee should also be asked to show their specifications for tenders and other contract prices. The Commissioners, "if they found that in one asylum they were spending 4d. a pound for meat on an average, and in another 3d.," should investigate the matter. "Even in Lancashire, where the asylums are all under one board, owing to the fact that each visiting committee have their own contracts, the variation in the price, although not very great, represents on the whole several thousands a year." The Lancashire Board was now considering "whether it would not be in the interest of the ratepayers as a whole that they should have a central committee to invite tenders and accept contracts."

Davy, Vol. IV., p. 350, col. 1, 34222.

Kershaw, Vol. IV., 32135.

851. The accounts of the visiting committees are subject to audit by the district auditors of the Local Government Board (Lunacy Act, 1891, Sec. 18), which we think should be as full and complete as possible; and the accounts of each asylum are included in the Local Taxation Returns, but there is no audit of borough accounts and stores. "So far as the boroughs are concerned, the greater part of the control and maintenance of lunacy in those places is beyond any sort of independent control," unless a special clause has been inserted in a local Act by which the audit is thrown on the auditors of the Local Government Board.

Recommendation XCIV.

Recommendation XXIII.

We are of opinion that, in the interests of economical and satisfactory management, the accounts of boroughs relating to the care and control of the mentally defective, including the accounts of asylums, should be audited by the Local Government Board Auditor, and that the specification for tenders and the contract prices should be examined by the members of the Board of Control or be investigated by the Auditor of the Local Government Board on their behalf and form part of his report to the Board. The reports of auditors should also, in our opinion, be communicated to the Board of Control and the Home Office. In any circumstances, we think that economy of management in asylums should be a question considered and reported upon by the Board from year to year in their annual report.

Payments by Relatives.

Recommendation XCIII.
Davy, Vol. I 34222.

852. We have dwelt on the necessity of enforcing from relatives contributions for the maintenance of mentally defective persons in public asylums or elsewhere under public care and control. We are of opinion that continuous attention should be paid to this subject and very careful inquiry made, so as to prevent those who could afford to support their relatives wholly or in part leaving them to be maintained at the public charge. The principles on which these contributions should be enforced, remitted, or suspended ought, we think, to be laid down and enforced by the regulations of the Board of Control. The amount raised in this way from year to year should be definitely and sufficiently stated in the accounts of the asylums, so that the public may be able to judge whether adequate attention is paid to the subject, and the question should be equally considered by the proposed committees in the case of mentally defective persons who are dealt with otherwise than in asylums and hospitals.

Grants Subject to Certificate of the Board of Control Recommendation XLI.

853. In these and in other matters, to strengthen the hands of the Board of Control we suggest, in Recommendation XLI., that the grant paid from the Exchequer to the local authorities should be payable "subject to the certificate of the Board of Control."

PART IX.

AMERICAN INSTITUTIONS FOR THE FEEBLE-MINDED.

CHAPTER XLI.

Institutions for the Feeble-minded in America.

854. We publish in a separate volume (Vol. VII.) simultaneously with this Report an account of a visit paid by some of our members to the United States of America in order to see the more remarkable American institutions for the care of the feeble-minded and epileptics. Our members were struck by the originality and directness of the methods adopted in several of these institutions with a view to stimulating the activity of the perceptive powers of the inmates, and, also, by the freedom from cramping and unnecessary regulations which enabled the managers to apply their minds to new experiments in education and organisation. They were also impressed with the large size of American institutions, some of which contained from 500 to 2,000 inmates. This seems to them to secure proper classification, the general plan being that each institution contains three departments, and it is perfectly easy to transfer an inmate from one to the other. These departments are, the Custodial for the lowest grade (*i.e.*, idiots), the school for the higher grade children, and the Industrial for the higher grade adults. These departments are entirely separate, and, often, at some little distance from one another, though under the same central management. Our members are of opinion that the large size of the institution tends not only to better classification but to greater economy. They also point out that the provision for the feeble-minded in America is on very economical lines. The capital outlay varies in the institutions they visited from £90 to £160 per head. We deal here, however, with only a few points which bear upon questions which we have discussed in this Report. Many details of interest will be found in the account of their visit which our members have drawn up.

Report of the Members of the Royal Commission on the Care and Control of the Feeble-minded upon their visit to American Institutions. Vol. VII.

855. As in England, so in America, the founders of the earlier institutions believed that by education, as ordinarily understood, they could bring the feeble-minded to such a level of intelligence as would enable them to earn their living. Experience showed by degrees that this aim, except in the higher grade cases, could not be accomplished; and later, in America, as in England, grave apprehension has been felt whether it was right to allow feeble-minded persons, more especially feeble-minded women of child-bearing age, to leave the shelter of institutional life. These two changes of opinion imply in effect a great modification of methods and of organisation. To give effect to them, little short of a remodelling of the whole institutional system is necessary. Space and opportunity have to be provided for manual labour of all kinds. The institution develops into the "colony," whatever be the name by which it is called, and this becomes the centre of a large estate, with the object both of employing the patients and of furnishing as large a part as possible of the necessaries of the establishment by their labour. And in the process of change, which is yet very far from complete, institutions for the feeble-minded stand at many different points of development, and endeavour to utilise the resources which they have inherited in many ways in order to meet the requirements which the change of opinion is now demanding.

The system of education or training.

856. The main issue is the method of education or training to be adopted with a view to a useful and contented life afterwards.

The Elwyn School in Pennsylvania. Vol. VII., p. 83.

The Elwyn School for Feeble-minded Children in Pennsylvania is "primarily a training school" under the management of Dr. Barr. He has compiled a careful scientific classification of the feeble-minded, which in the American use of the word includes all forms of congenital defect or retardation

The system of education and training—*contd.*

of the brain such as those we have included in the definitions (3) to (9) in Recommendation IV. Consistently with this he has framed a system of education, subject to the drawback, however, of the necessity of doing as much as he can for the children, while they are yet children and can remain in the School. "Owing to there being no power of detention and to the children being constantly taken away by their relatives, every effort is made by intensive education to fit them as rapidly as possible for a life of freedom, efforts doomed, in the opinion of Dr. Barr, to failure in the vast majority of cases." Vol. VII. p. 82.

Vol. VII., p. 83.

The actual classification of the School is shown as follows: There are 1,000 children: 303 are in the School Department, including 74 in "Improvement Classes," 277 are in the Custodial Department, including 79 in the Nursery. "When the limit of educability is reached we send them to the Custodial Home," Dr. Barr said. "There is very little to be done after the fifteenth year." The rest—rather less than half, 428, are in the Manual and Industrial Departments, 215 being "in household service." This shows how, even here, education, in the sense of reading and writing, occupies the time of but a small part of the children; and on the other hand music—a band and a large singing class, military training, and football and baseball teams, in which all who are capable of receiving any training take part, become important educational means. Yet the limitation of the whole method, however revised and improved, seems to no one, it would appear, more unsatisfactory than to Dr. Barr himself. A change of law in regard to detention might, however, alter the whole condition of the School. It would then become part of a larger organisation for the care of the feeble-minded—at least Dr. Barr's statements suggest such a development. He said: "No really feeble-minded child ought ever to be released from an institution. . . The high grade cases are very troublesome; the nearer they approach the normal, the worse they are. . . Most of the parents of these children are feeble-minded. . . We have quite a few cases of a third generation of defectives, nearly 100. . . Many of the children are absolute criminals. . . The absolutely bad children we cannot do anything with. We have fifty to seventy-five of them. I think the Government should take up the question of these children. I should have these form a national colony on the bad lands of the West, to be taken care of under military discipline. . . Of the 270 custodial cases about 100 are of the lowest grade who are unable to feed themselves." "There is a large waiting list seeking admission," the Commissioners point out; and "there is no systematic drafting of the uneducable cases to a colony or other custodial institution." In fact, there are the same conditions of isolation and block which affect our institutions for the care of the mentally defective in England.

Vol. VII., p. 84.

Vol. VII., p. 84.

Vol. VII., p. 85.

Vol. VII., p. 86.

The Custodial Asylum, Rome, New York State. Vol. VII., p. 21

857. But the more recently established institutions, or those practically remodelled under the influence of new ideas, adopt almost wholly the manual and industrial method of education.

The State Custodial Asylum at Rome, New York State, was established in 1893 originally as an institution for "untrainable idiots." It has a farm of 400 acres, which it is prepared to extend by the purchase of 1,000 acres more. The inmates consisted of men, women and children who required to be kept under control. "There was only one trained and certificated teacher. Dr. Bernstein discouraged any education in the ordinary sense of the word. He stated it was useless in most cases, and, where it succeeded, did not make for happiness, but increased restlessness, and a desire to leave the institution. He would like the whole of the time devoted to manual work, and this had been the case until lately. . . . . More than 50 per cent. of the inmates were actually occupied in cleaning floors or in domestic work of some trifling description. . . . ." Only one third were capable of doing work which had an estimable money value. Apart from domestic work, painting, repairing, etc., the farm was the chief source of employment.

Vol. VII., p. 20.

Large estates attached to institutions for the feeble-minded.

858. And the farm is prominent in many of the accounts of the American institutions. The New Jersey Training School for feeble-minded boys and girls has a farm of 280 acres. "In the spring the greater number of the children in the industrial classes are put to work on the farm." Part of the

l. VII., . 99, 101. l. VII., . 32, 86. . 103, 113, 120, l.

land is used as an orchard, and the girls pick the fruit and assist in canning, and the garden beds are alloted to a child or a class of children for caretaking. "On the farm most of the work is done by the patients. There is only one paid farmer, one florist, and four paid assistants. Some of the boys are practically self-supporting. Five are capable of delivering coal from the railroad without supervision."

Large estates attached to institutions for the feeble-minded—*contd.*

The Craig Colony for Epileptics has the beautiful estate of Sonyea, consisting of over 1,900 acres. The State institution for the feeble-minded of Western Pennsylvania at Polk has an estate of over 800 acres. The New Jersey State village for epileptics at Skillman, New Jersey, has a farm of 890 acres. The institution for the feeble-minded at Columbia, Ohio, has a farm colony of 1,800 acres; and the Illinois asylum for feeble-minded children has a farm of 880 acres. At the Indiana school for feeble-minded youth, it is proposed to purchase 500 acres more farm land, on which none but workers will live. At the Illinois institution, the farm "contributed substantially to the economical maintenance of the inmates, and this was corroborated by the fact that the legislature had recently completed the leasing of another 480 acres of land to reduce still further the expenditure by supplying as much as possible for the institution. The probable reduction in the maintenance cost was estimated to be from 11s. to less than 8s. a week." Everywhere, it may be inferred, on the ground of training, employment, and economy, a considerable estate available as farm land appears to be thought desirable.

Vol. VII., p. 122.

Vol. VII., p. 135, par. 24.

859. But the utilisation of an estate for the training of the feeble-minded appeared to our members to be illustrated best by the two joint institutions of Waverley and Templeton, in Massachusetts.

860. The Waverley or Waltham School, established in 1851, has developed from the "School" into the Training Custodial Home, as opinion has changed on the question of training and control of the feeble-minded. The school has 180 acres of land. "To get the highest development of these people," Dr. Fernald says, "it is not well to specialise their work highly during the educational period. It is best to give them great variety. Reading and writing are only for a few of our patients. The character of the feeble-minded boy should be practical and should aim at fitting him for work." "In no case is the actual industrial work mixed with the experimental work. The girls go through a special educational school for cooking, laundry work, etc.; after going through these they are sent to do the actual work. The same applies to boys with regard to carpentry." Both are kept in school for some part of the day up to the age of eighteen. To do so longer "would ruin them for practical purposes." There are very few cases of the highest grade. As to the lower grade: Ninety per cent. of the idiots are expected to come out of their "school" or "cottage." "They mostly do physical work, but there is hardly a child who does not receive some instruction. Each attendant has a class in teaching children to wash their faces, to dress themselves, etc. . . . . A very large proportion can 'go up,' if the training is done in early childhood. If they are properly developed they are capable of doing physical manual work." So on this scheme of training, out of doors in a field, were young boys carrying stones, and older boys using pickaxes and breaking the earth, under one supervisor. "A party of girls, low grade cases, were carrying stones from one circular enclosure to another, for exercise and health and muscular instruction." "Many children were playing games and practising balance and exercises, under an expert teacher on the lawn"; and "about a dozen children were playing outside with a teacher, holding on to a rope. The teacher was beating a small drum. The children ran after balls, and the weak and paralytic were helped and encouraged to stand, and walk, and run."

The Waverley School, Massachusetts. Vol. VII., p. 51.

p. 56.

Vol. VII., p. 59.

p. 58.

p. 59.

861. Connected, administratively, with Waverley, is the Templeton Colony. It represents, to some extent, the results of the system in its application to life in a "colony" after the age of training. It consists of "four groups of well-designed but very economical wooden cottages, standing some distance apart, each group affording room for fifty workers and the attendants."

The Templeton Colony, Vol. VII., p. 60.

Chapter XLI.
Institutions for the Feeble-Minded in America.

Large estates attached to institutions for the feeble-minded —*contd.*
Vol. VII., p. 61.

The colonists, though all custodial cases, *i.e.*, idiots or marked imbeciles, are all required to do manual work, and many of them do nearly the full work of a free labourer. "We saw a group of four," the members of our Commission write, "with heavy sledges and hammers breaking rock, and drilling it for blasting with explosive; they were working steadily and without supervision. Further on was another group of five men working in a field. They were bringing in stooks of corn which they were loading upon a cart. Others in the shed were unloading and storing the corn. A further group was hauling brick in wheelbarrows. At a little distance, there was a row of about a dozen who under the supervision of one man only, were working a field with sharp pick-axes. An imbecile was ploughing with a pair of horses, his daily task. All of these men had come from Dr. Fernald's schools for the feeble-minded, and a large proportion of those who were busily and happily engaged in useful work could never be taught to read and write; some had not human speech. The previous training was of course essential: idiots and low grade imbeciles could not be employed in this way without preliminary training."

"All the cottages are built on essentially the same plan—solid brick foundations on cement with rough cast walls and slate roof. £20 was paid to the architect for the original design, after which all the buildings are modelled. The cost of building and furnishing a cottage is £2,000, although the cost of the group just erected, owing to rise in the material, was £2,400—£40 to £50 a head. The levelling, etc., is done by the inmates, as well as all carting, trenching, sewering, painting, and varnishing."

"In each of the cottages, there is a large sitting and dining room for the men. It is a pleasant apartment, with an immense open fireplace, and windows along three walls of the room. The impression given is that of a large, substantial farmhouse. . . . There are two dormitories in each group, holding twenty-five beds each. . . . The attendance in one cottage consists of a man and his wife, four women, and a laundress. In another group, it consists of a man and his wife, two male assistants, and three women. In each group there are rooms for the attendants. Belonging to each group is a barn, the care of which falls entirely to the inmates. An immense woodshed, where the entire supply
p. 62. for the colony is kept, furnishes employment for many of the men, especially in winter. There is no doctor in the colony, but the local physician looks after the care of the inmates. There is telephonic communication with Waverley. It is seldom that medical aid is required, as long a period as six months having passed without an illness or mishap occurring."

Vol. VII., p. 62.

"The training schools at Waverley and their adjunct, the Templeton Colony, appear to embody the ideals of Dr. Fernald and the State Commissions at Massachusetts as a permanent provision for the training and employment of custodial cases, whether feeble-minded, epileptic, or even of certain types of insanity. . . . . The ideal, and, of course, to a more limited extent, the practical realisation, made a most favourable impression on the Commissioners. It was a pleasure to see the happiness of the colonists, the humanity of their treatment, and the social utility of their employment in reproductive work, and with prospects of good economical results."

The Newark State Custodial Home for Feeble-minded Women.
Vol. VII., p. 28.

p. 26.

Vol. VII., p. 31.

Vol. VII., p. 28.

862. We desire to draw particular attention to the account given by our members of the Newark State Custodial Home for Feeble-minded Women, in some respects the most remarkable of the American institutions. The object of this institution is "to detain women of a child-bearing age, in order to prevent the propagation of persons of feeble mind with its attendant evils to the community." There are 600 inmates. "About half were decidedly imbecile or idiotic, the other half being high grade imbeciles, or young women whose defect was so slight that on casual observation it would not be evident." "Twenty-five per cent. were women who had been brought before a magistrate on some charge, and without being convicted by him had been sent to the asylum as a proper place for their detention." A small percentage had been transferred to Newark from prison and detained there after the expiration of their sentences. This institution is one of the brightest and most comfortable, and, also, one of

the most economical that our members visited. It is built on the detached cottage system, and the cost varied according to the different cottages, sinking as low as £50, and never rising much beyond £80 per bed. The weekly cost of maintenance per inmate was 9s. 6d. The Newark State Custodial Home for Feeble-minded Women. —*contd.*

863. To the Report of our members on their visit to America (Vol. VII.) we desire to draw special attention. We propose many changes which will, we hope, facilitate an education such as is here described, followed by employment and occupation of healthy and useful nature, which is now entirely beyond the reach of the mentally defective. For, neither does their education at present, however careful and costly it be, fit them for it, nor has the community heretofore recognised the necessity of making provision for them after childhood in any organised or systematic manner. Conclusions.

The members of our Commission who visited America have summarised in definite conclusions the experiences which they have drawn from their visit. These should be read in relation to our Report. To one or two of the points on which they touch, we have made reference elsewhere. Vol. VII., p. 132.

PART X.

CHAPTER XLII.

Epileptics.

864. By our reference, we have "to consider the existing methods of dealing with idiots and epileptics, and with imbecile feeble-minded or defective persons not certified under the Lunacy Laws." We have submitted evidence and recommendations in regard to all these classes except sane epileptics, for in regard to epileptics who are also mentally defective we have already reported, in part at least. In this chapter, therefore, we propose to submit some evidence respecting epileptics generally, but to allude chiefly to the position and requirements of sane epileptics.

Definition of Sane Epileptics.

The use of the words "Sane Epileptics."

865. Sane epileptics, according to the phraseology of the Poor Law, are epileptics who are not certified as lunatics under the Lunacy Act of 1890. But it does not follow that a sane epileptic is not, in some degree, mentally defective. Many of them are. Thus under the Elementary Education (Defective and Epileptic Children) Act, 1899, Sec. 1 (*b*), an epileptic child is a child who, not being an idiot or an imbecile, is unfit by reason of severe epilepsy to attend an ordinary public elementary school. But a considerable proportion of these children who are provided for by the Education Authority in special schools are mentally defective, and, if not imbecile, at least feeble-minded in the sense in which we have defined the word. Indeed, the relation between epilepsy and mental defect is very close, and to define those for whom provision should be made as sane epileptics we have in the first instance to consider this relation. In doing so we will endeavour to indicate the serious effects which epilepsy appears to produce in persons who suffer from it and in their offspring.

Vol. II., p. 218.

Miss Skinner gave the following particulars as to epileptics then in York Union Infirmary:—"We have nineteen epileptics. These are placed in wards with special beds. Eight of these cases are certified. Five of these epileptics are sensible; two are feeble-minded; four are epileptic imbeciles; and eight are mental. Two of the epileptics are sisters; of these two, one is mental and noisy, the other sensible and quiet."

Conditions associated with Epilepsy.

866. Dr. Bond, the Medical Superintendent of the County of London Colony for Insane Epileptics, described the conditions associated with epilepsy, as follows:—"A neuropathic or psychopathic family history is pre-eminently the most important factor in the production of epilepsy and weak-mindedness, in all its grades, from simple mental defect on to all the graver mental reductions included under the term insanity. . . . The epileptic family history is to be regarded as especially dangerous. In the case of a parent who is epileptic the disease may be regarded as practically always present, and moreover, in the vast majority of cases it will have developed either early in life or at least prior to the birth of the next generation; whereas an attack of insanity may be recovered from, and, furthermore, in an appreciable number of cases described as possessing a family history of insanity, the insanity will not have appeared in the parent until after the birth of the children." When investigating the personal and family histories of 300 epileptics certified as insane, Dr. Bond found an epileptic family history almost as frequently as an insane one. Yet "that marriage was thought likely to 'cure the fits' has been repeatedly stated to him as the explanation of marriages which he had no compunction in stigmatising as social crimes and sins against posterity." "The prevalence of marriage with epileptics, though difficult to accurately estimate, is certainly not exaggerated, when it is mentioned that, in a series of 300 epileptics certified as insane (excluding the congenital cases, only one of whom was married) of those in whom epilepsy developed before the age of fourteen, no less than 20 per cent. had become subsequently married." And Dr. Bond later in his memorandum states that "in our present lamentably scanty knowledge as to what epilepsy really is, it is impossible to assert that there is any fundamental difference between the feeble-minded with, and the feeble-minded without, epilepsy." "He would prefer to regard all those who are congenitally weak-minded as predisposed to epilepsy, and the development of the latter disease as expressive of a further mental reduction."

Bond, Vol. I., p. 165, c. 1.

p. 165, c. 2.

Bond, Vol. I., p. 172, c. 1.

867. Dr. Alexander, Hon. Consulting Physician to the Maghull Home for Epileptics, associates epilepsy with a dulness of the intellect. "I do not think," he says, "that any epileptic escapes quite free from a certain amount of dulness. They have gradations from the simplest down to the severe. . . . They require to be looked after by somebody; they might be at home if their parents looked after them; they are not certifiable as being insane." And Dr. Clouston, Superintendent of the Royal Asylum, Edinburgh, says: "The real cause of mental feebleness in youth is undoubtedly the physical one of non-development of the brain cells which are the vehicle of mind. Fifty-one per cent. of all epilepsy comes on before fourteen years of age, and 95 per cent. before twenty-five. This shows its definite relationship to the developmental period of the brain."

The use of the words "Sane Epileptics." Alexander, Vol. II., 16794, 16796.

Clouston, Vol. III., p. 200, c. 2.

868. These quotations show that, in the opinion of competent observers, epilepsy and mental defect are as a rule closely associated, or rather perhaps are due both alike to some derangement of the brain, in the course of which sometimes one, sometimes both, come to light. It follows that though we may use the words "sane epileptic" as descriptive of a class, we cannot apply them absolutely to any large number of epileptics, for out of many who are termed "sane epileptics," and cannot but be treated as such, there are comparatively few who being epileptic are entirely free from mental defect. We may presume, therefore, that under the term "sane epileptics" we may include "epileptics whose minds are feeble but who will attend to advice; and praise or blame affects them:" —who are "subject to control by friends or self-control."

Alexander, Vol. II., 16725–16729.

Statistics of Epileptics.

869. This close relation between epilepsy and mental defect makes it very difficult to obtain any trustworthy statistics of epilepsy, considered by itself. The statistics, in fact, are little more than estimates.

Statistics of epilepsy generally.

(1) According to one estimate, the number of sane epileptics is one per 1,000 of the population, and "of that number only about one-fifth or one-sixth would be severe cases." On this estimate the number of epileptics would be about 32,527. Apart from this estimate, there have been one or two counts.

Gaskell, Vol. II., p. 310, c. 1, 16596. Ireland, Vol. III., 23998.

(2) Our medical investigators returned the number of sane epileptics as 1,373 in the areas which they investigated. The population of these areas combined is 2,362,222. This by proportion would give the number of sane epileptics in England and Wales as 19,516.

(3) Our medical investigators have furnished us with figures relating to sane epileptics in the areas in regard to which they made inquiries. We set out in the table below only the larger groups that may be compared with definite sectional populations, *e.g.*, the population of school children, the population of recipients of indoor relief, and the population of recipients of outdoor relief. The total number of epileptics in a population of 2,362,222, the population of these areas combined, was 1,373 (*see* Vol. VI. p. 53). Of these, 724 were either of school age (314 in all, *v.* cols. 4 and 5 below), or were in receipt of indoor relief (281 in all, *v.* cols. 10 and 11), or in receipt of outdoor relief (129 in all, *v.* cols. 16 and 17). The rest (649) come chiefly under the group "Known to practitioners" and the group "Other sources," that is to say, they are living among the general population:—

—	School Population.		Sane Epileptics.		Percentage.		Recipients of Indoor Relief (Adults).		Sane Epileptics.		Percentage.		Recipients of Outdoor Relief.		Sane Epileptics.		Percentage.	
1.	2.	3.	4.	5.	6.	7.	8.	9.	10.	11.	12.	13.	14.	15.	16.	17.	18.	19.
	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.	M.	F.
Urban Areas	120,805	118,342	121	93	·10	·08	5,153	3,705	130	117	2·52	3·16	2,495	7,858	22	23	·88	·29

Statistics of epilepsy generally—*contd.*

870. These figures show: (a) That the amount of epilepsy in the school population in urban areas is lower than the count made by Dr. Francis Warner which is mentioned below; (b) that it is rather larger in town than in country; (c) that in indoor relief it is a considerable factor, accounting in urban areas for 2·52 of the inmates in the case of men and 3·16 in the case of women.

Statistics of epileptics among the school population.
Beach, Vol. I., p. 379, c. 2.
Report of Departmental Committee on Defective and Epileptic Children, 1898, C. 8746, p. 31.

871. The number of epileptics among school children was ascertained by Dr. Francis Warner, Physician to the London Hospital, to be 110 out of 100,000 children; that is, 110 were "epileptics and children with a history of fits during school life." This would give proportionately a total of 6,275 in the school population of England Wales—5,705,000 in August, 1900. The Departmental Committee on Defective and Epileptic Children apparently accepted this estimate and concluded that probably about one-sixth of these epileptic children were suffering from severe epilepsy, and, not being insane, were suitable for special boarding-schools.

Beach, Vol. I., p. 380, c. 1.

In London, Birmingham, and Bradford there have been counts of epileptic children among the school population. In London, there were found to be 350 epileptic children under the jurisdiction of the School Board, and of these only sixty, or 17 per cent., were fit to undergo the ordinary school curriculum. There are eighty-five now (1905) in attendance.

Pinsent, Vol. II., p. 456, c. 2.

In Birmingham, in 1903, 206 cases between the ages of seven and sixteen were reported, but "after careful inquiry and examination only twenty seemed to the Medical Superintendent and the Committee to require separate treatment in a boarding school." These children were, according to the definition of the Elementary Education (Defective and Epileptic Children) Act, 1899, "children whose epilepsy is so frequent, so severe, and so disturbing to other children as to prevent them attending day schools."

Garbutt, Vol. II., p. 125, c. 1.

At Bradford, in 1905, the number of "known epileptic children of school age" was eighty—forty-two boys and thirty-eight girls. Of these thirteen were insane, eight mentally deficient, one blind, and fifty-eight sane. Of the fifty-eight "sane" children, twelve were unsuitable for school life, and forty-six had most of them (thirty-eight) fits very infrequently, and never or only extremely rarely at school.

872. These statements may be summed up thus:—

County or City.	Total children of school age.	Number of epileptics of school age.	Number suitable for ordinary school curriculum.	Number suitable for boarding schools.
1.	2.	3.	4.	5.
London chiefly (Dr. Francis Warner's examination) -	100,000	110	—	18[1]
London (1903) - - -	757,032[2]	350	60	—
Birmingham (1903) - -	93,896[3]	206	186	20
Bradford (1903) - - -	50,878[4]	80	46	—

[1] That is, one-sixth of the epileptic children of school age, according to the estimate submitted by the Departmental Committee.
[2] Number given by London County Council.
[3] Number given by Birmingham Education Committee.
[4] Number given by Bradford Education Committee.

Poor Law Statistics, Downes, Vol. I., 1811, 1841.

873. In regard to the Poor Law there are the following statements, in some degree supplementing the figures of our medical investigators.

See Return in Vol. I., p. 678a.

In the Metropolis, in 1893, the number of epileptics in workhouses, who were not certified as being of unsound mind, was returned as 626—267 males and 359 females. There were eleven male children under sixteen years of age and eleven female; 436 persons were between sixteen and sixty, 189 of them being male and 247 females; 168 were over sixty—67 males and 101 females. They were found to be of nearly every class of occupation; the largest entries were: 105, labourers; 65, domestic servants; 64, needlewomen or charing house work; 10, costermongers; 13, carpenters; and so on. One hundred and seventy were entered as having "no occupation." In the Poor Law schools in London, with 9,831 children, Dr. Warner found only five who were epileptic. From these returns, it would appear that the number of epileptic children in Poor Law institutions are few; that the number of female epileptics considerably exceeds the number of male epileptics; and that many of those who come on the Poor Law have had good trades, while a large number have either passed into the state of "no occupation," or have probably been employed in such casual and unskilled work as their malady allowed of their undertaking.

cf. Gaskell, Vol. II. p. 314, c. 2.

Beach, Vol. I., p. 380, c. 1.

Poor Law Statistics—*contd.*

As to the country at large, from a return made by the Local Government Board on September 1st, 1894, it appears that in the workhouses and infirmaries of 175 unions outside the Metropolis there were fifty-five boys and thirty-eight girls, total 93, who were epileptic only, and fifty-two boys and forty-six girls, total 98, who were both imbecile and epileptic. In the remaining unions, 443 in number, the returns "showed that there were no such children in the workhouses." This would give a percentage of 1·94 on the 9,833 children in receipt of indoor relief in England and Wales on July 1st, 1894, in the 175 unions. The return that there were no cases of epilepsy in 443 workhouses seems hardly credible, and throws some doubt on the return as a whole.

Curtis, Vol. II., p. 442, c. 2.

Among the recipients of indoor relief at King's Norton, Aston and Birmingham, the epileptics, not classed as insane, were returned at 141 (including six children not more than sixteen years of age). Of these, seventy-one were classed as improvable, fifty-one being under the age of forty-five.

Fleming, Vol. I., p. 678 (*b*).

We have, also, a return in regard to Hants with the Isle of Wight, Wilts and Dorset, and the Farnham Union which Mr. Baldwyn Fleming, General Inspector of the Local Government Board, submitted to us. The return showed that in this area there were 889 epileptic, idiots, and insane persons who were in receipt of indoor or outdoor relief. The number of sane epileptics included in the 889 persons was 193, of whom 102 were males and 91 females. The number of insane epileptics was 135—66 males and 69 females. Of the sane epileptics, 58 males and 50 females were in receipt of indoor relief; and 44 males and 41 females in receipt of outdoor relief. Of the insane epileptics the corresponding figures are: indoor, 49 males and 42 females; outdoor, 17 males and 27 females.

874. Particulars taken from these returns are set out in the following table:—

Unions.	No. in receipt of indoor relief, less lunatics.			No. of sane epileptics.			Percentage of col. 7 on col. 4.	Remarks.
	M.	F.	Total.	M.	F.	Total.		
1.	2.	3.	4.	5.	6.	7.		
	Adults.							
1. Metropolis (1893).	17,437	17,452	34,889	267	359	626	1·79	These are epileptics not certified as being of unsound mind. (Vol. I., p. 678a).
	Children.							
2. 175 Unions outside the Metropolis (1894).			9,833	55	38	93	·90	55 Boys and 38 girls were epileptic only. 52 boys and 46 girls were imbecile and epileptic. Including the latter, the percentage would be 1·94.
443 Unions outside the Metropolis (1894).	—	—	27,197	Nil.	Nil.	Nil.	—	Half-Yearly Return of Pauperism (England and Wales), July 1st, 1894.
3. King's Norton, Aston and Birmingham (1905).	Total and Children.	Adults	5,498	57	78	135	2·46	All these are sane epileptics. Of them 66 "might improve," it was considered: and 69 "would probably not improve." There were also 5 children who "might improve," and 1 child who "would probably not improve." The percentage, including the children, is 2·56.
4. Hampshire, Isle of Wight, Wilts (excepting Cricklade, and Wootton Bassett, and Swindon), Dorset, and the Farnham Union in Surrey, indoor and out (54 Unions).	Adults and Children (indoor and out)		37,911	102	91	193	·51	These 193 are sane epileptics. Under 20 there are 18: over 20 there are 88 males and 87 females. There are 135 insane epileptics. If we include both sane and insane epileptics, the percentage is ·86.

Poor Law Statistics—*contd.*

875. The figures suggest that the number of sane epileptics in urban districts in receipt of relief from the Poor Law is much larger than in rural districts. Probably in the latter case, however, a larger number remain with their relations. The large number found in rural districts under the headings "Known to general practitioners" and "Other sources" suggests this view.

876. To the reports of two of our medical investigators in regard to epileptics we will refer at greater length. They contain statistics with comments and conclusions.

Statistics of epileptic children Manchester, Chorlton and Prestwich. Vol. VI., p. 147.

In regard to his investigation of elementary schools in the Manchester, Chorlton, and Prestwich area, Dr. Melland has submitted to us the following results :—

Children on the School Register—Males.	Epileptics.		Children on the School Register—Females.	Epileptics.		Percentage of sane on total.	
	Sane.	Other.		Sane.	Other.	M.	F.
61,115	42	38	58,819	37	39	·07	·06

"Of these children," he says, "thirty were attending in the ordinary schools and were profiting by the instruction there. Twenty-two were attending the ordinary schools but did not get on satisfactorily, being more or less backward, though none to a degree that would justify their inclusion amongst the defective children. Eleven are away from school, five having passed the ordinary school age, the others mainly because the fits interfered materially with their getting to school. Sixteen are in the special school at the David Lewis Epileptic Colony." This statement shows generally what may be expected to be the distribution of sane epileptics in the schools of a large urban area. It suggests the necessity of a change in the school system in many cases.

Statistics and condition of epileptics in the workhouse, and at large, Manchester, Chorlton and Prestwich : Vol. VI., p. 149.

877. Our next figures refer to epileptics in the same area outside the schools. They explain the position of the epileptics in the workhouses and in receipt of outdoor relief, and indicate their distribution in the population generally.

	Population in Poor Law institutions less lunatics.	Epileptics.				Total sane epilep-tics.	Per-centage.
		Sane.		Other.			
		M.	F.	M.	F.		
Manchester, Chorlton and Prestwich.	7,510 (In workhouses, 6,139 ; in schools, 1,371).	43	49	31	37	92	1·23
	6,901 in receipt of outdoor relief	8	13	9	8	21	·30

Vol. VI., p. 63, c. 15.	Known to general practitioners	37	33	8	3	70	—
Vol. VI., pp. 173–175.	Other sources - - -	10	7	10	7	17	—

Dr. Melland writes : "There were *ninety-one persons in the workhouses whom I have included as sane epileptics—forty-two males, forty-nine females. Volume VI., p. 152. The great majority of these, all except thirteen, have been obliged to come to the workhouse as the result of the interference with their power of getting or retaining work which the fits entailed. Several had held fairly good positions or done distinctly skilled work before their affliction forced them to relinquish their work. Thus one man of fifty-five had been a book-keeper till two years ago, when his memory began to be affected ; another of forty-eight had been a lithographic printer for many years, another of sixty-one a skilled mechanic earning up to 30s. per week, another of forty-five had been a grocer, and so on."

"It is well recognised that many of those epileptics, who can only be classified as sane, exhibit certain minor mental defects which cannot, however, be looked upon as sufficient to remove them from this group. Many are perverse mentally.

* There was also one sane epileptic in the casual ward, Vol. VI., p. 154.

liable to fits of irritability and passion, or show varying degrees of failing memory, or loss of quickness of perception. Still, bearing these considerations in mind the whole of these ninety-one cases would be looked on, broadly speaking, as sane, and it is a defect in our present workhouse arrangements that they should be living in the same quarters with those epileptics who are obviously feeble-minded and with the insane. It is with pleasure, therefore, that one notes that the Manchester and Chorlton guardians have built and equipped a special colony at Langho, in the Ribble Valley, for the reception of the sane epileptics under their care."

Statistics and conditions of Epileptics in workhouses, and at large, Manchester, Chorlton and Prestwich—*contd.* Vol. VI., pp. 152—153.

878. In receipt of outdoor relief, Dr. Melland says, there were "twenty-one sane epileptics; three of them are children, eight are adults in whom the attacks are so severe as to preclude the possibility of their earning their own living, and three, while able to do a certain amount of work, cannot follow the more skilled trades to which they were brought up."

Melland, Vol. VI., p. 156.

879. Dr. Pearse, in the investigation of Wiltshire unions, found 105 sane epileptics, and seventy-three others. Of the former, twenty-five were known to general practitioners, and forty-six were noted "from other sources." There were only nineteen in the schools, and only fifteen in receipt of Poor Law relief—six being in receipt of outdoor relief. Of the children—sane epileptics, seven in number, who were not found in school—he says: "In two cases, the fits are of slight severity; in the remainder, they are of sufficient severity to render attendance at school quite impossible, and the result will in all likelihood be marked mental enfeeblement." "The majority of the adults are able to continue to work. Eight women, however, and eleven men were so handicapped as to be unable to follow any vocation; it is almost a certainty that all these cases and a certain number of the former will sooner or later degenerate into feeble-minded epileptics." These cases he describes, and he says: "It has been a sad experience in making the inquiry to see so many otherwise healthy individuals drifting towards complete mental enfeeblement, and to realise that nothing can at present be done to arrest this. A contrary experience has been the visit paid to a small cottage home for epileptic women near Chippenham; here I found nine women, all feeble-minded and all afflicted with severe epilepsy; but the records of the home showed a very marked diminution in the frequency of the attacks after admission, and the inmates were able to work at basket making, book-binding, etc., thus relieving the monotony of their lives and contributing towards their maintenance." This represents the position of epileptics in a rural district. These facts combined with this contrast are sufficient, and they require no comment; and Dr. Melland's report in regard to the epileptics in an urban district is equally explicit.

Statistics and condition of epileptics. Wiltshire: Vol. VI. Pearse, pp. 253, 257 and 265

266

880. We will now consider epilepsy in relation to the Poor Law, the schools, prisons, and lunatic asylums; and we will describe the chief voluntary institutions for their benefit and the proposals made for their care.

The Poor Law and Epileptics.

881. When dealing, in Chapter V., Part I. above, with combinations of guardians for joint workhouses, we alluded to the Langho Colony for Epileptics not classed as insane. The colony was inaugurated by the Chorlton and Manchester Guardians in 1906. It is situated at Langho, about five miles from Blackburn. The buildings are sixteen in number, and occupy only a small proportion of the estate of 166 acres, which affords ample space for future expansion of the colony. These buildings provide accommodation for 272 patients, and the necessary officers and staff.

The Langho Colony for Epileptics. *See* para. 177 above.

There is an administration block, an assembly hall, 110 feet by 50 feet, with fine open timbered roof and a large stage, a hospital and mortuary block, a laundry block, a kitchen and store block, a medical superintendent's house, and a range of workshops for brushmakers, upholsterers, carpenters, tailors, shoemakers, and plumbers. The patients are housed in separate "Homes," each providing accommodation for forty sane epileptic patients, and of two storeys. On the ground floor is a central hall, approached through a vestibule from an entrance verandah. This central hall gives access to the principal

The Langho Colony for Epileptics—*contd.*

rooms on the floor, comprising a well-lighted day room, 34 feet by 20 feet, with bay window, a small room for patients seized with a fit or requiring temporary seclusion, a boot and cloak room, a dining room, 25 feet by 20 feet, with bay window, a scullery, with arrangements for keeping warm and serving the food delivered from the general kitchen, and having a crockery store and larder attached, a lavatory, with double bath-room adjoining, two store rooms, and a range of w.c.'s placed in a separate annexe. From the central hall a staircase leads up to the first floor, on which are provided two dormitories, each 49 feet by 20 feet, and containing eighteen beds, three single bedrooms, a lavatory and bathroom, and sanitary accommodation in a separated annexe.

Each home has a special warming apparatus installed in a room in the basement, with hot water circulation to radiators placed in the principal apartments, which are also provided with open fire-places and ample means of ventilation. In addition to the main staircase, two subsidiary ones are also arranged for the escape of patients from the upper floors in case of fire.

Apart from the cost of the land, which amounted to £13,267, an expenditure of £75,500 has been authorised on the buildings, but the administrative block has been erected on a scale sufficient for the needs of a much larger colony than that at present existing.

The resident medical officer in his report (July 31st, 1907), stated :—

> "The patients exhibit certain mental symptoms during the intervals between their fits, which are as much a part of the disease as the fits themselves, a fact that must be recognised in their treatment. The chief symptom is an irritability of disposition with a certain loss of self-control, which often asserts itself in attacks of temper and an unpleasant peevish disposition, it being no unusual occurence for patients to get up from their devotions and immediately give way to the most violent outbursts of temper and profanity. Many constantly ask and demand attention in the most persistent and offensive way, while others are very obstinate in minor matters. All exhibit a greater or lesser degree of mental weakness, and when excited often exhibit unpleasant symptoms. Some have attacks of mental disorder before or after their fits, while others have attacks of acute mental disorder in the intervals between their fits."

Workhouses unsuitable for epileptics.
